□ **Sept. '83 to Aug. '84:** Visit. French M.D. and wife seek 1BR furn. apt. on or nr. campus. Call B. Barnett, 497-5913 (day). Local refs.

□ **Aug. '83 to June '84:** BETHESDA, MARYLAND area. Stanf. fac. family, nonsmokers, 2 boys, 11 & 14, seek furn. hse, apt. or condo while on sabbatical at the NIH. Call Paul Basch, Sch. of Med., 497-6698 (day), 493-4590 (eve).

□ **Summer '83 to summer '84 (flex):** Visit. Prof. (cpl & 2 children) need furn. 3+BR home, Palo Alto, or campus. Call 321-0250.

□ **NOW:** 3rd yr. med. student seeks studio or 1BR apt. within bike dist. to Stanf. Call Steve Freedman, 857-9357.

□ **April to July:** Single female prof. Sabbatical at Stanf. seeks hsng. or hsesit. To $440/mo. Call COLLECT (213) 206-6121.

□ **Sept. 1, '83 to June '84:** Prof. from Stanford Florence seeks 3-4BR furn. hse on campus. Call Sandy Glover, 497-4865 (a.m.) or 328-3023 (p.m.)

□ **Beg. April or May:** SLAC physicist, wife, baby wish to *trade* Swiss country villa for all or part of 2 yr stay here. Call SLAC Hsng. Off. 854-330, X3111.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

"A Was an Artist," a woodcut by William Nicholson

Museum show of William Nicholson who changed the art of woodcuts

An exhibition of woodcuts and related lithographs by the English artist William Nicholson (1872-1949) opened March 20 at the Stanford Museum and will remain through May 22. The exhibition contains over 100 works done by the artist at the turn of the century for the London publisher William Heinemann.

Among the works of particular interest is the illustrated *Alphabet* (1898). ABC's intended for adults as well as children, it starts out with "A was an Artist" and "B for Beggar" which respectively are portraits of Nicholson and his brother-in-law James Pyrde (who had earlier collaborated in designing posters under the pseudonym of J. & W. Beggarstaff).

Another is the *Almanac of Twelve Sports* (1898) devoted to the sporting life so prized by the English, with text by Rudyard Kipling. In 1927 Nicholson received a gold medal at the Olympic Games in Amsterdam honoring the work.

Nicholson's series of *Twelve Portraits* (1899), portraying well-known figures of the day, begins with his now famous portrayal of Queen Victoria as "an animated tea cosy," an image that provided the world with a lasting impression of the monarch during her final years.

After 1901, Nicholson abandoned the woodcut as an art form. Nevertheless the outstanding quality of his work affected the whole concept of graphic art in England and established his reputation as an artist when he turned to portraiture and landscape in the years to follow.

The prints in the Stanford exhibition, including both single prints and those as published in book form, have been lent by Stephen Gale Herrick of San Francisco.

The Stanford Museum is open to the public Tuesday through Friday from 10 a.m. to 5 p.m.; Saturday and Sunday from 1 to 5 p.m. It is closed on Mondays. Admission is free. Docent tours are given on Thursdays at 12:15 and Sundays at 2 p.m.

Pottery Workshop offers courses

The Stanford Pottery Workshop will offer beginning courses on Tuesday or Thursday evenings during spring quarter.

Classes will emphasize wheel-thrown ware, including specific forms such as teapots, mugs, juicers, and casseroles. No prior experience is necessary. All tools are provided (wear old clothes).

Come to sign up at 7:30 p.m. Thursday, March 31, in the basement of the Wilbur dormitory complex (across the hall from the student laundry facilities). Or call 497-1471 between 4 and 5 p.m. weekdays for early registration or further detail.

Faculty, staff, spouses, and any other members of the Stanford community are welcome to join the Workshop and take the class. The fee is $45.

Classes tackle problems of weight management, stress and smoking

Three exercise benefits that are particularly important from a cardiovascular standpoint are weight management, stress management, and smoking cessation.

Because of the major role that exercise can play in each of these factors, the Health Improvement Program will sponsor special two-session workshops on each of these topics during spring quarter. Information about how exercise can affect weight, stress and smoking habits will be given along with specific details about how much and what types of exercise are needed. This knowledge should then be combined with actual experience for maximum benefits; therefore, concurrent enrollment in a Health Improvement Program exercise class (or equivalent) is required.

Exercise and Weight Management meets 5:15-6:45 p.m. Tuesday April 19 and Tuesday May 24.

Exercise and Stress Management meets 5:15-6:45 p.m. Thursday April 21 and Thursday May 26.

Exercise and Smoking Cessation meets 5:15-6:45 p.m. Tuesday April 26 and Tuesday May 31.

All HIP spring workshops will meet at the Stanford Heart Disease Prevention Program Conference Room, 730 Welch Road, Suite B.

HIP offers several opportunities for exercise during spring quarter.

Walk/jog/run includes walking (1+ miles), beginning jogging (0-2 miles), jogging (2-3 miles), and running (over 3 miles). There will be two walk/jog/run classes. Section 1 meets MWF 12:10-12:50 p.m. at Roble Field and Section 2 meets TTH 12:10-12:50 p.m. at Angell Field. People of all ability levels are invited to join either (or both!) classes for a fee of $5 for the 10-week spring session. Classes begin the week of April 4.

The Joy of Swimming offers individualized swimming instruction at all ability levels. There are two sections for swimming on MWF at either 12-1 p.m. or 1-2 p.m. at DeGuerre Pool. Anyone interested in swimming is invited to join the group for a fee of $5 for the 10-week spring session. Classes begin the week of April 4.

Aerobic Movement/Workout offers stretching, aerobic and toning exercises to music. Three classes will be offered this spring. Section 1 meets MWF from 12:10-1 p.m. in Roble Gym. Fee: $30. Section 2 meets TTh from 1-1:50 p.m. in the Encina Gym Wrestling Room. Fee: $20. Section 3 meets MW from 5:30-6:20 p.m. in the International Center Assembly Room. Fee: $20. All Aerobic Movement/Workout classes are eight weeks and begin the week of April 4.

Stanford University faculty and staff may register for any HIP exercise class or Spring Workshop by sending their name, ID mail address, campus extension, class registering for, and a check payable to Stanford University to HIP, School of Medicine.

For more information call the Health Improvement Program at 497-9649.

HEALTH
IMPROVEMENT
PROGRAM

Exercise facilities: here are hours

Encina lockers and showers—M-F 7:30 a.m.-9 p.m.; SS 9 a.m.-6 p.m.

Roble lockers and showers and weight training facilities—M-F 8 a.m.-12 midnight; Sat 9 a.m.-8 p.m.; Sun noon to 8 p.m.

Olympic Gamefield, Angell Field, track, Perrier Parcourse—daylight hours every day.

Taylor and IM Fields and Angell Field infield—reserved only, call 497-0505.

Maples Pavilion—recreational basketball from 11 a.m.-1 p.m. M-F (show ID). Closed Mar. 28, Apr. 14-15, May 5-6.

Roble Gym floor—Open many hours during the week and on weekends for open recreation, volleyball, basketball, and badminton. Check the schedule at Roble Gym. (Show ID.)

Roble Pool—M-F noon to 1 p.m. faculty and staff only. Recreational swimming T 1-3 p.m.; M, W 2-3 p.m.; Th 1-5 p.m.; F 2-5 p.m. Closed weekends. (Show ID.)

DeGuerre Pools—M-F noon to 2 p.m.; 5:30-7 p.m. SS family swim 1-5 p.m. (Show ID.)

DeGuerre Courts—Phone in reservations M-F 10-11 a.m.; open for play M-F 11 a.m.-11 p.m.; SS 9 a.m.-11 p.m.

Tennis courts—Sign-up sheets are posted on court bulletin boards for next day's play: Encina and Roble courts, 8:30 a.m.; Varsity courts, 5:10 p.m. Courts open for play F, S, S from sunup to sundown; M-Th when no classes are scheduled. M-F noon to 1 p.m. Encina and Roble courts reserved for faculty and staff only.

Encina weight room—M-Th 9-11 a.m.; noon to 2 p.m.; 3:15-8:30 p.m.; F 9 a.m.-8:30 p.m.; SS noon to 5 p.m.

Roble field—Check schedule at Roble Gym office.

Roble Dance Studio (dance only), Studio 42, (mat work), and Room 33—check at Roble Gym office.

Golf course driving range—M-F 8:30 a.m. to one hour before dark; SS, holidays, 7 a.m. to one hour before dark.

Golf course—T-F first available starting time; T, priority ladies; SS, holidays, first available starting time after 11 a.m. Closed Mon. Obtain starting time in person and show ID at Pro Shop. For more info call 323-5633, 497-4344, or 327-6592.

Take your ID when you use recreation facilities

Those who use Stanford's recreation facilities should have Stanford ID with them. Due to overcrowding, spot checks of ID may be made at any of the above facilities.

For information on group use or to offer comments or suggestions, call recreation coordinator Shirley Schoof, 497-3089.

It's true—they're all McLains except that fellow second from left, Michael Riopel, who is married to Ruth McLain (in front of him).

The McLain Family Band brings traditional blue grass to Stanford

The six member McLain Family Band will perform traditional bluegrass music at 8 p.m. Saturday, April 2, in Dinkelspiel Auditorium, at Stanford.

The program will include such old favorities as: "Orange Blossom Special," "Cackling Hen," "Shortenin' Bread," "Tennessee Waltz," and others.

Internationally known, the McLain Family Band comes from Eastern Kentucky's Appalachian Mountains. They have toured to 62 foreign countries as the State Department's musical ambassadors, and to 48 of the 50 states. They have made six appearances at the Kennedy Center, a debut at Carnegie Hall in April, 1982, and have performed on numerous occasions at the Grand Ole Opry and at festivals, fairs, and jamborees throughout the country.

Each year, the McLains host their own yearly festival for family bands near their home in Berea, Kent. This event has been carried on NPR'S Folk Festival USA and Filmed by Kentucky Educational TV for national distribution.

The McLain Family Band has made appearances on NBC's "Today" Show and on the BBC. Since 1969 they have been featured on weekly radio programs and, most recently, on two series for WKYT-TV.

The McLains have recorded nine albums for Country Life Records.

The McLain Family Band is presented by the Lively Arts at Stanford. For ticket information call Tresidder Ticket Office, (415) 497-4317.

Spring quarter brings varied concerts

The Department of Music at Stanford begins an action-packed Spring Quarter Concert Series, March 29.

Highlights of the "season" include chorus and two performances of the *Verdi Requiem* on May 20 and 22 with the Stanford Chorus and Symphony Orchestra;

The Helsinki Academic Male Choir visiting from Finland on May 8;

A solo recital by newly appointed voice teacher Lila Stuart accompanied by Jodi Gandolfi on April 5;

A Faculty Voice Recital April 26 with Stuart, William Ramsey, and Gregory Wait, and;

A Symphony Orchestra program featuring the Chopin Piano Concerto in F minor and the Mozart Violin Concerto No. 4.

Also on the calendar are concerts by the Renaissance Wind Band March 29; the Symphonic Band May 21, in their second annual Sousa concert; the Early Music Singers, Glee Club, Chorale, Jazz Band, and a number of solo and chamber music recitals.

For a copy of the Spring Concert Calendar, call the Department of Music at 497-3811.

Evans to lecture on German people

Prof. Richard Evans of the University of East Anglia will present a free public lecture on "The Peculiarities of the Germans—the *Sonderweg* Debate" at 4:15 Thursday, March 31, on the Stanford campus, History Corner, Room 205.

Evans is the author of *The Feminists, Movement in Germany, 1895-1933*, and *The Feminists* and has edited *Society and Politics in Wilhelmian Germany, the German Family*, and *The German Working Class*. His current research deals with society, politics, and the cholera epidemic of 1982 in Hamburg.

M.L. King Games attract top-notch college athletes

The Dr. Martin Luther King Jr. International Freedom Games to be held April 1-2 at Stanford Stadium will be the occasion of some exciting rematches between some well-known people.

Three of the best college pole vaulters in the country will be there: Felix Behni of San Jose State, Doug Lyttle of Kansas State, and Dave Kenworthy of USC.

The women's 800 will feature the rivalry between Delisa Walton-Floyd of Tennessee and Bobin Campbell of the Stanford Track Club, along with Lois Romo of Cal, Regina Jacobs of Stanford, Joetta Clark of Tennessee, and Yvonne Hannus of the Stanford Track Club.

Two of the best collegiate hurdlers in the country—Candy Young of Fairleigh-Dickinson and Bonita Fitzgerald of Tennessee—will compete in the 100-meter hurdles, perhaps being joined by No. 1 U.S. female hurdler Stephanie Hightower.

The men's hurdles will bring together Milan Stewart and Toni Campbell of USC, Larry Cowling, formerly of Cal, and Villanova's Rodney Wilson.

Competing in the women's shot put are record holder Meg Ritchie of Arizona and Carol Cady of Stanford. Champion discus throwers expected are Lorna Griffin of the U.S. and Rosemarie Haunch of Canada.

Included in the meet are teams from USC, Kansas, Kansas State, BYU, San Jose State, and Villanova. The women will have leading teams from Nebraska, Tennessee, and Stanford. UCLA, the outdoor champion, will be joined by teams from Arizona, San Diego State, and Arizona State.

Oda Bittel to give I-Center concert

Pianist Oda Bittel will appear in recital at 8 p.m. Friday, April 1, at the International Center.

Bittel, a student at Musikhochschule in Frankfurt, W. Germany, has received numerous prizes in both piano and flute competitions. She has appeared in many concerts in Germany and has been recorded on piano, flute, and recorder.

Bittel will include works by J. S. Bach, Schumann, Chopin, and Debussy. There is no admission charge, although donations will be accepted.

Bourne to present Griffin lecture

Kenneth Bourne of the London School of Economics will present a Griffin lecture on "Palmerston at the Foreign Office" at 4:15 p.m. Tuesday, March 29, in History Corner, Room 205 at Stanford.

Bourne holds a Ph.D. from the London School of Economics and has taught international history there for more than 20 years. A former Fulbright Fellow, he has been a visiting professor at Kenyon College, Stanford, the University of California, and the University of Southern Mississippi. His books include *Britain and the Balance of Power in North America, 1815-1908*, and *The Foreign Policy of Victorian England, 1830-1902*. His edition of Palmerston's letters was published by the Royal Historical Society.

Bass baritone James Tyeska

Marlboro musicians to perform here next Wednesday

The Lively Arts at Stanford will present the distinctive music-making of Music from Marlboro at 8 p.m. Wednesday, March 30, in Dinkelspiel Auditorium.

The musicians, all participants in the Marlboro Music Festival, will be: Lydia Artymiw, piano; Isidore Cohen, violin; Mei-Chen Liao, violin; Ah Ling Neu, viola; Robie Brown Dan, cello; James Tyeska, baritone; and Robert Routch, horn.

The program will include Haydn's "Quartet in F Minor, Op. 20, No. 5, Hob. III: 35"; Brahms' "Trio in E-flat Major, Op. 40"; Barber's "Dover Beach, Op. 3"; and selections from Beethoven's "Irish and Scottish Songs."

Founded in 1951 in Marlboro, Vermont, the Marlboro Music Festival brings together leading musicians from all parts of the U.S. and many foreign countries for two months each summer. Both young professionals and mature artists come to Marlboro at their own expense to exchange ideas and explore the vast repertoire of chamber music in an informal and intimate setting, removed from the pressures of professional concert life.

The festival's artistic director is Rudolf Serkin, who was also one of the founders.

The Music from Marlboro touring program was inaugurated in 1965 to offer repertoire not frequently heard in live performance to a wider audience, and to offer additional concert opportunities to outstanding young musicians.

During its 17-year history, the Music from Marlboro touring program has presented more than 150 exceptional young performers, many of whom went on to international recognition as soloists, chamber and orchestral musicians, and teachers. Among them have been members or founders of such noted chamber ensembles as the Cleveland, Juilliard, Guarneri, and Vermeer String Quartets, the Chamber Music Society of Lincoln Center, and TASHI.

The 1982-83 Music from Marlboro touring program is sponsored by Philip Morris Incorporated.

Music for harp featured next Friday

Three of Marjorie Chauvel's harp students will perform at 8 p.m. Friday, April 1, in Tresidder Lounge: Camilla Passarelli, Linda Shwetz, and Ruth Bonaparte.

They will be joined by Stanford flutists Yuri Ito, Yvonne Kendall, and Kathryn Barnard and string bass player Lara Shwetz in works by Andriessen, Grandjany, Faure, LaParra, Salzedo, Ibert, Hindemith, and Caplet.

Chauvel is Stanford Music Department's lecturer in harp and has recently published two music books for harp.

Bonaparte, from Portland, graduated from Stanford last year and is currently a professional harpist in the Palo Alto area. She placed fifth in the American Harp Society national competition for young professional harpists in 1981.

Passarelli, a senior music and sociology major, is also from Portland. An accomplished pianist as well as harpist, she is accompanist for the Stanford Chorale, San Francisco Chamber Singers, and many solo performers.

Shwetz, a senior majoring in electrical engineering, is from San Luis Obispo. She also plays viola in the Stanford Symphony Orchestra.

Flutists Barnard and Ito have both soloed with the Stanford Chamber Orchestra this year, and flutist Kendall recently performed at Stanford to enthusiastic reviews.

Bassist Lara Shwetz, Linda's sister, is a grad student at Stanford in biology and a member of the Stanford Symphony Orchestra.

The concert is free.

Harp students Ruth Bonaparte and Camilla Passarelli (seated l to r) and Linda Shwetz.

Wind Band plans Tuesday concert

The Stanford Renaissance Wind Band, under the direction of Herbert Myers, will open the Department of Music's spring concert series at 8 p.m. Tuesday, March 29, in Kresge Auditorium.

The Band will perform late 15th-century and early 16th-century works from Germany and Flanders, drawn primarily from two sources: the printed collections of Ottaviano Petrucci (the Gutenberg of music printing) and the so-called Copenhagen Wind Band Manuscript. The latter consists of partbooks compiled in Prussia by a bandsman prior to his employment by Christian III of Denmark, and thus provides a fascinating glimpse into the practice of an early group.

Pieces to be performed include settings of Tandernaken, De tous biens plaine, La Spagna, and other early popular melodies. Among the composers represented will be Josquin des Prez, Johannes Ghiselin, Hayne van Ghizeghem, Heinrich Isaac, and Ludwig Senfl.

The Band will perform on its usual battery of period instruments: recorders, renaissance flutes, shawms, sackbuts, cornetts, curtals, crumhorns, doucaines, vielle, and viola da gambas. The concert is free.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., March 23, to cover the week of Mon., March 28, through Sun., April 3.

MONDAY, MARCH 28

Stanford Hillel: Passover Seder dinner. The Hillel Seder will be a strictly kosher meal, with wine and all traditional Seder dishes. Home hospitality will be available for both first and second Seders through the Hillel Office. 6:30 p.m. Tresidder Union Large Lounge. Students, seniors & children: $13.50; General $18.

TUESDAY, MARCH 29

Baseball: vs. U. Nevada-Reno. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

Women's Soccer: vs. Brigham Young. 3 p.m. Maloney Field.

History Dept. Lecture: "Palmerston at the Foreign Office," by British Scholar Kenneth Bourne. 4:15 p.m. Bldg. 200, Room 205.

Applied Physics Colloquium: "Time Dependent X-Ray Diffraction and Spectroscopy Using Synchrotron Radiation," by Dr. Dennis Mills, CHESS Lab., Cornell. 4:15 p.m. Applied Physics 200.

Urban Planning Lecture Series: "Consistent Formulation of Integrated Transportation Network Demand, Supply and Design Models," by Prof. David Boyce, Univ. of Illinois, Urbana-Champaign. 4:15 p.m. Terman Aud., Rm. M-33.

Coffee House Piano Concert: "Roberto y su Madre". Songs of the Mexican Revolution. 5:15-6:15 p.m. Coffee House. Free.

WEDNESDAY, MARCH 30

Men's Tennis: vs. UC Santa Barbara. 1:30 p.m. Varsity Courts. $2 Adults; $1 Child.

Baseball: vs. Santa Clara. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

Center for East Asian Studies Colloquium: "Current Developments in Sociology and the Study of Social Problems in China," by Prof. Yuan Jihui, Fedan Univ., Shanghai, China. 4:15 p.m. Lou Henry Hoover Bldg., Room 238.

Men's Volleyball: vs. Loyola Marymont. 7:30 p.m. Maples Pavilion.

Lively Arts at Stanford: Music From Marlboro, featuring works by Haydn, Brahms, & Beethoven. 8 p.m. Dinkelspiel Aud. $9.50, $8.50.

THURSDAY, MARCH 31

Women's Softball: vs. Hayward. 2 p.m. Roble Field.

Women's Soccer: vs. Hayward. 3 p.m. Maloney Field.

History Dept. Lecture: "The Peculiarities of the Germans—the *Sonderweg Debate," by Prof. Richard Evans, Univ. of East Anglia. 4:15 p.m. History Corner, Building 200, Room 205.*

Industrial Engineering Symposium: "Technological Uncertainty and Experts' Subjective Judgment in Public Sector Risk Assessment: Thoughts on Some Opportunities and Problems," by Prof. Granger Morgan, Carnegie Mellon Univ. 4:15 p.m. to 5:30 p.m. Terman Aud.

FRIDAY, APRIL 1

Martin Luther King Games: A major track meet, events for men and women. 8 a.m. to 6 p.m. Stanford Stadium. Tickets $4/$2. More information at 497-1021.

Bechtel International Center Concert: Piano Recital by Oda Bittel. Program will include works by J.S. Bach, Schumann, Chopin, and Debussy. 8 p.m. I-Center. No admission charge; donations accepted.

STARTS Concert: Cat Hermann, acoustic guitar and vocals. 9-12 p.m. Coffee House, Tresidder Union. Free.

SATURDAY, APRIL 2

Martin Luther King Games: A major track meet, events for men and women. 8 a.m. to 6 p.m. Stanford Stadium. Tickets $5/$3. More information at 497-1021.

Baseball: vs. St. Marys. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

The Lively Arts å Stanford: The McLain Family Band. Six musicians play traditional bluegrass music. 8 p.m. Dinkelspiel Aud. $9.50, $8.50 , Students $3 off regular price.

SUNDAY, APRIL 3

Memorial Church: with Dean R.G. Hamerton-Kelly and preacher Ernie Young. 9:30 and 11 a.m. Memorial Church.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

California Scenes by Lisa Hudson. The natural beauty of this world in a simple and straight-forward presentation. Coffee House Gallery. March 1 - March 31.

Contrasts - Marina Goodier. Watercolors, some oils, and pastels in a delicate and warm expression of nature and grace. Tresidder Upper Lobby, 2nd. Floor. March 1 - March 31.

Annette Kaplan, *Luz do Sol*, Tapestries. I-Center. March 3 - March 30.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

Photos from the Barrio Assistance Program by Phillip Baca. Coffee House Gallery. April 1 - April 30. .

Photographs of Africa by Sylvie Cohen. Tresidder Upper Lobby, 2nd. Floor. April 1 - April 30.

CAMPUS REPORT

Volume XV, Number 26 | A publication for Stanford University faculty & staff | March 30, 1983

New minority graduate enrollment drops 42%

New enrollment of minority students in graduate and professional programs at Stanford fell 42 percent last fall, to 88 from 151 students.

A report on graduate student affirmative action, scheduled for discussion at the Faculty Senate Thursday, March 31, expresses hope the setback was temporary.

"We are not sure of the reasons for this decline, but we are not alone among research universities facing such a situation," the report notes.

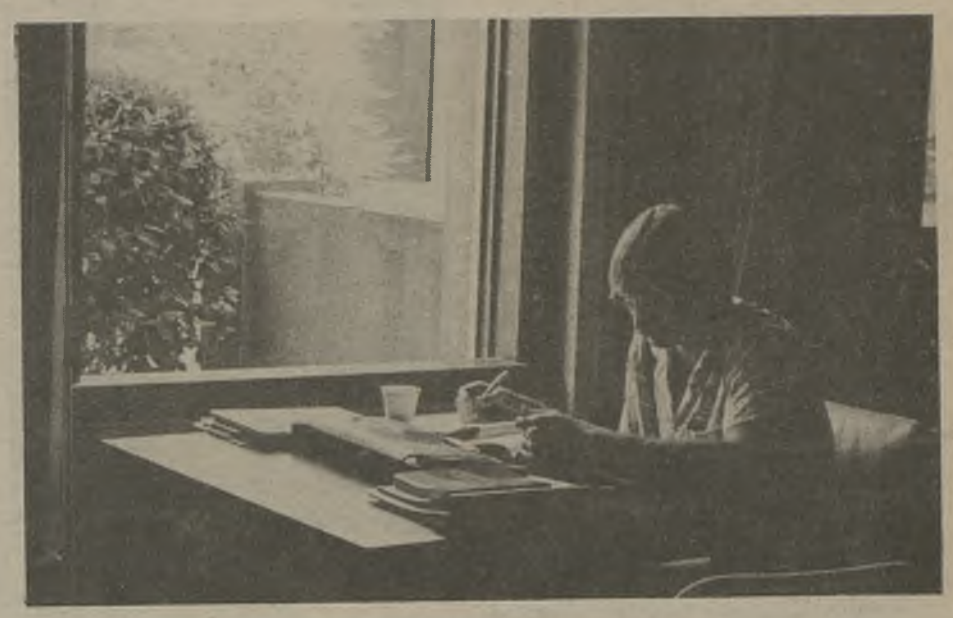
"We remain committed to our recruitment efforts, sustained and impelled by the knowledge that the goal of producing outstanding minority and women scholars and professionals is a worthy one."

The total number of graduate and professional degrees earned by minorities rose to 123 from 118 in 1982.

By mid-February, 1983 applications from American Indians, blacks, Chicanos, and Puerto Ricans were running about 10 percent ahead of last year, according to Vice Provost Gerald Lieberman, dean of graduate studies and research.

The total number of minority applicants to graduate and professional programs fell about 7 percent in 1982, to 1,486 from 1,593. Admissions dropped about 17 percent, to 210 from 255. But the biggest decline was in the "yield" rate—the proportion of those admitted who actually enrolled. This fell from 60 percent to 42 percent.

The total number of minority students enrolled in graduate professional programs declined slightly, to 392 from 414. Blacks dropped to 186 from 196, Chicanos to 162 from 174, and native Americans to 23 from 29. Puerto Ricans rose to 21 from 15. The proportion of targeted minorities dropped to 5.9 from 6.3 percent of total graduate and professional enrollment.



The proportion of women fell to 27 from 28 percent of total graduate and professional enrollment.

Women applicants to graduate and professional programs rose slightly, to 6,898 from 6,852, as did admissions, to 1,088 from 1,024. But new enrollments dropped about 4 percent, to 529 from 552.

Mozley seeks review, curbs on weapons-related research

Stanford should review and possibly restrict weapons-related research, Prof. Robert Mozley of the Stanford Linear Accelerator Center believes.

In a proposal circulated for discussion at the regular Faculty Senate meeting Thursday, March 31, Mozley asks that "the Committee on Research study the volume and character of weapons-related research at Stanford, and possible criteria relating to end use which might be used to reduce the volume of such research, if this proves desirable."

Mozley also requests that the committee submit a preliminary report to the Senate during spring quarter. Whether this timetable is feasible remains uncertain, if the Senate decides to request the study.

In a telephone interview March 25, Mozley said he was "worried more about the future" than the outcome of a controversial proposal to do unclassified weapons-related research at the Stanford Synchrotron Radiation Research Laboratory (SSRL), which depends on the SLAC beam line for its experiments.

Developed by scientists at Lawrence Livermore, Sandia, and Los Alamos national laboratories, the proposal was not included in President Reagan's 1984 budget request.

In a letter circulated to the Faculty Senate, Mozley said: "I believe that the proponents of the new x-ray beams at SLAC are likely to resubmit a proposal that will meet all present Stanford requirements, and that their use of SSRL may well be approved.

"SLAC would then meet its contractual obligation to SSRL and provide for production of the required x-rays.

"Although the short time allotted for Stanford's decision about this new project may make it impossible for the (Faculty) Senate to contribute to decisions taken in this matter, the problem raised is an example of others which may affect the University in the future."

In a telephone interview, Mozley said he would like to prevent this happening again in the future. "Maybe not even rules," he added. "Just make people more self-conscious" about the end uses of their research.

Mozley was not among 15 SLAC faculty who petitioned the Committee on Research in January, asking it to determine whether research explicitly dedicated to nuclear weapons tests and instrumentation should be permitted at SLAC or anywhere on campus, even when unclassified.

In the phone interview, Mozley said he was equally impressed with the petition signed by 280 SLAC staffers in mid-January expressing similar concerns to SLAC Director Wolfgang Panofsky.

Many staffers noted that SLAC's openness and non-involvement in weapons work led them to join it and made it a world center for research. Their petition reflected "the soul of this place," Mozley said. "A large number are now asking for transfers." (The SLAC Personnel Office has received no requests for transfers and reports only three resignations since Jan. 1.)

In his letter to the Senate, Mozley said: "It is probable that if other sources of research funding become smaller, principal investigators will seek the more readily available funds relating to weapons development and national defense.

"A large amount of research at Stanford is done under Defense Department contracts, and much of this is related to military development. The major part of this research is quite appropriate for a

Tenure-track appointments of minorities, women rise

Tenure track appointments of women and minorities hit a 10-year high in 1981-82 at Stanford, a new study shows.

Provost Albert Hastorf will discuss the faculty affirmative action report with the Faculty Senate at its regular meeting Thursday, March 31.

A total of 18 women, including 12 in the humanities, accounted for 24 percent of all new faculty appointments last year.

There were 11 minority group members among the 75 new faculty appointees, including seven Asians, three blacks and one Hispanic.

The highest previous totals were in 1972-73, when 21 women and 14 minorities joined the faculty.

In the past 10 years, women have constituted 17 percent of all new Academic Council appointments, and minorities 9 percent.

During 1981-82, four women already on the faculty were promoted to tenure, as were one black and one Hispanic. One tenured woman resigned and two died during the year. There were no such losses among tenured minority faculty.

Since 1972, changes in the tenure-line faculty at Stanford have been as follows.

	1972	1977	1982
Tenure-line faculty	1,035	1,072	1,151
Total women	67	86	108
Percent women	6.47	8.02	9.38
Total minority	50	72	84
Percent minority	4.83	6.72	7.30
Tenured faculty	676	752	833
Total women	24	29	48
Percent women	3.55	3.86	5.76
Total minority	20	41	51
Percent minority	3.00	5.45	6.12

People

Classical scholars honor Raubitschek on 70th birthday

People from another world came to Stanford on Friday and Saturday March 25-26.

They brought with them the wit and wisdom of an age that refuses to die, though it seemed to vanish 2,000 years ago.

About 100 classical scholars from all over gathered to honor the 70th birthday of Prof. Antony Raubitschek, professor emeritus of classics at Stanford, one of the world's outstanding figures in classical scholarship.

For 50 years Raubitschek has been revealing new facets of the ancient Greek civilization, largely from his studies of inscriptions, the public and private notices carved in stone by the Greeks.

From his transcriptions, Raubitschek has thrown new light on the laws, the customs, the sports, the habits, and the philosophy of the race that has influenced western civilization more than any other.

Beginning when he was 23, just before he graduated in classics from the University of Vienna and the Nazis took over Austria, his articles have come to be pathfinders in the classical world. His latest paper *The Mission of Triptolemos* (co-authored with his wife Isabelle), covered a wide span of Athenian architecture, sculpture, and topography.

Among those who came to honor Raubitschek at the two-day celebration were Sir Ronald Syme, of Oxford, author of the noted work *The Roman Revolution*; he spoke on Thucydides at a dinner meeting Saturday.

Others included W. Robert Connor of Princeton, where Raubitschek once did research; David Lewis of Oxford, another expert on inscriptions; Michael Walbank and Haruo Konishi, from Canada; Donald Lateiner, of Ohio Wesleyan; and Steven Hirsch, of Tufts.

Notables from Stanford included Paul A. Robinson, Lionel Pearson, and Susan Stephens, papyrologist; Nobel Laureate Kenneth Arrow and historian Gordan Craig.

A center of respectful attention was Raubitschek's wife of 41 years, Isabelle, his career-long collaborator and a leading art historian of ancient Greece. Since their marriage they have focused most of their

Antony Raubitschek

waking hours on ancient Greece and Rome, and they have sometimes written articles jointly. They have four children and six grandchildren.

The conference was organized by Prof. Michael Jameson and Assistant Prof. John Winkler.

"The new knowledge gained from inscriptions, papyri and archaeology has made classical scholarship all the more aware of the place of historians in literary and intellectual traditions," Jameson said.

"It is time to ask what effect the newer modes of criticism have had on our understanding of the historians and of the history of the classical world; in turn, what the deep legacy of scholarship on the ancient historians has to contribute to contemporary humanistic concerns."

In the future, he added, "we have to consider what direction research and explanation should take in the coming decades, in an age when neither readers nor even scholars of other disciplines can be assumed to have close acquaintance with the classical historians and their historical subjects."

The conference was made possible by support from the Stanford Humanities Center, the School of Humanities and Sciences, and Anastasi Oung, in memory of her father M. C. Oung.

—Donald Stokes

Four win Sloan research fellowships

Four assistant professors in economics and neurosciences at Stanford are among 88 winners of Sloan research fellowships, the Alfred P. Sloan Foundation has announced.

The Stanford recipients are Assistant Profs. Ben S. Bernanke, Graduate School of Business and economics; Thomas E. Macurdy, economics; Andrew R. Hoffman, medicine; and Eric I. Knudsen, neurobiology.

Each will receive two-year fellowships of $25,000 to stimulate fundamental research. Designed to permit the greatest possible freedom and flexibility, the fellowships do not require recipients to pursue a specified research project. They are free to shift the direction of their research at any time.

The fellowship funds may be used for technical assistance, professional travel, summer support, computer time, support of predoctoral and postdoctoral research assistants, equipment and supplies, or any other purposes approved by the University.

Candidates were nominated by senior scholars familiar with their talents. About 400 were reviewed nationally this year. Prof. William Fairbank of Stanford was one of three scholars reviewing nominees in physics.

Lewis Spitz

History Prof. Lewis W. Spitz will give the 34th annual Payton Lectures April 5-7 at Fuller Theological Seminary in Pasadena.

Dr. Spitz will speak on "Images of Luther," a particularly appropriate theme for his 500th anniversary jubilee of Martin Luther's birth. Lectures will be at 10 a.m. and 4 p.m. each day, with morning sessions at Pasadena Presbyterian Church (Colorado Boulevard at Madison Avenue) and afternoon sessions at Fuller. Lectures are "Luther the Man," "Luther the Professor," "Luther the Churchman," and "Luther, the Man of Learning."

Dr. Spitz holds the William R. Kenan Jr. professorship at Stanford University. He received his Master of Divinity from Concordia Seminary in Missouri and his Ph.D. from Harvard University. He has been a Fulbright professor, a Guggenheim fellow and a senior fellow of the National Endowment for the Humanities. He is author of several books on Reformation history and is currently at work on three more.

The Payton Lectures were instituted by Fuller Theological Seminary in 1949 to honor Dr. and Mrs. John E. Payton, parents of the late Mrs. Charles E. Fuller whose husband founded the Seminary. The themes of the lectures usually fall within the areas of the uniqueness of Christianity, the confutation of non-Christian views or the formulation of biblical doctrines.

For more information call (213) 449-1745, extension 3570.

Ingram Oklin

Stanford Prof. Ingram Olkin, statistics and education, has been elected president of the Institute of Mathematical Statistics (IMS). His term of office begins at the annual meeting in Toronto in August.

The IMS was founded in 1935 to foster the development of mathematical statistics, and is currently one of the most prestigious societies in statistics. The society publishes two journals, *The Annals of Statistics* and *The Annals of Probability*.

Olkin was previously editor of *The Annals of Statistics*.

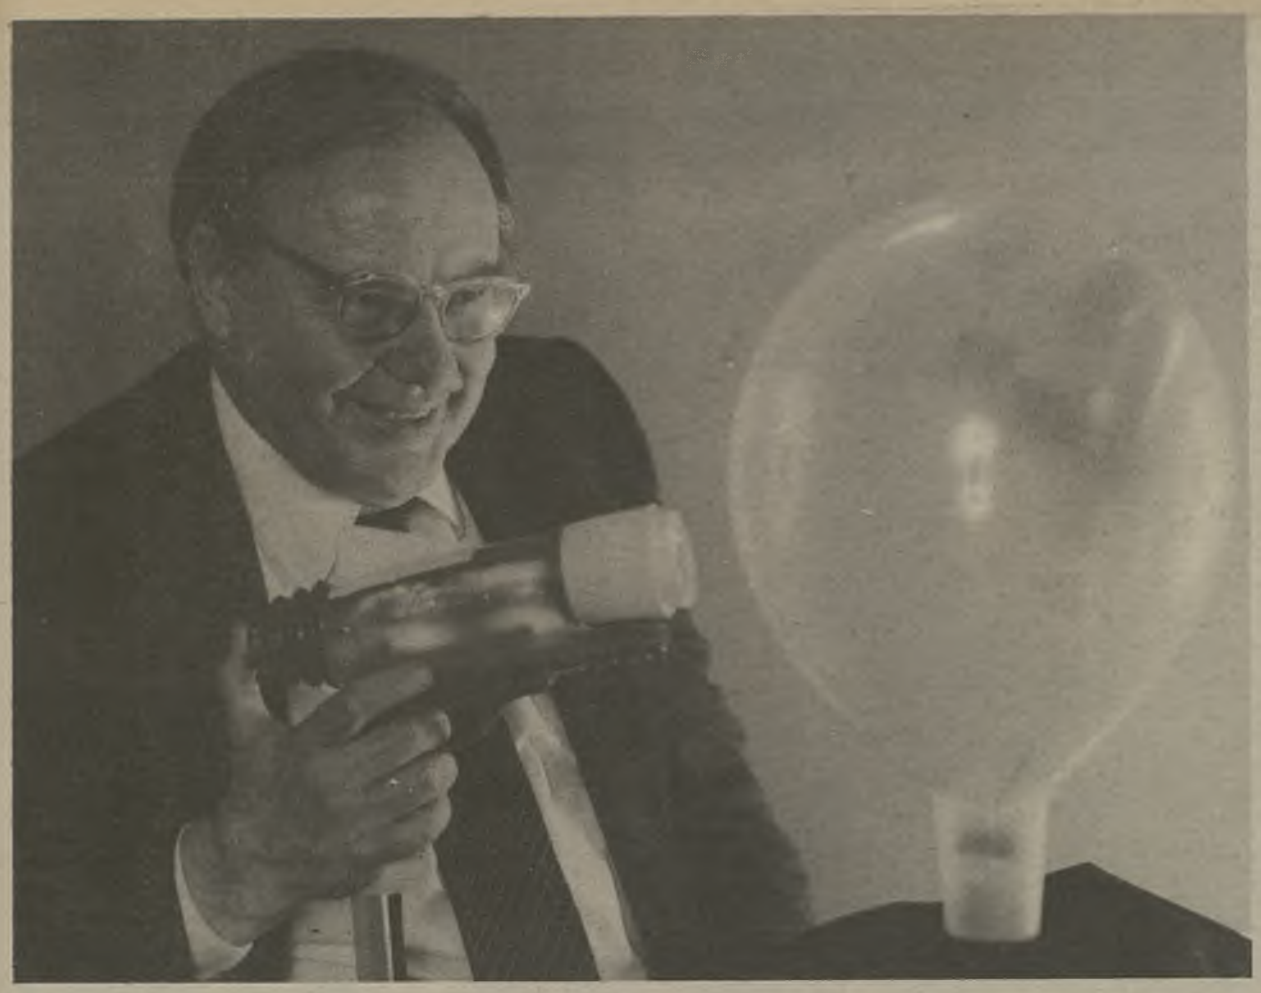
Anthony Cirone

Anthony Cirone has been appointed lecturer in percussion by Stanford's Music Department.

He has been percussionist with the San Francisco Symphony since 1965 and holds bachelor's and master's degrees from Juilliard. Cirone has soloed with the New York Philharmonic under Leonard Bernstein and several times with the San Francisco Symphony.

Cirone has composed 10 works for Percussion Ensemble, two for percussion and voice, sonatas, and method books. His *Double Concerto for Two Percussion and Orchestra* was premiered by the San Francisco Symphony in 1970. Cirone's latest book, *Master Technique Builders for Snare Drum*, was recently published by Belwin-Mills.

Cirone directs the San Jose State University Percussion Ensemble, and looks forward to reinstituting a performing Percussion Ensemble at Stanford. The San Jose Ensemble will perform one of his works May 9.



CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.

Published by the Stanford University News Service, Patricia J. Black, editor; Karen Marman, design assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

'Star Wars' Schawlow zaps Mickey Mouse, inside the balloon, with a laser gun.

Arthur Schawlow, pioneer of lasers, is skeptical they could beat A-missiles

BY DONALD STOKES

Arthur Schawlow, the Nobel Prize winner who coinvented the laser, is willing to help defend the U.S. against A-missiles. However, he does not wish to receive secret information he cannot share with his students.

"This balance of terror, with A-missiles on both sides, is unstable," he said at Stanford, where he is the Jackson-Wood professor of physics. "If I could do anything worthwhile to help in our defense I would certainly consider getting involved in weaponry if I believed such a defense could help to remove the terrible threat hanging over us.

"I would be willing to help, if I did not give up my ability to say what I know about scientific matters.

"If I were to learn about some laser techniques that could be useful in our research, but could not tell my students about them, that would be a very awkward situation for me. And whatever I thought about what was being done, I would not then be able to comment on it publicly."

The U.S.A.F. is reported to be trying to create a laser defense against A-missiles, an interviewer pointed out, and now President Reagan has named lasers as one of the means by which missiles could be made obsolete.

"They are trying to create such a defense, and have been trying for some time. Money is being thrown at the problem. I have never been involved in such programs, but one hears things, one way or another.

"The military tried in the early years to build a giant ruby laser. Well, a ruby just isn't the right material for producing a great deal of power—and clearly a very great amount of power would be needed for such a laser.

"The attempt to get a weapon with a giant ruby drained off a lot of money which could better have been spent on more wide-ranging exploration.

"It would be terrible to think we had a defense and in fact it did not work.

"Today we are capable of building large lasers which could destroy missiles, but there are some obvious disadvantages. I don't know how big these machines are, or details of what they can do, but they are certainly very big, and if they can hold a missile in their sights long enough they could do a lot of damage.

"There are several clear disadvantages of so called laser 'death rays,' and I don't know what solutions there might be. One is that you have to secure a direct hit—a near miss doesn't do anything.

"The advantage is of course that a laser beam goes at the speed of light, which is almost instantaneous.

The suggestion has been made that laser stations should be placed in outer space where one would not have the problem of the atmosphere, which would absorb some of the beamlight and heat it. In space lasers would not be affected by atmospherics.

"A laser battle station out in space would be a sitting duck. If the enemy wanted to launch missiles at us, the first thing they would do would be to destroy the opponent's laser stations in space.

"An extremely accurate system would have to be perfected in order to reach a rapidly-moving missile thousands of miles away."

And there would probably be a great number of missiles to be destroyed?

"Also the fact that the enemy would not only be shooting at you with missiles, but also jamming your electronics and setting off atom bombs. If you sent out radar to guide the laser that would send out magnetic pulse interference in space, so they would not be bothered by the atmospheric effects.

"It is easier for the attackers. Missiles would need to be protected only for the few minutes they are outside in the atmosphere. They could be accompanied by smoke-screens or vapor clouds to absorb the lasers, or they could be equipped with multiple mirrors.

Maybe there will be lasers for short-range battle. But the big ones would be lasers for defense against missiles, and I am skeptical of the practicality of this idea.

—Arthur Schawlow

"One can think of other ways in which the attackers could protect their missiles.

"I am sure I don't know everything about what could be done to enhance or protect laser weapons—or 'death rays' to use the sci-fi jargon—but I don't see at the moment that they would be practical.

"I don't want to appear as if I'm burying my head in the sand and ignoring the possibilities. Also I don't want to pay the price of being unable to divulge things, as one would have to do in order to really help. In other words I don't want to join the defense establishment and participate in laser research for military purposes unless I feel I could make a real contribution to our defense.

"So called 'death rays' are a very old idea, of course, going back to Buck Rogers and his 'disintegrators' and to H.G. Wells' *War of the Worlds*. There is even the apocryphal story of Archimedes burning enemy ships by reflecting sunlight off warriors' shields.

"Even if you had laser rays of immense power they would not be weapons of universal destruction because unlike bombs they are very precisely directed. They have got to be aimed with pinpoint accuracy. Their fearsome aspect is that they are so fast, as fast as any weapons can ever be.

"There are of course weapons that I never envisaged when I worked on the birth of the laser. There are laser-guided bombs where one puts a spot of light on the target and the bomb homes in on that. The light is coded so that the bomb is not 'confused' by diversionary attempts at defense.

"There are other laser weapons, such as those used in reconnaissance, and maybe there will be lasers for short-range battle. But the big ones would be lasers for defense against missiles, and I am skeptical of the practicality of this idea."

An interviewer pointed out that the Nobel Prize award specifies that it is meant 'to enable the recipient to undertake or complete a project which has as its ultimate objective the wellbeing of mankind.' Which of his projects came under that heading?

"Our main research is supported by the National Science Foundation. It is for research into spectroscopy and quantum electronics.

"It is very hard to define my field of research. This is awkward, because sometimes the atomic physicists think I am one of them, sometimes the optics people, and sometimes the quantum electronics people think I belong to them. I try to bridge the gap between them.

I don't feel I am inter-disciplinary. I have my own discipline which isn't quite the same as anybody else's. This is the way it should be, because if you start doing work just like others you had better watch out, for that means you are in a rut.

"I always have lots of ideas, and I say that if anybody in the world wants to take up any of them, that's fine, go ahead and do it. I'll do something else. The fact is, I usually have ideas that other people think are not worth bothering with.

I have to say no one stood in my way.

—Lois M. Stolz, pioneer in the study of child development

Stolz, 91, sees children as our prime resource

BY MILLICENT DILLON

We have yet to develop consistent, long-term programs for the development, education, and guidance of young children as an integral part of the fabric of society. And for one who has participated actively in all these stop-gap programs, the time seems long overdue for a genuinely constructive social approach."

So wrote Stanford emeritus Prof. Lois Meek Stolz in 1965 in an overview of her more than 40 years as a pioneer in child development. Now 91, still active in her field—she is to give a talk at the fiftieth anniversary meeting of the Society for Research in Child Development in April—she still stands by what she said 15 years ago.

"Those programs, by and large, have been flashes of light, soon extinguished and leaving slight residue in social life."

The basic principle which has guided her in her own work through the years has been a simple one, she says. "Children constitute the primary resource of a society, and the direction which society will take depends in large measure upon the kind of children society develops."

She has fought for that resource as director of the Institute of Child Development at Columbia University in the '30s, as director of the Kaiser Care Centers in Oregon during World II, and as professor of psychology at Stanford from 1946 until her retirement in 1957.

The Kaiser Centers, created in 1943, and lasting until the end of the war, were the most innovative child care centers that have ever existed in the U.S. they could, says Stolz, serve as a model even now—especially now—for industry sponsored day care centers.

It was Edgar Kaiser, who ran the shipyard, who decided that they should construct their own child care centers. After a national search he called Stolz and asked her to be his director. James Hymes, who had formerly assisted her at Columbia, was secured to be manager of the child centers in the two yards.

There were 25,000 women employed in the two shipyards, some of them office workers, but many more welders and chippers and burners, workers in the heart of the yards and at the ways. At that time there were almost no facilities in the city to handle the children who needed care. Yet it was clear that absenteeism and lateness for many of the women was connected with the care of the children.

At first there was great concern in the Portland community about the child care centers, says Stolz.

"Some people did fear that a center for children at the very entrance to a war industry might suffer from an enemy air attack. And others felt it was inappropriate for an industry to manage a program for children.

"The world's first day care centers were the rooms set up by factories for children in the early days of the Industrial Revolution. And many people were very concerned about what this industrial day care center would be like. Social workers, in particular, fought the idea tooth and nail. They were deeply bothered, fearing that an industry with its eye on holding women workers and appealing to new women workers might exploit children.

"The company itself, in its initial discussions with the objecting professional people, fed into these anxietes. Coming out of a background of dealing with sand and gravel, with road building and with dam construction, it had little awareness of the special needs of young children or of the hazards involved in group care over long hours.

"The company assumed—naively yet understandably—that it could staff its two new centers easily from the women applying for jobs as welders and office workers."

In fact, after consultation with Stolz and other professionals, Kaiser saw to it that an enormous amount of care went into both the construction and staffing of the center.

Each center, designed by the firm of Wolff and Phillips, was a building of 15 rooms, built out as spokes from a central hub-like enclosed play yard. Each room was large, with good storage space and with two walls of windows opening onto the shipyard so the children could see the ships their mothers were working on.

A home service food facility was set up in

continued on next page

Stolz/ continued from page 4

conjunction with the centers. "Eleanor Roosevelt, on a trip to England, had seen women war-workers buy precooked food for their family's supper right at their factories. She had passed the idea on to Kaiser and he was eager to try it."

Each center also had an infirmary for the care of ill children, supervised by the medical director of the yard and staffed by nurses and professional teachers. The centers were open 24 hours a day, 364 days per year.

Stolz was about to initiate an infant service that would provide 24-hour care for infants, as this was increasingly needed, when the War suddenly came to an end and the shipyards were closed and the centers disbanded.

Stolz notes that 3811 children were taken care of—a total of 250,000 child care days, which freed almost 2 million working hours for the women.

Handsome, alert, vigorous, witty, and as intellectually rigorous as ever, Stolz is often asked by young women how she did what she did in a time so inauspicious for the advancement of women in any field. Was it in spite of the situation, in spite of the men? they ask.

She laughs and says, "Well, I can't quite give them that answer. I have to say that no one stood in my way. Things just seemed to happen that made it possible for me to do what I needed to do."

All along, she notes, there were people who influenced her, men and women, some in a positive, some in a negative way.

First, she recalls, there was the influence of her father, Alexander Kennedy Meek, a lawyer with the Federal government. "When I graduated from high school all I wanted to do was to go to a finishing school, where I thought I could become beautiful and attractive."

But Stolz's father insisted she go to a Normal School, a two-year teacher's college. "Every woman should be able to earn her own living, if she has to," he said.

"Oh, did I hate my father for a month," she remembers. "I decided I'd go but I'd flunk out. So I sat in the back row, drawing pictures and talking to my friend Louise.

"But one day Louise said, 'You can stay here and fool around but I have to earn my living when I get out of here,' and she got up and went to sit in the front row."

Stolz followed her friend, for company more than anything else.

"That was my undoing. You know I couldn't fool around in the front row. I had to listen. I listened and I was hooked. I began to learn about the world I lived in, rather than the academic world of the high school classical curriculum. All the teachers at the Normal School were women, with excellent backgrounds and a verve for teaching."

While in Normal School, Stolz did her practice teaching in the Washington, D.C., school system, under the supervision of a remarkable educator, Rose Hardy.

"I was teaching a second- or third-grade class and there was a little boy in the group, Michael, who ruined every single day.

"One day I got so angry at him that I grabbed him and took him up the steps—the class was meeting in the basement—and when I got to the top of the stairs Rose Hardy was standing there. I was so mad at him, I think I had him by the ear. Rose Hardy never said a word. She just stood there and watched me as I went by with him.

"But at the end of the day, when Rose had her daily conference with me she said, 'Michael's giving you a lot of trouble. I wonder why he behaves that way. Do you know anything about his family?'

"That was the first time that I can ever recall that anybody had ever made that connection for me—about the why of behavior. She and I did go to visit the family. I don't remember much about that visit, but the question of that 'whyness' has remained with me ever since."

Following graduation from Normal School, Stolz taught in an elementary school and then became model teacher and supervisor in D.C. During those years she became interested in Progressive Education and did some experimental teaching.

Stolz took her B.A. at George Washington University in 1921 and then went on to Columbia, where she majored in educational sociology. "I was lucky there too because the chairman of that department was David Snedden.

"He didn't believe that women should bother with higher degrees, he thought they should be homemakers. So anything I wanted to take he approved. As far as he was concerned, it didn't matter."

Taking classes from many different psychologists, she soon became convinced that her major interest was child psychology. It is difficult from this vantage point, over sixty years later, to realize how little anyone cared about child psychology at the time. At Teacher's College, Columbia, the the most important institution for graduate study in education in the country, there was only one course in child psychology and "not a very good one at that."

"The teaching of child psychology was a drab affair then," she notes. "The indexes of some of the old books gives you an idea. These words do *not* appear: father, sibling, social class, dependence or independence, anxiety, hostility, or aggression."

After receiving her Ph.D. at Columbia, Stolz went to work for the American Association of University Women in 1924 to direct a program funded by the Laura Spelman Rockefeller Memorial. She was in charge of an adult education program in child development, set up to disseminate information about children to members of the Association.

According to Stolz, the Laura Spelman Rockefeller Memorial, under the leadership of Beardsley Ruml and Laurence Frank, was the dominant influence on child development research in the '20s and the '30s. With funds from the Memorial, Child Development Institutes were set up at the Universities of Columbia, Minnesota, Iowa, Yale, UC-Berkeley, and Toronto.

Curiously, or perhaps not so curiously, Stolz found a certain opposition to the program within the AAUW.

"There was some feeling among women who worked in the accepted disciplines of academic life that child development was a comedown for professional women.

"English, foreign languages, mathematics, Greek and Latin, even psychology were acceptable—but not child development.

"In general those who had this view were the very people who had worked hard to get opportunities for women in colleges and universities to be accepted as scholars equal to men.

"They didn't want the women to think of themselves as homemakers and taking care of children. They wanted them to think of themselves as intellectual leaders.

"Although these women irritated me at the time, in retrospect I can see that they felt that this was a lowering of standards for women, that child development would become a women's field, and that there would again be this differentiation which they had worked so hard, since 1882, to get rid of."

Under Stolz's guidance the AAUW program did have considerable influence. In the course of her years there she traveled extensively throughout the country, participated in meetings, and visited institutions and new programs which were being set up.

She was appointed chairman of a yearbook committee of the National Society for the Study of Education, the first women to be so honored.

She met and came to know many leaders in the field including Bird Baldwin, Harold Jones, George Stoddard, Arnold Gesell, Beth Wellman, Rachel Stutsman, and Nancy Bayley as well as Herbert Stolz, her future husband.

After five years at the AAUW she returned to Columbia and was appointed professor of education and director of the Child Development Institute.

"Those years were difficult years in some ways. It was the Depression. All employees got a cut in salary. The Laura Spelman Rockefeller Memorial went out of business. But it was also a very rewarding time. We supervised some excellent Ph.D. dissertations. We developed a syllabus for a major graduate course in child development; a family consultation center was opened, and a guidance nursery was developed."

During these New York years Stolz also participated as an advisor for the establishment of nursery schools for children of families on relief. Sponsored by the Emergency Relief Administration, this was the first involvement of the Federal government in any nursery school program.

In 1939 Stolz gave up her position at Columbia and married Dr. Herbert R. Stolz, the first director of the Institute of Child Welfare Research at UC-Berkeley.

A graduate of Stanford, he had been a Rhodes scholar before returing to Stanford to complete his medical studies.

In California she became involved in giving institutes for teachers, in the writing of two books, in research on adolescent development and in the mental health movement.

When the War came, Governor Olsen appointed her as his assistant in charge of "Care of Children in Wartime."

"There were many frustrations in that job," she notes, "most of them because of political problems. There was a lot of competition between different departments for control of the program."

But from that frustration she went on to the Kaiser Care Centers, the project she considers to have been the most exciting in her life.

Lois Stolz

There was some feeling among women who worked in the accepted disciplines of academic life that child development was a comedown for professional women.

—Lois Stolz

Letters to the editor

Kahn cites cases, contends that corporate morality is *not* high

Editor, **Campus Report**:

I was pleased to read the article in the February 23 issue entitled "McBride: Public morality lowered by bad examples up top" and to learn that the development of a corps of competent Inspectors General may bring about some improvement in this area. This is particularly true if they have the dedication of Mr. McBride.

However, the overall implication is that the public morality is low and the individual and corporate morality is high.

Unfortunately, this is not true. In recent years we have seen the Bank of America contesting through the courts (and losing) a claim by the State for money, in effect, stolen from small inactive accounts in their custody. When 14 years were allowed before inactive balances were reported to the State, the Bank of America (*and all other banks*—but only Bank of America contested it through the courts) applied service charges monthly to the accounts and, after a certain period of inactivity, stopped crediting interest.

In all cases with which I am familiar (and this includes all major banks), if a person came in with a passbook before the 14 years were up, the bank then eliminated the service charges and credited interest—unless the account had already been absorbed into the income of the bank.

The courts held that under the escheat laws of the State the State stood in the same place as the owner of the account and at the time the accounts were transferred to the State the same transaction should take place.

In another area, virtually all of the major department stores in the country had a practice of not sending statements to customers with credit balances (returned goods after payment, double payment, etc.) on the theory that it would confuse the customer and he might pay it again. Instead, if the credit was not used within 90 to 180 days, the credit balance was absorbed into the income of the company. The largest California retailer cited by the Federal Trade Commission was Carter Hawley Hale, who had taken some $4 million in this manner over a period of six years.

When the Pacific Telephone and Telegraph Company offered me an opportunity to purchase my telephone equipment, I found out that they were offering me equipment I had never had; and when they checked the records going back nine years, I received a credit of approximately $600 that had been charged to me "in error." For those who receive telephone bills, you know that the item that reads "service and equipment" is never ifemized. If you attempt to get an itemization, it may take you several weeks to several months to obtain the listing.

I hate to bring up the name of such major companies, all of whom have been or who are contributors to Stanford, but I did want to point out that these actions were formal corporate policies (perhaps PT&T could be credited to incompetence—but this always could have been cured by sending each customer a confirmation, after installation, of the items and cost being installed).

I dislike naming companies but it is the only way to drive home the point involved. I do this on the basis that Mr. McBride had no hesitancy in indicating that "there are places such as New Jersey, New York, and Reading, Pennsylvania. . . " where fraud and corruption exist. Nor did he hesitate to say, "In New York City you will find more corruption at all levels than you will find in, say, Kansas City, or Phoenix."

Robert Kahn, CMC
Stanford 1938

Cohn pushes Barnett's button—again

Editor, **Campus Report**:

Let's call this one "Counterpoint II." Once again Robert Cohn has invoked my muse—"pushed my button," as we technicians put it. Our antiphony might better be performed privately, taxing neither your continuing indulgence nor your column-inch budget. Still, your readership might relish the scrap—Cohn keening on the fuddy-duddy (ZAP!), Barnett twiddling the bits (OOF!).

Professor Cohn's letter in your March 18 issue is a tough tune to counter; he harps a mean melody. But, like many productions of the electronic slavery that revolts him, though the parts are impeccably—nay, artfully—crafted, the whole is flawed. His hymn to the redemptive toil of creative writing culminates in (fizzles into?) a smirk at the Tiro Project. Let me introduce a contrasting theme, one whose original score also was hand-wrought, non-linear, smudged, and laborious fun.

Word processors are really no big deal, unless we fail to surmount our opportunities.

We can expect too much from our machines. We were lured some years ago by the Prelude to Artificial Intelligence. Some of us are still. One thing we've demonstrated, in considerable and convincing detail, is how little we know of intelligence. Perhaps we shall see machines worthy of a lesser label, Artificial Ignorance, but not yet. (Belaboring the point would betray Real Stupidity.)

We can expect too little from our machines. There are many varieties, and they become ever more capable of conserving our time (as word processors can) or dissipating it (as video games can). If machines can do something as well as we, good; let's let them, while we do something else. We may also hope that our young, nurtured in a culture replete with such potential "friends" and "enemies," will be taught and led by folks who know those friends and enemies well, and can distinguish them.

We can expect too little from ourselves. We can, indeed, publish too hastily, what with movable type and electronic typesetters and now word processors and all. Even those with nothing to say are finding it easier and more profitable to say it in print. I'm sure we can rely on Professor Cohn and camp to teach and demonstrate that writing deserves care and a "justification" other than mere margin alignment. That doesn't mean that the ability to write something well makes it worth writing, much less true, nor even convincing.

We can expect too much from ourselves. That danger is remote.

Hang in there, Tiro crew, and Godspeed! Some belletristic John Henry's may opt to sacrifice themselves to out-word-driving a machine. We'll mourn them, of course, and illuminate an occasional manuscript in their memory. What technocracy needs, though, are Renaissance voices singing of both the heft of the hammer and the route of the right-of-way—voices that will keep us from desecrating John's grave, certainly, but also help us bend our ever-lengthening track away from the precipice.

With or without word processors, we will continue to write possibly much worse, but not much better, than our expectations. If a non-humanist may paraphrase the Bard, "The fault, dear writer, is not in our machines, but in ourselves, if we are hacks."

My Ode to Parking

'Tis the season to write letters. . . or so it appears.
It's lack of parking spaces that promotes our fears.
Why do we pay 75 dollars a year. . .
. . . is it for the privilege of working here?
We all have to work to earn a living,
And how can you take when no one is giving?
It's hard to arise at the crack of dawn,
So you can arrive and find close parking gone.
For if you arrive after eight on the lot,
It will take you forever to find a spot.
Is this a ploy to make sure we're on time,
And that way you know we earn every dime?
Once you find a place you're literally trapped,
And if you leave you should be slapped.
When you return from an errand again attempts fail,
So you park illegally and have to post bail.
We must find a way to come up with an answer;
This thing is spreading faster than cancer.
If it weren't for the staff the students wouldn't be here;
So let them park far and us park near.
Thanks for the space to air my views.
I'm glad I've been published in the campus news.

Taksar's analyses impress Hilton

Editor, *Campus Report*:

As editor of the *World Affairs Report*, which specializes in the methodical analysis of Soviet foreign policy, I wish to say how impressed I was with Michael Taksar's article "How Soviets control professors visiting the U.S." (*Campus Report*, March 16). It should be required reading for anyone making pronouncements on the subject.

Our universities are structured in such a way that a serious grasp of Soviet realities is a rarity. We are therefore lucky to have Michael Taksar on our campus and to have the benefit of his well-documented analyses. He should be listened to by us all, even though he is tucked away in Operations Research.

Ronald Hilton
Editor, *World Affairs Report*

Homeowners Assoc. sets annual meeting

Annual General Meeting—8 p.m. Wednesday, April 6—Bishop Auditorium, GSB

The Stanford Campus Homeowners Association had a brand new group of District Representatives elected to its Board at last year's annual meeting. These new Board members, along with the at-large representatives whose terms expire this year, are a concerned and enthusiastic group and are anxious to meet with residents from their districts at the annual meeting, April 6.

At the meeting, Prof. Haresh Shah of Stanford's Civil Engineering Department will talk about earthquake preparedness for homeowners, and will discuss the need for and desirability of various levels of earthquake insurance depending upon structural, financial, and other factors.

At this meeting we will also be seeking nominations for four new at-large representatives on the Homeowners Associate Board.

Some of the activities which the Board has pursued during the past year include:

1. Investigating the source and use of ground rents to determine whether homeowners are receiving fair benefits for the ground rents which they pay to the University, and how this has changed over the years. To do this we met with Marvin Herrington, director of public safety, and Janet Sweet, assistant controller, as well as Robin Hamill, Barbara Klein and Lucille Long of the Faculty/Staff Housing Office.
2. Providing input in opposition to the proposed County ordinance which would have required solar energy retrofits before a residence could be resold. This ordinance was not implemented.
3. Investigating the seismic safety of the Mayfield Reservoir which adjoins the Nixon Elementary School and some homeowner's property. This is still under way.
4. Providing input in opposition to an informal proposal by the University that homeowners assess themselves a "tax" to help pay for the costs of replacing eucalyptus trees in the green belts. The University subsequently decided to finance this from other sources.
5. Developing a brochure to set out for homeowners the services that are provided by the University as part of the lease agreement, and whom to contact for each of these services. This activity is scheduled to be completed during the spring quarter.

To carry out our function as representatives of homeowners, it is essential that we hear from homeowners about their concerns. A membership campaign this past month has been extremely successful. We received membership dues from over two-thirds of the campus homeowners, and a list of some of their concerns. The board hopes for a good turnout at the April 6 meeting. After the talk by Haresh Shah, we will have an opportunity to meet with neighbors and district representatives over cheese and wine to discuss common concerns.

Kris Speer studies music, earth science, sells computers

BY JULIA SOMMER

Diversity is often cited as the hallmark of Stanford undergraduates, and junior Kris Speer is a fine example.

Speer is double-majoring in music and applied earth sciences, will pursue either music or an MBA upon graduation, and has worked as both installer and sales manager for a local computer firm.

"I have too many interests. . . it's hard for me to focus on just one thing, so I'm still riding the fence," she says. "I wish I had time to take *more* undergraduate classes—especially art. It doesn't seem like I've learned enough to merit a college degree. . . 180 units is awfully short."

Speer entered Stanford in 1976 as a double major in music and civil engineering. "All my high school aptitude tests said I should pursue engineering, and I knew it was a good job market. There was an unspoken feeling in my family that music was an avocation and not to be pursued as a profession because it wasn't practical and didn't pay well—the same old story. But I enjoyed music and did well in it and wanted to continue private lessons on the bassoon."

Despite the aptitude tests, Speer didn't do particularly well in engineering. "By sophomore year I would stare at an engineering problem for three hours in the library, get nothing done, and feel totally dejected. Plus I had advisers in both departments, and they were each pressuring me to take more courses in their particular department."

At the end of fall quarter in her junior year, Speer stopped out. "I had lost interest in school and I didn't know what I really wanted to do anymore. It made me feel guilty that my parents were paying for such an expensive education and I wasn't getting anything out of it. I didn't have enough direction to make the time count, and Stanford's not the kind of place where you goof off."

Originally, Speer planned to stop out for just one quarter. That quarter grew to almost four years. She interviewed for a secretarial job at Marketron in Menlo Park, which makes computer systems for radio and TV stations. President Jerry Cronin suggested she join their Service Department instead. "When he said it would entail a lot of traveling, I said 'Great! Sign me up!' " Speer recalls.

She was trained on the mini-computers, then answered service calls, and after six months was on the road installing customized mini-computer systems around the country and instructing radio station employees on their use. "The hardest part was getting people to change their daily routine," says Speer.

"I enjoyed working at the radio stations. . . there's always an air of excitement because you're creating something live and you hear it immediately all over the station. I don't know any other place where you would find accountants working to the accompaniment of hard rock!

"I got a good overview of radio because I worked with everyone—schedulers, salespeople, management. Marketron computers are used to schedule commercials and music, and everyone's energies are centered around getting out that daily log. All three networks used Marketron's machines—they were the best on the market. I wouldn't mind working at a radio station in the future as an operations manager."

After a year on the road, Speer was put in charge of starting up and managing Marketron's assembling operation in San Carlos. "We had been buying computers ready-made, but could assemble our own cheaper using generic parts.

"I really liked working with the hardware," says Speer. "It was my favorite time at Marketron. I ordered parts, attended management meetings, and made sure we got the computers and parts kits out on time."

Speer then moved to the sales department. "Jerry felt my hardware knowledge would make me an effective salesperson, and it did. I knew what I was talking about, having worked with both the software and hardware. I eventually became manager of the department selling on-line services, mainly programs using rating information.

> ***My first quarter at Stanford I played in the marching band. It was a lot of fun, but one quarter was enough. A lot of my education freshman year actually came from being in the band.***
>
> ***— Kris Speer***

"That's when I traveled the most—about two weeks out of every month. We were paid a straight salary because so many of the systems sales were team efforts taking many months. Our systems sold for $15,000 to $40,000."

Speer ended up working almost four years for Marketron. "Initially, I felt I should go back to school, but I was enjoying myself and making good money. I moved up rapidly, but came to the point where I couldn't go any further without a degree. And I really wanted the education. . . I felt inadequate not having a degree.

"After I was promoted to sales manager, I really had nothing to sink my teeth into and felt ineffectual. Once I got my staff going on their projects, there wasn't enough for me to do. I felt like an overpaid babysitter. They were responsible people and knew what they were doing, and didn't need me to breathe down their necks. That's when I realized it was time for me to leave."

Speer left Marketron last July, then went on a two-week backpacking trip alone, covering the northern half of the John Muir trail in the Sierras.

"It was a good time to make the trip," she says. "I had never hiked alone, and I was making a big change in my life. It was a challenge, and the fact that it came off so well made me feel very self-confident. I didn't get bored like I thought I would, and could have gone for another week. I had perfect weather—it was criminally easy."

Speer plans another solo backpacking trip this summer—the southern half of the Muir trail. She may apply for work at a computer company: "They are exciting places to work because the technology is changing so quickly."

Speer returned to Stanford this fall. "When I came back, it was a huge change in lifestyle. I had to gear up my energy level by several points and learn how to study again—and play the bassoon! I hadn't touched the bassoon in four years and didn't even recognize my reeds!

"My first quarter back, if I ever found myself idle, I assumed there was something I *should* have been doing.

"I'm doing very well in school now because I enjoy what I'm doing. I'm very clear about what I want academically, so neither of my advisers can push me into taking anything I don't want to. Also, earth sciences has a looser curriculum than engineering, so I have more freedom to pick courses I'm particularly interested in.

"I enjoy the music history courses much more than I thought I would, mainly because of the excellent teachers. Right now, I'm split between going on for a graduate degree in music and applying to business school. I don't know if I'm dedicated enough to be a bassoonist, and I enjoy business, so that might be the best way to go."

Speer studies with Stanford's new bassoon teacher, Rufus Olivier, who is bassoonist with the San Francisco Opera. She plays in Stanford's Symphony and Chamber orchestras under Andor Toth.

Kris Speer

"Toth is terrific," she says. "It's a real privilege to play for him. He brings music out of the group that you never thought was there." She also sings with the Early Music Singers.

"My first quarter at Stanford I played in the marching band. It was a lot of fun, but one quarter was enough. A lot of my education freshman year actually came from being in the band!"

Speer has noticed some changes on campus since her return. "In 1976, the average student wore sloppy jeans. . . there was more of a '60s flavor. Now I see the ultra-preppy look, especially among freshmen women.

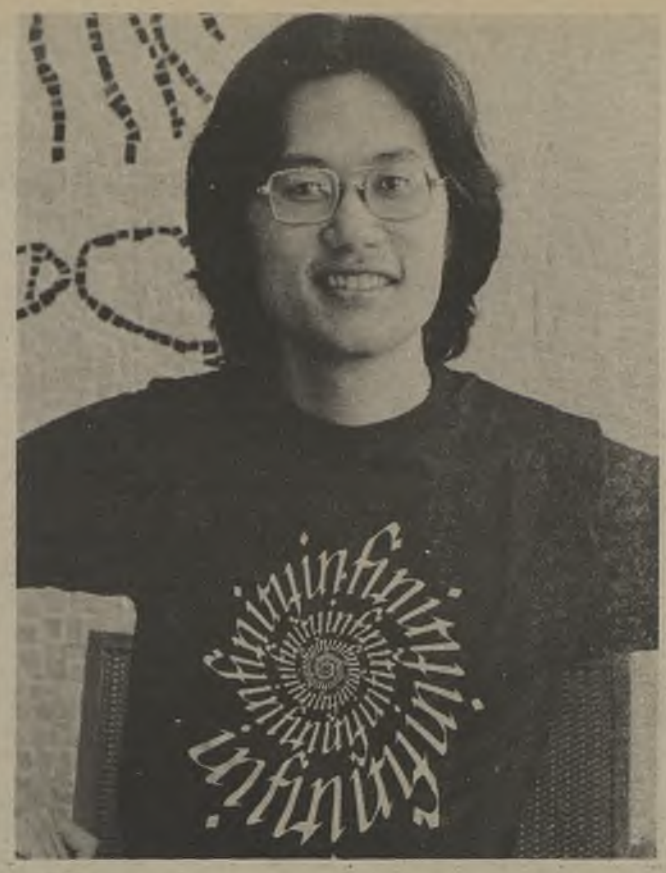
"I can't believe all the make-up, fantastic clothes, perfectly curled hair, and *nylons* every day! If anyone had dressed like that in 1976 they would have been considered a freak! In general, the students are much more serious. The only thing that hasn't changed is the band.

"I notice a new feeling of pride in the Music Department and more recognition of the department around campus. I think the new music building has something to do with it—we're not hiding up at the Knoll anymore. Many students don't know where the Knoll is, or think it's a museum!

"I'm shocked at the number of students who don't take advantage of all the activities on campus, so many don't even go to class! I can't understand it, because the faculty is the best thing about Stanford.

"Every professor I've ever wanted to talk to has made time for me. And they're neat people as well as teachers. Stanford is too rich for some of these kids."

Speer lives in Durand, an undergraduate dorm. "I don't feel any older than the rest of the house, but my roommates tease me about being a quarter-century old.



"I always announce Music Department concerts at dinner, but very few go. But those who *do* go always come to me afterwards and say how great it was. I'm surprised that more students don't take advantage of all this music so close by."

continued on page 19

Computer programming hot, profitable field, many students discover

By converting their dormitory rooms into small computer companies, some students sell their own software to Silicon Valley firms. Others, now consultants, hope to create their own companies.

Following are profiles by Craig LaGrow.

Scott Kim

Mike Boone

One of the most successful among this new breed is Mike Boone, 21, a senior majoring in petroleum engineering.

His company, appropriately called Boone Corporation, went into business last June with the initial investment of $75,000 by an anonymous wealthy investor whom Boone met two months after the company was organized. Since that time, his company has been evaluated by local venture capitalists to be worth over $1 million.

Boone's company now employs 26 people, half of whom are Stanford students.

"My philosophy is that if you hire talented people who want to work hard and enjoy what they're doing, and if you treat them like independent contractors, your company can't possibly fail," said Boone.

Run from the office headquarters of his own dormitory room in Lagunita Court, Boone meets informally with his student computer programmers. Some are Ph.D.s and graduate students who, according to Boone, "gave up some pretty attractive career options to have the freedom to work in a small company like mine."

David Stone, chief financial officer at Boone Corporation, revealed that the company now has plans to market a three-dimensional video game program that recreates the experience of playing golf at a famous national golf course. In the game, every sand trap, fairway, and lake is depicted on the video screen in the exact location as in the original golf course.

"This is a game in a class by itself," said Stone. "The three-dimensional graphics are surprisingly complex and we're sure that it'll be a big financial success for us when it hits the market."

Scheduled for release sometime this summer, the golf game program will be sold to anyone in the country who owns an IBM personal computer. According to Stone, businessmen and golf enthusiasts are the primary audience for the golf game.

In addition to the golf game, Boone's company plans to sell, within a year, three other computer programs which range from business to medical software.

"All you have to do to sell software is find a small 'vertical market' and monopolize it with a software program that suits its needs," said Boone. "That's how the golf game will work. I'm sure that country clubs across the country will be going wild over this game soon."

When asked to describe what it's like to start his own company, Boone replied, "I'm an extremely hyperactive high achiever who loves to sell things; I could sell an Eskimo a refrigerator, easy.

"I think I've gone through about four phases to get to the point where I am now. After the initial 'idea phase,' there came a phase where I had to develop the stamina and courage to do all the grunt work needed. Then came the 'super-hard work phase,' followed by the 'maturity phase,' which I've only recently entered."

Gary Retelny

But Mike Boone is just one of many Stanford students who are finding that, with enough energy and insight, they can become their own bosses.

Gary Retelny, a second-year Stanford MBA student, recently started his own business software company called Exemplary Software.

He is selling a computer program called RankMaster, which makes investment decisions for businesses and individuals based on the financial data that they input into their home or business computers.

So far, Retelny's company has sold 25 separate software programs, priced at $200 each. "We sold that many without even trying that hard," he claims.

Retelny believes that developing a good marketing strategy is essential to selling computer software. "Ideas are a dime a dozen. It's the effort behind the ideas that really count," he said.

Retelny sees his company's main competition coming from what he calls the "four major software houses in the United States" (VisiCorp, MicroSoft, Digital Research, and MicroProbe).

"These software giants are gobbling up the little independent software companies like ours and paying only a reasonable fee for the original ideas we develop," he said. Retelny is hoping, however, that his RankMaster software program will sell well enough so that his company will not have to "sell out" to these larger companies.

Scott Kim

Scott Kim, 27, a Ph.D. in computer science and graphics design, founded his company, called Look Twice, in 1975 after he published a book called *Inversions—a Collection of Computer-Generated Graphic Designs*. Kim wrote and published the book while he was an undergraduate at Stanford.

"I do for words and lettering what Escher did for visual thinking," said Kim. "I intend to prove that computers can be successfully applied to the arts. I even use myself as a guinea pig for things that I expect will become common for artists in the near future," he said.

Kim not only uses his computer to do graphic design, but also to keep track of his company's daily accounting. In addition to Kim's book, Look Twice also sells computer-designed T-shirts. He is also planning to design and sell computer graphic posters.

For all his various projects, Kim's company last year produced a gross revenue of $25,000.

"I hope that my company will one day help others to discover that there is art in the icons of the computer culture."

Craig Carlson

Youth appears to be no obstacle to making money in the computer software business. At least that's what 19-year-old Craig Carlson, an undergraduate in electrical engineering, has found.

So far, he has made about $6,000 by writing two business software programs for a company in Los Angeles called Continental Software, Inc.

Carlson does not run his own software company; instead, he is known in the industry as an "independent software writer."

"I like this kind of arrangement because I can go wherever I please," said Carlson. "Besides, they (Continental Software) treat me so well that, in turn, I sell them all my software."

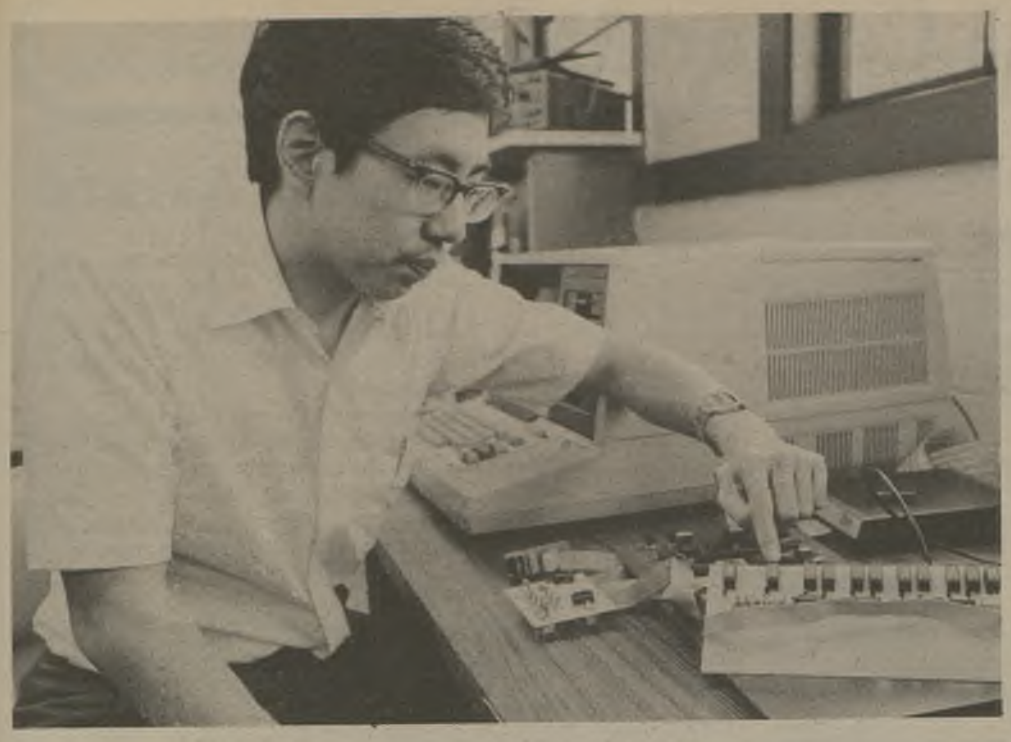
Carlson has designed a computer program that can manage one's personal financial portfolio—everything from balancing your checkbook to keeping track of the money you've spent on credit cards.

Robert Lisbonne Kurt Thams

Robert Lisbonne, 18, and his best friend Kurt Thams, 18, write their own independent software programs and work as consultants to private firms.

Like Craig Carlson, they also have no formal company. Both work independently on their own software projects.

"We've known each other since sixth grade and have grown up with computers," said Lisbonne. "I remember the day that I bought this cheap little Radio Shack computer with only four bytes of memory. Kurt and I have learned a lot since then."



Lisbonne writes software on a contractual basis for companies that want a computer program to do a specific task for them. For a utility company in Los Angeles, Lisbonne designed a software package that helps the company determine just how to get the maximum energy from burning waste products.

"Basically, I made it so that they could get quick answers to their technical questions. Now they're using my software as a daily working guide."

In the near future, Lisbonne hopes to steer away from the consulting side of his software business and write programs on a large-scale production basis. He hopes to sell software to any one of several "vertical markets."

"There are a lot of specific applications that computers can be used for on a one-time basis; but I'm more interested in the software packaging for entire business fields," he said.

continued on next page

His competitive swimming led Glen Inn (left) to design a computerized timing system.

Mike Boone (below right, with employee Brad Davis) claims he could sell refrigerators to Eskimos. He runs the Boone Corporation, with its 26 employees, from his room in Lagunita Court.

Robin Chang

High school teachers can now have their own compact minicomputer network for a fraction of the cost of buying their own individual microcomputers, thanks to Robin Chang, 20, an electrical engineering undergraduate at Stanford.

As a senior in high school, Chang discovered a way to hook up 15 microcomputers to one disk drive memory unit so that teachers could store records of their students' ongoing academic progress in the computer's memory.

Chang's invention was manufactured by a retail computer hardware outlet called Skyles Electric Works. Last year, his invention brought $300,000 in gross sales. Chang's net profit for last year was $37,000. Not bad for a 20-year-old student.

While Chang has not yet formed a company of his own, he does have plans to do so in the near future. In fact, he is now in the process of incorporating.

"The only problem now is that I have to figure out a good name for my company, and this step is harder than it sounds," he said.

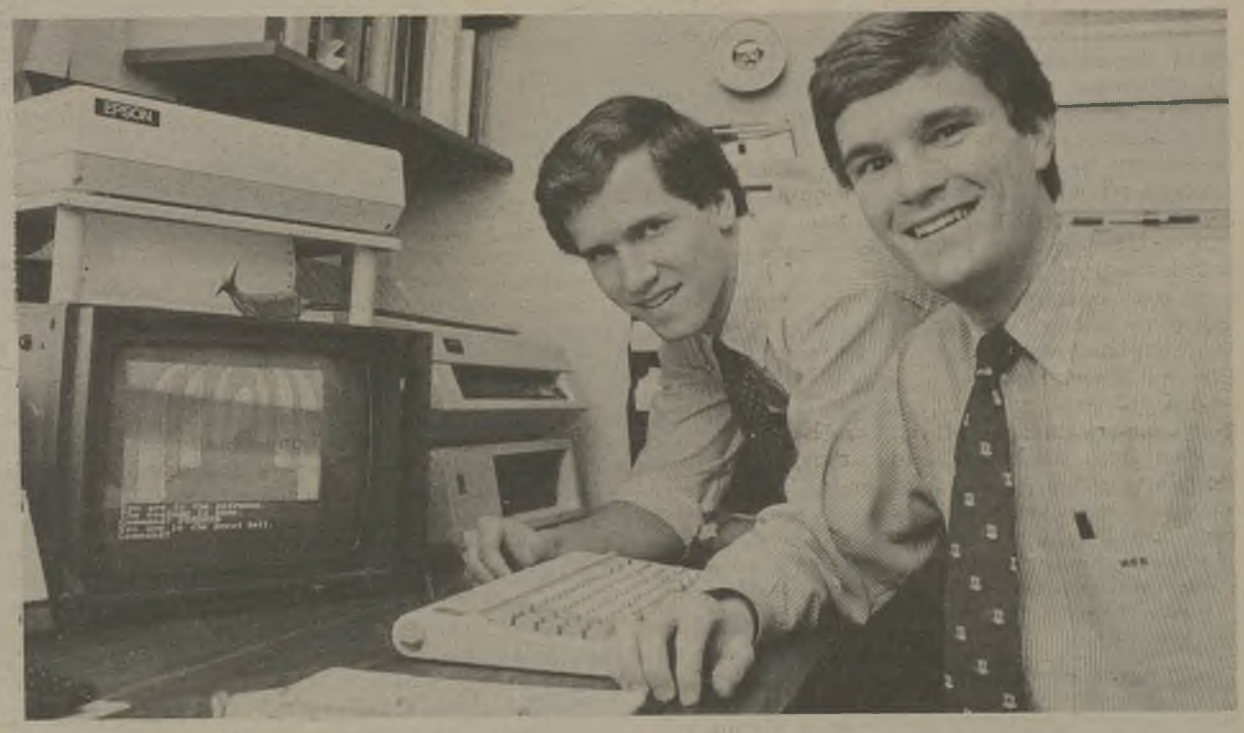
In the past, Chang designed computer software programs only for hobbyists and fellow computer enthusiasts. "But software for hobbyists just changes too quickly and one software program may be worthless after a year or so," he said.

Chang admitted, however, that trying to balance school work and his computer business has become a lot tougher than he had planned for.

"I've been working my butt off lately," he said. "But if I don't keep up with my computer projects, someone else is going to come and do them instead of me."

According to Chang, learning to start a computer company has given him the chance to put his education to the test. "It's a lot of pressure to deal with at times, but I think that it can really pay off in the long run," he said.

Glen Inn



Computers can even be used at swim meets, or so claims Glen Inn, 21, an undergraduate in electrical engineering. He has designed a computerized timing system that monitors, in milliseconds, the elapsed time in a swimming race.

Inn calls his timing device "Accuplace" and rents it to sponsors of local swim meets.

"Ever since I was six years old, I've been a swimmer. And it's always bugged me that no one has ever devised an accurate method of determining who really won or lost a close race," he said.

Inn designed the software for the swimming system as well as the hardware too. He has even built much of the equipment himself.

Although he has no formal company, Inn hopes to one day start his own computer hardware and software company.

Alan Ballweg

Alan Ballweg, 23, a senior majoring in economics and industrial engineering, started a company called Business Data Systems in December of 1981.

Since its beginning, his company has grossed $12,000 and today Ballweg charges an hourly consulting rate of $25. Ballweg has written four custom-designed computer programs for an engineering firm in Los Angeles, two financial consultants in the Bay Area, and a law firm in Palo Alto. He is now working on negotiations to sell a real estate software program to companies all across the country.

"I just realized that software writing is a big, wide-open market, that it pays well, and that it is growing rapidly," he said. "I also don't have any illusions about this business, though; but I do feel that there will be plenty of business out there for awhile."

Ballweg not only designs software to suit the specific needs of his customers; he also contracts with each company to "maintain" the programs that he writes. "If somebody wants me to add or change something on their computer system, as they do all the time, I provide that service as part of the contract."

Even though Business Data Systems is still solely run by Ballweg, he indicated that his long-term plans are to develop a corporation and hire a large staff.

Aaron Weiss

Another successful student entrepreneur is Aaron Weiss, 22, a senior in electrical engineering, who started Reliable MicroSystems with only $5,000—half from his savings and the other half from a short-term loan from his father.

Since his computer software company began last spring, Weiss has multiplied his original investment by five times. He now plans to hire a staff of computer programmers when his company expands this summer.

"I guess that I should apologize that I didn't start this company out of my garage," he joked. "It would sound a lot more believable than if I tried to convince you that my company actually began in my bedroom."

Weiss writes all kinds of computer software programs, from a medical accounting package to a scientific data analysis program.

Reliable MicroSystems actually started out by accident, Weiss claims. Because of the unexpected success of a computer program that he wrote for a hospital administrator, Weiss discovered that writing software on his home computer could mean big money.

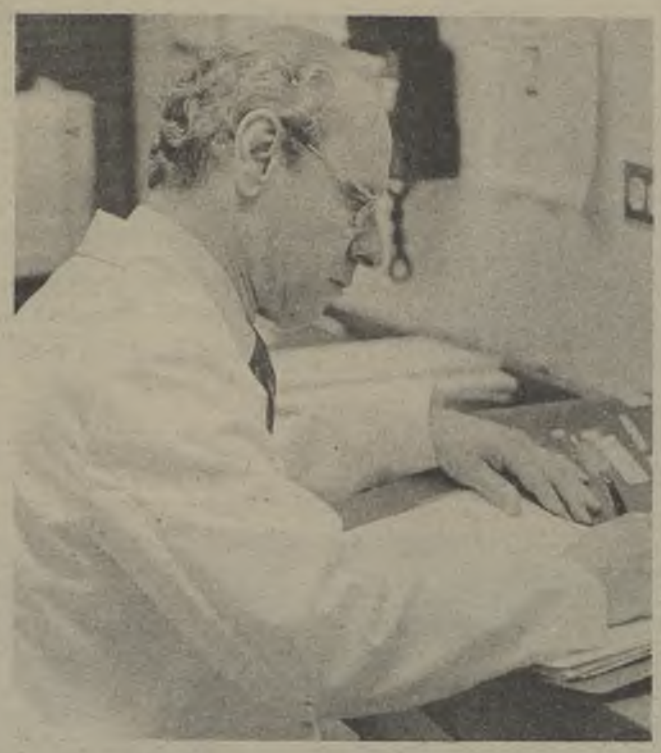
By last fall, Weiss had already signed contracts with four local companies to develop software programs for their businesses.

"But the real fun is coming this summer," he said. "The money I've been making has only, up to now, been reinvested into my hardware. By the end of this summer, I plan to make the megabucks, hire a permanent staff, and become an incorporated firm."

Medical Center MEMO

His colleagues honor Rosenberg with first Hewlett Award

Dr. Saul Rosenberg, professor of medicine and radiology at Stanford University School of Medicine, is the first recipient of the department of medicine's Albion Walter Hewlett Award.



Dean Dominick Purpura announced the award at last Thursday's medical grand rounds.

Rosenberg "has been recognized by his colleagues as the epitome of the academician dedicated to discovery in the biological sciences and to the sensitive and scientific application of such new knowledge in the effective treatment of human disease," states the award certificate.

The award was established last spring by the department of medicine to honor academic physicians who have advanced scientific knowledge and applied it to patient care. Dr. Albion Walter Hewlett was an internationally known professor of medicine and leader in clinical investigation at Stanford from 1916 until his death in 1925.

"There is no greater honor than to be recognized by your own," Rosenberg said. "Nothing is as important, appreciated, or difficult as being recognized by your own family, especially those who are not in your precise field. It gives me a special sense of satisfaction, as well as a special challenge to be the appropriate model for this award so the tradition can continue."

Rosenberg, a leading oncology expert, has received international acclaim for his research on Hodgkin's disease. He and Dr. Henry Kaplan, D'Ambrogio Professor of Radiology—both pioneers in the field—have made dramatic advances in the diagnoses and treatment of the disease, which have led to better than 80 percent survival at five years for all stages of the disease. Seventy-five percent of the patients are now permanently cured, according to published figures.

Rosenberg at work—the first time he applied to medical school he was rejected; today he is renowned as a pioneer in the treatment of Hodgkin's disease.

Rosenberg was among those who spearheaded the development of oncology as a specialty of internal medicine. He is chief of the division of oncology at Stanford, which was established in 1965. He is also director of the Debbie Probst Oncology Day Care Center, a treatment center for cancer patients, which opened here in 1978.

Rosenberg has also received the Henry J. Kaiser Award for Excellence in Teaching, and was the first recipient of the Arthur Bloomfield Award for Excellence in Teaching in Clinical Medicine. Medical education is one of his primary concerns—he took a year-long sabbatical to study the problems of premedical students competing to get accepted to medical school.

A native of Ohio, Rosenberg received his undergraduate degree, and then his medical degree in 1953, at Western Reserve University. The first time he applied to medical school he was rejected; the second time he was told he could come work in a laboratory for a year, after which his application would be reviewed.

The laboratory was involved with radiobiology research, which spurred his interest in radiation as a treatment method for malignancy. He also enjoyed internal medicine during medical school. Upon graduation, he decided the way to combine his interests was to specialize in oncology. But first, he had to create the specialty.

He trained at various hospitals that offered radiation therapy and cancer programs, and came to Stanford in 1961 to work with Kaplan. Their mutual interests in radiation therapy and cancer led to their research in Hodgkin's disease. And the support of the department of medicine, Rosenberg said, led to the development of the oncology specialty.

"Perhaps an equal accomplishment to the research in Hodgkin's disease is that of establishing the field of medical oncology as a respectable, successful field in internal medicine. I have had a major role in that at Stanford and we have been one of the strongest programs in the country. On a national scene, I've probably helped more people by helping establish this field and training physicians in it," he said.

The Hewlett Award consists of a certificate, a silver medallion depicting several figures from a sculpture symbolizing the award, and funds with which to buy books for the Hewlett Library.

The sculpture, housed in Stanford University Hospital's main lobby, was unveiled last spring. It depicts "man—his isolation intensified by disease—and the evolution of his integration with society through the intervention of the physician," according to Dr. Kenneth Melmon, chairman of the department of medicine.

All local members of Hewlett's family, including son William; daughter Louise Nixon; and grandchildren Walter, James, and William Hewlett, took part in the day's ceremonies.

—Shirley Kraus

Don't wrench autonomy from dying patients, says chaplain

"When people are conscious. . .decisions about life and death really do need to be checked out with them."

—Ernle Young

Patients slipping toward death in hospital intensive care units need help, but they are adults, not children, cautions a hospital chaplain.

When the kidneys, heart, and lungs begin to fail and death is imminent, there is often a temptation to make decisions for the patient, wrenching from him the last shreds of autonomy, said Dr. Ernle Young, chaplain at Stanford University Hospital and lecturer in medical ethics at the School of Medicine.

"The form of the relationship between caregiver and patient ought not to be 'parent-child' but 'adult-adult,' " Young said in a public lecture Wednesday evening, March 23. "This means that paternalistic decisions on the part of caregivers ought to be the exception rather than the rule. And the exception always requires justification."

In the last in a series of community lectures on progress and ethical dilemmas of intensive care, Young focused on the dying patient, and the ethical and emotional issues that permeate his care.

"Even though the patient may not be able to speak or to articulate anything, one of the skills that has to be acquired in the intensive care setting is learning to communicate with people who can't verbalize what they want to say," Young said in a related interview.

"One of the things you do is focus on nonverbal forms of communication. Another thing you can do is intuitively understand what they are trying to say, and express it for them. You say, 'is that how it is?' and you get a signal—maybe a squeeze of the hand—that says 'yes, that's what I'm feeling.' When people are conscious, all of these decisions about life and death really do need to be checked out with them."

In theory, permitting a conscious, competent patient to decide when artificial life support should be discontinued "scunds fantastic, but in practice is often very difficult," Young said.

"Some of us here tonight were up in the adult ICU earlier today where a lady, who was still conscious and who was party to the decision that aggressive treatment should be withdrawn, is now dying.

"It is a very much more difficult thing for caregivers and family alike to (be with) such a person in her dying than it would be if she were unconscious and out of it altogether," he said. "She is staring death in the face with enormous courage and peace."

When the patient is an infant or unconscious, and can't be consulted, the thorny decision shifts to the family and health care team. Though the family should assume an important advisory role, the physician and other members of the critical care team must take ultimate responsibility for deciding when to halt life support, Young said.

Such assertiveness on the physican's part might be considered paternalistic, Young admitted, but he added that the "irreversibility of disease is a uniquely medical decision."

But even the medical decisions are not always clear-cut, he said, describing the case of a man hospitalized for internal bleeding, who underwent 16 operations during his 14 months in Stanford's intensive care unit, and acquired a bill of $750,000 before his death.

"How long do you keep on going before you decide, 'OK, we've given it our best shot, the time has come to quit?' " Young asked. "In this case, the patient died before we quit—14 months and much suffering later."

Families who fear guilt feelings after assenting to termination of aggressive life support for a person who has no chance for recovery need to realize that "it's not the withdrawing of the support that kills a person, it's the underlying disease process," Young said.

—Deborah Franklin

Auxiliary celebrates landmark year for donations

The Auxiliary of Stanford University Hospital has passed the $1 million mark in contributions to the hospital since 1960. The record number of gifts was reached with this month's approval of a $28,000 project to fund *Lifeline*, a home emergency response program for the elderly and chronically ill.

Celebration of the landmark highlighted this year's Auxiliary reception, given last week at the Faculty Club by the board of directors and administration of Stanford University Hospital (SUH).

"I think it's very special to have given $1 million," said Auxiliary president Dee Gaynor to her co-members on accepting a plaque from SUH director and executive vice president Sheldon King. "We'll hang this proudly," she said.

Most of the money the Auxiliary dispenses is raised at the hospital gift shop, and almost all of the gifts are for patient care, approved upon department request. Examples of gifts this past year were a fluorescent microscope for the Department of Pathology, Social Services' patient care emergency funds, and two fetal heart monitors.

"We've worked very hard to get the sorts of things we want for the hospital," Gaynor concluded. *Lifeline*, King noted, will help keep the elderly safer at home and out of nursing homes longer. Components of the community service system should arrive at SUH within a month.

Gaynor, who has served as Auxiliary president for 1982-83, also received the gift of an antique white brass cooking pot from Korea, called a "shinselo," in honor of "her quick wit, compassion, and ability to forge ahead enthusiastically," as was inscribed on the pot.

Gaynor praised the efforts and cooperation of all Auxiliary members, encouraging them to lend the same support to her successor, Donnie Ellington, for the coming year. The total number of volunteer hours as of March, 1983, was impressively tallied at more than 1.6 million.

Other speakers at the well-attended event—which included cocktails, hors d'oeuvres, and a background of live music by the Benji Austin Quartet—were Dr. Donald Kennedy, chairman of the SUH Board and president of Stanford University; and Dr. Lawrence Crowley, vice president for medical affairs and president of the hospital.

Kennedy remarked, "I am here to extend the university's deepest gratitude and my own to all of you for all you do for the hospital."

The March 21 event was arranged by the Department of Community Relations, under the direction of Jeanne Kennedy. Buttons and balloons commemorating "our Auxiliary—one in a million" were distributed. This was the third time a reception was held for the Auxiliary, the first having been in 1980.

—Lisa Ames

Auxiliary members can be found everywhere at SUH, from the pediatrics playroom (left, Margaret Rice) to the gift shop (below, from left: Carol Davis, Laurie Cecil, and Dollie Mendelson), generating funds for numerous donations to the hospital.

Nursing gets grant to expand research training program

A grant to develop a research training program for practicing nurses has been awarded to Stanford University Hospital Nursing Services.

The three-year $600,000 grant from the Division of Nursing of the Department of Health and Human Services is the first such research training grant to a hospital nursing service department. Until very recently nursing research training was focused almost exclusively within university schools of nursing.

The project director is Duane Walker, R.N., M.S., associate director of SUH and director of nursing services.

"We believe that nursing research is a powerful tool nurses can use to bring about changes in the delivery of health care," said Walker, "and research findings contribute to the scientific basis of nursing practice."

The Stanford nursing research program is directed at integrating clinical research as a part of nursing practice.

The research training will be designed for nurses who are daily involved in the care of patients. "They are in the best position to identify the problems that need study. They are also in the best position to collect data with the least disruption of patient care and to propose and implement solutions," according to Dr. Lois Welches, associate director of nursing services. She and Dr. Marianne Zalar, assistant director of Nursing Research, will administer the project.

Goals of the project are to develop educational programs in research methods, provide consultation support to nurses throughout the research process, and provide facilities such as research sites, libraries and data processing mechanisms. Research courses and seminars will be conducted for beginning and intermediate level nurse researchers.

The training will be offered to practicing nurses from a consortium of eight Bay Area hospitals and a visiting nurses association, all located within a 35-mile radius of Stanford. The consortium was established in 1980 under Walker's leadership.

The nine agencies in the Research Consortium of Hospitals are: Stanford University Hospital, Children's Hospital in San Francisco, Mount Zion Hospital in San Francisco, El Camino Hospital in Mountain View, Mills Memorial Hospital in San Mateo, San Francisco Veterans Administration Hospital, Palo Alto Veterans Administration Hospital, Children's Hospital at Stanford, and the Santa Clara County Visiting Nurses Association.

Nurses from each of these institutions can join together to conduct studies over a far larger study base than would be possible alone.

A major problem encountered in clinical research, according to Welches, is obtaining an adequate study sample, since the patient's stay is so short. Data collection in all of the consortium agencies will yield a far greater sample as well as enable the researchers to generalize findings.

For example, a research proposal was developed at Stanford to compare two methods of treatment for decubitus ulcers, or bed sores. Nurses have the primary responsibility for the prevention and treatment of decubitus ulcers. Many methods of care are available, but no definitive treatment has been identified.

Stanford nurses collected data on two alternative treatments and made recommendations based on healing time, nursing time, and cost factors.

The Research Consortium has expanded this pilot study and data are currently being collected simultaneously in six of the consortium agencies. Results based on the larger study may lead to a change of treatment policy and greater impact on quality of patient care.

The Research Consortium is the only group of its kind in the country. "Hospitals throughout the country have asked to join," said Walker, "but more cannot be accommodated during the pilot phase of the project." He hopes, however, that the group will serve as a model for others.

Walker is committed to the need for nursing research within the hospital setting. "It is essential that we critically and systematically examine our practice if the optimal quality of care to patients is to be ensured," he said. —Barbara Battino

Dominick Purpura

Palo Alto endorses HMP in wake of access agreement

The Palo Alto City Council last Monday, March 21, reaffirmed its support for Stanford University Hospital's modernization program (HMP). Last year the council had made its endorsement conditional on the success of negotiations over community physicians' access to laboratory equipment.

While council endorsement is not required, the state and regional agencies which must approve all hospital construction projects review local community support while assessing whether the requested improvements are needed in the local area.

Ending more than four years of discussions, the hospital's board of directors March 4 approved an access plan which is acceptable to both the hospital and community physicians.

The agreement includes formation of a hospital board access committee to review applications and decide policies for access to new technologies. Earlier agreements had already established community physician access to most of the specialized labs, and ways to replace community physicians who currently have access when they retire.

Dr. Lawrence Crowley, president of SUH and vice president for medical affairs, said the hospital will file a "certificate of need" application for the HMP with the state and county after March 30. Scaled down somewhat in the last six months, the HMP had initially been priced at $123 million.

School implements fraud committee

A new committee to evaluate allegations of research fraud has been established at Stanford University School of Medicine, Dean Dominick Purpura announced in a March 4 letter to faculty members.

Though instances of verifiable fraud have remained "vanishingly small" nationally, Purpura said, "even a rare instance of scientific fraud damages science as an intellectual enterprise, violates expectations of fundamental trust and diminishes all who take special pride in a commitment to the pursuit of truth and excellence."

"It is sufficient for these reasons that we undertake a program for dealing with allegations of academic fraud swiftly, fairly, and honorably," he said.

Both the American Association of Medical Colleges and the National Institutes of Health have, in recent months, urged medical schools nationwide to establish such committees in an effort to curb research fraud.

While a protocol for disciplining an errant researcher has long been established at Stanford, evaluating the legitimacy of allegations has been "tortuous" in the past, Purpura said. "We now have a framework within which we can examine and resolve allegations swiftly."

Anyone who believes an act of academic fraud has taken place at the medical school should promptly contact the dean, who will notify the provost and president of the university, and refer the matter to the "Committee on Ethical Scientific Performance" for preliminary study, Purpura said.

A summary of the charge and results of the committee's findings are to be forwarded to the provost within four weeks of the initial allegations. The president then will determine whether formal charges should be filed in accordance with the process set forth in Stanford's long-standing "Statement on Faculty Discipline."

Both the dean's and president's inquiries will be confidential, to be made public or disclosed to research sponsors at the discretion of the president.

Members of the Committee on Ethical Scientific Performance are: Dr. Jack Barchas, professor of psychiatry; Dr. Roland Ciaranello, associate professor of psychiatry and chairman of the school's faculty senate; Dr. John Collins, professor and chairman, department of surgery; Dr. Stanley Falkow, professor and chairman, department of medical microbiology; Dr. David Korn, professor and chairman, department of pathology; and Dr. Kenneth Melmon, professor and chairman, department of medicine.

—Deborah Franklin

When patients need to be moved between hospitals, critical care transport plays crucial role

At the Palo Alto Airport (above), a five-week-old infant with severe pneumonia is rushed from air to ground ambulance on the way to SUH, by a specially trained Stanford medical team and equipment dispatched to retrieve the ailing child.

The Department of Critical Care Transport, formed in 1978 to provide high quality intensive care during interhospital movement of patients, epitomizes Stanford's role as a regional center for the critically ill.

The innovative service is credited with saving many lives. In 1982, 556 adult, obstetric, neonatal and pediatric patients were transported, most of them from community hospitals within 200 miles of Stanford. But the number of much longer-distance transports is also increasing.

The need for such a program lies in the increasing sophistication and costs associated with critical care; not every hospital has the staff and equipment to deal with critically ill patients, explained Dr. Alvin Hackel, director of the department.

An associated program is the Northern California Perinatal Dispatch Center (NCPDC), also directed by Hackel. NCPDC helps regional physicians quickly locate available intensive care beds for critically ill babies and high-risk maternity patients, and arranges for transport when requested.

Stanford pioneered the program in 1974, and it operated on a pilot basis until it received state funding in 1976. The outreach region for the dispatch center covers almost 200,000 square miles. A similar center that covers the lower part of the state is based at the Huntington Memorial Hospital.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MARCH 30

1983 Charles E. Culpeper Visiting Professorship Lecture: "The Effects of Radiation on the Normal Eye and Optic Nerve"—Dr Rodney Million (Univ. of Florida at Gainesville). 5 p.m., M106. *See listings below for Thursday and Friday Culpeper lectures.*

Basic Science Research Colloquium: "The Formation of Synaptic Connections Between Nerve and Muscle in Culture"—Dr. Bruce Wallace. 5 p.m., Fairchild Auditorium.

Div. of Orthopedic Surgery Grand Rounds: "Bone Grafting—Principles and Techniques"—Dr. Darrell Hayes, 7:30 a.m.; and "Electrical Stimulation of Bone"—Dr. John Csongradi, 8:30 a.m.; M114.

Div. of Clinical Pharmacology Seminar: "Approaching Membrane Bound Transport Systems of the Kidney: Looking for a Needle in a Haystack"—Dr. Richard Mamelok. 4 p.m., M110.

MARCH 30 through APRIL 1

Dept. of Dermatology: Practical Dermatology Conference. Wed. 8 a.m. till 5 p.m.; Thurs. 9:30 a.m. till 4:30 p.m.; Fri. 9 a.m. till noon. Fairchild Auditorium. For further information, call 497-7854.

THURSDAY, MARCH 31

Culpeper Visiting Professorship Lecture: "The Results of High Dose Radiation Therapy and Surgical Salvage for Carcinoma of the Pyriform Sinus"—Dr. Rodney Million (Univ. of Florida at Gainesville). 5:15 p.m., M112.

Div. of Otolaryngology/Head and Neck Surgery Clinical Survey Course: "Middle Ear Anatomy and Reconstruction"—Drs. George Wilson and Chris Daniell. Noon. M105.

Dept. of Medicine Grand Rounds: "Can Computers Help Us Teach Medicine?"—Dr. Roy Maffly. 8:30 a.m., Fairchild Auditorium.

Nursing Educational Services: "Pediatric Critical Care Course, Level I." 8 a.m. till 1 p.m., M112; 1:45 till 4:30 p.m., M104. For further information and to register, call Carole Kidder at 497-6366.

FRIDAY, APRIL 1

Culpeper Visiting Professorship Lecture: "Experience with Preoperative Radiation in Rectal Carcinoma"—Dr. Rodney Million (Univ. of Florida at Gainesville). 8 a.m., S092.

Div. of Child Psychiatry Grand Rounds: "The Health and Well-Being of Children in Institutions"—Dr. Saul Wasserman (San Jose Hospital) and Dr. Jerry Klein (chief of medical services, Santa Clara County Children's Institutions). 11 a.m. till 12:15 p.m., Faber Auditorium, Children's Hospital at Stanford.

Dept. of Biochemistry Seminar: "Functional Genes and Sites in Insertions Sequence of IS1 and Their Expression"—Dr. Eiichi Ohtsubo (Univ. of Tokyo). Noon, M316.

Div. of Family Medicine: "Transforming Stress into Creativity"—Margaret Buck (John F. Kennedy University). Noon till 1 p.m., M114. First in a spring lecture series on women and health to be held Fridays at noon. For further information, call 497-7043 between 8 a.m. and noon, or 497-6431 from 2 till 5 p.m. weekdays.

Dept. of Pediatrics Grand Rounds: "Long Term Outlook Following Surgical Repair of Congenital Heart Disease"—Dr. David Baum. 8 a.m., M106.

TUESDAY, APRIL 5

Dept. of Dermatology Lecture: "Metabolic Inhibitors of Cancer—Inducers of Oxidative Stress"—Ronald Pardini, Ph.D. (Univ. of Nevada). 10 a.m., Dermatology Library, R136.

THURSDAY, APRIL 7

Dept. of Biochemistry Seminar: "An Adenovirus Vector System for the Expresson of Eukaryotic Genes"—Carl Thummel, Ph.D. Noon, M316.

FRIDAY, APRIL 8

Registration deadline for Nursing Research Seminar: to be held **Friday, April 15.** "Nursing and Anthropological Research: More Than Passing Meds in the Congo." 8 a.m. till 4 p.m., Peninsula Covenant Church, 3560 Farm Hill Blvd., Redwood City. For further information and to register, call Betty Kibbe at 497-7062.

Dept. of Biochemistry Seminar: "Transposable Elements in *Zea mays*"—Dr. Peter Starlinger (Inst. for Genetics, Germany). Noon, M316.

TUESDAY, APRIL 12

Nursing Educational Services: "Critical Care Course, Level II: Multiple Trauma Symposium." 8 a.m. till 4:30 p.m., Faber Auditorium, Children's Hospital at Stanford. For further information or to register, call Carole Kidder at 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

What Shumway thinks of artificial hearts

In response to inquiries regarding the death in Salt Lake City of artificial heart recipient Barney Clark, Dr. Norman Shumway, chairman of Stanford's department of cardiovascular surgery, issued the following statement Thursday, March 24:

"The concept of an artificial heart is one that everyone must respect as an answer to the overall problem of heart replacement. However, the experience in Utah is indeed an indication that the idea is still very much in the development stage.

"The need for artificial devices as an interim measure while patients await biological hearts is crucial because of the chronic shortage of donor hearts."

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

...News Notes...

Armanda Holland

Armanda Holland, dietitian assistant at the Hoover Pavilion, has won the newly instituted Department of Dietetics Outstanding Employee Award for her exemplary job performance.

Recently developed to acknowledge exceptional service from dietetics personnel, the award will be given on a quarterly basis.

Employees nominated by their supervisors for the award are evaluated in three categories: creativity in improving some regularly-carried out responsibility or frequently-confronted problem; courtesy and good communications skills in dealing with their coworkers, supervisors, patients and visitors; and exceptional performance of their duties, showing keen judgment in solving problems and willingness to assume special responsibilities.

Holland was commended for developing a time-saving method of recording patient nourishments and testing her system on a small scale in her unit at Hoover.

Also noted were her special rapport with patients, self-confidence, dependability, and willingness to work extra hours when staff shortages occur. Her award includes a certificate and a $50 bonus.

Two other dietetics employees, Jim Barnes and Patsy Obayashi, were awarded honorable mentions. Barnes works in Sanitation, and Obayashi is in Clinical Dietetics.

* * * *

The Hospital Auxiliary has agreed to purchase three rocking chairs for the intensive care nursery (ICN), along with two transilluminators (a device which helps detect lung collapse) for the ICN and pediatrics units. Baby Photo proceeds will help pay for these items, which total over $2,500.

* * * *

The Department of Nursing publication **Nursing at Stanford University Hospital** *has won a merit award from the Western Art Directors Club in the "brochure" category.*

The recruitment magazine illustrates nurses in diverse hospital settings with individuals' comments about some of the gratifying aspects of their chosen specialties.

Among those specifically commended for the production of this brochure are the departments of nursing and community relations, Ronnie Welch of medical development for editing, Art Kirsch for art direction and design, and Mark Tuschman for photography.

Preoperative lab tests could be performed as much as seven days before surgery, if the hospital board and medical staff eventually approve a medical board recommendation made last month.

Currently, no tests conducted more than 72 hours before an operation may be used. Some physicians in private practice had objected to the old regulation, stating it discriminated against outside laboratories, and sometimes required that tests be duplicated unnecessarily at an SUH lab.

Both the old and proposed new rules require that preoperative lab work be performed in a state-approved lab that is also acceptable to the SUH director of laboratories.

The board accepted the recommendation of its bylaw committee, and the issue will now be submitted to a vote of the medical staff for final approval at the time they vote for other bylaw changes.

* * * *

Brian Wallace, a former pediatrics patient at SUH, has been named the Santa Clara County March of Dimes Poster Child for the second year in a row.

Brian, who is six years old, underwent surgery here in November, and is regularly treated at Children's Hospital at Stanford. He has cerebral palsy and cystic fibrosis.

Brian's mother Chris is a clinic services representative in Stanford's department of immunology.

One upcoming event Brian will help send off is the annual WalkAmerica walkathon, to take place April 24. Anyone interested in walking or sponsoring a participant should call Chris Wallace at 497-6001, or the March of Dimes, at (408) 297-1864.

* * * *

All Hospital exit doors are presently being modified for better security and handicapped accessibility, according to Ron Just, director of operations and maintenance.

Two exit stairwells, near the cafeteria and the Emergency Department, have been completed, and others will follow in the next few weeks.

The changes have come about for several reasons. Personnel had reported security hazards caused when damaged doors appeared closed and locked, but were easily opened. Replacement hardware became obsolete, and occasionally parts had to be specially made, Just said. Finally, when facilities are upgraded, certain codes require that they be made accessible to handicapped persons.

* * * *

"Communication with your Boss," "Eat Light," and "Meeting Management for Supervisors and Managers" are just a few of the classes being offered this spring, from April through June, by the Human Resources Development Department (HRD) of SUH.

To find out what courses are available this quarter or to register, call HRD at 497-5233.

A 10-year high for faculty affirmative action

...but the road ahead remains challenging. Senate to hear more from Hastorf

This is the 10th annual report to the Senate of the Academic Council on Faculty Affirmative Action. The report is being made in accordance with the February 1973 Senate legislation calling upon the Faculty Affirmative Action Officer to make an annual report to the Senate on the representation of women among Stanford faculty: 1) newly hired and 2) promoted during the preceding year. All such reports have included data about minorities as well as women.

All appointments are reported as of the academic year they become effective. Tables I and I-A show new apointments since 1972-73, of women and minorities to the Academic Council by school and division. They also show cumulative totals and percentages. There were a total of 18 women appointed to the faculty during the 1982-83 academic year. This represents the highest percentage (24%) of women faculty appointments during the past decade. The greatest gains were in the humanities area with 12 new faculty women appointments. There were a total of 11 minority faculty appointments, the greatest percentage (15%) over the past decade.

Tables II and II-A show new appointments by rank and also include cumulative totals and percentages. Table II displays that during 1982-83, there were 16 women appointed to the tenure line, including one at the level of full professor, and 2 at the nontenure line. There were 11 women appointed to the level of assistant professor which constitutes the highest percentage (28%) of appointments at that level during the past decade. In the past 10 years, there have been 147 women appointed to the Academic Council constituting 17% of all new appointments. There were a total of 11 minority faculty appointed to tenure track. Of these, 2 were at the level of full professor. Over the past 10 years, there have been 23 blacks, 31 Asians, and 19 Hispanics appointed which constituted 9% of all new appointments to the Academic Council.

Table III and III-A show the number and percentage of women and minorities in tenure line positions and with tenure. The number of tenured women has doubled since 1972 but the percentage of tenure line and tenured professors who are women continues to increase slowly. The number of tenured minorities has also shown considerable progress but it should be noted that the percentage of tenure line professors who are minorities has increased slowly.

Tables IV and IV-A show women and minorities at the nontenure line professoriate since 1980. Table IV shows a total of 10 women (9%) and 7 minorities (6%) who were appointed to the nontenure line professoriate.

Tables V and V-A reflect promotions to tenure, terminations and resignations, retirements, and deaths. Over the past decade, 29 women (11%) and 20 minorities (8%) have been promoted to tenure. During 1981-82, 4 women were promoted to tenure, the highest percentage since 1973-74. Half as many minorities were promoted to tenure. There have been 60 women and 29 minorities under terminations and resignations. While this continues to underscore the need for continued vigilance in the area of retention, it is important to note that the percentages involved are not much out of line with university norms.

Provost Hastorf will present further information about this report and other faculty and administrative affirmative action results at the March 31st Senate meeting.

Minority students...

continued from page 1

The report notes that "Stanford conducts graduate recruitment for minority students and for women in science and engineering. Our efforts have developed in recognition of the legacy of discrimination which has excluded, to a large extent, members of these groups from graduate education opportunity.

Recruitment complex

"Minority recruitment, in particular, is a complex matter, precisely because of the pervasiveness of this legacy. Sometimes a minority student's talent and ability may be misread or undervalued by both the student and the graduate admissions officials.

"In addition, the details and benefits of a scholarly field or profession may be relatively unknown to the minority undergraduate whom we expect to recruit. The lack of minority role models in academe can deprive minority students of important mentor relationships and help to foster inhibitions about graduate work.

"Financial considerations are often viewed differently by minority students because of family background and family financial demands. The acclaim of Stanford has not reached some minority communities and, where Stanford is known, it is often seen as inaccessible.

"Given these circumstances, along with the highly selective nature of Stanford's academic-programs, our approach to minority recruitment must be diversified, sensitive, and persistent.

Promoting an idea

"The aim is to increase the number of minority students enrolled in graduate programs at Stanford, but the task includes promoting the *idea* of graduate studies among minorities nationwide, a task which will benefit Stanford in time.

"Women in science and engineering have also faced discrimination and remain underrepresented in these fields. Many factors, some of them akin to the minority experience, work to exclude women from these fields.

"As a major research university with excellent educational opportunities in science and engineering, we accept a special responsibility to recruit women graduate students."

Three assistant deans—Anne Medicine, Keith Naylor, and Noey Lozano—have responsibility for the four groups targeted for minority recruitment: American Indians, blacks, Chicanos, and Puerto Ricans. An associate dean, Jean Fetter, has responsibility for recruitment of women in science and engineering.

SCIRE, SWOPSI seek codirectors

Noon hour informational meetings will be held Wednesday, April 6, Tuesday, April 12, and Thursday, April 14, in Old Union Room 590A for students who are interested in applying for a position as codirector of SCIRE or SWOPSI.

The directorship of these programs is shared by a professional and a student codirector. Each year two new students are selected to serve as codirectors from September through June.

Both positions are half time (20 hours per week), and the students have the option of enrolling half time for half tuition (eight units or fewer). The salary is in the administrative level range.

Responsibilities of the SCIRE codirector are student outreach, coordination of student applications, administrative liaison, administration of the Innovation Fund, general office work, and serving as an *ex officio* member of the Policy Board.

Responsibilities of the SWOPSI codirector are organizing and coordinating SWOPSI workshops and other public events, overseeing the process of course approval, catalogue production and other publicity, and acting as liaison for the program and the Policy Board with the community.

Applications for the two positions are due by 5 p.m. Wednesday, April 20. Questions should be directed to 497-4504.

Sample caterers' food

The Tresidder Catering Service will present its new catering manager, Linda Kim, the new chef, Justine Krantz, and some of their delicious menu options from 11:30 to 1:30 p.m. Friday, April 1, in Tresidder's Room 281.

Those who attend can sample the goodies and discuss their catering needs.

Speer...

continued from page 7

Speer comes from a tiny farming town in Iowa—Stanwood. "There were 62 in my class, including all the students from the next town. Most of my classes senior year had only four students."

She started studying the bassoon in sixth grade, and traveled almost every weekend, with her oboist sister, to nearby cities to play with youth symphonies, such as Cedar Rapids and Iowa City. "We entered many competitions and were well-known in eastern Iowa. My bassoon teacher at the University of Iowa was very disappointed when I decided to go to Stanford," she recalls.

Speer first heard of Stanford from fellow Sierra Clubbers on a service trip. "My parents said, why not apply? It was quite a shock when I got in!"

Her father is a large-animal veterinarian with a far-flung rural practice; her mother takes calls at home and relays them to him over a two-way radio and keeps the books. "They're straight out of Herriot's book *All Creatures Great and Small*," she recalls with affection. "It's perfect for them."

Speer's sister graduated from Yale and now goes to law school. One older brother is a flight test engineer in the Air Force; the other recently finished a master's degree in physics at the Navy's postgraduate school in Monterey.

Speer goes home about once a year. "Stanwood never changes, but my perception of it has. I used to feel insulted when people would comment on how flat Iowa is, but now I realize it is!

"It was a big change for me coming out here. One of the biggest shocks was people being rude to me for no reason. That doesn't happen in a small town—there is no impersonalized nastiness. If someone is rude to you, you know exactly why.

"I like Iowa, but there aren't enough jobs back there. I'd have to live in a city and I don't want to. Once you've been going at a faster pace out here in the Bay Area, life back there looks just too slow, but eventually I'd like to go back to a rural life. Wyoming is the type of place that attracts me. I would rather face challenges from nature than from people. But for now, I want to be here."

Dental insurance cost rises for some

Jeannie K. A. Thomas, manager of benefits and records, announces an increase in premium rates under the Stanford University Group Dental Plan.

Faculty and staff members who are not currently required to contribute to the cost of the dental premiums because of their appointment or the terms of a collective bargaining agreement will not be affected by the rate increase.

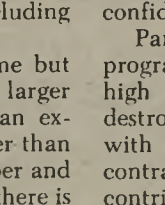
Those who are currently paying one-half of the dental premium because of appointment status will be affected by the dental rate increase. Participants in the Dental Plan who are on leaves without salary and paying the full cost of the premium will also be affected.

The rates under the Stanford University Dental Plan have remained unchanged since the implementation of the plan on September 1, 1980. The initial rates were based on a projected use of the plan and must now be increased to reflect the actual utilization of the past two-and-one-half years.

If you are currently paying for half the dental premium through payroll deduction, you will see an increase in monthly deductions beginning with your paycheck of May 22, 1983. Here are the rates effective June 1, 1983:

For	50-74% Time Your Monthly Contribution	Leave Without Salary Your Monthly Contribution
You alone	$ 5.62	$11.25
You plus one dependent	$10.29	$20.58
You plus two or more dependents	$16.76	$33.52

If, as a result of this rate increase, you should decide to cancel your dental coverage for yourself or dependents, you must wait 12 months before applying for coverage again.



If you have questions or wish to change your coverage please contact the Office of Benefits and Records at 497-1776 or 1777. SLAC employees should call the SLAC Benefits office at 28-2357.

Four million copies

DURING THE MONTH OF MARCH 1983
the Stanford Word Graphics Copy Centers produced four million photocopies. This is a significant milestone of service to the University.

The University is dependent upon the timely and economical availability of the paperwork that supports its day-to-day operation. The cheerful, dependable service that we have come to expect from the copy centers is much appreciated.

Congratulations

Above is a citation presented to the Word Graphics Copy Centers by Vice-President for Business and Finance William Massy at a special celebration. The four million copies consumed 2.6 million pieces of paper (26,000 pounds). Seventy percent of the work was printed on both sides of the paper—if it had not been, four million sheets (40,000 pounds) would have been used.

Elsewhere on this page is a good suggestion on what to do with all those pieces of paper (if, of course, they're white) after you've read them.

Please RECYCLE white paper by itself

ASSU Recycling now offers small white bins for white paper only in addition to the large green ones many University offices are familiar with.

All paper that's white may be put into the white barrels, with the following exceptions: NO newsprint, glossy-finished paper, glue-bound books, cardboard, envelopes with self-adhesive labels or plastic windows, or carbons (including "carbonless" carbons).

Computer paper is also welcome but often is better accommodated in a larger green barrel. White paper with an excessive amount of colored ink (other than black ink) is classified as mixed paper and should be put in a green barrel. If there is no green barrel for mixed paper at hand, ASSU Recycling asks that the mixed paper be stacked to the side of the white bin.

The white paper program began in 1980, after a human biology environmental policy course discovered that the University processed 25,886 reams of white paper or 13,000,000 sheets (about 2,500 miles if laid end to end) during winter quarter 1979. ASSU Recycling services more than 40 offices and departments with white barrels now and will add more as requested.

Long-fiber white paper is considerably more valuable than lower quality newsprint, explains Leslie Young of ASSU Recycling. It is cheaper to make paper from used white paper than from a mix of papers, and the product is more satisfactory.

Separating white paper from mixed paper at the source saves many hours of very tedious work for the recyclers. The small white bins can be put right next to a desk or a copy machine.

Last year the recycling program initiated a new white paper/computer paper project on a larger scale specifically for confidential material. Large three-cubic-yard dumpsters, complete with lock and key, were placed at four locations on campus which generate high volumes of confidential papers.

Participants are very satisfied with this program. No longer do they have to pay high haulage or incineration fees to destroy the papers—ASSU Recycling deals with a reliable, certified destruction contractor. In addition, these offices are contributing used paper to be made into new paper products, thus helping to conserve dwindling resources. There is no cost to them, and the paper generates revenue for the nonprofit, student-run recycling project.

During this school year, ASSU has recycled approximately 5.3 tons of computer paper and 5.6 tons of white paper per month. Last year's total volumes were 59.52 tons of computer paper and 56.89 tons of white paper.

Volumes are steadily rising and could increase drastically if all paper at Stanford were recycled. White barrels are ready at the recycling yard on Pampas Lane for assignment to needy offices. The large dumpsters for confidential material can also be ordered through ASSU Recycling—locations are worked out with the Planning Office.

For answers to questions or more information about the recycling projects, call ASSU Recycling, 497-0915.

Academic Council

TO MEMBERS OF THE ACADEMIC COUNCIL
NOTICE OF MEETING
Friday, April 1, 1983

A meeting of the Academic Council will be held on Friday, April 1, 1983, beginning at 4:15 p.m. in the Physics Lecture Hall (ph100).

Agenda for the meeting will be as follows:

1. Minutes of the Council meeting held on February 3, 1983 (Draft minutes below)
2. Memorial Resolutions:
   Cly H. Hatcher
   Frederick E. Terman
   Harry A. Williams
3. Report on Senate activities Autumn Quarter:
   A. L. Fetter, Chair
4. Report from the President
5. Unfinished business
6. New business
7. Adjournment

Clara N. Bush
Academic Secretary

Draft minutes of the meeting of the academic council

February 3, 1983
(Subject to Approval)

The Winter Quarter meeting of the Academic Council was held on Thursday, February 3, 1983, beginning at 4:15 p.m. in Room 290 of the School of Law with President Donald Kennedy presiding.

The minutes of the last meeting of the Academic Council, held on October 8, 1982, which had been published in *Campus Report* on January 26, 1983, were amended as follows: The paragraph announcing Eric W. Wright as the recipient of the John Bingham Hurlbutt Award for excellence of teaching in the School of Law was corrected to read "...the son of a distinguished Stanford professor...." The minutes were accepted as amended.

The following memorial resolutions were presented to the Council:

MEMORIAL RESOLUTION
LOREN R. ("YANK") CHANDLER
1895-1982

Professor William Northway presented a resolution in memory of the late Loren R. "Yank" Chandler, Emeritus Professor of Surgery, who died on October 16, 1982. The resolution was prepared by Emeritus Professor David A. Rytand (Chair), Professor Robert A. Chase, and Emeritus Professor Roy B. Cohn.

MEMORIAL RESOLUTION
ANTHONY E. SOKOL
1897-1982

Professor Robert C. North presented a resolution in memory of the late Anthony E. Sokol, Emeritus Professor of Political Science, who died on November 11, 1982. The resolution was prepared by Emeritus Professor Robert A. Walker, Professor Robert C. North, and Emeritus Professor Kurt Steiner.

MEMORIAL RESOLUTION
JAMES T. WATKINS IV
1907-1982

Emeritus Professor Kurt Steiner presented a resolution in memory of the late James T. Watkins IV, Emeritus Professor of Political Science, who died on September 27, 1982. The resolution was prepared by Emeritus Professors Kurt Steiner (Chair) and Robert A. Horn, and by Professor Robert C. North.

The three memorial resolutions were adopted by the Council in the customary manner.

Memorial Resolution
Cly Howard Hatcher, M.D.
1900-1982

Cly Howard Hatcher, M.D., Emeritus Professor of Surgery and former Head of the Orthopaedic Division of the School of Medicine died December 19, 1982 of a massive heart attack from which he never regained consciousness. Memorial services were held at St. Bede's Episcopal Church on January 3, 1983. He is survived by his three children, Barbara, Nancy, and Henry. His lifelong companion and devoted wife, Annabel, died in 1981, leaving a great void in his life.

Howard Hatcher was a product of the West, having been born in Porterville, California on January 13, 1900. After graduation from Chaffee Union High School, Ontario, California in 1918, he joined the U.S. Navy in which he served as a medical corpsman during World War I until 1919. He entered the University of California, Berkeley in 1920 and obtained his A.B. degree in 1924. His Medical School was the University of California in San Francisco, where he was awarded the M.D. degree in 1929.

In the middle of his medical education he married Annabel in 1927. He did his internship at the U.S. Naval Hospital, San Diego, from 1927-28, but found that it was not recognized by the University of California where he applied for a residency in Orthopaedic Surgery. As a result, he repeated his internship at the Southern Pacific Hospital in San Francisco in 1928-29.

This era of his Far Western education ended in 1930 when he volunteered to become the first resident in Orthopaedic Surgery at the new University of Chicago School of Medicine. It was here that he came under the influence of Dallas Phemister, M.D., Professor of Surgery. Together they built an intense interest in bone pathology, and for the next 30 years laid the foundations for contemporary orthopaedic surgery as Howard Hatcher progressed from resident in Orthopaedic Surgery to a full professor at the University of Chicago in 1950.

In 1960, the Hatchers moved to Palo Alto to head the Orthopaedic Division of the Department of Surgery in the newly-built Stanford Medical School that moved from San Francisco. Dr. J. Garrot Allen, the new Professor of Surgery and former colleague of Dr. Hatcher, had recruited him to take on this new venture when most men were thinking of retirement. The move from the City to the Farm was disruptive. Only a few stalwarts from the old Stanford, such as Dr. Roy Cohn, came down from the City. Dr. David Hunt, a medical student at Stanford at the time, and now a Hatcher-trained practicing orthopaedic surgeon, wrote that when Dr. Hatcher arrived at Stanford "an authentic hero had arrived; the magnetism and the authority radiated." Three of that group of six surgical interns were drawn to orthopaedics that year!

In 1965 Howard became Professor Emeritus of Orthopaedic Surgery, but remained with us as our teacher of orthopaedic pathology, patiently sitting on the other side of the microscope tutoring every resident for the next 15 years, and acting as the consultant for the faculty of the Orthopaedic Division.

He gained an international and national reputation in the diagnosis and treatment of bone tumors despite the fact that his curriculum vitae consisted of only 18 publications. He held fast to the belief that publication for publication's sake was useless.

Dr. Hatcher brought a meticulous scholarly approach to orthopaedics. He continually sought ways to improve the accuracy of diagnosis of difficult conditions, particularly benign and malignant tumors of bone. He was gifted in devising surgical approaches, combining a high likelihood of cure with minimal compromise of function. He always pursued a detailed knowledge of his patients so that they felt bound by his genuine interest in their lives; they would write him of marriage, child rearing, and family events, as well as reporting their physical status. His was the ultimate extended family.

Because of his scholarship in the field of bone pathology and its clinical correlations, radiologists and pathologists, as well as orthopaedic surgeons, will long remain in his debt for the advances he made in this field.

When you look for his monument, we must document the extraordinary circle of academicians in orthopaedics who were his graduate students at the University of Chicago: Professors James S. Miles (Colorado), J. Crawford Campbell (Boston), William F. Enneking (Florida), Michael Bonfiglio (Iowa), Eugene R. Mindell (Buffalo), Thomas D. Brower (Kentucky), Henry J. Mankin (Boston), and the late Mary Sherman (Dallas) and John J. Fahey (Chicago).

When he was an intern in Chicago, the chairperson of this resolution learned about Howard Hatcher from one of his former University of Chicago students, John J. Fahey, M.D., one of the "Hatcher" orthopaedic surgeons to become national and international leaders in the field. He said, "Howard Hatcher was different." Indeed he was! His difference was in strict scholarship without oen taint of political motivation, sometimes a painfully direct comment, and scrupulous honesty in all his relationships. In 1973, the Orthopaedic Division under the leadership of Donald A. Nagel, M.D., established the Howard Hatcher Visiting Professorship, which has now become an annual event to ensure our memory of his contribution to orthopaedic surgery, and to rekindle his scholarly approach to patient care as a model for the faculty and students.

Eugene E. Bleck, M.D., Chair
Harry Oberhelman, M.D.
Henry H. Jones, M.D.

Memorial Resolution
Frederick Emmons Terman
1900-1982

Frederick Emmons Terman, provost emeritus of Stanford University, died in his sleep at his campus home on December 19, 1982. A memorial service was held on January 4, 1983 at the Stanford Memorial Church. He is survived by three sons, Frederick, Terence, and Lewis, and by five grandchildren. His wife of 47 years, the former Sibyl Walcutt, died in 1975.

Fred Terman was born in English, Indiana, on June 7, 1900. He was the son of Professor Lewis M. Terman, the psychologist who developed the Stanford-Binet intelligence quotient after moving to Stanford in 1910.

Fred grew up on the campus and acquired an early interest in radio. He obtained a bachelor's degree in chemical engineering in 1920, following this with the engineer's degree in electrical engineering two years later, under Professor Harris J. Ryan. He received his doctorate at MIT in 1924 under Professor Vannevar Bush. He then contracted a severe case of tuberculosis which required nearly a year's convalescence. In spite of this handicap, he was able to undertake part-time teaching at Stanford, and to begin the first of a series of textbooks on radio engineering. The success of these volumes enhanced Stanford's reputation in engineering on a nationwide basis. He became an assistant professor in 1927 and in recognition of his teaching and writing ability was made full professor and head of the department in 1937. His reputation was such that in 1941 he was named president of the Institute of Radio Engineers—the first person so chosen who lived farther from New York City than Rochester.

Always keenly interested in and dedicated to the University, his Stanford career was interrupted only during the Second World War when he was called upon to organize an 800-person government laboratory at Harvard University whose purpose was to develop anti-radar devices. As a result of his wartime responsibilities, Terman became part of a relatively small group of individuals who exerted great influence on U.S. science policy for the postwar period.

In 1946 he returned to Stanford as Dean of Engineering and began the program of faculty selection and organizational innovation that brought the Stanford School of Engineering to the forefront among American universities. He did this by recognizing that in the postwar period there were opportunities to obtain government support for basic research and graduate study in the universities without compromising their traditional independence. In addition, he perceived that an organized interaction with local high-technology industry could provide not only

REPORT ON SENATE ACTIVITIES:
AUTUMN QUARTER 1982-83 A. L. FETTER, CHAIR

Following is the text of the February 3 report on the previous quarter's Senate activites as presented by A. L. Fetter, Chair of the Fifteenth Senate of the Academic Council:

During Autumn Quarter, 1982-83, the Senate heard the customary annual reports of the previous year's work from standing committees of the Academic Council.

The Committee on Undergraduate Admissions and Financial Aids reviewed Stanford's current financial aid policy and practice, strongly endorsing Stanford's need-blind admissions policy and highly commending the admissions office operations and personnel. The committee noted that applicants from middle income levels are now most vulnerable to rapidly rising tuition costs and decreased availability of financial aid. The committee intends to monitor this development. It is also studying the completion of bachelor's degrees, in relation to students' financial aid packages and their non-financial needs.

On the recommendation of the Committee on Graduate Studies, the Senate voted to establish two new interdisciplinary graduate degree programs (an M.A. program in International Policy Studies, and a Ph.D. program in Medical Information Sciences) and to extend two others that had been favorably reviewed (Biophysics and Neurosciences). The Senate expressed concern, however, about the proliferation of graduate interdisciplinary programs and the need for continuity and perspective in their review. It charged the Committee on Graduate Studies to consider drafting for Senate approval sunset legislation for graduate interdisciplinary programs. The proposed review procedures and master review schedule should specify the Senate's role.

The Committee on Academic Appraisal and Achievement, in addition to its regular yearly work, reported on the Registrar's implementation of the Revised Pass/NC Policy. This spring, it intends to report the extensive work of its Subcommittee on the Evaluation and Improvement of Teaching.

The Committee on Libraries, and its guest Dr. Patricia Battin, Director of Libraries at Columbia University and Acting President of the Research Libraries Group, described recent developments and improvements in the Research Libraries Information Network (RLIN). Automated circulation at Stanford remains infeasible for the immediate future, however, because available systems are either prohibitively expensive or too restrictive for RLIN purposes.

The Committee on Undergraduate Studies summarized its timetable for the review of extradepartmental undergraduate programs and its work last year as a committee of the whole on the new distribution requirements. This year a new subcommittee will consider criteria for distribution requirements, and the new Curriculum Committee in the School of Humanities and Sciences should assume responsibility for reviewing those extradepartmental programs confined within the School. These developments should ease the recent heavy work load for C-US.

The Committee on Research recommended two changes in University policy, both of which were endorsed by the Senate: one established third-party University oversight of faculty employment of Stanford students outside the University; the other amended the Secrecy in Research Guidelines by significantly shortening the allowed publication delay of research results.

In addition to these six annual reports, the Senate heard an interim report from the *Ad Hoc* Committee to Study the Question of the Length of Academic Terms. That committee, which expected to present its final report by the end of the quarter, was unable to agree on a single new system that affirmed all educational values. The split between adherents of the quarter and semester systems was principally along disciplinary lines. Attempts to devise a compromise, e.g., five-week units ("Golubs") to produce terms of various lengths, were judged too complex and also too burdensome on the advising system.

The Senate spent a large part of its Autumn Quarter on University budget problems, particularly the shortfall in the recovery of indirect costs and the resulting effect upon the long-range financial forecast. Provost Hastorf detailed the gap between projected income and expenses based on standard and explicit assumptions, and then outlined the administation's proposals for closing the gap over the next few years. Vice-Provost Lieberman and Associate Controller Riddle summarized the procedure for determining indirect costs and for negotiating their recovery. They also discussed the factors that drive up indirect costs. The administration will continue to solicit faculty opinion on indirect cost recovery and budgetary control. The goal is to restore the University to financial health in as short a time as possible without undue damage to its academic integrity.

Memorial Resolution
Harry A. Williams
1901-1982

Harry Andrew Williams, Emeritus Professor of Civil Engineering, died of a brain tumor on Christmas night, December 25, 1982, at the age of 81. Williams devoted most of his professional life to the University and was a Stanford man through and through. His attention to the welfare of the Civil Engineering Department, and particularly to its students, is probably without parallel.

Williams was born in Fallon, Nevada, on August 7, 1901. In 1916, his family moved to the Santa Clara Valley, where he completed his high-school education in Santa Cruz and San Jose, graduating in 1921. He attended the College of the Pacific (then located in San Jose) for one year; he then transferred to Stanford where he received the AB degree in Civil Engineering in 1925. For the next five years, he worked as a professional engineer for the Standard Oil Company, rising quickly from draftsman to design engineer.

In 1930, Williams returned to Stanford, again majoring in Civil Engineering, to work toward the Degree of Engineer, which he received in 1933. For the first year of his graduate program he was also a part-time teaching assistant, and for the next two years, a part-time instructor. His thesis was a pioneering study of the newly-developed relaxation method for analyzing statically indeterminate structures.

On receiving his degree, Williams joined the Civil Engineering faculty, serving successively as instructor (1933-36), assistant professor (1936-41), associate professor (1941-51), and professor from 1951 until his retirement in 1966. He was recalled to active duty in 1967-68, thereby completing 38 years of devoted teaching. His primary fields were engineering mechanics, structural engineering, soil mechanics, design of foundations, and marine structures. In later years most of his teaching was at the graduate level, but he maintained a strong interest in undergraduate education and always taught at least one undergraduate course each year.

In his teaching and research, Williams was not only a pioneer but also a cooperative faculty member when the department's interests were at stake. For example, during the World War II era, he saw a void in Stanford's Civil Engineering curriculum in the then-developing area of soil mechanics, now called geotechnical engineering. To fill this gap, he developed a soil mechanics laboratory and created undergraduate and graduate courses which he taught until 1966. He covered these same subjects at the University of Hawaii in 1966-67 and 1969-70. A similar developmental role in the area of foundation design was also a Williams contribution, thus demonstrating his unusual ability to do teaching and research in many areas of structural engineering. His early investigations were in the Stanford "Vibrations Lab," located in what is now the Havas Building. He studied the effects of dynamic loads on buildings, with Professor Lydik Jacobsen, and the fatigue properties of building materials. Later, with Professor Jack Benjamin, he performed a series of now classical experiments on shear walls (structural walls designed to resist the horizontal shaking of buildings during earthquakes). Other investigations included the behavior of light-weight concrete, masonry, and plywood. He published numerous articles in these fields.

Harry served as an occasional consultant to industrial firms on stress analysis, materials, and vibrations problems. His clients included Douglas Aircraft, Corps of Engineers, U.S. Bureau of Reclamation, Tracerlab, and Westinghouse. In addition, he spent 15 months (1949-50) on research at MIT and two separate years after retirement as a visiting professor at the University of Hawaii, where he helped organize a new Department of Ocean Engineering.

Williams was a responsive and willing adviser, both academic and personal, to numerous graduate and undergraduate students. Harry and his wife Gertrude opened their home to those who needed counsel and friendship, whether related to academic, employment, or personal matters. For several years, he was Faculty Adviser to the Stanford Student Chapter of the American Society of Civil Engineers. In all of his work, he was a true professional, participating actively in several engineering organizations. Professionalism characterized his teaching as well; technical subjects were presented with an emphasis on professional practice and professional ethics.

Within the department, Harry's gentleness served well. Often, he was the conciliator and peacemaker, undertaking roles that no one else desired, and in his quiet way he calmed many a controversy. Faculty and students alike both loved and respected him. Through his association with the Bechtel International Center, where his wife Gertrude worked for many years, he spent many hours with visiting scholars, particularly from Japan, who desired an informal opportunity to improve their conversational English.

Harry's friendliness was outstanding, whether it be a game of golf, a lunch at the Seniors in Retirement monthly meeting, or a chat by the swimming pool. He was willing to work with you on refurbishing your golf clubs or to listen to your latest joke. He knew your interests and would lead you to discuss them. As both a good listener and a sharp questioner, a discussion with Harry was a fruitful experience.

He is survived by his wife of more than 50 years, Gertrude Smoyer Williams; a son, Brian Kirk Williams; a daughter, Susan Williams Lyons; five grandchildren; and two sisters. A memorial service was held on January 6, 1983, in Stanford Memorial Church. Harry is sadly missed by his many friends.

Memorial Resolution
FREDERICK EMMONS TERMAN

continued from page 20

financial assistance but intellectual support and stimulation as well for both faculty and students. Terman was extraordinarily successful in creating what he called "a community of scholars."

Terman became provost in 1955, and from 1959 served in addition as vice-president of the University until his retirement in 1965. During that period he devoted his full energies to developing the University as a whole. It was widely agreed that he and President J. E. Wallace Sterling constituted a remarkably effective team. Particularly evident during this interval was Terman's ability—characteristic of his entire career—to think constructively about the future, and to act accordingly.

Terman achieved during his lifetime a truly international reputation. He received five honorary degrees and was decorated by three governments. He held the highest U.S. civilian awards—the Presidential Medal for Merit, and the National Medal of Science.

Fred Terman was a giant in vision, innovation, and achievement, but he never lost his humility. He was always available to junior faculty, graduate students, and former students. His wisdom and clear reasoning influenced the personal and professional lives of an extraordinary number of people, and as David Packard has said, "He was responsible more than any other single person for the position of excellence Stanford now enjoys."

Ralph J. Smith

Report from the president

President Kennedy devoted his report to a review of the problem of indirect cost recovery.

This year there has been a significant reduction in the recovery of indirect costs associated with sponsored research projects. This has resulted in increased pressure on other sources of income, e.g., tuition, and has prompted significant efforts at expense reduction and internal reallocation of funds.

In reporting the history and status of indirect costs over the past decade, President Kennedy defined direct and indirect costs, specified how indirect costs are figured and negotiated, and discussed the interrelationships among indirect cost rates, research volume, and unrecovered costs. He surveyed the rise of indirect cost rates in recent years, outlining the factors which have contributed to significant increases in the rate at Stanford and at other similar institutions.

Having reaffirmed Stanford's policy of fully allocating research costs and fully recovering them, pointed to the economic and political realities which may prevent our recovery of full indirect costs on research, currently and in the immediate future:

1) Fixed indirect costs are currently spread over fewer projects because of a low rate of research volume growth.
2) Actual rates of indirect costs over the past few years have exceeded the negotiated rates, resulting in large positive carry-forwards.

continued on next page

Academic Council...

continued from page 21

Both these factors will tend to drive up indirect cost rates to unacceptably high levels, and to strain relationships between research faculty (who are concerned about the political climate in Washington and about their competitive status versus that of their counterparts in other institutions) and administrators (who are responsible for full indirect cost recovery on behalf of the University).

These conditions may lead the University to modify, for the immediate future, its practice of pressing for full recovery of indirect costs. Stanford plans to take the following steps in the next year or so to ameliorate this problem:

1) Ease the immediate push for full indirect cost recovery as a concession to current political and competitive forces;
2) Work to gain understanding here and in Washington of the reality of indirect costs;
3) "Back up" to full recovery of indirect costs by reducing indirect expenses as much as possible consistent with our other responsibilities.

These actions will be taken to limit the risks to Stanford's principal investigators and to private research universities in today's political climate, while at the same time working for the University's return to full overhead recovery. The full text of President Kennedy's Academic Council report on indirect costs was published in *Campus Report* on February 9, 1983.

At the conclusion of his report, President Kennedy has asked how the indirect cost rate will be set if it is not based on the principle of full recovery. He responded that it then must be set much as any other price is set, by approaching full recovery as close as we dare, considering market and competitive factors as well as the political forces at work. Price-setting is said to be the toughest and most "seat of the pants" judgment that organizations ever have to make.

He was asked how this short-run change in recovery practice would affect the recovery of the very large amounts the government now owes the University because of underrecovery in past years. He responded that arbitrary limitations on recovery rates (self-imposed or otherwise) will make full recovery of all present carryforwards virtually impossible.

In response to a final question about effecting full recovery through cutting indirect costs, President Kennedy emphasized that no one effort alone is likely to bring us into a full recovery mode; it will take cutting of indirect costs, increased research volume, and also increasing the understanding of those in Congress and in federal funding agencies about the reality of indirect costs.

There being no further questions, President Kennedy then introduced Dean F. Hargadon, who reported from a broad perspective on the undergraduate admissions picture at Stanford. Dean Hargadon, whose report was laced with wry comments and illuminating tabular data, made a number of major points:

1) It is not everyone's dream in life to attend Stanford. Only 14,000 of the approximately three million high school graduates in a given year even apply. Of those admitted to Stanford, there is no reason given by a student for coming to Stanford that is not cited by another as the reason for not coming to Stanford.

2) The potential college applicant pool in a given year is far less manipulable than is generally assumed to be the case.

3) Significant changes in the makeup of a student body are possible over time. In the last fifteen years at Stanford, at least three noteworthy trends have been established:
   a) an increase in the number of the minority students enrolled (18 % of the current freshman class as compared to 3% in 1966);
   b) an increase in the number of women enrolled (42% of the current freshman class as compared to 32% in 1966); and
   c) an increase in the number of different secondary schools from which our applicants, admits, and enrolled students come (applicants from 4,059 schools in 1982 as compared to 2,614 in 1966; enrolled students from 991 schools in 1982 as compared to 653 schools in 1966).

4) Sheer geographical proximity to particular institutions of higher education exerts a strong influence on the college application and enrollment decisions of high school seniors. The great majority of students in this country attend college within 400 miles of their homes. Even institutions like Harvard and Stanford, with an obvious national spread among enrollees, show strong evidence of this geographical effect in their enrollment patterns.
5) For colleges like Stanford, the rather sharp decline in the absolute numbers of students scoring at the highest levels on one or another national standardized test is far more significant than the more highly publicized declines in the mean test scores. In 1982, for example, fewer than half as many students scored above 700 on the Verbal SAT (i.e., 8,240 as compared to 17,560 in 1972), or above 750 on Achievement Tests in English Composition (i.e., 1, 302 as compared to 2,918 in 1972). The declines are not all so dramatic, but they occur in all fields and at all levels.

The Stanford applicant pool has steadily increased in size and in the proportion of students who achieve very high scores on standardized tests. Stanford's practice of favoring those applicants whose academic programs appear to have been most rigorous helps to balance whatever limitations the test scores may have. The percentage of freshman applicants admitted each year has declined from 52% in 1948 to 18% in 1982; the percentage of transfer applicants from 23% in 1972 to 8% in 1982. Stanford applicants, by and large, reflect the changes with regard to career patterns which occur nationally.

Dean Hargadon closed with three additional points:

1) Achieving some admissions balance overall is a continuing goal, but it is simply impossible to achieve in any absolute sense. Maximizing any single criterion means that something else has to give.
2) The present basis for calculating need for financial aid appears to penalize frugality and reward families who spend their money on luxuries rather than save for higher education. This is a knotty problem, however; for whatever reason, the student does need financial aid to accept admission.
   Unfortunately, financial aid is now too often expected as a right, and not fully appreciated when it is received.
3) The recent NCAA legislation on athletic eligibility needs to be revised. Some sort of rule whereby colleges would be allowed to award incoming athletic scholarships only in proportion to *graduating* seniors who had been on athletic scholarships would help ensure that students' educational needs and interests were not overlooked, and would raise the academic standards of intercollegiate athletics everywhere.

Dean Hargadon's stimulating presentation was received with thanks.

There being no further business, the Academic Council adjourned at approximately 5:30 p.m.

Clara N. Bush
Academic Secretary

Imposing end-use criteria on research would hurt science, Lieberman says

continued from page 1

university. Most contribute only indirectly to the national defense and much other non-Defense Department funded research contributes in a similar way.

"Almost all research can be said to have some military utility. What I am concerned about is that a general move. . . in this direction will produce a narrowing of the intellectual life here.

"Stanford can contribute best to the national defense by the broad excellence of its research and training. . .

"Some of the more specific hazards I see are the following:

"Problems such as those presently visible at SSRL will occur where an outside group such as SLAC finds itself in 'involuntary servitude' to a weapons-related project.

"Groups from outside the University may continue to purchase the use of Stanford facilities (like SSRL), removing them from the control of Stanford faculty and staff.

"Programs with short-term relevance may become classified as secret, causing the work to be discontinued, with bad effects on students and staff.

"Programs with immediate relevance to military uses may be subject to pressures for expansion and priority which affect other research."

In a separate interview, Vice Provost Gerald Lieberman, dean of graduate studies and research, said there was "no objecting to the faculty reviewing our criteria. The Committee on Research did that when the issue first arose."

These criteria bar secrecy in research on campus, but impose no limits based on prospective end use of the research.

"Personally, I feel the criteria are very reasonable," Lieberman said. "Imposing an end-use criterion could be detrimental to the progress of science in the U.S."

While he will be in London when the Senate discusses the issue, Lieberman expressed his personal opinion that it would be "just as appropriate, and much more relevant" to discuss "mission-oriented research" rather than "weapons-related research," a more inflammatory term.

In the fiscal year ending Aug. 31, 1982, he said, about $24 million of research expenditures at Stanford came from the Defense Department. Total research volume was $123 million, excluding $61 million paid SLAC from the Department of Energy.

Both the National Science Foundation and the Department of Health and Human Services accounted for a larger share of Stanford research volume than did Defense.

But the overall share of Stanford research funding from Defense has risen, in line with national trends. In fiscal 1981, Defense accounted for $22 million of a $120 million total, excluding SLAC. In fiscal 1978 it amounted to $10 million in a total of $81 million.

No funding was included in President Reagan's fiscal 1984 budget for the controversial proposal for research at SSRL by three national laboratories: Lawrence Livermore, Sandia, and Los Alamos.

They seek about $5 million for the development and testing of high speed x-ray detectors from the Department of Energy's Office of Military Applications. Besides funding SLAC entirely, the Department of Energy is the largest source of funding for SSRL.

The SSRL proposal review panel, a group of 10 experts outside the University, has raised several questions concerning the national laboratories' proposal, but neither these questions nor Stanford research policy would bar the research on the basis of its application in weapons testing.

In his letter to the Faculty Senate, Mozley said: "It may be possible to decide on criteria for end-use which will add an additional screening to that obtained by banning secrecy. The question is, can this be done without at the same time preventing generally interesting work from being done, or intruding too much on the choice of work by the faculty."

He suggested that distinctions might be made on the basis of 1) short-term relevance to military uses, 2) issues of "involuntary servitude," and 3) reducing the ability of outside groups to "purchase" the use of Stanford facilities.

The University might also require those principal investigators wishing to do weapons-related work to defend their choice to a peer group, Mozley said.

"This, although intrusive, could have the effect of making principal investigators aware of possible unpleasant consequences, such as those at SSRL. It is best to stop such projects before they are clearly formulated. . . .

"There should be an examination of the volume and character of research being done here to see if the drift toward military relevance is occurring. . . .

"In making this proposal, I do not wish to imply any criticism of the (University) Administration in its handling of these issues.

"I feel that the problem is real and should be understood by the University as a whole. The Senate is therefore a suitable forum.

"Even if no clear solution to the difficulties can be found, the discussion should make the complexity of the situation clear to the University community."

The Committee on Research is headed by Prof. James Meindl, electrical engineering. Members include Profs. Jon F. Claerbout, geophysics; Michael D. Fayer, chemistry; Edward Garwin, SLAC; Philip C. Hanawalt, biological sciences; Sumner M. Kalman, pharmacology; and John B. Shoven, economics; Marcia M. Bieber, research associate in radiology; Rosemary Redfield, graduate student in biological sciences; and John Halamka, senior in medical microbiology.

Lieberman and Earl Cilley, director of the Sponsored Projects Office, serve ex-officio, without vote.

Schawlow/ continued from page 3

"The term 'quantum electronics' was only invented in 1959, during the early days of masers. It conveyed the idea of using atoms and molecules instead of electron tubes to generate first radio waves and then we were able to extend it to light waves.

"So the science of generating and controlling electromagnetic waves through atoms and molecules is the subject of quantum electronics, but the raw materials of quantum electronics are the atoms and molecules. You have to understand those deeply before you realize what they can be made to do.

"If I were fully into quantum electronics I would be spending more time on devices than I do. Instead, I like to explore atoms and molecules not just for their own sake, but to find new ways of doing it.

"The hope is that they may give us new ways of creating and controlling electromagnetic radiation.

"For the last couple of years we have been concerned with systematic ways of using lasers to 'label' one particular state of molecules so that we can identify what connects to that one state in the spectra.

"We have had a good deal of success in simplifying a few spectra, but we are more interested in developing a general method. We are concentrating on the molecule of sodium, which is a convenient one to work on, and we have learned a great deal about that molecule."

The research of the Schawlow team is carried out in an eight-room laboratory which he shares with a brilliant young German-born researcher, Prof. Theodor Hansch, who came to Stanford as a postdoctoral fellow from Heidelberg on a NATO fellowship.

"As soon as he arrived we realized that he was extraordinary, and within two years we had hired him as an associate professor, and a short while after that he was made a full professor.

"I try to keep out of his way in research as much as possible so that he can go straight ahead. We do collaborate occasionally, and we have a number of fields in common.

Ours is a nice informal atmosphere. We like to improvise. When I try to plan things for the future it hardly ever works out the way I imagine. On the other hand if we get an idea, and we have the necessary equipment, then we can try it out immediately.

"Our equipment is getting more elaborate. Typically, in our work, we will have one laser that drives another laser. It is room-sized equipment, nothing gigantic."

In my own basic research I never dreamed that the first practical use of lasers would be to repair detached retinas of the human eye.

—Arthur Schawlow

Is Schawlow's research affected by current cuts in research expenditure?

"Our funds were cut back soon after I received the Nobel! They cut us by about 10 percent. They said it was hoped that the cuts would be restored before long, but I am not counting on it. We face being nibbled away by inflation. Winning a Nobel is no protection in research, though perhaps it may be to some.

"We do receive some money from the Navy, part of a general contract on advanced laser source research."

Schawlow believes that it is not always a good idea to go directly at a problem in order to solve it. "In my own basic research I never dreamed that the first practical use of lasers would be to repair detached retinas of the human eye. I had never even heard of a detached retina, but today this condition is being treated as a routine, by lasers.

"I think if I had been trying to prevent blindness I would not have been fooling around with simulated emissions from atoms."

Schawlow keeps a close eye on the latest uses of lasers. "It is gratifying to see how lasers are becoming common in surgery. It is bloodless, and the use of lasers in operations is growing quite rapidly.

"Lasers are wonderful in dermatology for removing tattoos or removing unsightly birthmarks."

Schawlow smiled as he pointed to a plaque on the wall which certified that he is an honorary member of the Gynecologic Laser Society, whose members have done good work in removing pre-cancerous tumors in the cervix.

"I like to think lasers can save lives in other ways. There are systems which the police are using, consisting of a neon laser beam mounted on a rifle so that a suspect knows that he is in the sights when the spot of light hits him, and so encourages him to give up.

"Lasers are being used in machining in an increasing way, because they are very useful in welding metals which otherwise could be treated only with very great difficulty.

"Another important use is in the highly selective hardening of particular parts of a metal. A leading auto manufacturer says that this may lead to treating the walls of engine cylinders in stripes, so that the hardened parts take the wear while the softer parts enable oil to penetrate.

"Lasers are also coming into use to harden the teeth of gears. They tell me that the lasers are far more reliable than the machine tools they replace, because there is no tool bit to wear.

"New uses are still being found for coherent radiation in spectrophysics. With a laser it doesn't matter whether a subject is very hard or very soft. Lasers cut everything from diamonds to the rubber nipples of babies' bottles.

"They are also being used to measure the drift of continents, by using a marker our astronauts left on the moon. They are also being used in earthquake studies."

Schawlow is pleased by the impetus lasers have given to the creation of holograms. Pioneer work on holography was done at Stanford before lasers, by Emeritus Prof. Paul Kirkpatrick, aided by students Ralph Wuerker, Hussein El Som, and Albert Baez.

Baez's daughter, Joan, is the world-famous singer. While Joan was at Palo Alto High School she cut her first record in the physics lecture hall.

"I like to observe that if we had that record to sell," said Schawlow, "we might have made enough to build a new Physics building."

The physicist whose 33 years of research have helped to improve the world, who has been given the highest honors any scientist can receive, sighed as he thought back over his career.

"There have been so many hurdles, so many difficulties." He paused: "But it has all been worth it."

Faculty Club shows Haden etchings, photographs of "China's Elders"

An exhibit of etchings by Sir Francis Seymour Haden, as well as a photographic exhibit on "China's Elders," most taken by members of the Stanford community, will open at the Faculty Club on Easter.

The Haden selections are from the collection of Stanford alumni Hannah and Russel Kully of San Marino, who have been collecting his work for more than a decade.

Seymour Haden, wed to the sister of young James A. McNeill Whistler, was a prosperous London surgeon who, in his forties, took up etching seriously. During the next 40 years, he became one of art history's famed etchers.

Haden was dedicated to catching the spirit of landscapes rather than rendering every detail of the scene. Most etchings deal with the British countryside, but some represent countries where Haden vacationed.

Whistler, who was some 20 years younger than Haden, and the surgeon often went out together to etch from nature until a rift occurred in their friendship. They never mended their differences.

Haden founded and served as president of the organization that became the Royal Society of Painters, Etchers, and Engravers. Although he was a leader in the revival of etching in England at the end of the previous century, he was not knighted until 1894, near the end of his career.

"China's Elders" consists of photographs of citizens of the People's Republic of China taken by Peninsula residents who traveled there between 1975 and 1982.

While none of the photographers is a professional, the lives of Chinese senior citizens are captured clearly in their careers and sociological roles—caring for tots, helping with homework, passing time with friends.

Seven members of the Stanford community are represented: Dean Myron Atkin, School of Education; Dr. Paul F. Basch, professor of international health; Robert Beyers, director of news and publications; Dr. Esther B. Clark, clinical professor emeritus of pediatrics and founder of the Children's Health Council; Beverly Fuchs, director of group services for the Senior Center of Palo Alto; Prof. John Gurley, economics; and Robert Hall, professor of economics and senior fellow at the Hoover Institution.

Also represented are Derwood Baker, professor emeritus of New York University; Gertrude Bleiberg, Palo Alto artist; and Dr. Iva Gendzel, Palo Alto psychiatrist.

Fuchs organized this exhibit, which is sponsored by the Senior Coordinating Council of the Palo Alto Area, Inc. and the Chinese Community Center.

Both exhibits will close in early May.

Woman with Wrinkled Face, by Prof. Robert Hall, economics

Staff employment opportunities

Exempt

21557-JB (JCC:2344) INTERNAL AUDITOR III: Respon for auditing organizational & functional activities to evaluate the adequacy & effectiveness of admin controls; determine whether Univ & external regulatory policies & procedures are being followed; advise sr. mgmt on policies & procedures & internal control practices; perform audits in accordance w/ acceptable standards; report audit findings; make recommendations for change whenever approp; QUALIFICATIONS: broad & thorough knowl of audit practices & principles; excel tech & professional judgment; familiarity w/ Univ acctg & health care facilities; and an understanding of computer-based informa sys highly desirable; excel oral & written commu skills; able to establish & maintain effective working relationships w/ all levels of mgmt.; C07; $2113-2724.

Ph.D.orals

David Hinson, electrical engineering, "Radio Scintillations Observed during Voyager Planetary Occultations: Internal Gravity Waves of Titan and Magnetic Field Orientations at Jupiter and Saturn," 4:15 p.m., 134 McCullough.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, April 5, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

HIP offers courses in stress management, personal health improvement

The Health Improvement Program (HIP) is now accepting registration for two spring quarter classes: "How to Manage Stress" and "Changing toward Health," both classes are open to all Stanford University faculty and staff and their families.

How to Manage Stress—This popular stress management class will be taught again by Christine Rosche, M.P.H., a health educator who has taught stress management at Stanford, Midpeninsula Health Service, and San Jose State University. Students will learn to recognize stress-producing techniques, exercise options, time management skills, effective communication, and positive thought statements.

The class will meet from 5:15-7:15 p.m. Mondays, April 11-May 16, at the Stanford Heart Disease Prevention Program conference room, 730 Welch Road, Suite B. The fee is $25.

Changing toward Health—This is a pilot class taught by Corinne Powell and David Schrom, who have conducted the HIP noon swimming program for the past two years.

As an outgrowth of their work they recognized the need for a class to help each individual lay plans for personal health improvement. The new class will teach both subjective and objective methods of assessing current health and evaluating the potential for improved health.

Using an individual problem-solving approach students will record health improvement activities, monitor change, and evaluate the results. By learning to follow the steps outlined in the class they will develop a general method for lifelong health improvement.

Each class meeting will include discussion of such topics as redefining health, heart-healthy nutrition, exercise, and stress management, and will include a practice session for relaxation training. This training includes gentle yoga and dance steps based on exercises to extend your range of motion and visualization, and meditation techniques to enable one to be more relaxed and at ease in any circumstance.

The class will meet from 12-1 p.m. Tuesdays and Thursdays, April 19-May 26, in Encina Gym Room 350. There is an incidental registration fee of $5.

Registration—To register for either of these classes please send name, department, and extension along with a check for the registration fee made out to Stanford University to HIP, School of Medicine.

For further information please call the HIP office at 497-9649 between 10 a.m. and 2 p.m.

Spring dance classes scheduled

Stanford Dance Quorum offers a wide variety of dance classes for faculty, staff, and students during spring quarter.

The Dance for Lunch Bunch Jazz Class meets from noon to 1 p.m. Tuesdays and Thursdays beginning Tuesday, March 29, in Roble Studio 42. The instructor is Lisa Christensen; cost is $40.

Intermediate Modern Dance meets from noon to 1 p.m. Mondays and Wednesdays, beginning March 30, in Roble Studio 42. The instructor is Kathy Stewart; the fee is $38.

Stretching and Relaxation, a new class, is designed to relieve the kinks and tension of a long, rough day at work. It meets from 6 to 7 p.m. Tuesdays in Elliot Program Center (Governor's Corner) and 6 to 7 p.m. Thursdays in Roble Room 33, starting March 31. Lisa Christensen is the instructor; the fee is $40.

Other classes include Jazz at 6-7 p.m. Mondays and Wednesdays in Roble Studio 42; Floor Barre 6-7 p.m. Tuesdays and Thursdays in Roble 42; Ballet 7:15-9 p.m. Tuesdays in Roble 42 and Thursdays in Roble 33.

Saturday classes include Modern Dance 10-11:30 a.m. in Elliot Program Center; Floor Barre 11:30-12:30 p.m. in Roble 33; Ballet 12:30-2 p.m. in Roble 33; and Jazz 11:30 a.m.-1 p.m. in Elliot Program Center.

Children's dance

A limited number of spaces are available in Children's Dance at Stanford spring classes. Nine- to 13-year-olds may participate in Ballet, Modern Dance, or the Performance Workshop. Boys ages six to eight are invited to join "Dance for Boys," a curriculum of rhythms and movement designed to challenge body and mind.

Ballet meets Tuesday and Thursday afternoons from 4 to 5 p.m. Other classes are held Friday afternoons at 4 and 5 p.m.

Childrens' Dance at Stanford is sponsored by Stanford Dance Division at Roble Dance Studios. It offers a full dance curriculum for children ages three to 13.

For more information and registration call Dance Quorum at 497-4254.

Tennis classes

Tennis lessons (six pupils per group) will again be offered to staff and/or families on weekday mornings or Saturday mornings. Players are grouped by ability in these classes taught by Dick Gould's staff. Call 497-1160 on weekday mornings to receive detailed printed information and registration forms. Lessons begin week of April 18.

Fun Run for 50 +

Runners 50 years of age or older are invited to participate in a Fun Run which will start at 9 a.m. Sunday, April 24, at the south end of Stanford Stadium near El Camino Real. The run covers a four-mile course (twice around the two-mile Peterson loop).

The event is sponsored by Fifty-Plus Runners Association, which has its headquarters at the Stanford Heart Disease Prevention Program.

For further information contact Don Carpenter evenings at 327-8043.

□ **April 1 to June 1 (flex):** Los Altos, fully furn. 2BR/2BA, FR, AEK, 2 frpl, 2TV, park-like 1/3 acre. 1 Queen, 1 dbl bed. Dead-end st. Car poss. No pets. $1050/mo. Call (415) 967-2918.

HOUSING NEEDED

□ **June 17 to Aug. 21, '83:** Institute for Humane Studies needs furn. apts for Visit. Profs. Stanf./Menlo area. Also need 2BR/2BA apt. nr. Stanf. May 7 to Aug. 1. Call Pat Dunbar, 323-2464, 7 a.m. to 3:30 p.m.

□ **Beg. anytime:** 1st yr. resident, xclnt refs, SU undergrad, seeks hsesit, short or long term. Call 564-2622 (eve) or 493-5000, pager 229, Marjorie Shuer.

□ **July 1 to Aug. 31, '83:** Swiss prof, wife, 4 yr. old son seek fully furn hse, 3 to 4BR/2BA, pool. Please send conditions, photos, to Prof. F. Weinberg, Freiestrasse 19, CH-8032, Zurich, Switzerland.

□ **Sept. '83 to Aug. '84:** Cpl on sabbat. lv. from NY w/15 yr. old son, nonsmokers, seek 2BR furn apt. nr Stanf. Call COLLECT (212) 598-7757. Will consider SWAP for 2BR village apt. in NYC.

□ **Beg. Aug. 21 for 3 to 6 wks:** Prof. cpl & daughter wish to hsesit in Stanf. area. Local refs. Write D.K. Nordstrom, c/o Oster, Gyllenstiernsgatan 18, 11526, Stockholm, Sweden, or call (415) 857-1641.

□ **April to July '83:** Female prof. on sabbat. at Stanf. seeks hsng. or hsesit. To $440/mo. Call COLLECT (213) 206-6121.

□ **Beg. Sept. (flex) for Academic Yr:** Mature Stanf. Bus. Sch. stud. seeks hsesit or lodging in return for serv. (gardening, gourmet catering, bartend, handyman). Resp., personable, Harv. grad., multilingual, CPR, WSI cert. Served valet to Harv. Prof. Pref. det. qtrs. Impeccable refs. Call COLLECT 1—800—638-1527, x5718, 9 to 5 eastern time.

□ **Beg. July 1, 1-4 mos.:** Reliable Stanf. staff seeks HOUSESIT for summer. Nonsmoking, childless cpl, returning from east will give xclnt care to plants, pets, hse. Call COLLECT (617) 469-2040 or write David Mark, M.D., 20 Walnut Rd., Chestnut Hill, MA 02167.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Morgan State University Choir

Morgan State choir concert April 6

The Stanford Black Community Caucus and the Stanford University Gospel Choir will present the Morgan State University Choir in concert at 7:30 p.m. Wednesday, April 6, in Memorial Church.

Tickets ($5 general admission, $3 students and senior citizens) may be purchased at the door.

The Morgan State University Choir is famous for its wide musical repertoire and its professional style of performance. It has toured Europe, the Caribbean, and the U.S. It is directed by Nathan Carter, a graduate of the Juilliard School of Music.

The two-hour concert will include songs by the Stanford Gospel Choir, adding diversity and a touch of local pride.

For further information, call 497-1587 between 10 a.m. and 5 p.m. Monday through Friday.

German theologian Solle to speak

The Stanford Progressive Alliance and the Ecumenical Ministries at Stanford will sponsor a lecture and discussion with German theologian Dorothee Solle at 4:15 p.m. Thursday, April 7, in the Old Union Clubhouse Alumni Room.

The visit of Solle to Stanford is part of a national tour organized by the Youth Section of the Democratic Socialists of America.

Solle is a member of the Evangelical Church of Germany (EKD) and has been a lecturer in the theological faculty of the University of Hamburg since 1978. Since 1978 she has been the Harry Emerson Fosdick Visiting Professor at Union Theological Seminary during spring semesters. She has also delivered lectures in most of the major German Universities, in many European universities and ecclesiastical institutions, and has toured Great Britain through the Sponsorship of the Goethe Institute, London.

Solle has published numerous articles and books on theology, including in English translation, *Christ the Representative*, *The Truth is Concrete*, *Choosing Life*, and *Political Theology*. Her recent publications include a volume of poetry and a feminist disarmament story, *In the House of the People-Eater*.

Solle has been deeply involved in the Peace Movement in Europe and has spoken at most major peace demonstrations in Germany, including the Bonn rally in 1982 that drew more than 250,000 people.

Women in Science, Engineering series

The Stanford Women in Science and Engineering spring quarter lectures begin at 4:15 p.m. Thursday, April 7, with a discussion of Science and Engineering Research in Academe in Room 420-041 (basement of the Mathematics Department).

Participating in the discussion are Assistant Prof. of Biological Sciences Patricia Jones, Assistant Prof. of Neurobiology Carla Shatz, and Margaret Wright, senior research associate in operations research.

All members of the Stanford community are welcome; refreshments will be served afterwards.

The series is designed to promote interdisciplinary discussion among women in science and engineering. It is jointly sponsored by the Office of the Dean of Graduate Studies and Research and Women in Science and Engineering at Stanford.

Brandenberg discusses origin of catacombs

Hugo Brandenburg, formerly at German Archaeological Institute, Rome, and now professor of classical archaeology at the University of Munster, West Germany, will discuss "Origin and Development of the Jewish and Early Christian Catacombs in Rome" at 4:15 p.m. Friday, April 8, in History Corner, Room 205 at Stanford.

Brandenburg has written articles in Jahrbuch fur Antike and Christentum, Romische Quartalschrift, Romische Mitteilungen, Archaologischer Anzeiger. His most recent books are on Early Christian Sarcophagi in Rome (1967) and Italy (forthcoming), Early Christian Churches in Rome, Late Roman and Early Christian Art.

Richard to direct Wynter's play, *Maskarade* in the Nitery next week

The Stanford Drama Department and Black Performing Arts musical production of *Maskarade* has been moved from the out-of-doors space in the Old Union Courtyard to the Nitery Theater.

The new performance schedule is at 8:30 p.m. Thursday through Saturday, April 7-9 and April 14-16, with matinees at 3 p.m. Sunday, April 10 and April 17.

The play, written by Sylvia Wynter of the African and Afro-American Studies program, will be directed by Sandra L. Richards, who is director of Black Performing Arts and a member of the drama faculty.

The setting for "Maskarade" is Jamaica in the mid-19th century during the Jonkonnu Festival, a celebration similar to Mardi Gras in New Orleans and Carnival in Trinidad. It was celebrated during the Christmas season marking the end of harvesting and provided the slaves with an opportunity to express their creativity and ambition through elaborate costumes and riotous merry-making.

The participants drew their inspiration from both African and European cultures and incorporated masked paraders reminiscent of Africa, pieces from Shakespeare, and harlequin and clown characters with singing and dancing—all to the sounds of reggae, calypso, ska, and the special Jonkonnu sounds combining African drums with European flutes.

Musical director for the production is Michael Britt, choreography is by Halifu Osumare, scenic design by David McLain, and a parade of exotic, elaborate costumes and masks by Douglas A. Russell.

Tickets are on sale at Tresidder Ticket Office and major Bay Area Agencies, and by telephone (497-4317) with major credit cards. Because seating in the Nitery is limited and recent Drama Department productions have been sold out, early ticket purchase is advised. General admission is $4, students and seniors, $2.

Hill, Wynter to discuss Carnival

Profs. Errol Hill and Sylvia Wynter will discuss "The Social Implications of Carnival—Mardi Gras and Jonkonnu" in a Stanford Drama Department talk at 4:30 p.m. Wednesday, April 6, in the Forum Room of Meyer Library.

The lecture is given in connection with the upcoming production of Sylvia Wynter's musical play, *Maskarade*, which opens the following evening in the Nitery Theater. Hill, the Willard professor of drama and oratory at Dartmouth and former chairman of its drama department, is the author of *The Trinidad Carnival: Mandate for a National Theatre* and editor of *The Theatre of Black Americans*, Vol. 1 and 2, a collection of critical essays.

During spring quarter, Hill will be visiting professor in the Department of Afro-American Studies at Berkeley.

Wynter, professor of African and Afro-American Studies and Spanish and Portuguese at Stanford, lived in London during the late '50s and early '60s where she was an actress, dancer, and writer.

Along with her fellow Caribbean writers, George Lamming and Jan Carew, she wrote radio plays for the B.B.C. In 1962 she returned to Jamaica where she wrote several plays in which she tried to mold documentary material into drama through the vehicle of a folk idiom.

An invitation to deliver a paper on folk dance in Jamaica from UNESCO served as the stimulus for writing what would become the musical play, *Maskarade*. In the process she discovered cultural forms which had been forgotten or ignored by the Jamaican middle-class. The reinterpretation and reevaluation of West African and European folk forms later gave rise to the reggae forms so popular with audiences today. She is author of *Hills of Hebron* and former chairman of the African and Afro-American Studies.

The Drama Forum Series lecture is open to the public and admission is free. Performances of *Maskarade* are at 8 p.m. April 7-9 and April 14-16, and at 3 p.m. Sundays, April 10 and 17. Tickets for the *Maskarade* production are on sale at Tresidder ticket office.

Film series on Japanese women starts April 7 at I-Center

The Other Cultures Film Series continues the tradition of international cultural, environmental, and social themes during spring quarter, with the first program of the quarter focusing on Japanese women.

"Four Women Four Choices," "Setaro Tanaka" and "The Image of Japanese Women" will be shown at 7:30 p.m. Thursday, April 7, at the International Center.

"Four Women Four Choices" examines the lives of four Japanese women through interviews and a close look at their daily activities. The film focuses on the choices and decisions afforded these women as they follow their individual lifestyles in modern Japan.

"Sataro Tanaka" explores the universal nature of art through a portrait of Sataro Tanaka's life as her father's successor, a tsuzuji musician for the Kabuki Theater. This sympathetic portrayal of her lifestyle focuses on her peculiar role as the only female musician for the theater. She is a celebrated performer, teacher, student, and mother of three.

"The Image of Japanese Women" describes the progress of women's rights through the eyes of Japanese women. The issues surrounding the problems that these women perceive include higher education, salary and retirement differentials, shared housework, and child care.

The Other Cultures Film Series visits the British Isles on April 14, when it presents "Glasgow" and "Dublin," both from the Cities of the World Film Series. An hour-long film on the ancient Chinese imperial city, "Xian," will be shown on April 21.

For additional information, phone 497-1831. Admission to the films is free, though a 75 cent donation will be requested at the door to help cover the cost of the series.

Nathaniel Rosen

Nathaniel Rosen, Brooks Smith set concert April 8

Nathaniel Rosen, first American cellist to win the Tchaikovsky Competition Gold Medal (1978), will be presented in concert with pianist Brooks Smith by the Lively Arts at Stanford at 8 p.m., Friday, April 8 in Dinkelspiel Auditorium.

The program will be as follows: "Introduction, Theme, and Variations (from a work for piano, four hands, Op. 70, No. 2)," by Schubert (arr. Piatigorsky); Beethoven's "Sonata in A Major, Op. 69"; Bach's "Suite No. 3 in C Major for Unaccompanied Cello, BWV 1009"; Faure's "Elegie, Op. 24"; Tchaikovsky's "Valse Sentimentale"; and David Popper's "Spinning Song."

A Native Californian, Rosen began his cello studies at age six, and at 13 began a long association with Gregor Piatigorsky, who became his teacher and mentor. At age 22 Rosen became Piatigorsky's assistant, a post he held for six years, up until the master's death in 1976.

A graduate of the University of Southern California, and former principal cellist with the Pittsburgh, and the Los Angeles Chamber Orchestras, Rosen has performed in recital, chamber music, and orchestral concerts with major conductors and orchestras throughout the world. In 1977, he was winner of the Naumberg Cello Competition.

Smith, a native of Texas, studied with Rosian and Josef Lhevinne at the Juilliard School. He has performed with Heifetz, Milstein, Perlman, Piatigorsky, Harrell, and the Juilliard, Cleveland, and American quartets.

Currently on the faculty at the University of Southern California, he has also taught at the Aspen Music Festival and the Eastman School of Music.

Greene landscape show

Landscape paintings of Jasper Ridge Biological Preserve by Pamela Greene will be shown at the Falconer Biology Library through April 30.

The exhibition includes 18 recent works in oil from summer 1982 to the present.

The Falconer Library hours are: Monday through Thursday 8 a.m.-11 p.m.; Friday 8 a.m.-6:30 p.m.; Saturday 10 a.m.-5 p.m.; Sunday, 10 a.m.-10 p.m.

Chisholm to give Kant lecture series

"The Primacy of the Intentional" will be the theme of the eighth annual Immanuel Kant Lectures, to be delivered by Prof. Roderick Chisholm of Brown University April 5, 7, 11, and 13 at Stanford.

Chisholm is America's most distinguished epistemologist, having written and edited more than a dozen books and over 200 articles on the Theory of knowledge and related topics.

Sponsored by the Department of Philosophy, his free public talks on "The Primacy of the Intentional" are scheduled at 4:15 p.m. in Room 200-2 History Corner as follows:

April 5: Objective Reference

April 7: Properties Intentionally Considered

April 11: Psychological Properties

April 13: Language Intentionally Considered

Chisholm is the Andrew W. Mellon professor of the humanities at Brown. He received his Ph.D. from Harvard University in 1942. He is the author of *Perceiving, Realism and the Background of Phenomenology, Theory of Knowledge, Person and Object*, and *The First Person* as well as other books.

Chisholm's book *Realism and the Background of Phenomenology* was the main cause of interest in the European philosophical movement in the U.S. Phenomenological themes have played a larger and larger role in Chisholm's philosophy, and in these lectures he moved the categolry of the intentional to center stage.

Chisholm is the editor of "philosophy and Phenomenological Research," the associate editor of a number of philosophy journals, and has been the Carus Lecturer of the American Philosophical Association, the highest honor the Association can bestow on a member.

For further information, contact the Philosophy Department at 497-2547.

Ogilvy to discuss overspecialization

"Academic Departments and the World Problematique: Is Tunnel Vision an Occupational Hazard for the Well-Trained Professional?" is the title of a talk to be given by James A. Ogilvy, senior social scientist of SRI International, at noon Tuesday, April 5, at Bechtel International Center.

The program will be the first Tuesday Luncheon/Lecture of the spring quarter series, which will focus on some of the solutions to problems of world-wide conflict and poverty addressed by speakers during the fall and winter.

James A. Ogilvy is the author of *Many Dimensional Man* and *Seven Tomorrows: Seven Scenarios for the '80s and '90s*. He is a Williams College graduate and Ph.D. who taught at Yale University, the University of Texas, and Williams College before coming to SRI International. At SRI he works in futures studies, values and lifestyles, and lectures widely.

Other questions Ogilvy will address are: "Can professionals cope with the multidimensional character of present problems?" and "Can scholarship be applied to the future?"

Luncheon tickets are available at a cost of $2.50 one week before the event at the I-Center office or at the door while they last. Brown baggers are also welcome at no charge. For more information about this and other programs being planned for spring quarter call 497-1831 or stop by the I-Center.

Stuart plans first Stanford recital

Soprano Lila Stuart will give her first Stanford recital, accompanied by pianist Jodi Gandolfi, at 8 p.m. Tuesday, April 5, in Dinkelspiel Auditorium.

Stuart is the Music Department's newly appointed voice teacher with a national reputation as both opera singer and voice teacher.

Her program will include lieder by Schubert, Strauss, and Schoenberg; the aria "To This We've Come" from Menotti's opera *The Consul:* melodie by Debussy, and *La Bonne Cuisine* by Leonard Bernstein—four songs based on outlandish recipes.

Tickets for Stuart's April 5 recital are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and the door.

Belgian film showing

"Belgium: Land of Two Peoples," a travel documentary produced and narrated in person by Kathleen Dusek, will be presented twice on Monday, April 4, by Stanford University Events and Services.

Part of the Discovery Film Series, the film will be shown at 2:30 p.m. in Kresge Auditorium and at 7:45 p.m. in Memorial Auditorium.

Belgium has been the crossroad of Europe for centuries. In her film, Dusek visits all of the major cities and sights of the country, weaving its political and artistic history into her narrative. She also explores the distinctive cultures of the Dutch-speaking Flemish of the north, and the French-speaking Walloons of the south.

Tickets are $3 for the matinee and $4 for the evening showing. Tickets are available at the door and at Tresidder Ticket Office, (415) 497-4317.

Mendicants plan Wine Taste Concert

The Stanford Mendicants will present their fifth annual Wine Taste Concert at 8 p.m. Saturday, April 2, in the Tresidder Union large lounge.

The evening will include an hour-long concert by the Mendicants and wines from Christian Brothers, Sonoma Vineyards and local wineries, homemade breads, cheese, and nonalcoholic beverages. Semiformal dress is requested.

Tickets at $6 ($10 per couple) are available at Tresidder Ticket Office or may be bought on White Plaza at noon March 30 through April 1.

The Mendicants of Stanford is a group of 13 men who follow the tradition of East Coast collegiate singing. The group was founded in 1963 by a transfer student from Yale.

The Mendicants has a broad repertoire of music, both *a capella* and bass-and-guitar-accompanied songs, including barbershop, bluegrass, plainchant, '40s jazz ballads, folk, and contemporary pop.

They have sung for many local groups including women's clubs, country clubs, service organizations, corporate groups, and retired people in a variety of settings, from dinner parties and luncheons to meetings and award ceremonies.

Proceeds of the Wine Taste Concert will benefit the Mendicants' tenth album and a joint tour with Counterpoint (their female alter egos) to Hawaii in June.

For information contact John Rowehl at 327-0667 or the Mendicants' office at 322-0974.

Mueller gives recital

Organist Jill Mueller will give a free solo recital at 8 p.m. Monday, April 4, in Memorial Church. She will graduate from Stanford in June with both a B.A. and M.A. in music.

Presented by the Department of Music, Mueller's program will include Bach's *Fantasia and Fugue in G minor*, Maurice Duruflue's *Prelude, Adagio, et Choral varie sur Veni Creator*, and Liszt's *Fantasy and Fugue on Ad Nos*. Mueller studies with university organist Prof. Herbert Nanney.

Sclaelo Maredi

South African play set Friday

South African playwright Selaelo Maredi will direct and act in his play "For Better Not for Worse" at 8 p.m. Friday, April 1, in Dinkelspiel Auditorium on the Stanford campus.

The play is a political comedy of hope and struggle for the end of apartheid in South Africa. It is sponsored by the Stanford African Students Association and the Committee on Black Performing Arts.

Maredi was born in Sophiatown, one of Johannesburg's oldest ghettos. He was still in school when all the black families, including his, were removed from their homes by policemen and bulldozers because Sophiatown had become attractive to the white community.

Maredi was attracted to the theater at an early age and has won several awards for his work, which includes a musical play, "Melodi," coauthored with Hugh Masakela. He plays the part of Shai in this play.

Moeketsi Bodibe, born near Johannesburg in Alberton, plays Mampane. He has acted in musicals as well as dramas, and also is a singer, dancer, and drummer.

Tickets for "For Better Not for Worse" are $5 ($2 for children).

Fool for Christ to be shown

Fool for Christ, a film based on the life of Ken Feit, itinerant storyteller, mime, and clown, will be shown at noon Monday, April 4, at the Clubhouse Common Room (top floor).

The director/producer of the film, Jim Friedrich, will be present.

The film is sponsored by Episcopal Fellowship at Stanford. All are welcome.

Women 50 to 69 needed for study

Graduate students in Stanford's department of physical therapy are seeking women volunteers aged 50 to 69 years for a study of the changes in balance associated with age.

Women interested in volunteering for the study, which involves a single, brief test of their balance as they attempt to stand still, should call Kathy Sherwood at 497-5795 or 948-8679.

Give blood at Terman Friday

The Stanford University Blood Bank will hold a blood drive from 10 a.m. to 4 p.m. Friday, April 1, in the mezzanine of Terman Engineering Building.

Faculty and staff are urged to donate blood at this time, and whenever possible, to announce the blood drive to students and colleagues.

Patients at Stanford Hospital and the Children's Hospital at Stanford often have complex and sophisticated transfusion needs, and the demand for all blood products is high.

The two Stanford hospitals combined use over 100 units of blood each day, and in order to support this need, the Blood Bank asks your support.

Dvorak exhibits rice paper works

Raffaello Dvorak's exhibition of work on rice paper at Stanford's International Center April 1-30 features recent woodcuts and paintings.

A reception for the artist will be held at the Center from 5-7 p.m. Friday, April 8.

The exhibition includes the exaggerated still lifes for which Dvorak is known and impressionistic landscape paintings which are seldom exhibited.

Some of these landscapes are painted on wrinkled rice paper and later mounted and flattened with conservator's rice paste. Others employ collage—layers of colored rice paper, Chinese ink and watercolor.

Dvorak has studied Japanese woodcut printmaking, Sumi painting, and Chinese brush painting.

A graduate of the University of Illinois and UC-Berkeley, Dvorak is currently conducting drawing workshops for the extensions of the University of California, Foothill College and the College of San Mateo. His studio is in downtown Palo Alto.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., March 30, to cover the week of Mon., April 4, through Sun., April 10.

MONDAY, APRIL 4

Episcopal Fellowship at Stanford Film: "Food for Christ," about Ken Feit, itinerant story-teller, mime, and clown. Noon. Clubhouse Common Room. Free.

Biological Sciences Seminar: "Parasitic Infections as Regulators of Animal Populations," by Dr. Robert May, Dept. of Biology, Princeton University. 4:15 p.m. Room T-175 — Herrin Hall, Dept. of Biological Sci.

Numerical Analysis Seminar: "Two Fluid Instabilities," with Bruce Stewart, Brookhaven Laboratories. 4:15 p.m. Room 380C, Math Corner.

Law School Lecture: "Thinking About the Bill of Rights." with Sir Zelman Cowen, former governor-general of Australia and present provost of Oriel College, Oxford. 3 p.m. Room 290. Crown Quad. Free.

TUESDAY, APRIL 5

STARTS: Crochet. Learn to make your own creative clothing with Karen Springen. $8 for 8 week session. Noon. Tresidder Union Room 263.

Learning about Racism Lunch Series: "Internalized Racism," by Gloria Watkins, teacher of courses on Women's Studies at S.F. State Univ. and U.C. Santa Cruz. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Room.

Mens' Tennis: vs. San Jose State. 1:30 p.m. Varsity Courts.

Discovery Film Series: "Belgium," with Kathleen Dusek. 2:30 p.m. Kresge Aud. $3.

Baseball: vs. Sonoma State. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

CROW Poetry Reading: Shirley Kaufman, author of *The Floor Keeps Turning, Gold Country & From One Life to Another*, reading from her poetry. 4:15 p.m. Briggs Room, English Dept.

Discovery Film Series: "Belgium," with Kathleen Dusek. 7:45 p.m. Memorial Aud. $4.

WEDNESDAY, APRIL 6

Gifts and Exchange Division, Stanford Univ. Libraries: Book Sale. Books in many fields. Harbound $1.50 and up, paperbacks 25 cents and up, periodicals 10 cents and up. 11 a.m. 1:30 p.m. Green Library, West Wing, First Floor, Room 101.

Chemical Engineering Colloquium: "Rheology of Rodlike Macroions in Solution," by Professor Guy Berry, Carnegie Mellon University. 4:15 p.m. Chemical Engineering Conference Room.

Drama and Black Performing Arts Lecture: "The Social Implications of Carnaval—Mardi Gras and Jonkonnu," by Errol Hill (Dartmouth College) and Sylvia Wynter (Stanford). 4:30 p.m. Meyer Library Forum Room. Free.

United Campus Christian Ministry Worship: with leaders: Rev. Carolyn Roberts, Rev. Keith Naylor, Rev. Byron Bland. 6:45 p.m. Clubhouse Common Room.

Men's Volleyball: vs. Hawaii. 7:30 p.m. Maples Pavilion.

United Campus Christian Ministry Morning Seminar: Informal discussion of interesting theological, social, and personal questions and struggles. 8 a.m. - 9 a.m. Clubhouse Common Room.

Stanford Society of the Archaeological Institute of America: "The Etruscan Tomb Paintings of Tarquinia," by Friedrich Wilhelm von Hase of Mannheim. 8:15 p.m. Room 370.

THURSDAY, APRIL 7

Theology & Natural Sciences Lunch Series: "History of the Relations between Science & Theology," by Bob Russell, director of Center for Theology & Natural Sciences, Berkeley. Bring a bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

Stanford Women in Science and Engineering Lecture: Science and Engineering Research in Academe. Featuring: Patricia Jones, Assist. Prof. of Biological Sci.; Carla Shatz, Assist. Prof. of Neurobiology; & Margaret Wright, Senior Research Associate in Operations Research. 4:15 p.m. Building 420, Room 041.

Applied Mechanics Division Seminar: Mini-Max and Relaxed Mini-Max Problems in Structural Optimization," with Professor John E. Taylor, Dept. of Aero. Engineering, Univ. of Michigan. 4:15 p.m. Skilling Aud.

Biological Sciences Special Seminar: "The Alcohol Dehydrogenase Genes of Maize: Structure, Expression and Controlling Elements," Dr. Elizabeth Dennis, Dept. of Biochemistry, Stanford Medical School. 4:15 p.m. Room T-175 Herrin Hall, Dept. of Biological Sciences.

Numerical Analysis Seminar: "A Large Time Step Generalization of Godunov's Method for Systems of Conservation Laws," by Randall LeVeque, Courant Institute of Mathematical Sciences. 4:15 p.m. Margaret Jacks Hall, Room 352.

Other Cultures Film Series: "Four Women Four Choices," "Setaro Tanaka (Kabuki)," & "Image of Japanese Women," 3-films on Japanese women. 7:30 p.m. Bechtel International Center. ,75 cent donation requested.

Spirit of Japan Lecture Series: "Japanese Woodblock Prints," by Roger Keyes. 8:15 p.m. Annenberg Aud. Comm. for Art members & students $4, non members $5.

FRIDAY, APRIL 8

Men's Tennis: vs. Arizona State. 1:30 p.m. Varsity Courts.

Women's Tennis: vs. UC-Irvine. 2 p.m. Varsity Courts.

Materials Science and Engineering Colloquim: "Dynamic Compaction of Rapidly Solidified Materials and Their Properties," by Dr. Carl Cline, Chemistry and Materials Dept. 3:30 p.m. Room 550A Building 550 - Peterson Lab.

The Lively Arts at Stanford: Nathaniel Rosen, cello. 8 p.m. Dinkelspiel Aud. $10.50, $9.50, students $3 off regular price.

STARTS Great Directors Friday Film Series: "My Love Has Been Burning," by Japanese Director Kenji Mizoguchi. 8 p.m. Geology Corner, Room 320. $2.50 general.

STARTS/Coffee House: Jon Jang with Steve Killion and Frances Wang (jazz). 9-12 p.m. Coffee House. Free.

SATURDAY, APRIL 9

Baseball: vs. California. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Men's Tennis: vs. Arizona. 11 a.m. Varsity Courts.

Coffee House/STARTS: The Rescue (Mo-town rock & roll). A special spring event on the Coffee House patio which includes dancing. 9-12 p.m. Coffee House Patio. Free.

SUNDAY, APRIL 10

University Public Worship: with preacher Wendy Smith, Associate Dean of the Chapel. 11 a.m. Memorial Church.

The Lively Arts at Stanford: Suk Trio. Haydn: Trio in D Major; Schumann: Trio in D minor; Dvorak : Trio in F minor, Op. 65. 2:30 p.m. Dinkelspiel Aud. $10.50, $9.50, students $3 off.

EXHIBITS

Inventions. An exhibition of books and manuscipts relating to the history of science and technology. Lurie Rotunda, second floor, West Wing, Green Library. Jan. 15 - April 8.

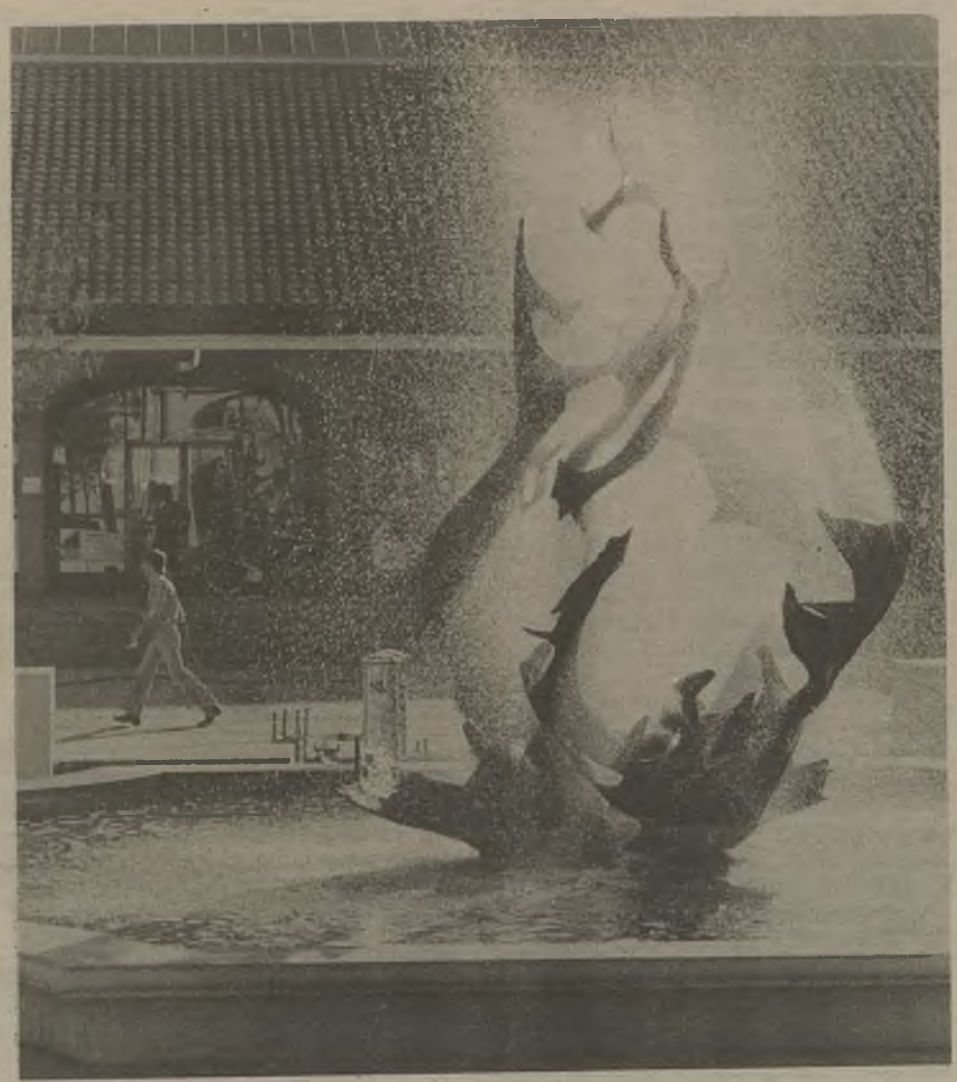
"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

The Prints of William Nicholson. Tues.- Friday 10 a.m.- 5 p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

R. Raffaello Dvorak, works on rice paper. I-Center. April 1 - April 30.



Photographs of Africa by Sylvie Cohen. Tresidder Upper Lobby, 2nd. Floor. April 1 - April 30.

Photos from the Barrio Assistance Program by Phillip Baca. Coffee House Gallery. April 1 - April 30.

Trans Arts Gallery. Exhibit and Sale by Trans Art Gallery. 11 a.m. to 5 p.m. Tresidder Union Lobby 2nd. Floor. April 7April 8.

Riggs to head Development with Hinchliffe

Henry E. Riggs

Bruce G. Hinchliffe

Prof. Henry E. Riggs, 48, and Bruce G. Hinchliffe, 47, have been named vice president and associate vice president for development, respectively, Stanford President Donald Kennedy announced Friday, April 1.

A veteran Silicon Valley entrepreneur and award-winning teacher, Riggs has headed the Department of Industrial Engineering and Engineering Management since 1980. Now on sabbatical leave in Japan, he will return to campus April 15 and assume the vice presidency July 15.

Hinchliffe, a 1957 classmate of Riggs at Stanford, will continue as acting vice president for development until then. His full title will be associate vice president and director of development.

"Together, these appointments will provide a strong faculty imprint and imaginative, effective leadership in fund-raising and management for the University," Kennedy said. "Henry is greatly admired as a teacher and has been a strong advocate for institutional programs. Bruce has done a superb job as acting vice president and is one of the best professional fund-raisers at any university. We're lucky to have them both."

Riggs will succeed Joel P. Smith, who resigned the vice presidency for reasons of health last year, but continues as secretary to the Board of Trustees.

Stanford received $77 million in gifts during 1981-82 and $79.5 million in 1980-81, the highest totals in the University's

Senate asks study of volume of weapons-related research

The Stanford Faculty Senate Thursday, March 31, asked the Committee on Research "to study the character and volume of weapons-related research" at the University.

Adopted by a substantial majority in a divided voice vote, the resolution said it was "desirable that a preliminary report on issues and procedures be delivered to the Senate" this spring.

Prof. James Meindl, electrical engineering, chairman of the Committee on Research, said it probably would not be able to discuss the issue until its May 4 meeting. It already has scheduled an open forum April 26 on proposed changes in computer software and copyright policy.

Prof. Robert Mozley of the Stanford Linear Accelerator Center (SLAC), who introduced the resolution, said "President Reagan's support for a major increase in funding for beam-weapons research makes clear the pressures of funding availability which may move University research programs in a weapons-related direction.

"Although it is difficult and dangerous to apply criteria in selecting research appropriate to a university, a slight move toward avoidance of work with a clear direct military mission might be desirable to prevent Stanford from becoming too deeply involved in military research."

He said the resolution was motivated by "the probability that a beam-weapons related project at the Stanford Synchrotron Radiation Laboratory (SSRL) will command the effort of SLAC people who do not wish to work on it." But he

Kennedy foresees no change to restrict research by use

Stanford President Donald Kennedy Friday, April 1, strongly supported open research, warning that "today's benign restriction might become tomorrow's suffocation. . . .

"Once you begin making value judgments about the possible outcomes of scientific work, there is no place to stop."

In his spring quarter talk to the Academic Council, Kennedy said he planned no change in present Stanford policy to restrict unclassified weapons-related research at the Stanford Synchrotron Radiation Laboratory, "nor do I think that my colleagues should wish to do so." *(See text, page 16.)*

"I would hold that view even if the project under consideration were much more heavily involved than it is to end-uses with which I am personally uncomfortable."

In a divided voice vote at its regular meeting Thursday, March 31, the Stanford Faculty Senate asked its Committee on Research to examine "the character and volume of weapons-related research" at the University. But it deleted a request that the committee study "possible criteria relating to end use which might be used to reduce the volume of such research if this proves desirable."

In December, 1971, the Senate adopted a policy statement that allocation of research resources should be based on "scholarly and educational merits" and "not on speculations concerning the political or moral impropriety of the uses which might be made of its results."

Former commissioner of the Food and Drug Administration, Kennedy said Friday that "many of us here believe that the present direction of our national effort is tragically wrong. Our dependence on

People

Richard Bube

Richard Bube

Prof. Richard H. Bube, chairman of the Stanford Department of Materials Science and Engineering, is making several extended speaking tours in order to discuss the integration of science and Christianity. On March 21, 22, he was an invited lecturer at the 75th Anniversary of Olivet Nazarene College in Kankakee, Ill. On March 23, 24, and again on April 21, 22, Bube is lecturing as a Staley distinguished Christian scholar on the campuses of Evangel College, Springfield Mo., and Bethel College, St. Paul, Minn. On April 20, he will lecture at the University of Minnesota, and on May 2 at Sonoma State University.

Bube is active in research on photovoltaic conversion of solar energy through the use of suitable semiconductor junctions. He lectures on the technical aspects of this subject, as well as on the broader subjects involving both science and Christian faith.

He is the author of several books on solid-state physics, *The Encounter Between Christianity and Science* and *The Human Quest: A New Look at Science and Christian Faith*; books that will appear in print this year or next include *Fundamentals of Solar Cells*, written with Stanford Senior Research Associate Alan L. Fahrenbruch, and *Science and the Whole Person*, which has been published serially in the *Journal of the American Scientific Affiliation* which Prof. Bube serves as editor.

Lisa Adler

Senior Lisa Adler has been selected as the 1983 recipient of the Haas-Koshland Award, which provides an all-expenses-paid year in Israel for study and personal development.

Adler is an economics major who is writing an honors thesis on "Resistance in Literature of the Holocaust." She plans to use the year in Israel to examine the bonds between the diaspora and Israel.

Adler is a native of Shawnee Mission, Kansas. She had her first trip to Israel in the summer of 1978 with a group of 58 students and has hoped since then to return for a longer period.

The Haas-Koshland Award is a special fund of the Jewish Community Endowment Fund of the Jewish Community Federation.

Clare Bell

Clare Bell, a graduate student in the Design Division of Mechanical Engineering at Stanford, has just published her first science fantasy novel *Ratha's Creature* (Athaneum), a tale about a society of intelligent cats close to extinction 25 million years ago.

Bell, who has worked as a test manufacturing equipment engineer for a major computer company for the past four years, is an honor's cooperative student at Stanford. She is currently working on a Stanford team, designing a robotic manipulator to be controlled by severely disabled people, under the sponsorship of the Veteran's Administration Hospital and Prof. Larry J. Leifer.

By the age of 12 she began to write stories about her own flying ships and animals, or around the characters she otherwise imagined. Thus she gradually developed the evolutionary theme that runs through her written and artistic work.

Anna Durand
Glen Nager

Two recent graduates of the Stanford Law School will fill U.S. Supreme Court clerkships during the 1983-1984 term.

They are Anna Durand of Albuquerque, N.M. and Glen Nager of Houston, Texas. Both are members of the Class of 1982.

Durand will clerk for Justice Harry Blackmun, and Nager will clerk for Justice Sandra Day O'Connor.

Durand completed the four-year Stanford law and business program, graduating with the combined JD/MBA degree. In addition to her studies, she served as managing editor of the *Stanford Law Review*.

Durand's honors include the Frank Baker Belcher award for best academic work in the evidence course, and election to the Order of the Coif, the national law school honor society.

Upon graduation she clerked for Judge Herbert Choy of the U.S. Court of Appeals, Ninth Circuit.

Nager is currently clerking for Judge J. Skelly Wright, U.S. Court of Appeals, District of Columbia Circuit.

At law school he was editor of the *Stanford Law Review* and won election to the Order of the Coif.

The duties of the U.S. Supreme Court clerks include reviewing petitions, writing bench memoranda, and assisting the justices in drafting legal opinions.

Riggs, Hinchliffe head development

continued from page 1

history. Among private universities, Stanford ranks second to Harvard in total gift support, averaged over five-year intervals.

Riggs received the Tau Beta Pi outstanding teaching award in the School of Engineering in 1979 and was cited for his "extraordinary energy, skill and zest" when he received a Walter J. Gores award for teaching in 1980.

In the late 1960s, while he was president of ICORE Industries in Sunnyvale, he used to teach an 8 a.m. class at Stanford three times a week. "I concealed from them successfully that I would have worked for nothing, but they paid me," he once told a campus interviewer.

During 1970-74, he served simultaneously as vice president of finance for Measurex Corporation and as consulting professor at Stanford. He became an adjunct professor in 1976 and full professor in 1980.

He is the author of a McGraw-Hill textbook, *Accounting: A Survey* (1981), and *The Use of Computer-Based Exercises (Games) in Engineering Management Education* (1979) and *Biomass Energy Options for Hawaii*.

Highly regarded as a teacher by students in the Graduate School of Business, he has been involved in several Silicon Valley startup firms and is a director of University National Bank and Trust, Palo Alto. Several of his engineering students have started their own companies.

His introductory course in basic accounting has attracted as many as 500 students over two academic quarters, including both graduates and undergraduates. Known for his bow ties and aggressive enthusiasm, he still likes teaching 8 a.m. classes.

In a 1981 talk to the Business Development Association, he said the key to success "is to be very good at what is really important." Small firms can make effective use of "misfits...creative people who may be a bit hard to get along with but are even harder to do without."

Among his caveats for consulting with small business were; 1) "Always worry about cash"; 2) "Be skeptical about any balance sheet"; 3) "Design the organization to fit the people—not the other way around. And keep it lean."

In a 1980 talk to engineering alumni, he said small firms thrive by finding a small market niche, and then energetically dominating it.

Born in Chicago Feb. 25, 1935, he received his bachelor of science in industrial engineering at Stanford in 1957, graduating Phi Beta Kappa and Tau Beta Pi. He was a student in the honors cooperative program here the following year, then obtained his MBA at Harvard with high distinction in 1960. He worked as a process engineer at Ampex and as an industrial economist at Stanford Research Institute before helping found ICORE Industries in 1963.

Hinchliffe received his bachelor's degree in economics in 1957 and his MBA from Stanford in 1959. He has been with the Stanford Development Office since 1963. Under his leadership of corporate fund-raising, receipts grew from $8.3 million in 1978-79 to more than $17 million in 1981-82.

He served as associate director and chairman of the executive committee of the $300 million Campaign for Stanford during 1972-77.

Sterling award nominees sought

Nominations are being accepted for the J. E. Wallace Sterling Award, presented annually by the Stanford Alumni Association to recognize a graduating senior who has demonstrated strong potential for service to the University and to the Alumni Association. The prize, established in 1979 and presented during Class Day exercises in June, honors Stanford's chancellor and former president, Wallace Sterling.

Members of the senior class are particularly encouraged to submit names of classmates who should be considered for the award, which consists of a medal and a life membership in the Alumni Association. Suggestions are also welcomed from members of the faculty and administration.

In defining "potential for service," Association Director William Stone noted that it could be reflected in a student's record of involvement in programs and services that have benefited the University and the community and could include participation in activities such as clubs, counseling, athletics, drama and musical productions, student government, religious organizations, residential education, development committees, publications, social and political organizations, or tutoring.

Nominations must be made to the Alumni Association by April 22. Selection of the winner will be made by an Alumni Association committee. Further information may be obtained by contacting Marie Earl or Karen Porter at Bowman Alumni House, 497-2021.

Research associate vacancy at HEPL

Applications are sought for a Research Associate position to begin October 1, 1983, for a term of up to two years. The successful candidate would carry on a Stanford-Berkeley program of heavy ion scattering and reactions at the LBL 88" Cyclotron and Bevalac. Candidates must have a Ph.D. degree and preferably have experience with magnetic spectrometers, solid state, scintillation and gas detectors, and conventional electronics.

Applications with curriculum vitae and three letters of recommendation may be sent by July 1, 1983, to Professors K. Van Bibber and M. R. Yearian, High Energy Physics Laboratory, Stanford University, Stanford, CA 94305.

Stanford is committed to equal opportunity through affirmative action in employment and we are especially eager to identify qualified minority and women applicants.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.
Published by the Stanford University News Service. Patricia J. Black, editor; Karen Marman, design assistant; Debbie Jeppson, production assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto., CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Schawlow: the brilliance, burden, and caring of a Nobelist

A rumpled, plump physicist, he thinks to classical jazz, seeks help for autistic son

BY DONALD STOKES

Arthur Schawlow

Arthur Schawlow of Stanford is far removed from the popular image of a Nobel Prize winning physicist.

The man who helped to transform our world by co-inventing the laser is not an ascetic stepping from the calm of his lab to tranquilly enjoy the crock at the end of the rainbow.

Instead, he is a troubled man with a load of very special responsibilities and demands on his time.

He is grateful and proud to have received the Nobel, but he is equally glad, more than a year after the award, that subsequent winners are being publicized, and he can give more time to research and his family responsibilities.

Schawlow is the fifth Stanford physicist to gain a Nobel, and they are all busy on campus. But Schawlow is unique in his style, his problems, and his outlook.

To see him at work, one could not guess at the heavy load of his responsibilities. He is a rumpled, plump figure who thinks, whether in the office or in his car, to the accompaniment of classical jazz music.

He finds the likes of Louis Armstrong or Bix Beiderbecke, chosen from his collection of 1,500 records and cassettes, to be conducive to working out his problems. He buzzes around campus on a moped, amiably waving to his friends.

His impish sense of humor revels in his scientific tricks of demonstration in the classroom, and his students regard their tousled professor with deep affection.

Schawlow is a caring man, and this has caused many of his burdens since he won the big prize. He cares about the good causes which seek his name in support; he responds to friends and acquaintances in the worlds of physics, engineering, and science who want him to lecture or to visit. He is an easy touch for the collectors all over the world who ask for his autograph or photo.

He gives earnest thought to the swarm of letters from those who imagine that a man of his eminence must be able to help them shape their careers.

He worries about becoming politicized. "All sorts of people want my name to add to their manifestoes or appeals," he said. "Often I am approached by people whose judgment I respect, and it is very difficult to decline, but at the same time I am anxious not to become a political figure. Winning the Nobel in no way enhanced my judgment in political affairs.

"Sometimes these appeals do some good, such as when an Argentine physicist was released from jail because of international pressure, to which I added my name.

"Certainly the time I have available for the things that really interest me has been cut down considerably. I hope that will get better as time goes by."

Schawlow is asked to testify before U.S. Congressional Committees, to give talks to audiences all over the country. Each time there are additional burdens involved.

"There are so many things to watch out for. For example, having traveled somewhere to give a talk, the organizers say they want to print the talk, that they have recorded it and will ask me to edit the manuscript.

"Of course, there is a great difference between the way one talks and the way it should be presented in print, so a great deal of work is involved in editing it into suitable shape."

Another time-consumer is the steady stream of requests from all over the world for his autograph or photo. A surprising number of them come from Germany and Austria.

"I hope what I'm saying doesn't seem to imply that I'm sorry I won the Nobel. Far from it. It is just that there are heavy new responsibilities I had never dreamed of."

Schawlow worries that the flood of expectations from others that surrounds him will take too much time away from his research. "The scientific world is sometimes like the political arena, where the refrain is 'What have you done for me lately?' In science, unless you are doing new creative things, you are regarded as washed up. You really lose respect.

"Of course, in the wider world, the fact that one is a Nobel Prize winner still means a great deal to many people. I remember giving a talk to a group of physics students and teachers, where one of the teachers told me that he had been teaching physics for 20 years, and had never met a Nobel winner before.

"At Stanford they are fairly common, and if you go to a meeting of the American Physical Society they are almost the norm."

Schawlow's new eminence does bring some dividends. When he fell ill with a severe virus infection recently while giving a talk at a Navy college, he was taken to a Navy hospital and given the red carpet treatment, with awed nurses and intravenous feeding.

This was the very first time in his life that Schawlow had ever been treated in a hospital. He remembers how, at the age of five, he was laid out on the dining room table at home so that his tonsils could be removed. On another occasion he contracted diphtheria ("we've wiped that out now") and an enormous needle was plunged into his leg with anti-toxin.

In all the range of his caring, nothing is more pressing to Schawlow and his wife Aurelia than the plight of their first-born, a son of 27, named after him. Artie, as he is called, is autistic.

Nobody knows the cause nor the cure for autism, a withdrawn condition in which the patient is unmindful of objective reality. The baffling frustration is that the person is often of good intelligence. The very existence of the condition was little known when Artie was young. Today it is much better known, and facilities and behavioral treatment are available for autistic children.

But the problem of caring for autistic adults is largely unmet. The Schawlows face the problem that their son is fully-grown and quite husky—5'10" tall and weighing 180 pounds. It is therefore difficult to secure adequate care for him.

Artie speaks only a few words. "Nearly all the time he is gentle and sweet," said Schawlow, "but on the rare occasions he gets annoyed, his very size makes him a problem.

"Very few facilities are available for adult autistics. This is particularly difficult for us because of Artie's size." Schawlow sighed deeply and his normally benign features creased into lines of deep worry. "It is a problem bristling with difficulties.

"Autistic people have just as much comprehension as more fortunate people, but they find it difficult to communicate, and this makes them frustrated. They need to learn—I suppose by techniques of behavioral modification—how to conform to the group.

"Children are often rough when they are little, but they learn to conform. Artie was very withdrawn when he was little and did not learn some of the social lessons he might have. In those days hardly anybody had heard of autism, people wondered whether our son was retarded or disturbed. It may be neither, or it may be something of both.

"The root cause of the affliction is unknown; perhaps it is a disease, perhaps a syndrome. It may be a birth defect of some kind. It was given a name only as recently as the 1940s.

"Usually autistics are very withdrawn, but Artie is not so anymore. Some people say—and I tend to agree with them—that autistics are not insensitive to their environment, but hypersensitive to it, and they withdraw into their shell because they cannot cope.

"Today there are programs in some schools for them, where they are taught to process information. When Artie grew up there was no such help, so he is

continued on next page

Schawlow on autism: 'It's one of those things you can never give up on'

continued from page 3

having a hard time now.

"What he needs is to be in a group so that he can learn from others, and enjoy a certain amount of group support and learning. At home there are no contemporaries for him to relate to.

"At one time he was very hard to reach, but now he is open and warm and wants to learn, so we hope he can be given the opportunity."

During his travels Schawlow meets many medical people, also parents, who are involved in the world of autistics. Very often he has found proof of the intelligence of autistics. In Sweden he learned of a young autistic who has learned to communicate by means of a typewriter device.

In Florida he heard of an autistic who has earned a Ph.D. in mathematics, but has been unable to hold a job because of his withdrawn manner.

An interviewer suggested that there might be a keen brain in Artie, trying to express itself. "That could be," replied Schawlow. "The father paused and said slowly: "It's just one of those things one can never give up on."

The Schawlows have given substantial help to the Peninsula Children's Center, Palo Alto, which is doing excellent work for young autistics. So far, unfortunately, the Center has not been able to help Artie.

The Schawlows hope that they may be able to find help through other organizations. In any case, they expect that the bulk of the Nobel prize money will go on trying to find help for Artie.

"Just in the past three or four years," said Schawlow, "Artie has become willing, indeed eager, to sit at a table and work on academic skills. He can now recognize a considerable number of words, can add some numbers and is beginning to use some sign language.

"It is very important for him that he can find somewhere to live where he can be comfortable and happy and continue to learn.

"It is all very difficult, and we live with it all the time."

As part of the media attention given to Schawlow when he won the Nobel, and the problems he faces with Artie, he received a large volume of mail from people giving suggestions about treatment.

"The trouble was, it didn't add up," said Schawlow. "I have taken Artie to many doctors, each of whom looks at Artie in perspective of his own particular specialty. Some look at brain-waves and nothing else. Psychiatrists try to analyze the parents. Others say there is something genetic about the condition."

Wherever he goes, whether in the office, in his car, or traveling, Schawlow likes to listen to classical jazz. He has a hi-fi set in his office, and stereo speakers in his car, and wherever he travels he tries to find time to visit local record shops to search for new finds, from New Orleans sounds, Dixieland, the swing era, and the big bands.

He switched on his set in the office and a clarinet solo from Dixieland filled the room with sharp perfection.

"I turn the music on most of the time as background, but not if it is too distracting—and the really great masters are distracting. I am not really a musical person. I can't carry a tune, nor play an instrument."

His interest in music goes back to when he was finishing high school, and he built a radio. "About the only thing worth listening to was swing music. Being of scholarly disposition I went to the library to find books on swing. They had none, but they did have books on jazz, so I read about people like Louis Armstrong. I have been amassing jazz records ever since.

"I had about a thousand 78 rpm records, and I gave those to the Archive of Recorded Sound at Stanford. Today I have a lot of LP's. As soon as I have bought a new record I play it once, then put it on cassette so that I can listen to it here and in my car.

"I am an amasser rather than a collector, although I am a member of the International Association of Record Collectors, and have written a number of articles about jazz. I have never wanted to have rare records—I never wanted to pay premium prices or spend time going through junk piles.

"I am uncomfortable with rare records, and when I do get one I give it to a real collector. I want the music, and in a form I don't have to worry about."

He has fallen behind in listing his 1,500 records because he has been so busy. He thinks he must have 100 records of his particular favorite, Louis Armstrong, essentially all of his early records and many of the later ones.

"I also have everything Bix Beiderbecke ever played—what a pity he died so young. Then there is Irving Fazola, the great clarinetist, Artie Shaw, Duke Ellington. . . .

"I have been fascinated during the last couple of years by some Swedes and Danes who are remarkably fine copyists of the old masters. There's one Dane, Theis Jensen, who in some tapes sounds better than Louis Armstrong himself. He plays the way Louis did in 1932 when he was at the height of his powers."

When the famous Preservation Hall Dixie band played on its 50th anniversary at Stanford, Schawlow thanked Richard Lyman, then president of Stanford, for bringing them on campus; he gave Lyman a record of Joe Muranyi, a fine clarinetist who used to play with Armstrong.

The result was unexpected. "One night when I was in New York I went to the well-known Jimmy Ryan's bar to listen to Joe Muranyi in person. While I was chatting with Muranyi (about whom I had written an article for a fan magazine), he excused himself to circulate among the customers and sell his records.

"Joe came back to me grinning, saying 'I tried to sell one to one dude but he said that he had already been given one—he gave me his card.' The card was Dick Lyman's, who was among the crowd!

"I like classical music also. My wife is a classical musician; she studied voice and has a master's degree in music. She plays the piano and organ, and conducts the choir at Ladera Community Church. We like to go to opera and classical concerts.

"Aurelia tolerates jazz, but she doesn't really like it."

The Schawlows have two daughters. The elder, Helen, is 25, a year-and-a-half younger than Artie. She gained her B.A. at Stanford and her master's at UC-Berkeley, and is now considering graduate studies in French. Edith, who is 23, has a B.A. in psychology, and is working for a personnel manager. She is married.

What makes Schawlow popular with students is the empathy he creates. He cares deeply about them and worries about their difficulties.

"There are many problems for them," he says. "For example, at one time going into medicine was a sure way of finding a satisfying career, but it has become so over-extended. Today so many try to get into medicine, and in the classes I teach I am aware of the almost frenzied straining in the highly competitive atmosphere.

"At the peak of the frenzy they try desperately to get that extra point in a test, because it may make all the difference in their grades and their chances of a career."

Schawlow has a great reputation as a teacher. He is particularly noted for the way he uses novel demonstrations in class to drive home points. An example famous on campus is when he uses a laser on one of the familiar types of balloon which has another balloon of different color within it.

Schawlow directs a laser on to this type of balloon and the inner part collapses, since the inner balloon has a dark blue color and so absorbs the intense red light from the ruby laser.

In sciences you have to do what you can do, to make sure that it is something new, and you have to depend on your instincts that you are working in a fruitful direction. . .
Doing research is an art as much as a science. It uses science, but it is a creative art. There are pitfalls on both sides.

—Arthur Schawlow

Schawlow was widely expected, by his professional colleagues, to win the Nobel Prize in 1964. With his brother-in-law, Charles Townes, he had first shown the possibility of creating a laser.

Schawlow speaks now of his disappointment in a calm, almost offhand manner. "By the end of 1957 Charles Townes and I were working on the principle of an optical maser, extending the principle of masers to visible wave-lengths. Six years earlier Townes had invented masers, the first devices that used atoms to amplify radiation. But they worked in the radio region and we wanted to see if something like that could work for light.

"We thought we could not afford to waste two or three years trying to build one, for it had never been done, and looked terribly difficult. So we published a theoretic paper showing the calculations, which proved that it could indeed be done, and describing the structure that most lasers use.

"One example we used was potassium vapor from potassium lamps; we had enough information about that so that we could calculate everything.

"Townes and his students started trying to build one using potassium. I thought that solids were better than gases for the purpose, so I started to study the optical properties of solids, including rubies. I proposed a dark ruby for an optical maser; later on it was demonstrated and it worked.

"We had shown that an optical maser could be built, and how to do it. But if we had had to have a particular wavelength or level of efficiency, it would have added more conditions that would have made it impossible.

"In science you have to do what you can do, to make sure that it is something new, and you have to depend on your instincts that you are working in a fruitful direction."

When the Nobel Prize winners were announced in 1964, Charles Townes was named as a co-winner, with two Russians, who like Townes had done pioneer research on masers.

Schawlow had to wait another 17 years for his.

"Doing research is an art as much as a science," says Schawlow equably. "It uses science, but it is a creative art. There are pitfalls on both sides.

"You can work on the obvious recognized problems, which may be impossible to solve, or you may look under the lamp post for the lost quarter because that is where you can see, though you lost it somewhere else."

Humanities and Sciences dean to oversee curricular programs in DAPER

Humanities and Sciences Dean Norman Wessells will become responsible for overseeing curricular programs offered by the Stanford Department of Athletics, Physical Education, and Recreation (DAPER), effective Sept. 1.

Provost Albert Hastorf announced the change to the Faculty Senate Thursday, March 31, following an extensive committee study and consultation with Athletic Director Andy Geiger and others.

The change is designed to reduce the isolation of DAPER's Division of Educational Programs from other academic units.

Headed by Associate Prof. Pamela Strathairn, the division offers no degree programs. Its present isolation handicaps efforts to coordinate curriculum where undergraduates seek work in physical education to complement other academic majors or to heighten their career options, the committee study found.

At present, there is no forum for discussing standards for credit and grading or for comparing physical education courses with extradepartmental courses or activity courses in other departments.

"The division's isolation also diminishes the University's ability to see the full continuum of courses, among them physical education activity courses, which the faculty have decided can play only a limited role in student completion of the baccalaureate degree," Sally Mahoney, University registrar and committee head, informed Hastorf.

"Although the School of Education is committed in principle to maintaining its master's level programs in physical education and in the dance area of arts education, the division is not well positioned" to respond to these needs.

The committee recommended that:

1) The academic staff for teaching use the titles senior lecturer and lecturer, as is done elsewhere in the University;

2) The dean of humanities and sciences appoint a committee, including at least two faculty outside DAPER, to oversee its curriculum;

3) Further limits be placed on use of physical education courses as credit toward baccalaureate degrees, integrating them with limits now applied to extradepartmental programs;

4) DAPER courses generally be graded on a pass-no credit basis, unless specifically excepted by the oversight committee; and

5) The dean of humanities and science, the dean of education, and the head of DAPER's curricular division agree on plans for advanced training programs.

Hastorf suggested that these recommendations be reviewed by Wessells, Geiger and Strathairn after Sept. 1.

"Any bill in particular is worth tackling only because doing so holds promise of added value for our overall educational objectives," Hastorf said in a memo to Geiger and Strathairn.

"We think the promise is there in large part because of the quiet and effective attention you and your colleagues have paid to the quality of a curriculum that serves a wide variety of undergraduates and the professional training of a small number of others.

Besides Mahoney, those serving on the ad hoc committee included Education Dean Myron Atkin, Assistant Provost Cecilia Burciaga, and Profs. Jack Friedenthal, law; Michael Kirst, education; and Richard F. Thompson, human biology and psychology.

Volunteers sought for nutrition study

Interested in good nutrition? Want to find out how well *you're* eating?

The Communication Department needs volunteers to evaluate draft versions of materials for a nutrition education campaign. The materials, a nutrition self-assessment chart and a companion 16-page booklet, are being developed in cooperation with the Nutrition Education Unit of the United States Department of Agriculture.

Volunteers will be asked to use the booklet and the chart to keep track of what they eat for a week, then meet with a researcher and six to eight other volunteers to offer opinions and criticisms of the materials.

The group discussion will be held at the Communication Department (Building 120) from 5:15 to 6:30 p.m. Wednesday, Apil 27, and Thursday, April 28.

To be eligible, volunteers must be: 1) the person in their household who does most of the cooking and food shopping, 2) 20 to 50 years old, and 3) have at least one child aged 2 to 18 in the household. Staff employees preferred.

If you are interested and can attend one of the two discussion groups, please call Kathy Malin at 497-4700 by April 15.

Carstens to discuss South African events

Kenneth Carstens, lecturer at Harvard University and consultant on South Africa to the United Nations and other groups, will discuss events in South Africa at 8 p.m. Thursday, April 14, in the Round Room of the Stanford University Memorial Church.

A panel will follow including Robert Hamerton-Kelly, dean of the Chapel, and Profs. William Gould, law school, Prof. David Abernethy, political science, and Joel Samoff, education.

The event is sponsored by the Social Action Committee of the Friends of Memorial Church.

For more information, call the Church office at 497-1762.

Mahoney summarizes recommendations on DAPER's educational programs

Following is the major portion of a memo to Provost Albert H. Hastorf from Sally Mahoney, associate provost and registrar, concerning summarizing the report of the Ad Hoc Committee to Review Educational Programs in Physical Education.

The Department of Athletics, Physical Education and Recreation (D-APER) through its Division of Educational Programs headed by Associate Prof. Pamela Strathairn offers no degree programs but does offer an extensive curriculum in support of several objectives the staff understands the University expects of them. The Division seeks to contribute to general education, to elective work within certain undergraduate majors, to pre-professional exploration and preparation, and to advanced training programs in the School of Education.

Our principal finding is that D-APER's curricular division is separated, indeed, isolated from the other academic units. It is the responsibility of no School, nor has oversight responsibility for it been assigned to any of the University's faculty deans.

This general circumstance affects several aspects of the Division's function. The Division's efforts to maintain an effective instructional staff have not been matched by developmental opportunities for its professorial faculty and its academic staff for teaching (who hold distinctive titles which simply may isolate them further from others in the University of the same status and similar responsibilities).

Isolation seems to hamper the work of the Division's curriculum committee: they have only informal means and no formal structures through which to coordinate curricular planning with departments and programs whose undergraduates seek work in physical education to complement majors or to heighten career options; they have no forum for the discussion of standards for credit and grading or for comparing physical education courses with extradepartmental courses or with activity courses in other university departments.

The Division's isolation also diminishes the University's ability to see the full continuum of courses, among them physical education activity courses, which the faculty have decided can play only a limited role in student completion of the baccalaureate degree.

Finally, although the School of Education is committed in principle to maintaining its Master's level programs in physical education and in the dance area of arts education, the Division is not well positioned to respond to the needs implied by that commitment.

In response to these findings we make several recommendations:

First, we recommend that the Dean of Humanities and Sciences be appointed the Division's cognizant academic officer, assuming oversight of D-APER's curricular program and the staff supporting it.

Second, we recommend that the Division's cognizant academic officer respond to several personnel matters. In that connection, we specifically recommend that the Division's academic staff for teaching use the titles, Senior Lecturer and Lecturer, used generally in the University and not the special titles used in the Division since 1972.

Third, we recommend that the cognizant academic officer charge a committee, to include a core of the Division's own curriculum committee and at least two academic council members from outside D-APER, with oversight of the Division's curriculum.

Fourth, we recommend limitations beyond those now in place on the use of physical education courses in support of Stanford's baccalaureate degrees and, further, that these limits be integrated with other credit limits now applicable to extradepartmental programs.

Fifth, we recommend that D-APER courses, generally and unless specifically excepted by the oversight committee, be graded on a Pass (P)/NC basis.

Sixth, we recommend that D-APER's cognizant academic officer, the Dean of the School of Education, and the head of D-APER's curricular division come to closure on the advanced training programs to which D-APER's curricular Division contributes, reporting their plans, as appropriate, to the Provost.

This assignment proved an interesting task for the members of the committee. We have enjoyed the cooperation of many, and we are especially appreciative of the contributions of Valerie Veronin of the Office of Management and Budget, who provided the staff support for our work.

Should you wish to discuss our recommendations, we would be happy to meet with you at some mutually convenient time.

J. Myron Atkin
Cecilia P. Burciaga
Jack H. Friedenthal
Michael F. Kirst
Sally T. Mahoney
Richard F. Thompson

Hastorf accepts key recommendation, defers rest

Following is a March 21 memo to Andy Geiger, director D-APER, and Prof. Pam Strathairn, associate director for educational programs, from Provost Albert H. Hastorf.

All of us have had more than a little interest in the recent report of the *ad hoc* committee which reviewed D-APER's educational programs, specifically those involving the formal credit curriculum. Having studied the report and having learned your reactions to it and the reactions of others, I am persuaded of the committee's central finding: that D-APER's educational objectives for its credit curriculum are made difficult by the program's isolation from other units offering a credit curriculum.

Furthermore, the thrust of academic reorganization implemented during the past year has been, wherever possible, to locate credit programs within the Schools of the University. After discussions with Humanities and Sciences Dean Norman Wessells, which had been preceded by conversation between Associate Dean Carolyn Lougee and you, I am announcing that the School of Humanities and Sciences is accepting responsibility for the D-APER credit curriculum, effective September 1, 1983.

Having accepted the primary recommendation of the *ad hoc* committee, I think it would be in the spirit of their report to suggest that after September 1 the Dean and you review the other recommendations. I will look to his specific recommendations and actions following that.

There are, of course, several matters about which to be concerned: the workings of D-APER's internal curriculum committee and the possible establishment of a School level program policy committee; appropriate staffing arrangements responsive to issues raised in the report; matters of grading and credit limitation which may involve consideration and action by C-AAA or by C-US; and, as you work with the Dean's Office, still other issues beyond those raised by the *ad hoc* committee but which bear on the educational contribution of the program.

Any bill of particulars is worth tackling only because doing so holds promise of added value for our overall educational objectives. We think that promise is there in large part because of the quiet and effective attention you and your colleagues have paid to the quality of a curriculum that serves a wide variety of undergraduates and the professional training of a small number of others.

I expect that between now and year's end there will be opportunity for some informal discussions among you and Norm and his colleagues, discussions that will aid your planning for the formal change to come in Autumn. Let me know if further clarification would assist you or if I can be of other help.

Faculty Senate discusses weapons-related research, asks more information

continued from page 1

said this particular problem "can most likely be best handled by the Stanford administration without direct (Faculty) Senate involvement."

In a March 29 letter to 280 SLAC staff who petitioned against the research in mid-January, SLAC Director Wolfgang Panofsky said SLAC would "cooperate fully" if the unclassified proposal to SSRL were accepted by the University. So far, the proposal has not secured funding and has not been acted upon by the SSRL proposal review panel.

(For text of Panofsky letter, see p. 8.)

Developed by Livermore, Sandia, and Los Alamos national laboratories, part of the proposed research involves the development and testing of high-speed x-ray detectors, used in the analysis of nuclear weapons tests. This application was "very blatant and clear," Mozley said.

Meindl noted that the 42-page proposal was discussed by the committee Jan. 26 and found in accord with current University research policy. This requires openness, but does not consider end use.

The proposal, which also includes many University of California faculty research projects not involving weapons, was "full of all kinds of soft x-ray applications," he added. These involved astrophysics, the life sciences and several other disciplines "far beyond weapons."

Trying to restrict research on the basis of end use could "easily take a whole year of meetings," Meindl said.

Prof. Kenneth Arrow, Nobel Laureate in economics, could see "no logic" for distinguishing between weapons-related work and other defense research. He noted that he receives funds from the Office of Naval Research.

The more interesting issue, Arrow said, is the "involuntary servitude" of SLAC staff, whose skills provide the electron beam on which SSRL depends.

While it's "perfectly proper" to have the committee make a study, "we're not saying necessarily there's a problem. We're asking the cpommittee to think about it."

Prof. Gerald Gillespie, German, who seconded Mozley's motion, expressed "misgivings" about trying to "predicate limits on end use" on deciding whether or not to accept research. The question of volume could be more easily examined.

Defense Department funding

In the fiscal year ending Aug. 31, 1982, the Defense Department funded about $24 million in research expenditures at Stanford, according to Vice Provost Gerald Lieberman, dean of graduate studies and research. Total research volume was $123 million, excluding $61 million for SLAC from the Department of Energy. SSRL's largest single funding source is the Department of Energy, whose Office of Military Applications was asked to provide $5 million for the national laboratories' proposal. Another $1 million would come from the University of California.

Prof. Robert White, electrical engineering, said that end use was "an awfully treacherous criterion" to use in evaluating research.

Mozley said that "whatever problems we have at SLAC can only be resolved by a general University ruling" on research policy.

"I don't like ad hoc solutions," he added, agreeing with White's concerns. He acknowledged that a study could be "very time consuming," noting in a statement to the Senate that "a great amount of factual material must be obtained and evaluated. The problems of any possible restrictions must be studied in relation to the very diverse community here."

He and Gillespie agreed to delete language from the initial draft resolution asking the Committee on Research to also study "possible criteria relating to end use which might be used to reduce the volume of (weapons-related) research if this proves desirable."

Mozley told the Senate that even "a preliminary look to find out how difficult the problem (of weapons-related research) is would be very helpful."

Prof. Anthony Siegman, electrical engineering, suggested that those concerned might undertake the study themselves, since the underlying data should not be hard to get from "voluminous reports" published by the Sponsored Projects Office. (Before debate began, Provost Albert Hastorf noted that SPO had requested faculty "forgiveness and patience" on grant applications, since they are short two people and training two others.)

Siegman, who directs the Ginzton Laboratory, noted that two projects there might be erroneously identified with directed beam weapons.

These are free electron laser research by Prof. John Madey and a prospective x-ray laser being developed by Prof. Steven Harris. The latter has "nothing to do with the atomic-bomb pumped laser that Edward Teller (prominent physicist at Lawrence Livermore Laboratory and senior research fellow at Stanford's Hoover Institution) has been working on," Siegman said.

Both the Madey and Harris experiments represent "work of the highest possible scientific order and Stanford should be proud to have these faculty members and these projects here," he added.

"The likely practical consequences of one of these projects will be negligible and the other enormous, but I won't say which," he quipped. "Neither one of them is likely to be a weapon."

Senate statement by Mozley

Following is a statement by SLAC Prof. Robert Mozley to the Faculty Senate.

First let me make it clear that I am not representing SLAC administration in requesting that the University examine possible problems relating to doing weapons-related research. I would guess that I have the complete support of about half of the SLAC faculty and a considerable number of the staff. I will assume or at least hope that you have read the enclosed material.

My proposed resolution was motivated by the probability that a beam-weapons related project at SSRL will command the efforts of SLAC people who do not wish to work on it. The resolution does not directly address this problem but relates to my concern that this particular issue may be part of an increasing set of problems which will arise if Stanford's research efforts should become more and more directed to military goals. I believe that the particular SSRL-SLAC problem can most likely be best handled by the Stanford Administration without direct Senate involvement.

President Reagan's support for a major increase in funding for beam-weapons research makes clear the pressures of funding availability which may move University research programs in a weapons-related direction.

Although it is difficult and dangerous to apply criteria relating to the use of research in selecting the research appropriate to a university, a slight move toward avoidance of work with a clear direct military mission might be desirable to prevent Stanford from becoming too deeply involved in military research. The University may be more liable to government pressures when weapons research is involved. At some level such involvement could change the character of students and staff attracted to Stanford and, as we have already seen, can have an effect extending beyond the departments directly involved.

This is a subject which has broad effects on the entire Stanford community, and merits discussion in the Senate. To discuss it intelligently a great amount of factual information must be obtained and evaluated. The problems of any possible restrictions must be studied in relation to the very diverse community here. The Committee on Research seems the appropriate starting point.

Therefore I propose the resolution presented in Senate Document 2479.

(See text, p. 19.)

Judging end use tricky, difficult. . .

continued from page 1

large stockpiles of nuclear weapons, and on deployment measures and countermeasures with great destructive potential, have placed us all in collective jeopardy.

"Recent extensions of those policies have caused the defense budget to hypertrophy at the expense of social programs that fulfill human needs; and within the Department of Defense itself, an increased focus on weapons technology has weakened the support of more fundamental research efforts."

The controversial research proposal for SSRL was developed by Lawrence Livermore, Sandia, and Los Alamos laboratories, who seek $5 million from the Department of Energy's Office of Military Applications. An additional $1 million would come from the University of California for faculty research not related to weapons.

Kennedy said "A careful reading of the proposals reveals in fact a wide variety of work, including a number of programs on the fundamental properties of living materials, is to be conducted, although the weapons applications are understandably stressed in the short form of the proposal directed to the funding agency.

"The heterogenous mix of intentions and prospective uses for this proposed (beam line) demonstrates clearly just how tricky and difficult it is to judge end-use and intent.

"Sometimes the search for knowledge leads one to unexpected places. No research can safely be predicted to be free of harm—nor, conversely, can a piece of work that includes a military end-use automatically be defined as 'bad.'

"Our policy is that Stanford scientists are free to conduct work of their own choosing as long as it can be carried out in accord with the principles of openness and freedom of publication.

"The principle underlying the policy is that the special benefit flowing from free and unimpeded efforts to gain new knowledge will outweigh the cost exacted by occasional pieces of dangerous knowledge we obtain as a result of free inquiry.

"Because I believe in the principle, I support the policy."

—Bob Beyers

Panofsky says nuclear defense initiative 'ill-advised'

President Reagan's nuclear defense initiative is "ill advised," says Stanford Prof. Wolfgang Panofsky.

An internationally respected physicist and arms control expert, Panofsky says the President's "vision" of developing an "impenetrable umbrella" against strategic nuclear missiles "could lead us in an extremely dangerous direction," encouraging further escalation of the arms race.

No study has yet shown an impenetrable defense against mass nuclear attack to be technically feasible, he adds. "You cannot coerce technology by a policy decision."

Speaking as a citizen, Panofsky finds the President's proposal "somewhat spiritually troubling." He believes it was "a national tragedy" that so little detailed preparation preceded the President's public announcement March 24.

Panofsky favors continued research and development of new defense systems. "I don't want us to be surprised," he says. To identify defense research with evil is "a perversion."

The Soviets are "wrong" to charge the President's initiative with violating the existing Anti-Ballistic Missile (ABM) Treaty, he adds: "The type of research now going on in both the U.S. and the Soviet Union on space ballistic missile defense is fully permitted under the treaty.

"However, the President's initiative does contain the seeds for future abandonment of not only the ABM treaty, but also other existing treaties," including the ban on nuclear weapons in space and the Limited Test Ban Treaty of 1963, which bars nuclear tests in space and in the atmosphere.

Feasibility questioned

Unlike the exhaustive, careful studies which preceded the decisions of President Roosevelt to build an atomic bomb and of President Kennedy to go to the moon, "no study has indicated the feasibility of a massive, impenetrable defense to protect the population of the U.S. against the combined nuclear threat of missiles, both ballistic and air-breathing, airplanes, and other means of delivery," he notes.

As long as nuclear arsenals remain near their current level, 'there is no foreseeable technical means to eliminate the mutual hostage relationship that now exists between the people of the U.S. and those of the Soviet Union. . . .

"Ballistic missiles can be shot down from the ground after being detected by radar by various forms of interceptors, including some which may use nuclear weapons.

"We have learned, starting from the 1969 ABM debate, that such systems cannot possibly protect the entire population in an effective way, although they may be of some use to protect a few selected targets.

"The President seems to be relying instead on suggested space-age weapons, such as satellite-borne lasers or sources of particle beams, or on the type of x-ray laser that is fed by nuclear explosions, as recently publicly advocated by Dr. Edward Teller (now a senior research fellow at Stanford's Hoover Institution).

"In principle, such weapons can be designed and built so they shoot down individual incoming ballistic missile boosters or warheads. But does that constitute the type of impenetrable defense that the President envisioned?

"All previous studies. . .have led to extremely pessimistic conclusions about whether such a defense is feasible or advisable. Its costs would be enormous; the possible counter-measures are many; the opponent could increase his offensive power and leave the U.S. population in just as much danger as they were before.

"The President's proposal, although currently asking only for intensive study and not for an immediate increase in the $1 billion a year that now goes into 'directed energy' weapons, could lead us in an extremely dangerous direction.

"The danger stems simply from his public advocacy of such a program, not from the technical reality of these weapons.

"It is dangerous because such a 'new technology' initiative may well lead the Soviet Union to match or follow what we do, as they have done in the past. Even more serious, they may be led to increase their offensive power even further because of the possibility that the President's initiative may lead to at least some limited form of protection. . . . We would do precisely the same had Mr. Andropov given the speech that was delivered by President Reagan. . . .

"No technical choice beyond mutual deterrence exists as long as the arsenals of the U.S. and the Soviet Union, which by now contain over 50,000 nuclear weapons, remain as enormous as we have permitted them to become. . . .

"The President implies that increased armament is needed first to 'bring the Russians to the bargaining table.' But we are already at the bargaining table with the the Russians in the START and Intermediate Range Nuclear Force (INF) talks.

"In fact, the Soviets want to be at more bargaining tables than we do. At the end of the previous Administration, we had signed the SALT agreement and started the INF talks. We were engaged in negotiations with the Soviets on means to terminate the threat of anti-satellite warfare, to end all nuclear tests, and to limit conventional arms transfers. None of these negotiations have been continued by the present Administration.

"The Soviets introduced into the U.N. in late 1981 a request for the beginning of negotiations to eliminate all weapons from outer space, but we have not yet reacted to that initiative.

"The use of space has been a boon to mankind, both commercially and to enhance security. Communication satellites are in world-wide use, and the use of outer space for reconnaissance has made this a more open world by permitting all nations to see what others are doing and to verify compliance with arms control agreements. Introducing the threat of making space a battlefield will endanger these achievements. . . .

"The best way to reduce nuclear arms is to reduce nuclear arms, not to say that we must build more arms in order to reduce them. The costs of yet another layer of defense are many: the financial costs are enormous and there are grave risks to present and future arms control agreements.

"There is one additional grave risk. . .should a secure defense umbrella against nuclear weapons over the entire country be accepted as a realistic concept, then this could support the view that nuclear war fighting under the cover of that umbrella might become acceptable."

"If a nuclear war starts, under any doctrine, in any theater of war, through the first use of nuclear weapons by either the U.S. or the Soviet Union, then a grave threat to the future of civilization as we know it will exist. This risk. . .will only be increased if we add another layer of weaponry, rather than reducing what we already have."

Panofsky's views were developed in a column for the *San Jose Mercury*, interviews with *The New York Times* and other media, a national telecast with David Brinkley, and in an office interview with Stanford News Service.

Drell says U.S. soon faces decision on war in space

America very soon will face a decision about war in space, says a nationally prominent Stanford arms control expert.

Prof. Sidney Drell, a physicist who headed early studies of MX missile basing for the Defense Department, warns that "we are rapidly getting to a point of no return if we want to head off yet another dimension in arms competition and, through negotiation, maintain space as a sanctuary for our important communication and reconnaissance satellites."

The decision could be as profound as the earlier ones to proceed with the hydrogen bomb or multiple independent reentry vehicles (MIRVs), he adds.

He takes a skeptical view of "wonder weapons" and anti-ballistic missile defense systems.

In a recent talk at New York University on news coverage of nuclear weapons, Drell urged reporters and the public to avoid being trapped by "the fallacy of the last move—the belief that a magical new weapon will not provoke a response which counters and defeats it.

"Recall the Anti-Ballistic Missile (ABM) debate of 1969-70. Technical arguments for deploying a ballistic missile defense, then called Safeguard, collapsed when the next move was analyzed carefully—when the ease of response by the Soviet offense to such an ABM deployment was considered.

"The very recent proposal for the Densepack system—or closely spaced basing of the MX missile—similarly collapsed when the plausible ease and speed of reaction by the Soviets was considered.

"Now there is sweet technical appeal to space-based ABM systems using lasers or other directed energy beams to attack ICBMs shortly after they have been launched.

"But don't forget that many potential counters—such as, for example, decoys or space mines—that have the potential to neutralize and defeat them. And these space-based systems will certainly be very extensive and expensive."

In a campus interview March 24, Drell said he's "puzzled" by President Reagan's call Wednesday, March 23, for a new system designed to neutralize nuclear weapons after they are launched. This may simply have been designed to boost support for more defense spending in the President's budget. But it could signal the beginning of a new and dangerous redirection of national security policy, Drell said.

The President's insistence that whatever is done would be within the confines of the present ABM treaty is "a very severe limit" on any testing or deployment of new systems, Drell noted.

Both the U.S. and the Soviet Union are spending billions on research for space-based particle beams, lasers and other devices. "The technology is pretty well known," Drell said. "The problem is putting them together in a system. To do that requires testing, and many forms of testing would violate the ABM treaty."

On technical grounds alone, Drell sees little prospect for developing an effective system.

"Any serious effort would require pulling out of the existing ABM treaties. Then we would end up with less security.

"You can talk all you want about an anti-ICBM system based in space, but the cruise missiles never come up out of the atmosphere.

"We all have a vision of getting out from under the nuclear threat. The question is how. The best hope is arms control. Perhaps the President could offer a joint venture for cooperation in space with the Soviets, rather than more competition.

"We lost the opportunity to talk about and possibly avoid MIRVs and, before that, hydrogen bombs.

"This could be another big step. I don't see it as being effective.

"But it's hard to know what the President is talking about. He didn't ask for anything specific. Both the U.S. and the Soviets have research and development programs in progress.

"If what he has in mind is another Manhattan Project (which led to the atomic bomb in World War II) that would be terrible."

Scoville to speak on arms control

Herbert Scoville, Jr., currently the president of the Arms Control Association, will talk on "The Impact of New Weapons on Arms Control" at 7:30 p.m. Thursday, April 14, in Kresge Auditorium at the Stanford Law School.

Scoville has served as assistant director of the Arms Control and Disarmament Agency, deputy director of the Central Intelligence Agency, and technical director of the Armed Forces Special Weapons Project.

Scoville wrote "MX: Prescription for Disaster," (1981), which earned acclaim as a landmark contribution to the strategic weapons debate. He also has authored numerous articles on the concept of deterrence, the dangers and benefits of space technology and the potential impact of neutron weapons in defense of Europe.

Measures which he has championed include: abandoning the land-based leg of the strategic triad; efforts to curb an arms race in space; and reduced reliance upon tactical nuclear weapons for defense of Europe against conventional attack.

Scoville's lecture is sponsored by the Stanford Arms Control and Disarmament Forum.

Letters to the editor

Blacker on challenge of arms control

Editor, *Campus Report*:

The sharp and impassioned tone of Constance Kurruppu's letter to the *Campus Report* (March 23), prompts me, as a member of both the Arms Control and Disarmament Program and the Northeast Asia-U.S. Forum on International Policy to respond in some detail.

To begin, the Political Science Department does not now offer, nor has it ever offered, any course on nuclear weaponry. The Department does offer, through the auspices of the Arms Control and Disarmament Program, a two-quarter course sequence on the challenge of nuclear arms control and disarmament.

We who teach these courses feel strongly that the first and most important step in eliminating these weapons of mass destruction must be to learn about their origin and development. Only through careful study of these weapons—including the implications of their possible use and the ongoing efforts to control their proliferation—can we as concerned citizens hope to have a positive and enlightened impact on the decisions reached by our national policymakers.

Only by confronting the problem directly, as discomforting as that task may be, can we hope to avert the holocaust of nuclear war and begin to change the world in which we live. We believe firmly that an educated citizenry, able and willing to express its views on these difficult issues, can influence government policies in a way a less enlightened public cannot.

On a related matter, the Northeast Asia-U.S. Forum on International Policy at Stanford does not now study, nor has it ever studied, nuclear "first-strike scenarios." The Forum, established in 1979, brings together a diverse group of American, Japanese, and Chinese scholars and former government officials to study collectively problems of special concern to these countries.

The international character of the Forum, as well as its multidisciplinary approach to problem-solving make it unique. Topics of study include economic cooperation and competition, the implications of the revolution in high technology, health problems and nutrition. Forum associates also examine the problem of security in Northeast Asia from a number of differing perspectives.

It is critical to note in this regard that the Forum was the first university-based program to discuss with Chinese scholars the importance of nuclear and conventional weapons control in Asia. These discussions, which began in 1978, continue; we hope to convene yet another meeting with specialists from the Peoples' Republic of China in 1984. Work with Japanese scholars on these issues dates from 1973.

Finally, I should like to comment on the work of Dr. William Perry, who is associated with both the Forum and the Arms Control and Disarmament Program. Mrs. Kurruppu comments that there are "all too many folks like William Perry." I sincerely wish that were the case.

As Undersecretary of Defense for Research and Engineering in the Carter administration, Dr. Perry was one of the most articulate and forceful advocates of nuclear arms control ever to serve in the U.S. government. During the consideration of the ill-fated SALT II Treaty in 1979, Dr. Perry spoke out repeatedly, at great length and in great detail on the merits of this agreement. He traveled tens of thousands of miles to argue the case for SALT II. He addressed citizens' groups nationwide to urge ratification of the treaty.

It is precisely Dr. Perry's conviction that nuclear weapons must never be used that has led him to propose new measures to guard against a nuclear war through accident or miscalculation. It is this same conviction that has prompted him to offer alternative strategies for maintaining national and international security, including the development of certain kinds of conventional weapons as well as negotiated limits on weapons of all kinds.

In discussing with the Chinese the possible subsitution of precision-guided munitions for nuclear weapons, Dr. Perry was attempting to communicate the critically important message that nuclear weapons are completely unsuitable for use in war and appropriate for one and only one mission—deterrence of nuclear attack. Dr. Perry's important efforts on behalf of arms control should not go unrecognized; his work merits strong support.

The larger issue raised in Mrs. Kurruppu's letter—the injunction to choose life over death-serves to remind us that these are issues of the utmost gravity, beside which all others pale. I want to assure Mrs. Kurruppu and all members of the Stanford community that those of us who study these problems feel deeply the urgency of that message. We have chosen, in fact, to make nuclear arms control and the prevention of nuclear war the central focus of our professional lives. We sincerely hope that others will do the same.

Coit Blacker
Associate Director
Arms Control and Disarmament Program

Cohn questions word processors again

Editor, *Campus Report*:

A number of interesting objections have been raised against my remarks on the dangers of using word processors for creative or humanistic work, and I will answer a few here.

It is hypothetically true that creativity is a purely spiritual matter independent of instruments, and in my piece I left room for the *possibility* of first-rate writing being done on a word processor.

But in normal existence there is a lively interchange between pure mind and concrete, earthly matters; artists have traditionally cared a great deal about their choice of medium, the tools of their craft, the condition of their mind and body, time of day, location, and so on. These things are too well known to merit documentation here. What I want to stress is that a machine may not be *helpful* in just this humbly concrete sense.

It is evident that one cannot *blame* the gadget for hasty writing, but there is this mysterious yet familiar fact that the very act of taking to the machine both implies and abets a quantitative frame of mind which works against the all-important qualitative attitude. In one of those currently much-discussed "undecidables" of existence, it is hard to say whether the error lies in a previous disposition ("implies") or a specific act ("abets"). But, regardless, one knows in a flash of instinct simply to turn away from both, when it counts.

Someone took exception to my view that the gadget made for glibness, a sort of premature perfection which discouraged creative effort; this person observed that a piano offered similar "glibness" and that great composing has been done on it for centuries anyway. The answer to this is twofold:

First, the piano does represent a real problem of automatic perfection as compared to, say, a violin, and that has to be reckoned with in practice. Composers have frequently feared working with it partly for that reason, and the matter has been much discussed. For similar reasons, they eschew prematurely lush tone in the vocalization of their incipient music, and there is the well-known phenomenon of the "blank composer's voice."

Secondly, the piano is not just a docile efficient transmitter of impulses comparable to a word processor; it takes many years of arduous practice to begin to get the thing to translate your complex musical intentions adequately.

On both grounds, then, the example of the piano confirms my point. Meanwhile, when someone has gotten anything as compelling as a Brahms concerto out of a computer, please let me know.

SLAC will 'cooperate fully' if SSRL approves research proposal—Panofsky

Following is a March 28 memo to petitioners relating to the SSRL Program from W. K. H. Panofsky.

First, let me apologize to you for delaying my response to the petition which has been signed by so many of you until this time. I have used the opportunity, in the meantime, including a recent eastern trip, to discuss the basic problems raised in your petition with many of my colleagues and friends in institutions where similar problems have arisen in the past or might arise in the future.

Let me make the facts clear as they stand. SSRL is a laboratory under the direction of Professor Bienenstock which reports to the President of Stanford University independently of SLAC. We have made an agreement with SSRL to deliver beam and take care of certain of their needs such as radiation safety, vacuum protection, and so forth. However, the authority to determine the program of SSRL is vested in the SSRL director under the advice of a separate program advisory committee.

SSRL has received a proposal from the Lawrence Livermore National Laboratory, the Los Alamos National Scientific Laboratory, the Sandia Corporation, and several campuses of the University of California.

This proposal has been submitted to the SSRL program advisory committee and has not as yet been acted on. Funding for the proposal has not as yet been secured. The Livermore National Laboratory has made a submission to the Department of Energy's Division of Defense Programs for financial support; this may or may not be forthcoming. I have discussed the content of the proposal personally with the management of the Livermore Laboratory which is proposing to carry the largest part of the financial load and will do most of the work in constructing a new beam line.

The management of Livermore is committed to having their proposal be considered under precisely the same terms in which any other user proposals at SSRL are treated. This means that the University policies regarding lack of any secrecy, free access and publication, and the availability of running time on the newly constructed beam line for general SSRL use will be obeyed.

The proposal encompasses a large number of scientific and technical activities. An open seminar on the total proposed program will be scheduled at SLAC in the near future. The proposal states explicitly that some of the expected scientific results will be useful for the nuclear weapons program. It is this explicit statement by the proponents which has been the basis of the objections raised by you as well as through a separate petition which has been submitted by 15 members of the SLAC faculty to the Committee on Research of the Stanford University Academic Senate.

The faculty petition was heard by the Committee on Research during the meeting of January 26, 1983. At that meeting it was not as yet clear whether the work proposed by Livermore and the other laboratories was going to be in full conformance with University policy; in the meantime commitment in this respect has been secured. The Committee decided that it was not going to recommend imposition of any further University restrictions based on either *intent* or *end use* of work proposed. Rather, they felt that if the work conformed to the University policies as formulated, the matter of final decision was the responsibility of the SSRL director.

University policies on the acceptability of Stanford research were born during the general turmoil of the 1960s. At that time many initiatives arose aimed at limiting the University's involvement in various forms of research. The question then was faced explicitly how to define "good" and "bad" research. Stemming from the soul-searching of that time, the University decided that reliance should be on the *conduct* of the research only. Basically, current policy is to assure that the conduct of such research is consonant with the basic educational mission of the University, independent of intent or end use. This implies that all members of the University community, including students, faculty, visitors, and staff should have full access to classrooms and laboratories, and that the result of the research should be published just as soon as the results merit publication from the point of view of the quality of the findings.

End use was judged to be a quality difficult to predict; therefore trying to outguess end use constitutes an inacceptable burden on the freedom of research initiative. The matter of intent is even more complex. The intent or applied goal of the proponent may or may not be declared publicly. IF it is stated publicly, then indeed someone can judge whether he is or is not in agreement with the purpose, but opinions will differ. If this is not stated, then such judgment lacks any solid basis. It was for this reason that intent was not judged to be an acceptable test for the suitability of Stanford research.

Based on all this earlier agonizing, the University Committee on Research reaffirmed the policy that only the scientific merit of the proposed research should be the test of acceptability, provided that the other University policies discussed are met. In addition, a laboratory director also has to decide how to allocate finite resources among a variety of meritorious proposals, and he has to determine whether the proposal is in accordance with the basic mission of the laboratory. Note that SSRL and SLAC have quite different purposes. SLAC is a single-function laboratory dedicated to elementary particle physics. SSRL is a laboratory operating in various areas of pure and applied science, be it physics, biology, medicine, semiconductors, or other practical applications. It is only in the area of applied science where the matter of intent or end use becomes a basic policy issue as discussed above.

Based on all these considerations, I have decided that the only course of action for SLAC fitting these circumstances and policies is to assure the director of the Stanford Synchrotron Radiation Laboratory and the president of Stanford University that SLAC will cooperate fully with the proposal of the Livermore, Los Alamos, and Sandia Laboratories, and campuses of the University of California, if it were accepted. I cannot predict at this time when or if this will happen.

I am communicating this decision in response to your petition, realizing that it meets the concerns of some, but not all of you. I'll be happy to discuss the matter further with those of you who may wish to go into the matter further.

Carrier Pidgin serves global network of linguistics in pidgin, creole

Stanford is becoming a center for the study of pidgin and creole language with the publication of an international newsletter, the *Carrier Pidgin*, according to John Rickford, assistant professor of linguistics.

"We've a relatively high percentage of Ph.D.s and post graduates in creole languages, and we'll attract more as we become better known as a center—in my opinion the center for pidgin and creole studies."

A pidgin is a mixture of three or more languages used for rudimentary communication. A creole is an expanded variety which has acquired people who speak it as a native tongue.

Unique in its field, *The Carrier Pidgin* provides information about new books and papers, conferences, and notes and queries. Rickford observed, "it is the only source that let's you know what people are doing as they do it."

Theoretical significance

"Pidgins and creoles have been receiving more national and international attention," said Rickford, "because of their theoretical significance for linguistics and other fields. For instance Derek Bickerton's book, *Roots of Language*, draws on creole language data to shed light on the origin of human language. It suggests that people are prewired with a creole-like linguistic system called a 'bioprogram.' "

Pidgins often arise on colonial plantations, with a small powerful group speaking one language and a larger, powerless group speaking a variety of native languages. The pidgin takes its vocabulary from the language of the ruling group, like English or French, and its syntax from the subordinate group, like the West African languages of slaves brought to the Caribbean.

The pidgin undergoes simplification, losing inflectional endings and some grammatical categories.

The children of pidgin users learn it as their first language. It has then become a creole and, with greater work to do, expands its vocabulary and grammatical resources. In ordinary language acquisition parents are experts and children novices; with creoles the reverse is true.

Where do children get the tools and material to create a more developed language? Bickerton argues they get them from whatever it is that humans have wired into their system, the linguistic-genetic bioprogram. When the children don't have a complex language, they have to draw on their bioprogram to create one.

Evidence for bioprogram

Further evidence for a bioprogram, Bickerton suggests, is the fact that many creoles are similar in ways that are very different from their associated standard language. By studying the creoles and the similarities, we can begin to understand the structure of this bioprogram.

The Carrier Pidgin, now celebrating its tenth anniversary, came to Stanford one year ago when Rickford assumed the editorship with support and encouragement from the Dean's Office and News and Publications. He and Associate Editor James Fox have expanded the publication by printing book reviews and biographies of creolists. Future issues will cover various controversial subjects.

Other Stanford professors on *The Carrier Pidgin's* editorial board are Elizabeth Traugott, who is interested in literary dialects and historical linguistics, and Charles Ferguson, who has explored the similarities between pidgins and creoles and simplified registers like baby talk.

Rickford, an assistant professor of linguistics, works on Guyanese and Sea Island creoles and their implications for sociolinguistic variation and change. Fox, an assistant professor of anthropology, works on Russenorsk, a Russian-Norwegian creole, and its implications for pidginization and creolization.

Funding for the newsletter comes mostly from subscriptions, $6 a year.

—David Weissmann

Library exhibits pidgin, creole language materials

Pidgin and Creole language material from the Green Library collections at Stanford will be exhibited in the Lurie Rotunda from April 15 to May 1.

Stanford has the primary collecting responsibility for these studies for the Research Libraries Group.

Assistant Prof. John Rickford, linguistics, and James A. Fox, anthropology, recently became editors of the *Carrier Pidgin*, a newsletter serving 700 subscribers and correspondents in this specialty world-wide.

Languages represented in the exhibit will include Hawaiian Pidgin English, the French-based Creoles of Mauritius and Seychelles, Australian Aboriginal Kriol, Solomon Islands Pijin, and several West Indian Creoles.

FOR, FO' (FOAH) To.
Haole: "I was only trying to get to know you."
Pidgin: "Ah was on'y tryeen fo' touch yo' body."

U.S. Postal Service encourages using ZIP plus four

Four more digits have been added to the 94305 University zip code, and their use is encouraged by the U.S. Postal Service, according to Stanford University administrators Kent Peterson and Jack Albrecht, who met recently with local postal officials.

The Zip + 4 program is voluntary but, say Peterson and Albrecht, mail recipients will receive faster service if they encourage the use of the additional four digits on incoming U.S. mail. An incentive plan to encourage the use of additional digits on outgoing mail is under discussion, but is not yet final.

The 94305 area has been divided into geographical sectors, and Stanford has been assigned 15 sector numbers running from 10 through 24. Several offices in close proximity may have the same sector number, but each separate mail delivery point has its own discrete segment number. For example, the President's Office Zip + 4 number is 94305-2087; the Controller's Office is 94305-1994.

All current mail delivery points will probably be notified of their new Zip + 4 numbers by the Postal Service sometime in the future, according to Albrecht. But, he stated, if departments are renewing subscriptions, having new stationery printed, etc., they are encouraged to begin using the additional four digits now.

To find out what they are, call the Postal Service Address Information System in San Francisco at 550-5205 between 8 a.m. and 4:30 p.m. Monday through Friday and state department name or street address. There is no office at Stanford responsible for providing or verifying this information.

Campus residences will be notified of their Zip + 4 numbers in October.

The Stanford Sierra Camp at Fallen Leaf Lake will open for a special Spring Weekend April 29 through May 1, according to Wim Steenbakkers, camp director. The Alumni Association decided to take advantage of this year's heavy snows and to make the facility available at a time when there would still be snow, in all likelihood accompanied by sunshine.

The weekend program will include ski touring, movies, hiking into Desolation Wilderness, a snow picnic, and fireside music and socializing.

Rates for the weekend are $100 per adult, $50 per child 8-14, $40 per child 3-7; and $20 per child under three. The six meals included will begin with dinner on Friday and end with lunch on Sunday.

Further information may be obtained by contacting Sue Cahn at Bowman Alumni House, 497-2021.

$ Alumni to host financial seminar

The Stanford Financial Seminar for Executives, sponsored by the Stanford Alumni Association, will be held April 12-14 on campus.

The program is designed for executives and managers who have a limited financial background or who work principally in nonfinancial areas.

Profs. James T. S. Porterfield and George G. C. Parker of the Stanford Graduate School of Business are the seminar's leaders. Among the subjects covered will be forecasting financial requirements, accounts receivable management, the measure of investment worth, and working capital management.

One of the Alumni Association's Continuing Education Executive Programs, the seminar is open to all interested.

Tuition is $900, exclusive of accommodations. Further information may be obtained by contacting the continuing education staff at Bowman Alumni House, (415) 497-2021.

Medical Center MEMO

HMP now under review by state and county

Plans for the modernization of Stanford University Hospital have been filed with state and local agencies for their review during the next several months.

Certificate of Need (CON) applications were filed last Wednesday with the California Office of Statewide Health Planning and Development in Sacramento and with the Santa Clara County Health Systems Agency in San Jose.

The CON process is required of hospitals seeking to renovate or expand their facilities, to ensure that a community need exists for the project.

The 400-page document includes financial feasibility studies, space plans, and extensive documentation of need for all aspects of the renovation and construction. It was prepared by the hospital's Office of Health Services Planning, in conjunction with the Hospital Modernization Project (HMP) office and The NBBJ Group, an architectural and planning firm in Seattle and Palo Alto.

Included in the documents are financial and economic analyses and forecasts prepared by Amherst Associates Inc. of Walnut Creek.

The cost of renovation, new construction, equipment and fees is estimated to be about $114 million. The total cost will depend on financing conditions, but it is expected to be about $125.5 million.

The goal of the modernization is to upgrade the physical facility to meet the needs of modern medical care. Earlier studies have cited serious functional deficiencies that compromise the efficiency of the hospital and its future ability to provide quality patient care.

Because of inadequate space, the hospital has been unable to utilize all of its 663 licensed bed capacity. Some multi-bed patient rooms will be replaced with private rooms in the new construction. This will enable the hospital to accommodate a wider range of patient needs without adding to its licensed capacity.

The number of beds will be increased only in the 25-bed neonatal intensive care unit, which will be remodeled to accommodate 31 beds. State and regional studies have indicated that the need for care of critically ill infants is increasing in the region.

Project Director Elvia Garwood explained that the modernization project is designed to take place in three stages.

The first stage calls for finishing the Phase I building, an expansion opened in 1978 but never completed.

In the second stage, a four-story, 349,000 square foot diagnostic and treatment wing and eight new nursing units will be constructed. These will be located north and west of the present building, with a connecting atrium to the present facility.

The new construction will increase the number of private rooms available, allow existing nursing units to be updated and remodeled, and provide space for moving about 90 beds from Hoover Pavilion to the main center.

A new surgical suite with new operating rooms will be built, and several hospital functions, such as clinical laboratories, will be consolidated in the new space.

In the third stage of the project, existing space in the original 1959 building will be remodeled as newly constructed space becomes available to relocate services.

When the project is approved at state and local levels, construction on the first step of the renovation could begin as early as next spring.

According to Ron Hill, director of health services planning, the agencies will conduct an initial review of the CON documents to determine if they are complete. Detailed reviews are expected to last through the summer. Public hearings may be scheduled at local and state levels as part of the review process.

In addition to the CON, the hospital is preparing an Environmental Impact Report which will be filed with the City of Palo Alto later this year.

In the meantime, The NBBJ Group and the modernization project staff will be working with hospital departments, faculty and community physicians, to develop detailed plans and equipment needs.

—Barbara Battino

Cancer patients learn 'I Can Cope'

A useful, practical course of the American Cancer Society, for people dealing with the implications of living with cancer, will be offered at Stanford University Medical Center on eight consecutive Wednesday evenings beginning May 4.

Nutrition, body image, rehabilitation, and sexuality are among the topics covered by the course, which is intended for cancer patients and their families. "I Can Cope" seeks to help participants be more aware of their own strengths in coping with cancer, live within limits, and like themselves. It provides a setting where ideas and concerns may be shared and discussed.

The unique course deals with daily health problems as well as legal and work issues, and allows participants to express and resolve their feelings. Free of charge, it will be taught by a team of Stanford oncologists, nurses, dietitians, physical and occupational therapists, and social workers. Information about and access to appropriate community resources will be provided.

"Participants in this course are given an opportunity to realize they are not alone in their adjustments to everyday life," according to co-leader Sherry Feld, L.C.S.W. "Those with cancer and their loved ones need ways to cope with fears and anxieties as well as the disease."

Implemented nationally, she said, the patient education program is helping move people from asking, "What can I do?" to stating, "Here's what I can do!" The course supports the premise that increased knowledge about cancer decreases anxiety and increases a personal sense of participation on the part of the patient and his or her "significant others," with the medical system.

The course was developed by Judi Johnson, R.N., and Pat Norby, R.N., for the Minnesota Division of the American Cancer Society. The course content starts out with very concrete information about cancer, presented in an educational format.

Sessions will be held from 5:30 to 7:30 in room TF 122c of the Psychiatry Building. Susan Weisberg, L.C.S.W., will co-lead. Enrollment is limited. For further information and registration, call the Department of Clinical Social Work by April 27, at 497-5091.

Workshop aims to promote exercise

A structured workshop for people who want to start and maintain a regular physical exercise regimen will be offered at Stanford University on 10 consecutive Tuesday evenings beginning April 19.

Open to the public, the newly developed workshop will provide information, individual assessment, support, and both behavioral and cognitive strategies designed to get participants to the point where exercise provides its own self-sustaining incentive and reward.

No exercise will actually be engaged in during sessions, said leader-coordinator Dr. Fritz Bottjer of the Behavioral Medicine Program. Participants will undergo some testing, including before-and-after body mass, psychological, and cardiovascular functioning.

In addition to attending sessions, participants will be expected to read handouts, engage in exercises of their choice, and to complete assessment and other assignments.

According to Bottjer, success at maintaining regular exercise suitable to the individual has been linked to a variety of positive physiological and psychological outcomes. These include:

- improved cardiorespiratory functioning and resistance to disease;
- improved appearance, body image and self-confidence;
- enhanced strength, energy and sports performance;
- appetite and weight control;
- lowered incidence of depression;
- improved sleep;
- heightened sexual interest and appeal;
- improved management of stress;
- the general maintenance of a healthy, attractive and youthful body.

Sessions will run for two hours, and the required fee is due at the first session. For the program overview or further information, contact Bottjer at 497-7340, or write to him at the Behavioral Medicine Program, TD 205, Stanford University School of Medicine, Stanford, CA 94305.

Prospective participants are requested to call or write by April 15.

SMASH series resumes for spring season

This week marks the opening of the spring quarter 1983 lineup of S*M*A*S*H lectures at Stanford School of Medicine.

The season's lectures are as follows:

- April 8: "Medical use of synchrotron radiation"—Dr. Edward Rubenstein, professor of medicine (clinical) and associate dean of postgraduate medical education;
- April 22: "T-lymphocytes and their function in man"—Dr. Edgar Engelman, assistant professor of medicine and pathology, and medical director, Stanford Blood Bank;
- May 6: "Order from chaos: Prenatal development of the mammalian visual system"—Dr. Carla Shatz, assistant professor of neurobiology.

The lecture series—whose full name is "Stanford Medical and Scientific Highlights"—was initiated in 1980 by the medical school's Faculty Senate, which now cosponsors it with the Stanford Medical Students Association.

The organizing committee hopes to encourage a wide exchange of ideas, and to provide a forum by which the medical center community may be informed of significant medical research and developments at Stanford. The Friday talks are geared towards all those with basic scientific understanding.

This season's presentations will all take place at 4:30 p.m. in Fairchild Auditorium, with TGIF gatherings afterwards in the lobby.

Stanford may again perform kidney transplants

Renal (kidney) transplants could be resumed at Stanford University Hospital if an application filed last Wednesday is approved by the state Office of Statewide Health Planning and Development (OSHPD).

The application must also be reviewed by the Santa Clara County Health Systems Agency (HSA) in San Jose.

Dr. Rex Jamison, professor of medicine and chief of the Division of Nephrology, said the program would provide the only renal transplant facility in Santa Clara County and would enhance and expand existing organ transplant research at Stanford.

Renal transplants were performed at SUH between 1965 and 1971, and then the specialized program became inactive.

"Recent developments in drugs to prevent rejection of organs and other research have increased survival of transplanted kidneys," Jamison explained. "This is an opportune time to revive the program."

In its application to reactivate the program, Stanford estimated that more than 80 persons under age 50 in Santa Clara County were waiting for new kidneys. Currently, these persons must seek transplantation at centers outside the area, often requiring burdensome travel or living expenses away from home, Jamison said.

Currently the two existing renal transplant centers in northern California—at University of California at San Francisco and Pacific Medical Center, San Francisco—are experiencing long waiting lists, according to Stanford's application to the HSA.

No additional hospital facilities would need to be built to accommodate the new program, since the hospital has the necessary specialized resources, said Patricia Stone, the health care planner responsible for processing the application. Jamison said a transplant surgeon and a transplant nephrologist would be recruited and that transplants could begin as early as January 1984 if the application is approved.

Among issues to be reviewed by the state agency are that the facility is medically and financially sound, and most important, that the project fulfills a health care need in the region, which was indicated in the application to be about 25 to 30 transplants a year.

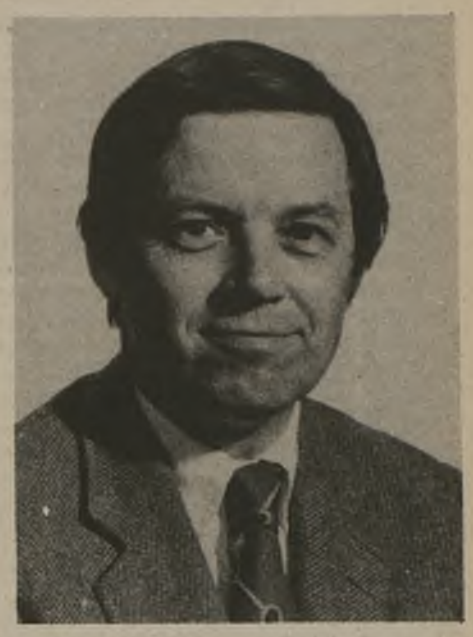
The project would be a joint venture between the Department of Surgery and the Department of Medicine's nephrology division.

Stanford currently operates transplantation programs in hearts, heart/lungs, corneas and within the next few years, bone marrow.

"All of these programs complement one another, and the addition of kidneys would add to the research and instructional capabilities of the institution as well as improve patient care," Jamison said.

Research programs currently under way include efforts to use radiation to retard rejection, the body's natural response to "attack" and eliminate foreign tissue. This study is directed by Dr. Samuel Strober, chief of the Division of Immunology.

The heart and heart/lung transplant program, pioneered by Dr. Norman Shumway, chairman of the Department of Cardiovascular Surgery, is currently working with improved medication to control rejection while allowing tissue to heal. Cyclosporine is being used on an experimental albeit so far highly successful basis to control rejection of transplanted hearts. The drug, a fungal derivative, is being used for kidney transplant patients at other centers.



Stanford's existing nephrology program includes a hemodialysis unit, where about 40 patients undergo regular maintenance.

Jamison said that such treatment offers the sole alternative for some patients, particularly the elderly, but that transplantation offers the opportunity for a less restricted and more active lifestyle, despite the possibility of rejection.

Hemodialysis patients must spend two to four hours several times weekly immobilized while a machine removes waste products from their blood.

He said even with the threat of rejection, transplanted kidneys usually are more effective than the dialysis machine.

—Mike Goodkind

"Recent developments in drugs to prevent rejection of organs and other research have increased survival of transplanted kidneys."

—Rex Jamison

SCI to host visit of Yale physician

Dr. Samuel Thier, chairman of the department of internal medicine at Yale University School of Medicine and chief of the medical service at Yale-New Haven Hospital, is the Stanford Community of Internists (SCI) visiting professor for the week of April 11-15, 1983.

During his visit, Thier will meet with community and faculty physicians, Stanford University Hospital housestaff and Stanford medical students. Discussion topics will include the role of clinical faculty in academic institutions, and the coexistence of faculty and community physicians.

Thier will present a lecture on "Potassium Homeostasis" at Stanford's medical grand rounds, 8:30 a.m. in Fairchild Auditorium April 14, and a lecture on "Physiologic Approach to Acid-base Disorders" at Santa Clara Valley Medical Center's grand rounds, 8 a.m. April 15.

Thier has authored almost 80 articles and a medical textbook. He has had numerous honors bestowed upon him, including membership in the Institute of Medicine, National Academy of Sciences.

Samuel Thier

PHOTO BY J.D. LEVINE YALE UNIVERSITY

Co-chaired by Drs. Lawrence Crapo and Charles Feldman, SCI includes about 130 community and faculty physicians. The four-year-old group offers educational programs and "comraderie" for local physicians, said Sally Mixer, administrative assistant to Stanford's department of medicine.

Officials refute cruelty charge; VA lab treated dog properly

David Mendelow, associate dean for administration, said last week that no specific inquiry was necessary in response to written and verbal allegations by the Santa Clara County Humane Society.

Mendelow said ongoing monitoring of animal care was aggressive and appropriate, and that a dog injured in a fight with another dog in a Veteran's Administration Medical Center laboratory in Palo Alto had received proper care for its injuries.

On Friday, the humane society issued a "Fact Sheet," stating that the dog was taken home by a third-year medical student working in the lab on the evening of March 24. The student, Peter Barran, said he telephoned Dr. Carolyn Reed, the Stanford veterinarian responsible for the dog's care.

Reed said she asked Barran to return the animal to the lab so that she could examine it. Barran told a news conference that he asked Reed to come to his house to treat the dog, which Reed refused to do.

Reed later said that she refused to come to the house of a student she didn't know late in the evening. She requested instead that he return the animal to the laboratory, where veterinary equipment was available for proper treatment.

Randy Hemphill, a Palo Alto veterinarian, said the dog was brought to him at the South Peninsula Veterinary Emergency Clinic. Hemphill told the humane society's news conference that he euthanized the dog soon afterwards.

Reed said the medical student may have been acting under a sincere concern for the animal's welfare "but it was clearly wrong for him to remove the dog from the facility."

Reed said the dog had been under treatment after it apparently had been bitten by another animal housed in the same VA laboratory, where Stanford surgeons conduct cardiovascular research. (Stanford provides medical care under contract to the VA, and some faculty members' research is conducted there. Stanford is responsible for veterinary care in the Palo Alto VA).

"The experiment insofar as that individual dog is concerned was compromised," Reed said.

Mendelow said in a statement that "animals which augment human knowledge and ultimately help us gain knowledge used to alleviate suffering are a precious resource which we must conserve and use appropriately.

"Constant monitoring by ourselves, as well as the United States Department of Agriculture, ensures that we will provide optimum care to our laboratory animals. An accident which produces injuries such as befell the dog involved in the allegation is serious and punctuates the need to constantly maintain a vigil.

"But to assume that the incident implies widespread problems involving animal welfare is ludicrous," Mendelow continued.

Barran, who brought the incident to the attention of the public, told the news conference that he had not seen another such incident during the 10 months he worked in a research laboratory where dogs are used.

Reed said the dog had been bandaged immediately after it was bitten during the week before it was taken home by the student. She said bandages were removed March 23, the day before the dog's removal, and that she determined the best treatment was to let the bite wounds drain. Surgical incisions in the groin area had been sutured but may have opened after the March 23 examination, Reed said.

—Mike Goodkind

NLRB upholds vote against union

The National Labor Relations Board in Washington has turned down a union's appeal of an election in which service and maintenance employees at the Hospital rejected bargaining representation.

Mike Vartain, associate staff counsel, said the University was informed in a March 25 telegram from the NLRB that an appeal by Local 715 Service Employees International Union, AFL-CIO (United Stanford Workers) had been denied.

The board's action lets stand the Feb. 7 decision of the regional NLRB in Oakland, which upheld results of the Nov. 5-6, 1982 hospital election.

With approximately 90 percent of the 1,150 eligible voters casting ballots in November, the results tallied 778 to 253 against representation by Local 715.

The regional board overruled seven objections filed four days after the election by the union.

Vartain said the most recent NLRB action is final.

No employees are represented by Local 715 at the hospital. At the university, a Local 715 contract covers a bargaining unit of 1,350 workers.

Teens used CPR to save their drowning friend's life

The victim of a near-drowning incident spent nearly a week recuperating at Stanford University Hospital (SUH) after a heroic rescue that reads like both a movie adventure and an endorsement for cardiopulmonary resuscitation (CPR).

Brian Miller, 18, was "doing well" last week, according to Dr. Linda Bosserman, thanks to the immediate reaction of his eight friends who began administering mouth-to-mouth resuscitation after pulling him out of a river in which he was submerged for more than three minutes.

Bosserman said the immediate administration of CPR not only saved his life but also prevented any apparent brain damage.

"All the care we gave Brian was possible because of the early CPR treatment he received," Bosserman said. "Without that early care it is highly unlikely that he would have survived no matter what physicians did later."

Brian was admitted to the intensive care unit March 29, flown here from King City by Stanford's department of critical care transport. He was originally listed in critical condition because of potential complications of the heart and kidney and susceptibility to pneumonia, Bosserman explained.

Brian was moved to an intermediate care unit April 1, before being released from the hospital April 3.

What Brian and his friends—all students at King City Joint Union High School—experienced in the remote, canyon-like area called the Shutins near King City, however, could easily have had a tragic ending.

It promised to be a great camping trip, recalled Brian's twin brother, Bruce, who explained the incident:

School was out for the week of spring vacation, and the weather finally cleared, making conditions ideal for the five-mile trek in from the road where the boys left their truck Monday.

Brian, Mitch Anderson, and Rick Bender were exploring caves near their campsite. The river had more than the normal amount of water in it due to the recent excessive rainfall, so the boys tied a rope around their waists as a precaution.

Suddenly, Brian stumbled and fell off a rock into the river. Mitch jumped in to grab him, only to be swept off by the current.

Back at the campsite, the rest of the boys heard screams. They ran to the caves to see Rick pulling Mitch out of the water.

Brian, however, was pinned under a rock. His head was submerged under water.

Good news about the medical condition of Brian Miller (inset), who nearly drowned during a backpacking trip near King City and was saved by his eight friends, brought smiles last week to Brian's mother and twin brother, Barbara and Bruce Miller.

Bruce said he does not remember diving in the river with a knife to cut his brother loose. He managed to drag Brian's 6-foot-3-inch frame onto a rock. He was blue, Bruce recalled, and was not breathing. He had no detectable pulse, and was unconscious.

Peter Anderson, who works as a lifeguard during the summer, began shouting directions on how to start mouth-to-mouth resuscitation.

Together with Keith Knott and Gill Latham, they tried to breathe life into the still body.

Meanwhile, Doug Latham ran the five miles out to the truck, and began to drive into town. When the truck broke down, he ran the last 12 miles to the nearest farm. From there, he notified the fire department, sheriff, and military ambulance.

Brian began to throw up shortly after his friends began the CPR treatment. Not until 15 long minutes had passed, however, did he begin to breathe on his own again. Once he came to, he fought his friends violently, activity doctors said helped keep him alive.

Everyone Doug notified about the crisis set out immediately in rescue vehicles. Because of the location, however, none could make it to the cave site. Finally, two military medics hiked in. Navigating their way across the rocks, one fell in the river and hurt his back. The other reached Brian, and together with Peter's assistance, pulled him onto firm ground.

Darren Bryant had begun sending out smoke signals from the campsite to attract attention. A helicopter passed overhead after about an hour, but didn't land. It finally landed shortly thereafter.

Brian was lifted into the helicopter and taken to the Fort Hunter Liggett Dispensary. There he received oxygen and intravenous fluids, and was then transferred to George L. Mee Memorial Hospital in King City.

"Everyone in town rallied around Brian," said his mother of her friends in the small community. "They prayed for him all night."

Brian's physicians at Mee Hospital decided he should be transferred to a better-equipped hospital.

"He was brought to SUH because we are able to provide round-the-clock intensive care services under specialized physician and nurse supervision," explained Dr. Alvin Hackel, head of the transport service. (About 400 persons are transported by air to Stanford each year for care.)

Brian's father accompanied him on the plane, while the rest of the family drove up to Stanford.

"When I saw Bruce he said, 'Mama, we did all we could. Did we do enough?' " his mother continued. They did indeed.

"We learned CPR during our sophomore year in high school," Bruce said. "At the time we thought it was just something to know. I never thought I'd have to use it. With Peter leading and all of our knowledge put together, we were able to save my brother."

"I'm thanking God every minute," added his mother.

And meanwhile, back at Stanford Medical Center, Dr. Myer Rosenthal, director of intensive care units, thanked CPR training in the schools.

"Some states routinely require this training in high schools. It might be a wise idea everywhere," he said.

Early detection to thwart kidney failure

Novel applications of new diagnostic techniques may enable physicians to prolong the life of transplanted kidneys, according to a Stanford researcher.

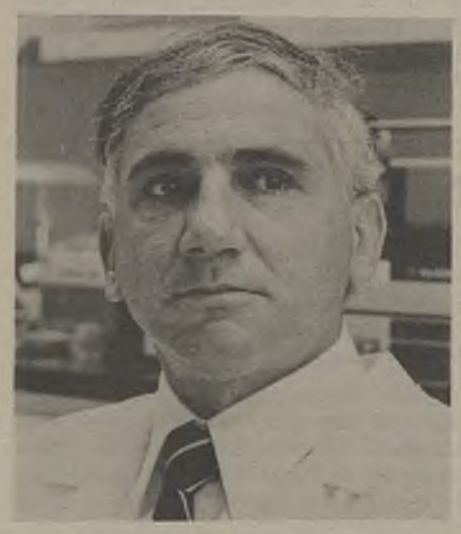
More than half the number of patients receiving kidneys from unrelated donors each year experience kidney failure within two years following the transplant, said Dr. Bryan Myers, director of clinical nephrology and associate professor of medicine (nephrology). Well over 4,500 people have kidney transplants each year, according to National Kidney Foundation statistics. In 1981, for example, 4,883 received new kidneys.

"Our goal is to identify injury in the kidneys leading to chronic rejection early on. This will allow intervention sooner than is now possible, which may reverse the rejection process and extend the life of the kidney," he said.

Myers plans to do this, he explained, by using unique analysis equipment purchased with funds from Beta Sigma Chi, an international philanthropic organization. The group has been donating funds—$45,000 to date—for kidney research to Stanford since 1975.

The ELISA (enzyme-linked immunoabsorbant assay) technique allows physicians to measure the concentration of protein in more minute quantities of biological liquids, such as urine, than ever before.

The protein concentration in urine reveals how effectively the kidneys are functioning. The ability to detect the concentration sooner gives physicians the opportunity to begin administering therapies—immunosuppressant drugs, for example—sooner, which may help ward off kidney failure.



Kidneys contain millions of tiny filters, called glomeruli. When healthy, they separate toxic substances from blood to urine for excretion. The filters do not, however, allow larger-sized proteins to pass into the urine.

In diseased kidneys requiring transplantation, the filters become clogged, thereby retaining the toxic substances. Enlarged pores in the filters allow the proteins to slip through into the urine, leading to protein depletion and kidney failure.

Myers can simulate proteins leaking through the filters by injecting synthetic sugars—similar in size to proteins—into patients' bloodstreams and measuring their appearance in the urine.

Myers' research is supported by National Institute of Health funds also.

Medical Center Calendar

PUBLIC EVENTS

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, APRIL 6

Physicians for Social Responsibility Lecture: "The Reagan Administration's View of Survivability"—Robert Scheer, reporter for the *Los Angeles Times* and author of *With Enough Shovels: Reagan, Bush and Nuclear War*. 8 p.m., Fairchild Auditorium.

Basic Science Research Colloquium: "Nerve Growth Factor"—Eric Shooter, Ph.D. 5 p.m., Fairchild Auditorium.

THURSDAY, APRIL 7

Dept. of Biochemistry Seminar: "An Adenovirus Vector System for the Expression of Eukaryotic Genes"—Carl Thummel, Ph.D. Noon, M316.

Dept. of Pharmacology Seminar: "The Structure of the Gap Junction Channel and Regulation of Cell-to-Cell Communication"—P. Nigel Unwin, Ph.D. 4:15 p.m., R358, Pharmacology Library.

Div. of Otolaryngology/Head and Neck Surgery Grand Rounds: "Radical Neck Dissection from the Top Down"—Drs. Greg Steadman and Victoria King. 6:15 p.m., R117, Wang Library.

Dept. of Medicine Grand Rounds: "Diagnosis and Treatment Issues in Mild Hyperparathyroidism"—Dr. Robert Marcus. 8:30 a.m., M106.

FRIDAY, APRIL 8

Div. of Family Medicine Friday noon lecture series on Women and Health: "Living with Questions"—Alla Bozarth-Campbell (Episcopal priest, gestalt therapist, feminist poet). Noon till 1 p.m., M114.

Deadline for Nursing Research Seminar: to be held **Friday, April 15**, "Nursing and Anthropological Research: More Than Passing Meds in the Congo." 8 a.m. till 4 p.m., Peninsula Covenant Church, 3560 Farm Hill Blvd., Redwood City. For further information or to register, call Betty Kibbe at 497-7062.

Dept. of Medicine Resident Lecture Series: "Oncogenes"—Dr. Linda Boxer. Noon, M110.

Dept. of Pediatrics Grand Rounds: "Unusual Sleep Disorders in Childhood"—Dr. Thomas Anders. 8 a.m., M106.

Dept. of Gynecology and Obstetrics Grand Rounds: "Support for Parents Who Have Experienced Neonatal Death"—Emily Corpus and Shirley Sweeney (HAND of the Peninsula). 8 a.m., A336.

SMASH Lecture: "Medical Uses of Synchrotron Radiation"—Dr. Edward Rubenstein. First of the spring SMASH series. Open to all. 4:30 p.m., Fairchild Auditorium.

SATURDAY, APRIL 9

Medical Center Auxiliary Volunteer Orientation. 9:45 a.m., W001. For further information, call 497-6636.

MONDAY, APRIL 11

Dept. of Biochemistry Seminar: "Transposable Elements in *Zea mays*"—Dr. Peter Starlinger (Inst. for Genetics, Germany). Noon, M316.

Dept. of Medical Microbiology Seminar: "Developmental Events Occurring During the Intracellular Growth of *Bdellovibrio Bacteriovorus*"Dr. Edward Ruby (USC). 1:15 p.m., M114.

Dept. of Biochemistry Seminar: "Transmembrane Assembly of Membrane and Secretory Glycoproteins"—Dr. John Hanover (National Cancer Institute). 3 p.m., M114.

TUESDAY, APRIL 12

Dept. of Biochemistry Colloquium: "An Algorithm for Relating Amino Acid Sequence to Protein Function"—Prof. M. Laskowski (Purdue). Noon, M316.

Dept. of Biochemistry Seminar: "Enzyme Transport in Mammalian Cell Mutants Defective in Acidification of Endosomes"—Dr. William Sly (Washington University). 4 p.m., M114.

Nursing Educational Services: "Critical Care Course, Level II: Multiple Trauma Symposium." 8 a.m. till 4:30 p.m., 900 Welch Road, room 15. For further information or to register, call Carole Kidder at 497-6366.

Dept. of Dermatology Grand Rounds: "Cutaneous Markers of Internal Malignancy"—Dr. Schwartz. 10 a.m., R136, Dermatology Library.

WEDNESDAY, APRIL 13

Dept. of Biochemistry Seminar: "The Role of Protein Phosphorylation in Branch Point Regulation: The Glyoxalate Bypass"—Dr. David LaPorte (UC-Berkeley). Noon, M114.

THURSDAY, APRIL 14

Dept. of Medicine Grand Rounds: "Potassium Homeostasis"—Dr. Samuel Thier, Stanford Community of Internists' Visiting Professor, from Yale. 8:30 a.m., Fairchild Auditorium.

Stanford Magnetic Resonance Laboratory Seminar: "NMR Studies of the Filamentous Bacteriophages"—Dr. Stanley Opella (Univ. of Pennsylvania). 4 p.m., Chemistry Gazebo, Chemistry Bldg.

FRIDAY, APRIL 15

Dept. of Biochemistry Colloquium: "Membrane Proteins Involved in Cellular Cholesterol Metabolism"—Prof. Richard Anderson (Univ. of Texas Health Center). Noon, M316.

Please register by now: for the Behavioral Medicine Program's 10-week workshop on starting and maintaining a regular physical exercise regimen. (*See related story in this issue.*) For further information or to register, call 497-7340.

TUESDAY, APRIL 19

Dept. of Structural Biology Seminar: "Actin Assembly"—Dr. Albrecht Wegner (Institute for Physiological Chemistry, West Germany). 4 p.m., Fairchild Bldg., D102.

WEDNESDAY, APRIL 27

Registration deadline for American Cancer Society course: "I Can Cope," on living with cancer, intended for cancer patients and their families. Sponsored by dept. of clinical social work at SUH. (*See related story in this issue.*) For further information or to register, call 497-5091.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

...News Notes...

Hospital personnel, consider your linen usage! A chart displaying the total linens used monthly is now in place outside the cafeteria entrance in the "P" wing, said Joyce Miller, R.N., of the Linen Conservation Committee.

The chart has been implemented to illustrate the amount of patient linens used on all SUH units, in order to encourage conservation. The chart also shows the specific use of sheets, blankets, towels and bedspreads. All figures are computed on a "pounds per patient day" basis. A single complete bed change requires approximately 12 pounds of linens.

* * * *

All Medical Center employees and their families are eligible for special discounts on tickets to the Santa Cruz Boardwalk, Great America and Marine World Africa USA. The reduced rates apply to specific days beginning in May.

Also available are three group rate vacation packages to the Caribbean, Alaska or Mazatlan.

Both discounts are offered by the human resources group (HRG) of the Medical School, and Catherine at 497-6295 has further information on both.

Stanford Clinical Laboratories will celebrate Medical Laboratory Week April 10 through 16.

The California Association for Medical Laboratory Technology (CALMT) has this year chosen the theme "Laboratory Professionals Serving the Patient Community" to emphasize the clinical laboratory practitioner's role in modern medicine.

* * * *

Several members of the medical center academic community are participating in a Palo Alto Medical Foundation Tuesday seminar series which began April 5.

April 12, Dr. William Robinson of the Department of Medicine will speak on "Hepatitis B Virus and Liver Cancer."

April 26, Dr. Sun Win Chou, postdoctoral fellow in Infectious Diseases, will address "DNA Hybridization Methods for Rapid Diagnosis of Viral Infections."

Each May lecture will feature a Stanford faculty member as well. (See future "News Notes" for details.)

The events begin with lunch at 12:15 p.m., and the seminars follow at 12:45 p.m. They take place at the Palo Alto Medical Foundation's Research Institute at 860 Bryant Street, Palo Alto.

For further information, call the office of Dr. Marcus Krupp at 326-8120.

* * * *

Drs. Diana Guthaner, Philip Oyer and Stuart Jamieson of Stanford were recently made fellows of the American College of Cardiology at that organization's annual meeting held in New Orleans, La.

* * * *

Nominations for the 1983 Thomas A. Gonda award are being accepted through April 8, said Susan Cabral, employee relations specialist for the hospital's Personnel Department.

The award honors a hospital staff member who has been employed for at least five years and has contributed in a special way to the hospital's mission.

The two most recent recipients of the award were Aaron Smith, social worker, in 1982; and Barbara Petree, clinical nursing coordinator in the Delivery Suite, in 1981. The award is named for Gonda, SUH president from 1968 to 1974, and present chairman of the department of psychiatry, in honor of his exemplary dedication and service to the hospital community.

This year's award will be presented at the upcoming spring banquet. Those wishing further information or a nomination form may call hospital personnel at 497-6251.

* * * *

The department of clinical social work is sponsoring a series of speaking events to begin April 27, as part of the continuing 70th anniversary celebration of social work at Stanford. These events are free of charge, and the public is invited.

The April 27 lecture, given by Rose Grobstein, C.S.W., is entitled "Genetic Counseling and Prenatal Diagnosis," and will be held at Faber Auditorium, Children's Hospital at Stanford, from 2:30 to 3:30 p.m.

On April 29, an all-day conference will be offered on "Oncology Social Work and Clinical Research," at Fairchild Auditorium. Isabel Walker, Patricia Fobair, Sherry Feld, Jill Lehman and Susan Weisberg, all licensed clinical social workers, will lead the conference, which will take place from 9 a.m. to 4 p.m.

On May 20 and June 24, two-hour workshops will be offered, the former on "Adaptation to Hemodialysis," and the latter entitled "Approaches to Psychotherapy with Borderline Patients."

Further information on the talks will appear in upcoming **Medical Center Calendars**. *Also, information is available by calling the department of clinical social work at 497-5091.*

Smaller schools, local governance keys to improved urban systems—Levin

"The organizational building blocks of a strong urban school system are smaller schools with school-site governance," according to Stanford Prof. Henry Levin, director of the Institute for Research on Educational Finance and Governance.

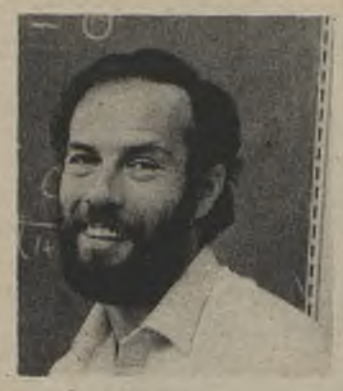
"There is no educational argument for primary schools larger than about 300-350 students," he declares. "Smaller schools can be viable down to about 150 students if they share some services with neighboring schools.

"Likewise, four-year secondary schools can be as small as 300-400 students if they are able to cooperate through the use of some shared teachers and professionals in highly specialized areas. . . .

"As a rule of thumb, any primary or secondary school is probably too large if the principal and teachers do not know most of the students by name."

School closures should be viewed with caution, he adds. Anticipated savings from closures are often exaggerated, for several reasons:

1) Teacher and administrator salaries and benefits, the largest cost categories, usually are unaffected or reduced only slightly by closings;



2) Schools are rarely leased at market prices or sold expeditiously after they are closed; and

3) Added costs of moving children from a local neighborhood are high, both in transportation costs and the political alienation of parents.

Levin suggests that several "mini-schools" could operate in a single large building with considerable autonomy, sharing resources needed for handicapped students, bilingual, and other programs.

In some instances, excess space could be leased while maintaining school operations for a smaller student body in the same facility.

Parents, community representatives and teachers should work with administrators in governing smaller school units, he adds. At the secondary school level, students might also be included in governing bodies.

Henry Levin

Governance responsibilities should include the selection of the school principal, serving on a multi-year contract and evaluated on the basis of performance.

"School-site governing boards also could set local policy for educational accountability, information availability on school and student performance, and student behavior. These policies would be implemented by the professional staff of the school," he adds.

In their preoccupation with school finances people often overlook a wide variety of human and material resources available to schools, including the use of senior citizens for tutoring, field trips, language instruction. Their involvement could contribute to political support for the schools.

Students also could be encouraged to tutor their colleagues and to help with clerical tasks and logistical duties. "In Japan, students spend part of the day cleaning and maintaining their schools, a collective activity that gives them a sense of ownership and pride," he notes.

"Research on peer teaching suggests that both cross-age tutoring and same-age tutoring improves instruction for students in need of extra assistance and also raises the skills of the tutors."

Young people should be active initiators of learning, not just passive recipients. Students should help each other.

Smaller, more personalized schools should welcome parental participation. Local businesses can contribute, both in material resources and in jobs for students. They may also provide managerial advice for improving school operations

"The overall aim is to draw in new resources in a spirit of commitment and enthusiasm, so the entire community identifies with its schools, or mini-schools," Levin explains.

Central administration would remain responsible for the overall financial administration of large urban school systems, even if many spending decisions are made on the local level.

The central administration also would be largely responsible for maintaining accurate records on personnel and students, and for negotiations on salaries and working conditions with employee organizations.

Besides providing technical assistance, the central administration would be responsible for a city-wide program of testing and information, whose results would be available to local schools and their governing bodies.

Revitalization of urban schools requires "fundamental changes rather than cosmetic alterations," Levin believes. "The patient is gravely ill. . .radical surgery and treatment is needed.

"Many established groups in education will view radical surgery as unthinkable because of the apparent risk it implies for altering the present claims of their constituencies. But students, parents, teachers, other school personnel, taxpayers, and the cities themselves are facing an increasingly moribund situation without hope of a 'quick fix' or a magic rescue.

"Continuation along the present path promises further deterioration in which all of the participants will be certain losers."

Levin's views are contained in *Policy Perspectives*, a publication of the Institute. Copies may be obtained by writing IFG, School of Education, CERAS Building, Stanford, Ca. 94305-1691.

CIT to upgrade operating system

As campus users of computer facilities see terminals springing up everywhere around them, they may wonder where all the computer power to handle this dramatic increase is going to come from. What is to prevent response and turnaround time from eventually grinding to a standstill?

Starting this month, CIT is addressing this very problem. At the end of April and the beginning of May, CIT will begin to prepare for the greatly expanded present and future needs for main memory by upgrading the MVS operating system to the next version, MVS/XA. ("XA" stands for Extended Architecture.)

In order to install the new system, CIT has had to set up a somewhat altered schedule of weekend unavailability, starting Saturday, April 30. The total number of hours that the IBM 3081 will be unavailable to users will remain unchanged, however. Presently, the system is down for routine maintenance on Saturday and Sunday from 6 a.m. to noon. As it is necessary to use large, contiguous blocks of time for installing the MVS/XA, the downtime hours have been extended on Sunday to 3 p.m. On Saturday, however, the system will be available starting at 9 a.m.

CIT plans to have the installation finished either early in August, if the modifications and testing are completed early, or in October, if not. (The intervening time is reserved for the "closing" of the fiscal 1983 school year, and no changes can be carried out during that time.)

MVS/XA will increase the virtual memory addressing capcity—about which more later—from the current limit of 16 megabytes to 2,000 megabytes.

This huge increase of over a hundredfold (the 2,000 megabyte limit comes as a package deal with the MVS/XA) will not be used all at once, but will allow the system room for growth, including the addition of real memory.

The key reason for increased demand on memory, said Ed Williams, director of Computer Services and Systems Division at CIT, is the heavy present and anticipated use of SPIRES, Stanford's data base management system, which was adopted last fall as the principal administrative data base system. Several other systems also contribute to the demand upon memory: on-line users are making increased use of printing and storage facilities and of electronic mail facilities; and they are using more microcomputers, to which the IBM 3081 acts as one of the hosts.

The benefits from the users' point of view will be that the MVS/XA will be able to accommodate this increased demand while maintaining responsiveness and providing good turn-around on batch jobs.

For information, contact Ed Williams, Cedar Hall, 7-3907.

Guidelines for fundraising support

Following is a March 15 memo to Vice-Presidents, Deans of Schools, Department Chairs, and Directors of Institutes from Provost Albert H. Hastorf on establishment of fundraising support groups:

A marked increase in proposals to establish new groups which require membership payments or dues in support of particular activities at Stanford points once again to the need for a written policy where none now exists.

Such groups have made significant contributions to several programs here. That is precisely why they are proliferating. But proliferation poses problems, and I am persuaded that for the future we must institute procedures which will permit us to be certain that such groups not only serve the purposes for which they are intended, but also that they do not divert funds from other University objectives, or consume the time of Development staff and others which might be spent more productively.

Henceforth, then, it will be the policy of this administration that new groups formed to support and raise funds for a particular objective will be established only with the approval of the Provost. In deciding whether such approvals should be granted, I shall seek the advice of the Office of Development and of other appropriate University officers. On occasion, when the proposed group has such significant ramifications that it warrants consideration at higher levels, I may seek the advice of the Administrative Council and the approval of the Trustees.

Proposals for new support groups should include the following information:

1) Justification of the need for funds, and academic relevance of the program;

2) Description of the program and of any privileges to be offered members;

3) A plan setting forth the organization's long-range financial goals, anticipated costs, and staffing needs;

4) An initial budget;

5) A fundraising plan, worked out in collaboration with the Development Office, including:

a) Annual dollar target;
b) Expected prospect constituency;
c) Membership categories;
d) Proposed solicitation techniques;
e) Volunteer plan, including leadership identified, committee structure, etc.

The initial proposal should be submitted first to the department chairman or, if he/she is the proposer, directly to the cognizant dean for preliminary review. After appropriate consultations, a final proposal should be prepared for review by the dean and the Development Office and, if it meets with their approval, for the Provost.

In evaluating proposals, my office will be guided by the following criteria:

1) New support groups must further important University objectives as determined by the academic leadership.

2) There must be potential for substantial new gift dollars. Therefore the constituency for new groups should be predominantly nonalumni and nondonor.

3) The sponsoring organization must be able to provide the necessary direct staff support for the fundraising and programmatic efforts. Such staff will be jointly accountable to the sponsoring organization and to the Vice-President for Development or his designee.

4) Funds raised should carry a single designation consonant with the agreed-upon objectives of the group, and donors should not be permitted to place further restrictions on their gifts. Control over expenditure of funds which these groups help to raise should rest with the recipient University entity, not with volunteer committees.

5) Fundraising by support groups should be strictly limited to seeking recurring, annual, expendable gifts of $1,000 or less. Larger gifts solicitations require the usual academic and Development Office approvals.

6) Gifts to a support group would not exempt an alumnus or parent from a regular Annual Fund or large gift solicitation.

Finally, we intend to apply a sunset law to new support groups. The Office of Development will make a cost/benefit audit of them after the second and fifth year, and at subsequent five-year intervals. Based on these analyses, the Provost's Office, in consultation with the Office of Development, will make decisions about the programs' continuance.

UAW probably will be bargaining agent at Fremont Toyota-GM plant—Gould

The United Auto Workers probably will become the bargaining agent for workers at the Toyota-GM plant in Fremont, says Prof. William Gould of the Stanford Law School.

A former attorney with the UAW, Gould has just completed a book comparing U.S. and Japanese labor laws. He was a visiting-professor at the University of Tokyo Law School in 1975 and 1978.

He believes the courts are likely to uphold Toyota's position that the new plant will "start from scratch."

The union is in a "somewhat weak" position to argue that the Toyota-GM plant is truly a "successor" company under the old GM-UAW contract, he noted.

"Plans to increase the reliance on robots and to adopt the kanban system—the integration of parts manufacturing facilities with the assembly plant—are signs of substantial change that argue against 'successorship.' So does the two-year hiatus between the closure of the assembly plant and the start of a new facility in 1984.

"A lack of preferential hiring (of former GM workers) is the most telling argument against successorship. The UAW cannot oblige management to bargain until it establishes that it represents a majority of the work force's 'full complement.'

"While the odds are long against the courts finding that Toyota-GM is a 'successor' firm under the old contract, it's conceivable that the National Labor Relations Board might rule that the company is a 'successor' for bargaining purposes.

"If so, the company would be free to set its own terms of hiring so long as it did not discriminate against applicants because of union membership. The UAW can be expected to be vigilant about any such discrimination.

"The chances are that the law will be largely irrelevant to recognition problems because of the longstanding UAW-GM relationship.

"The odds are that the UAW will use its leverage with GM and become the bargaining agent. We can expect hard bargaining as the contract is put together. Toyota-GM's strong legal position will no doubt soften up the union.

"For starters, management will seek and probably obtain more flexibility in work assignments. It also will resist Japanese-style UAW incursions into white-collar ranks.

"New procedures may be announced for the resolution of grievances, another area in which Japanese and American practices differ markedly. But labor relations that smack of paternalism will be more difficult to sell to California auto workers, regardless of their previous work experience.

"The Japanese have avoided or resisted unions in most American production facilities. If I am correct in assuming that the UAW will have a bargaining relationship with Toyota-GM, it will present an unusual opportunity for East and West to meet.

William Gould

"Fremont may be an important listening post for those—I count myself among them—who would like our system to promote more cooperation and less conflict."

Gould's views were developed in a commentary for *The Los Angeles Times* in interviews with *The Oakland Tribune* and Stanford News Service.

Al Hastorf to mount soap box May 11 at 'Majors Event' for undergraduates

For most students, choosing a major is the heaviest of all problems.

In May, Stanford is going to help make that choice easier—or, at the very least, provide students with every possible bit of information on which a decision can be based.

The Inner Quad—the center of Stanford's academic campus—will be transformed on May 10 into a "Majors Event," with just about every academic department represented to sell its programs. On the following day, departments will hold open houses for discussions.

There even will be a "Hyde Park Corner" according to Provost Albert H. Hastorf, the University's academic vice-president, "where departmental representatives, or merely interested parties, can offer public comments on various fields of study.

"I, for instance, will be mounting the soapbox to extoll the field in which I was an undergraduate major."

Audrey Bernfield, coordinator of departmental student services, who is organizing the two-day event, says "too many students select majors without thought or information. They shouldn't just follow the crowd. "It's very important that students understand that they can focus on almost any major and still go on to any professional school or job.

"The main thing is to major in something you love. We're talking about the quality of your undergraduate life: follow it, pursue it, and be challenged. In the long run, you'll be happier."

Hastorf feels that making the "Majors Event" an annual affair will streamline departmental efforts and make better advising possible through a more efficient use of faculty time.

"Until now," he says, "systematic attention across the university community has not focused on students' decisions about their major field."

Etchings by Rob Mason may be seen in the newly renovated School of Humanities and Sciences offices in Building 1 on the Inner Quad through mid-May. The artist is a registered professional engineer who turned to art full time after a 20-year career in the maritime industry. Mason grew up in Palo Alto; his father was a Stanford professor, and his mother still lives in the family home in Palo Alto.

Alvarado, Aguirre featured speakers at meeting on Hispanic professionals

Linda Alvarado, president of Alvarado Construction Co., and Jesse Aguirre, director of corporate affairs for Anheuser-Busch, will keynote a conference on "The Hispanic Professional: A Question of Dual Commitment" at Stanford Saturday, April 16.

Alvarado, a recipient of the 1982 National Businesswoman of the Year award, has spoken frequently on economic development, business management, and the promotion of women in non-traditional careers.

Aguirre, an alumnus of Stanford and of Harvard Law School, has contributed to the political and cultural enrichment and welfare of the Hispanic community at the local and national level.

The day-long conference at the Stanford Graduate School of Business will bring together professionals, students, and local community members, starting with registration at 8:30 a.m.

Topics covered will include "The Hispanic Professional in the Business Setting: Obstacles and Opportunities" and "Balancing Professional Life and Community Involvement," among others.

The conference is sponsored by the Latino Business Society, Stanford Society of Chicano Engineers and Scientists, the La Raza Staff Association, and the Personnel Management Association of Atzlan.

According to Ruben Rodriguez, student member of the Steering committee, the conference is unusual in the range of subjects and the diverse background of participants from the Chicano professional community.

Registration fee is $5 for students and $10 for professionals and the general community, including registration materials, lunch, and a reception.

Further information and advance registration can be obtained by contacting Rodriguez at (415) 497-3967 or Edward Escobedo at 497-2009 at the Stanford Career Planning and Placement Center, Stanford, Ca. 94305.

Placement Center open in noon hour

Beginning Monday, April 4, 1983, the Career Planning and Placement Center will remain open between noon and 1 p.m.

This trial arrangement is being made in order to allow noontime access to the Center by its many users, both those coming from on and off campus.

Limited services will be offered during the noon hour.

Sponsored Projects closed in noon hour

Beginning Monday, April 4, the Sponsored Projects Office will close between 12 noon and 1 p.m. Those wishing to deliver materials during this time may leave them on the table adjacent to the main entrance way.

Kennedy does not plan to change research policy based on end-use limits

Following is the text of President Donald Kennedy's talk to the Academic Council on 4/1/83.

As most of you know, a research project at the Stanford Synchrotron Radiation Laboratory has been proposed jointly by Lawrence Livermore National Laboratory, the Los Alamos National Scientific Laboratory, the Sandia Corporation, and several campuses of the University of California. Under the terms of the proposal, a new beam line would be constructed at SLAC, at a cost of some $6 million; the derived radiation would be used for a wide range of materials research applications, including one that relates quite directly to nuclear weapons testing.

A number of researchers at SLAC have petitioned the director of that facility to protest the project, objecting to the doing of weapons research and alleging that they will be made unwilling collaborators in programs they find unacceptable, and of a kind they understood would not be undertaken at SLAC. With some of the petitioners' concerns I find myself in sympathy. The problem of "involuntary servitude" is a knotty one. I also agree that there are questions regarding the degree to which outside users can determine what is done in a Stanford facility. A resolution by Prof. Mozley which raises these questions among others, received thoughtful attention by the Senate yesterday afternoon, and the Committee on Research will be examining them in the future.

The question I want to examine today is different. To put it in the most concise form: should we undertake a modification of Stanford's research policy so as to rule out this and other projects that have prospective military uses? Some background is essential before considering that important issue.

The Stanford Synchrotron Radiation Laboratory (SSRL), an interdisciplinary research laboratory of Stanford University, is a national facility used by some 400 scientists from universities, industry, and the government. These researchers, from a variety of disciplines, utilize the intense ultra-violet and x-radiation from the SPEAR storage ring at SLAC. SSRL receives the majority of its funding from the U.S. Department of Energy, although various other government and non-government sponsors also support the Laboratory's research activities.

All proposals to construct instrumentation and to perform research at SSRL are evaluated by an SSRL External Proposal Review Panel, made up of distinguished scientists from around the country. The Panel uses these criteria to rank the proposals:

1) the scientific quality of the proposed work;

2) the ability of the researchers to perform the proposed tasks;

3) the level of contribution of the proposed work to SSRL's scientific development; and

4) the contribution of the proposed work to the education of Stanford students who participate in research at SSRL.

Because multi-million dollar investments are needed for the construction of each new beam line at the Lab, SSRL has guaranteed some sponsors who fund construction of new beam lines access to a portion of those beam lines for scientific projects. Any agreements involving guaranteed access by the sponsor are currently limited to three-year terms, with renewals subject to the criteria given above.

When guarantees of access to the beam line have been given a research sponsor, at least one-third of the total beam time must be available to general (non-sponsor) SSRL users whose proposed research is approved by the Review Panel.

All work performed at SSRL must conform to all University research policies, including the Secrecy in Research Guidelines. The latter provides that no research agreement can prohibit a scientist's right to publish or otherwise disseminate the results of his/her University research activity. Although an "incidental" amount of proprietary information may be given in confidence by a sponsor to a University researcher, the principle of freedom of access by all interested parties to the underlying data, to the processes, and to the final results of research is of overriding importance. Accordingly, it is Stanford's policy that no program of research that requires secrecy is to be conducted at the University.

To insure openness of research and timely disclosure of research results, SSRL has taken two additional steps beyond those specifically required by University policy. First, no research involving proprietary data may be performed by a sponsor during the period of time in which the researcher is utilizing his "guaranteed time" on the beam line; all proprietary research must be approved on a specific project-by-project basis by the External Review Panel, in competition with all other proposals submitted by the general SSRL user community. Second, the director of SSRL must be provided all of the proprietary information involved and is responsible for seeing that the research results, including the proprietary data, are indeed published after the research results have been analyzed.

All University research activities, including those conducted at SSRL, are governed by Stanford's "Statement of Principles Concerning Research" which was adopted by the Senate on December 16, 1971. It reads, in part, as follows:

". . . The individual scholar should be free to select the subject matter of his research, to seek support from any source for his work, and to form his own findings and conclusions. These findings and conclusions should be available for scrutiny and criticism as required by the University's Policy Guidelines on Secrecy in Research.

"Research techniques should not violate established professional ethics pertaining to the health, safety, privacy, and other personal rights of human beings or to the infliction of injury or pain on animals.

"The University should foster an environment conducive to research. Where, because of limited resources, the University cannot support all research demands, it should allocate space, facilities, funds, and other resources for research programs based on the scholarly and educational merits of the proposed research, and not on speculations concerning the political or moral impropriety of the uses which might be made of its results.

"The above principles circumscribe the University's role with respect to University-connected research. They in no way diminish, and indeed they reinforce, the individual researcher's personal responsibility to assure that the sources of funding for his research, and its perceived applications, are consistent with his own judgment and conscience."

Although the quoted policy results from a Senate action in 1971, the critical debates over the issue actually occurred during 1969—hardly a sleepy time with respect to such issues. Indeed, I remember well much of the flavor of that debate in the Senate, since I was the author or seconder of several of the amendments. An adequate indicator of the intensity of feeling at the critical meeting of April 26, 1969, is given by the termination time recorded in the minutes. It was 10:40 p.m.

In a series of discussions before and after that, the Committee on Research and the Senate repeatedly walked up to the conclusion that Stanford faculty members should be prevented from doing research *intended* for particular purposes, or likely to be *used* for particular purposes. In the end we wisely walked away.

There is a certain sense of *deja vu*: the reason today's problem is vexing and controversial is the same as it was then: a prospective end-use of the research is involved with weapons development.

There are various views, on this campus and elsewhere, about the need for applying the research skills of this nation to the development of military technology in the interest of our national security. But many of us here believe that the present direction of our national effort is tragically wrong. Our dependence on large stockpiles of nuclear weapons, and on deployment measures and countermeasures with great destructive potential, have placed all of us in collective jeopardy.

Recent extensions of those policies have caused the Defense budget to hypertrophy at the expense of social programs that fulfill human needs; and within the Department of Defense itself, an increased focus on weapons technology was weakened the support of more fundamental research efforts. There are, in short, a variety of reasons to be uncomfortable about weapons research.

In the present instance, we have a research program that will produce some output clearly related to nuclear weapons testing. A careful reading of the proposals reveals that in fact a wide variety of work, including a number of programs on the fundamental properties of living materials, is to be conducted, although the weapons applications are understandably stressed in the short form of the proposal directed to the funding agency.

The heterogenous mix of intentions and prospective uses for this proposed facility demonstrates clearly just how tricky and difficult it is to judge end-use and intent. Sometimes the search for knowledge leads one to unexpected places; no research can safely be predicted to be free of harm—nor, conversely, can a piece of work that includes a military end-use automatically be defined as "bad."

That is why the Committee on Research and the Senate reached the conclusion I described earlier—that is, that University restrictions on research would not be imposed based upon intent or end-use, but only upon conduct.

The Stanford faculty decided that to open the door to prohibitions of this kind would, in the long run and in the aggregate, do more harm than good. It foresaw that today's benign restriction might become tomorrow's suffocation: that once you begin making value judgments about the possible outcomes of scientific work, there is no place to stop. In summary, we placed our faith in the ultimate net benefit of free inquiry.

I therefore do not plan to try to change the University's policy on research in order to eliminate this proposed program, nor do I think that my colleagues should wish to do so. I would hold that view even if the project under consideration were much more heavily devoted than it is to end-uses with which I am personally uncomfortable.

Good general principles often get their severest and most meaningful tests in such uncomfortable situations. That is why those who are devoted to civil liberties sometimes find themselves defending dreadful people, and it is why the courts frequently have to release felons when it turns out that the police discovered their felonies in inappropriate ways.

Our policy is that Stanford scientists are free to conduct work of their own choosing as long as it can be carried out in accordance with principles of openness and freedom of publication.

The principle underlying the policy is that the social benefit flowing from free and unimpeded efforts to gain new knowledge will outweigh the cost exacted by the occasional pieces of dangerous knowledge we obtain as a result of free inquiry. Because I believe in the principle, I support the policy.

'Working against Sexism'—rally, speakers, workshops set

"Working Against Sexism" is the theme of four days of workshops, films, and discussions at Stanford, starting with a White Plaza rally Monday noon, April 11.

Rally speakers will include Barrie Thorne, visiting associate professor in feminist studies and sociology, and Alice Supton, assistant dean of residential education. Thorne will lead a workshop on "Sexism in the Classroom" at 7:30 p.m. Monday in Gavilan House of Florence Moore Hall.

A free public panel discussion on "Sexual Harassment: In Education and in the Workplace" will be featured at 7:30 p.m. Tuesday, April 12 in Kresge Auditorium of the Law School.

Participants will include Catherine MacKinnon, author of *Sexual Harassment of Working Women*, and visiting professor at Stanford last year; Karen Haney, director of Women Organized Against Sexual Harassment; Anna Price, former Yale student harassed by a professor there and defended by MacKinnon; and Peggy McGinnis, one of the first women to follow a sexual harassment case through the courts.

Topics covered will include recent legal development, practical strategies for dealing with sexual harassment, and theoretical and social interpretation of sexual harassment in the workplace.

Sherry Ortner, associate professor of anthropology at the University of Michigan, will discuss "The Cultural Construction of Gender and Sexuality" at noon Wednesday, April 13, in Terman Auditorium as part of the Jing Lyman lecture series on "Female Sexuality" of the Stanford Center for Research on Women.

Featured programs Thursday will include a women's self-defense demonstration at noon in White Plaza and and candlelight "Take Back the Night" march, starting at 7 p.m. from the end of California Ave. in Palo Alto near the Co-Op market and the fountain. A community get together and potluck will precede the march, starting at the Stanford Women's Center at 5 p.m.

The self-defense demonstration will include Matt Thomas and Sheryl Doran of Model Mugging, Inc., an organization which teaches practical self-defense to women. Taken by thousands of college students nationally, this program enables women to test their skills at full strength against fully padded attackers—kicking them in the groin, the head and other vulnerable spots.

Four more workshops besides Thorne's are planned for Stanford students, faculty, and staff.

"Sexual Harassment: What to Do if You Are Harassed" will be discussed at noon Tuesday, April 12, at Tresidder Memorial Union. "Power Pinch," a 30-minute film on dealing with harassment in the workplace, also will be shown.

"Changes in Relationships Between Men and Women" will be discussed at 2:30 p.m. Tuesday, April 12 in Donner House of Stern Hall by Jim Steyer, instructor in the SWOPSI class on "Men's Lives," and Carrie Griffin, outreach discussion leader with the Rape Education Project.

"Abuse in Dating and Love Relationships" will be discussed by Anne Wurr, community educator for the Mid-Peninsula Support Network for Battered Women, at 4:30 p.m. Wednesday, April 13 in Trancos House of Wilbur Hall. Studies done with college age adults show that one in five students have experienced physical violence with their dates or lovers.

"Growing Up Male: Violence in Our Lives" will be the topic for Alan Creighton and Andrew Bundy, workshop leaders for Men Overcoming Violence, at 7:30 p.m. Wednesday in Rinconada House of Wilbur Hall.

Patricia Lind

Self-improvement: in your thinking...

Do you know how you learn most effectively? Are you aware that your thought process may be blocking your success in school or work, developing new skills or improving old ones?

"Assessing Your Thinking Style" will be taught by Patricia Lind, M.A., from 7 to 9 p.m. Tuesdays, beginning April 5, in Tresidder Union. (Even though the first meeting was yesterday, those interested in the class should call 497-9671 to see if there's still room.)

Participants will learn how their thinking style works for them and how it works against them. Study techniques will be given to enhance particular styles, such as organizing facts and ideas in the form of a map, to see the "whole picture."

Lind has taught at Foothill College, is a consultant to school systems, and currently is the director of Educare Learning Center. The Center has developed new models from recent brain research for releasing learning block patterns in adults and children.

The fee for the course is $18, payable the first time you attend.

...and in shedding weight permanently

The Health Improvement Program (HIP) is offering an experimental weight loss course designed for those not wishing to participate in traditional weight loss classes.

Research conducted by the Stanford Heart Disease Prevention Program and investigators at the University of Minnesota suggests that self-administered weight loss formats which minimize contact between participants and program staff can be as effective as more "intensive," face-to-face treatment approaches.

The Health Improvement Program self-help course has been tested by Stanford Heart Disease Prevention Program researchers in Monterey and Salinas as part of its Five City Project in an effort to improve the cardiovascular health of the general populations in the two areas.

The available evidence indicates that the program is as effective as those using group treatment formats.

Orientation meetings to describe the course are scheduled for the following dates: 5:15-6:15 p.m., Tuesday, April 12; 4-5 p.m. Wednesday, April 13; 12 noon-1 p.m. Friday, April 15. To reserve a place at one of the meetings, telephone HIP at 497-9649 between 1 and 3 p.m.

Tennis lessons start soon

Tennis lessons (six pupils per group) will again be offered to staff and/or families on weekday mornings or Saturday mornings. Players are grouped by ability in these classes taught by Dick Gould's staff. Call 497-1160 on weekday mornings to receive detailed printed information and registration forms. Lessons begin week of April 18.

Ram's Head plans all-student version of 'Hello Dolly!' starting April 14

Ram's Head Theatrical Society at Stanford will present an all-student production of "Hello Dolly!" at 8 p.m. Thursday and Friday, April 14-15 and at 2:30 and 8 p.m. Saturday, April 16, in Memorial Auditorium.

Based on Thornton Wilder's book, "The Matchmaker," the title role of Dolly Levi will be played by Alexandra Cocu. An aspiring opera singer, she recently returned from studies in Vienna and has resumed vocal training with Stanford's Lila Stuart.

Richard Gerrig, a Yale graduate studying for a doctorate in psychology at Stanford, will portray Horace Vandergelder.

Costume designer is Cynthia Cook, a Palo Alto High School graduate who came to Stanford to study petroleum engineering but became a drama major.

Musical Director Susan Silverman, of Hillsborough, attended Crystal Springs and Exeter Academy. Still a sophomore, she already has been musical director of three Ram's Head productions, including "Cabaret."

Ticket prices are $6 for the general public and $4.50 for students for the evening performances, and $5.50 adults, $4 students and senior citizens, and $3.50 children for the matinee.

Tickets are available at the Tresidder ticket office at Stanford.

Stanford West hearing Monday

A public hearing on the pros and cons of the proposed Stanford West housing project will take place at 7:30 Monday night (April 11) before the Palo Alto City Council.

Strong opposition to the housing is expected from Menlo Park residents across San Francisquito Creek from the Willow Road housing site.

Stanford faculty, staff, and graduate students will be eligible to live in the 1,275-unit project. The units will range in price from $60,000 to $250,000, with rentals targeted at or near $400 a month.

Those interested in expressing their views on the subject may attend the meeting in the Palo Alto Civic Center, 250 Hamilton Ave., or may write in care of the City Clerk, at the same address, Palo Alto, 94301.

Carpools

Ongoing carpool needs another partner. Leaves Oakland at 8:30 a.m. Leaves Stanford at 6 p.m. M-F. Call John Bundor at 7-4480.

Carpoolers wanted. Dublin/San Ramon/Pleasanton to Med Ctr. Hours 9-5:30, M-F. Call Ed at 7-5569.

Carpoolers wanted for existing carpool. Marin County to Stanford University. M-F, 8-5. Contact Kyle at 7-5602.

Senate report

Senate asks study of volume, character of weapons-related research here

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 10

Summary of Actions Taken by the Senate
March 31, 1983

At its meeting on March 31, 1983, the Senate took the following actions:

1. On the recommendation of the Comittee on Academic Appraisal and Achievement, the Senate, by unanimous voice vote, conferred bachelor's degrees on candidates who had met the various requirements for those degrees.

2. On the recommendation of the Committee on Graduate Studies, the Senate, by unanimous voice vote, conferred advanced degrees on candidates who had met the various requirements for those degrees.

3. On the recommendation of the Committee on Graduate Studies, the Senate, by unanimous voice vote, revoked an M.D. degree which had been awarded in error last September.

4. On a motion made by R. Mozley and seconded by G. Gillespie with a friendly amendment proposed by S. Dornbusch, the Senate passed, on a divided voice vote, the following resolution:

> Resolved: that the Committee on Research study the volume and character of weapons-related research at Stanford.
>
> It is desirable that a preliminary report of issues and procedures be delivered to the Senate during the Spring Quarter of 1983.

Minutes of the Fifteenth Senate
of the Academic Council
March 31, 1983
(Draft subject to approval by the Senate)

A meeting of the Fifteenth Senate of the Academic Council was held on 3/31/83, beginning at 3:18 p.m. in Room 180 of the School of Law with A. L. Fetter (Chair) presiding. Present were 40 representatives, 8 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 3/3/83 (SenD#2481) were approved with one amendment. In the discussion of the Report of the *Ad Hoc* Committee to Study the Question of the Length of Academic Terms (page 3), the last sentence of the fourth paragraph should read as follows:

> He advises that such experiments be tried first at advanced undergraduate and graduate levels.

Conferral of Degrees

Under the Action Calendar, the Senate, by unanimous voice vote,

1. Conferred bachelor's degrees on candidates recommended by the Committee on Academic Appraisal and Achievement in the Preliminary List (SenD#2482), a Supplementary List (SenD#2483), and a final list of three candidates added by Registrar Mahoney.

2. Conferred advanced degrees on candidates recommended by the Committee on Graduate Studies in the Preliminary List (SenD#2484), and a Supplementary List (SenD#2485).

3. Revoked an M.D. degree awarded in error last September.

Report of the Steering Committee

In the report from the Steering Committee, A. L. Fetter, Chair, reminded the Senate of the April 1 Academic Council meeting and called attention to the Senate schedule for May 12, which includes both the C-AAA-EIT report and the report from the Dean of Humanities & Sciences. The plan is to limit debate to 45 minutes or so on the committee report at that meeting and continue the discussion at the following Senate meeting.

Report of the President

The President reported that he intended to address his remarks at the Spring Quarter Academic Council meeting on April 1 to the matter of the SSRL research program and the controversies which have risen from it.

He then commented on Stanford's position regarding the coupling of Selective Service registration and financial aid derived from government sources. In light of the present legal situation, Stanford will process applications as usual, as if the regulations did not apply. Students will be advised to follow a similar course of action.

Report of the Provost

The Provost first reported that the Sponsored Projects Office is currently training two new staff members to fill recent vacancies and hopes that faculty will be patient if there are occasional delays in handling grant applications during this period.

He also reported on actions he has taken in response to the report of an *Ad Hoc* Committee to Review Academic Programs in Physical Education, which he appointed over a year ago. The committee, chaired by S. Mahoney, was composed of J. M. Atkin, C. Burciaga, J. Friedenthal, M. Kirst, and R. Thompson.

He has implemented the following recommendations of that committee, effective September 1983:

1. That the Dean of Humanities and Sciences be appointed the cognizant administrative officer of the Division of Educational Programs of the Department of Athletics, Physical Education and Recreation (D-APER);

2. That the Division's academic staff for teaching use the titles, Senior Lecturer and Lecturer, used generally in the University and not the special titles used in the Division since 1972, and

3) That the cognizant administrative officer charge a committee, to include a core of the Division's own curriculum committee and at least two Academic Council members from outside D-APER, with oversight of the Division's curriculum.

Two other recommendations of the *ad hoc* committee are yet to be acted upon. These will be addressed in the future by the Dean of Humanities and Sciences and the appropriate Academic Council committee. They are:

4) That limitations beyond those now in place be put on the use of physical education courses in support of Stanford's baccalaureate degrees and, further, that these limits be integrated with other credit limits now applicable to extradepartmental programs (with C-US), and

5) That D-APER courses generally, and unless specifically excepted by the oversight committee, be graded on a Pass/No Credit basis (with C-AAA).

Annual Affirmative Action
Report on Graduate Students

Associate Dean of Graduate Studies A. Gelpi presented the Annual Affirmative Action Report on Graduate Students, 1981-82 (SenD#2478).

At the outset, he pointed out that Assistant Dean D. K. Naylor had prepared the final report, to which all of the staff of the Dean of Graduate Studies and Research had contributed. He also reminded readers that the report bridges two academic years, in that the dean's office activities in one year affect the enrolled graduate student population of the following year.

He emphasized that the situation described in the report is troublesome, as the Dean of Graduate Studies had predicted it might be in his affirmative action report last year. The data show that for fall enrollments in all schools there was a decline in the number of minority students, while the number of women enrolling held steady in the School of Medicine and increased in the other schools. Applications and admissions figures also showed the same trends.

This has caused the dean's staff grave concern and has resulted in renewed efforts in recruitment, even though it mirrors a general national picture.

Stanford's commitment to its affirmative action goals in graduate student recruitment are evidenced by a number of recent developments in the dean's office. These include the appointments of three assistant deans for minority recruitment, an increased program of campus recruitment visits, revised publications, liaison affiliations with departments, participation in minority name exchanges, special fellowships for minorities, and Stanford academic workshops to build a faculty network of connections with colleges which can provide promising minority applicants.

He introduced the dean's administrative officers for recruiting: Assistant Deans D. K. Naylor for blacks and Puerto Ricans; A. Medicine for native Americans; and N. Lozano for chicanos, and Associate Dean J. Fetter for women in science and engineering.

Last June a graduate student minority recruitment committee composed of minority graduate students from all the schools was asked to assess the affirmative action program at Stanford and make realistic plans for the future.

All the University affirmative action officers now meet together in regularly monthly meetings. A day-long University-wide retreat is presently being planned for 1983 for all those involved in the affirmative action programs at Stanford; its purpose will be to review the past and the present, and plan for the future.

The dean's office is eager to learn from departments any suggestions on how affirmative action efforts can be improved, and any way in which the dean's staff can assist departments in their own affirmative action programs.

The prospects for next year seem to look a little better. Although admissions processes are still going on, there are indications that figures for minorities and women are either holding even or are already higher than last year's figures in nearly all schools.

Annual Affirmative Action Report
on Academic Staff/Research

Associate Dean Gelpi then went on to present the Annual Affirmative Action Report on Academic Staff/Research, 1981-82 (SenD#2477).

He pointed out that even with a 3 percent decrease last year in the total number of academic staff/research appointments, the number of minority appointments remained the same. The bad news is that these numbers are very small.

Dean Lieberman has observed that, since 1979, the increased numbers of minority academic staff/research appointees who leave here to take regular faculty positions elsewhere is an encouraging new development, with implications for affirmative action. Such positions here and elsewhere may prove a fertile source of minority faculty appointees in the future.

Associate Dean Gelpi closed with a request for faculty support and cooperation in reversing the downward trends of 1981-82, and pledged the wholehearted assistance of the dean's staff in that effort.

In the discussion following these two reports, the question was asked why the recruitment effort for women is focused only on science and engineering. Associate Dean Fetter responded that it was a matter of targeting areas of the most severe underrepresentation. She pointed out, however, that even in fields in which women are not underrepresented in graduate admissions generally, they may well be so at the Ph.D. as opposed to the Master's level. This affects the potential pool for affirmative action appointments on college and university faculties.

B. Roth commented that affirmative action programs seem to be systematized by now all over the country. There are some new initiatives (like the networking system), but by and large most faculty aren't being utilized in the affirmative action effort. Somehow it seems that the system isn't working.

Associate Dean Gelpi responded that the new departmental liaison plan is intended to involve more faculty directly. Associate Dean Fetter added that the new Minority Access for Research Careers Program (MARC) has been another notable development for involving faculty. Assistant Dean Naylor described a model Stanford summer program in biomedical research sponsored by NIH which involved faculty as mentors and provided access to laboratory facilities for minority undergraduates with high potential for research careers. He added that the dean's staff would like to have more contact with faculty, and greater continuity of such contact. He urged departments to designate faculty who have an interest in affirmative action and will take the time to work with the dean's staff. He sees faculty participation as a critical component in attracting high-potential minority applicants.

Associate Dean Gelpi added that the dean's staff is currently working on a plan for some kind of a mentor program to involve interested faculty. This is still in the early stages of planning.

To the question of how effective the Compton fellowships are as recruitment tools, Assistant Dean Naylor replied that they are presently very limited, because there are so few and because the awards are somewhat out of phase with Stanford admissions decisions. A conference

continued on next page

Senate report

continued from page 14

will be held soon for participating institutions so that they can plan how to make better use of these fellowships.

L. Rosenberg, speaking from years of experience with the Medical School's minority recruitment program, expressed the view that affirmative action has to be declared more or less a social failure. Given the best will in the world and the most serious institutional effort, there is no significant improvement in minority representation at professional levels. The pool of candidates is not only limited but has gotten poorer in the last few years. Given the lack of support for education in the cities and in the public sector generally, the possibility that a sustained affirmative action program will be effective is very problematical. Perhaps as an institution we could think of something that we could do to improve the applicant pools. To have half a dozen top universities competing every year for the 4 or 5 minority applicants in any one field doesn't really make any social impact. We should continue to do that as energetically as we have, but we have to do something a little different to address the question of what the quality of the pool is and how we can make it bigger.

Asked to comment, Dean Atkin of the School of Education agreed that while education has made great strides nationally in bringing populations formerly poorly served up to some minimal level, it has not done well for a broad range of the population, majority students included. We have to work considerably harder to improve the schools, and this will be done in the future to a significantly greater degree than it has been in the recent past.

To the question of whether or not long-term career planning is a part of minority recruitment programs, Assistant Dean Medicine responded that efforts are made to identify promising native American students in reservation schools. Contacts are then established and maintained over the student's next two or three undergraduate years to encourage potential applicants for medical school, for example, in planning their careers.

Annual Affirmative Action Report on Faculty

In opening his presentation of the Annual Affirmative Action Report on Faculty 1981-82 (SenD#2480), Provost Hastorf commented that graduate affirmative action is obviously crucial to faculty affirmative action.

He also reminded the Senate that Santiago Rodriguez, the University's Affirmative Action Officer, chairs the Task Force on Staff Affirmative Action. He could not attend this meeting, and staff affirmative action will not be reported here.

The provost then asked Assistant Provost C. Burciaga to report on the processes in effect now for faculty affirmative action. She detailed a number of processes, both internal and external to the University.

Internally, the University is working toward involving faculty and departments more and more directly. A faculty Affirmative Action Committee is now advisory to the president and the provost on both the recruitment and the retention of women and minority faculty. It also meets with school and departmental faculty affirmative action representatives to assess the role of these representatives in the program and to discuss problem areas within disciplines. The deans and the provost will also be meeting with these departmental representatives. The intent is to extend the commitment to affirmative action deeper into the department and faculty level—to decentralize the program.

A special emphasis is being put on the early identification of talent within a discipline. Departments are urged to maintain rosters to serve as a talent pool, and to extend each search as broadly as possible. Appointment searches are being monitored for affirmative action procedures, and conspicuous improvements have been noted in the recent past. The faculty affirmative action fund is one of the oldest and most effective of the University's internal tools for implementing affirmative action. This year it has been heavily used, but even so, departments are urged to apply to it if necessary when an opportunity to make an affirmative action appointment arises.

One of the external processes in affirmative action is Stanford's regular report to the Department of Labor. These reports have been very favorably received, and Vice-Provost Burciaga commended the dean's staff for the excellent work done on these reports. Federal reporting is an effective mechanism for monitoring our own program.

Regular affirmative action meetings are now being held with counterpart officers at sister institutions in the East. These have provided another external process for monitoring our progress.

The Provost confirmed that this year, for the first time, the affirmative action fund has been committed to the limit of both its budget base and its savings, but that even so, inquiries will be welcomed.

In summarizing the report data on faculty affirmative action, Provost Hastorf pointed out the trends evident over five-year periods:

	% women		% minorities	
	Tenure line	Tenured	Tenure line	Tenured
Ten years ago	6.5	3.5	4.8	3.0
Five years ago	8.0	3.9	6.7	5.5
Last year	9.4	5.8	7.3	6.1

He commented that last year was the best in the last ten years for faculty affirmative action: 24 percent of all new faculty in the fall of 1981 were women (18 women in all). Twelve of those were in the humanities. Two, however, were appointed in the School of Business, which represents a real breakthrough. (He added that the School of Business has tried several times to make prestigious senior appointments of women or minorities without success, but not for lack of effort. Rather, he thought, it was because of the intense competition for candidates in a severely limited pool, as had been suggested earlier.)

Last year was also the best year of the last ten for new appointments of members of minority groups. Eleven new minority faculty members were appointed in the fall of 1981. Good as the faculty affirmative record on new appointments was in 1981-82, it is no cause for complacency, he added.

He pointed out also that four women were promoted to tenure effective in the fall of 1981 and that the record of this year's promotion of women to tenure will be even better.

Finally, he addressed the question of the appointment of women or minorities to academic administrative positions, and reported that the percentages have remained essentially unchanged over the past three years.

A. Mellor pointed out that the data given in the report on departures pools terminations and resignations, and that the separation of that information would be of interest. Discussion then moved to the difficulty of interpreting the meaning of "resigned," since the act has many motivations including on occasion the expectancy of termination. There was some agreement that while at least some terminations are documentable, resignations are enormously difficult to interpret. It may not be possible to make a valid separation of departure figures in that regard.

Resolution on Weapons-Related Research

The last item on the agenda was the presentation of a resolution to refer the problem of weapons-related research at Stanford to the Committee on Research for study (SenD#2479). R. Mozley, in presenting the resolution, pointed out that he did not represent the administration at SLAC in proposing this resolution. He estimated that he did have the complete support of about half the SLAC faculty and a considerable number of the staff.

He was motivated to propose the resolution because of "the probability that a beam-weapons related problem at SSRL will command the efforts of SLAC people who do not wish to work on it." That immediate problem, he believes, can best be handled by Stanford administrative officers without Senate involvement. He sees this problem, however, as a warning example of what can happen if university research becomes focused more and more in a weapons-related direction because of the pressures of funding availability.

Recognizing that criteria relating to the use of research are both difficult and dangerous to apply, he nevertheless proposed that they be considered in order to heighten awareness of the problem and the effect that such an influence could have upon the University.

For these reasons, he proposed the following resolution:

> Resolved: That the Committee on Research study the volume and character of weapons-related research at Stanford, and possible criteria relating to end use which might be used to reduce the volume of such research if this proves desirable.
>
> It is desirable that a preliminary report be delivered to the Senate during the Spring Quarter of 1983.

J. Meindl, Chair of the Committee on Research, was asked to comment on the resolution on behalf of his committee. He responded that C-Res had spent its January meeting in several hours of discussion on the SSRL project, concluding that there was no apparent violation of University policy involved. C-Res is now working on the problem of software and copyright policy and has identified several promising areas for policy change. The April meeting is being planned as an open meeting for copyright and software policy discussion. The last meeting of the year will be needed for closure on policy changes to be recommended. These Spring Quarter plans for C-Res, he said, could be changed if the Senate decided to accept the resolution before it.

K. Arrow commented that the matter is one of serious concern which should be considered. The resolution as worded, however, presumes both that there is a significant problem with weapons-related research here and that it demands correction. Presumably, all DOD research has some eventual relationship to defense; whether or not it is directly weapon-related is another matter. Different scholars take different positions on whether or not they wish to work on such research. The case with the SSRL project is different because of the involuntary service aspect. That is an interesting ethical issue, a problem worthy of study. However, the record should show, if the resolution passes, that the issue of weapons-related research as a "problem" has not been prejudged; rather, C-Res has been asked to think about it.

G. Gillespie remarked that R. Mozley's presentation made it clear that the SSRL project is open and above-board and does not contravene present University policy, and that it can probably best be handled by University administration without Senate intervention. The dangers of a large volume of the University's research being funded by a single dominant sponsor are real and diversification of sponsorship is important. As the resolution is formulated, however, there is another danger—the danger of predicating hypothetical end use and by so doing, restricing freedom of research in many fields.

J. Adams recalled the Senate's earlier lengthy debates on research policy and on the problem of determining what is a weapon and what is not. He asked Meindl what effect the passing of this resolution would have on C-Res and its agenda.

Meindl responded that resolving the issues concerned would necessarily absorb the committee for at least another year.

R. White pointed out that potential end use is a treacherous judgmental measure for assessing research and proscribing who may do what within a university context.

J. Merryman asked to what extent Mozley would be satisfied with a narrowing of the resolution to deal with the problem of involuntary involvement by research staff. Mozley responded that that would serve only as a partial answer. The basic issues, he feels, demand University-level policy decisions.

At this point, S. Dornbusch proposed a friendly amendment to the resolution. As amended, it would read:

> Resolved: that the Committee on Research study the volume and character of weapons-related research at Stanford.
>
> It is desirable that a preliminary report of issues and procedures be delivered to the Senate during the Spring Quarter of 1983.

G. Gillespie seconded both the original motion and the amendment.

After a discussion of the contrast in the terms "weapons-related" and "defense-related," the original term was retained. It was also made clear that the clause relating to end use criteria which the amendment would delete was motivated by a desire to have the present University research policy re-examined in the light of recent developments. There was objection, however, to the implicit hope expressed in the end use clause that C-Res would devise some criteria based on predicated end use (and perhaps research volume per sponsor) which would arbitrarily limit freedom of research at Stanford.

R. Mozley accepted the amended resolution as proposed and seconded.

There was then some discussion of both the importance and the feasibility of the spring reporting time but N. Gage pointed out that "desirable" does not mean mandatory and "preliminary" does not mean final.

As the discussion closed, A. Siegman commented that there are other ways to get information than by mandating that it be produced by a committee. He suggested that those concerned might readily obtain the data needed for such a preliminary survey.

Put to a vote, the resolution as amended passed on a divided voice vote.

The meeting adjourned at approximately 5:10 p.m.

Clara N. Bush
Academic Secretary

Staff employment opportunities

Exempt

30788-AW (JCC:1980) UNIV MANAGER III: Asst. Dir-Energy Resource Mgmt Group; respon for the mgmt of sys, personnel & resources to deliver steam, chilled water & electrical service to the campus & med ctr/hospital reliably & efficiently; respon to manage Univ's energy conservation program; directs a professional/technical staff of engrs & others to accomplish the above; short & long range planning for the specified utility sys, incl formulation & implementation of all capital improvements, operational & maintenance respon, & fiscal/budgetary control of several major utility budgets; QUALIFICATIONS: requires a degree in mech or elec engrg & 10 or more yrs exp in production and/or distribution of steam, chilled water & electrical utilities; ability to dir energy conservation programs required; knowl of computer/micro-processor-based energy mgmt sys nec; must possess excel managerial & commu skills; a professional engrg registration & tech competence or exp w/ HVAC sys desired, but not nec.; C09; $2972-3642.

28219-LL (JCC:4076) PROGR/ANALYST GEN II: Programmer/Analyst for Data Bank Network (17 US & Canadian data banks) which use to TOD (Time-Oriented Database) Software Sys; write TOD programs in PL/I on IBM 3081 computer, incl editing, debugging, & documenting (using Script & Wylbur); maintain TOD schemas for data banks, check & transpose data, & maintain user-specified coding & compute routines; transfer & convert data fr other sys to TOD; trouble-shoot hardware & data commu problems; QUALIFICATIONS: BA w/ emphasis on applications programming & sys analysis skills or a combination of edu & exp in computer programming area; required to work flexible hrs (evenings and/or wkends); commu skills (oral & written) commensurate w/ facilitating instruc of users; ability to develop effective work methods & work thru projs to their completion.; C06; $1854-2312.

26732-LL (JCC:5042/5050) Sys Programmer II/III: Primary respon for develop't/mgmt of DEC VAX 11/780 & 2 VAX 11/750 computers w/ UNIX operating sys; specific tasks incl develop't/maintenance of VAX/UNIX kernel, Ethernet interface software, user subsys (e.g., text processors, languages, mail sys, networks), other sys software; analyzing sys performance, recommending configuration upgrades, working w/ users to solve special software/hardware interface problems; working w/ hardware maintenance people to isolate/correct sys failures, etc; QUALIFICATIONS: sys programming exp (level III if significant UNIX exp otherwise will be considered at II level); knowl of VAX UNIX & proficiency in Computer programming lang; good oral/written commu skills; DECsys 2060/TOPS20 sys programming exp; exp w/ Motorola MC68000-based workstations.; C06/C07; $1854-2312/2113-2724.

22958-LL (JCC:5588) LIFE SCI RES ASST I: Preparation & purification of proteins; column chromatography; high-pressure liquid chromatography; centrifugation; radioisotopes; absorption spectroscopy; enzyme kinetics; work on photoenzymology of vision, starting w/ purification of rod outer segments fr retinas; much of the research will deal w/ purification & characterization of proteins involved in amplification; detailed protocols for most of these studies have not been worked out; LSRA will design experimental plans based on genl guidelines provided by supvr; these plans will often have to be evaluated & modified on a daily basis in response to experimental results; QUALIFICATIONS: bkground in biochemistry essential; BS or equiv in biochemistry desired; at least 1 yr exp as a res assistant.; C05; $1670-2086.

26108-LL (JCC:5596) LIFE SCI RES ASST II: Perform research at cellular, biochemical & animal level analyzing the mechanisms which control immune response & immunologically relevant cellular interactions; generation & maintenance of long-term in vitro cultures of alloreactive murine T cell clones, receptor specificity & genetic restriction analysis utilizing mixed lymphocyte reactivities; reconstitution of immunodeficient animals; head res assistant for lab organization—selection & maintenance of capital eqpt, overseeing mouse colony status, supvn & training of tech personnel QUALFICATIONS: BS degree or equiv relevant lab exp; exp in doing innovative & independent res; capable of admin decision-making involving lab personnel on res projs.; C06; $1854-2312.

44332-TC (JCC:6214) CLIN CYTOTECHNOLOGIST: Microscopic evaluation of Gyn & non-Gyn smears for cellular abnormalities; occasional specimen preparation & staining; asst Radiology personnel in preparation of specimens for fine needle aspirations; work closely w/ Pathologists in the evaluation of cases; work w/ clinicians; QUALIFICATIONS: ASCP registered; 4-5 yrs exp preferred.; C06; $1854-2312.

30787-JB (JCC:8688) TRADES & CRAFTS SUPVR III: Supervisor-Water Systems; respon for day-to-day operations of domestic water, lake water & fire protection water mains sys, the sanitary sewer sys, the storm drainage sys & all Stanford lakes & wells throughout the campus & faculty/staff housing areas; supv a crew of 4; interface w/ O&M & Facilities Proj Engrg; able to respond in emergency situations & bring the sys back on line w/ a min of inconvenience to users; QUALIFICATIONS: 5 yrs of exp as a line mgr or operations supvr & a thorough working knowl of operation & maintenance of water & sewer sys; posses or obtain w/in 1 yr a Water Quality License; good working knowl of construction practices for underground pipeline sys is mandatory; knowl of civil engrg skills (surveying, hydrology, pipe design) are desirable.; S18; $2536-3182.

Why the orange lights? Electrician Greg Redondo installs a new roadway light as part of the conversion of outdoor lighting to high-pressure sodium. The conversions produce an orange light but also provide increased illumination at substantially lower energy cost. An additional incentive is a PG&E rebate program which underwrites part of the cost of conversion to more efficient light sources. The project is under the direction of Facilities and Services. Installation is by University electricians and by Cupertino Electric, electrical contractors. Comments and questions about tbe conversion are welcome and should be directed to the Utilities Department at 7-3765.

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

39403-PM (JCC:2078) ADMIN ASST I (N): Admin Asst for Div of General Surgery; respon to Div Chief & Dept Business Mgr & respon for interpretation & application of admin policies & procedures to div faculty members & staff; organization & supvn of clerical staff of approx 4 persons; prep of grant & contract proposals; records maintenance; supplies requisitioning & expenditures; coord of Surgery residency program, incl intern selection/matching & housestaff rotation schedules, etc; QUALIFICATIONS: typ 65; knowl of Univ, Med Sch'l & Hospital policies & procedures & w/ Stanford acctg & payroll sys; supvry exp essential; organizational skills & commu skills, both verbal & written; contact: Rhandal Smart, Room A246, 497-6489.; B16; $1593-1671.

31946-BP (JCC:2210) ACCOUNTING ASST III: To accurately, efficiently & independently prepare for recording & acknowledgement all gifts & pledges made to Univ; review & batch work of employees still in a training period; prep, reconcile & maintain various logs, records & reports; prep agenda & 1 minutes for dept mtgs; share in assumption of supvry respon in supvr's absence; oversee daily workflow of various personnel w/in dept; overtime required; QUALIFICATIONS: strong acctg aptitude or bkground; familiarity w/ SU acctg procedures extremely helpful; supvry skills; good written & verbal commu skills; legible handwriting; exp in working w/ large volumes, constant pressure & frequent deadlines & interruptions; able to use 10-key adding machine; send appl/resume to Liz Trujillo, 301 Encina Hall.; B14; $1440-1514.

23947-PM (JCC:2454) OFFICE ASST II: 50%; fixed term 4/1/83-10/31/83; file xerox, track folders, bkup phones, disseminate miscellaneous mat'ls; typ applications, awards, notebooks & misc corresp; include data collection for year-end reports; QUALIFICATIONS: typ 50+; ability to deal w/ pressure, students, many diverse tasks punctuated w/ interruptions; contact: Nancy Smith, M127 Med Ctr, 497-6958.; B09; $565-595.

30676-BP (JCC:2462) OFFICE ASST III: Prov sec'l & clerical support for Row & Cluster Facilities Office; organize mat'ls & files effectively; accurate record keeping & atten to detail; prep corresp; answer & screen calls; prep & process personnel, payroll & other univ forms, etc; QUALIFICATIONS: typ 60; high sch'l diploma or equiv edu/exp; knowl of genl offc routine & use of offc machines; willingness to learn HP 3000 sys (computer terminal); accurate typing; effective public relations; exp in payroll procedures desirable; supvry exp desirable; understanding of basic household maintenance problems & ability to commu well w/ students & staff; send appl/resume to Heloisa Edwards, 672 Lomita Drive, 497-9266.; B11; $1246-1310.

29466-PM (JCC:2562) SECRETARY III: Prov full range of admin & sec'l support for Asst Dean-Dir, Corporate Relations, & Reg'l Dir, Corp Rel; answer questions about all Business Sch'l & Univ develop't programs & Stanford admin procedures; draft letters/reports; make appts & travel arrangements; maintain calendar; prep expense reports & monitor & reconcile budgets; typ finished corresp & reports w/ high level of accuracy; use offc machines, incl computers for word/data processing; supv part-time or other support personnel; QUALIFICATIONS: typ 60-65; sec'l exp w/ proven ability to handle respon independently; ability to establish prior & meet deadlines w/ min supvn; excel writing, editing & typing skills; knowl of word/data processing or willingness to learn; send appl/resume to Norma Sandy, GSB Rm. 24 or call 497-3012.; B14; $1440-1514.

30514-PM (JCC:2596) SECY II-SPEC: Full range of sec'l serv for Dir of Ctr. for Economic Policy Research & Chairman of Steering Committee; receives & screens visitors & phone calls; routes incoming mail & composes routine corresp; types or inputs in word processor tech papers containing math formulae, Greek symbols, statistical tables, graphs & figures; maintains & updates filing sys & mailing lists on word processor; assts w/ conference planning & arrangements; orders & maintains offc supplies; serv as petty cash custodian; QUALIFICATIONS: typ 60; 2-3 yrs of genl sec'l/clerical exp; excel spelling, grammar & punctuation; ability to interact effectively w/ diverse group of faculty, staff & public; knowl of uses & limitations of specialized typing eqpt; proficiency on word processor, preferably NBI; contact: Jean Barnes, CEPR, 329-1211.; B12; $1310-1373.

SLAC

94684-JM (JCC:1050) Electronic Engineer: Design, build & test one-of-kind electronic devices that are commercially available; assist physicists in setting up eqpt for experiments; analyze faults in eqpt; test & recommend commercial eqpt for purchase; QUALIFICATIONS: BSEE & extensive exp or equiv; must have capability to design analog & pulse counting eqpt; exp w/ ultra high impedance circuits & some basic knowl of radiation detection devices desirable; able to do hands-on work.; C99; $2500-3000. APPLY AT SLAC

94680-JM (JCC:2580/2596) Sec II-S or Trainee: 50%, afternoons; asst in providing all sec'l serv for group of 20; typ genl corresp, tech papers (physics & engrg) using mathematical symbols; maintain files & keep records; make appts; arrange travel; QUALIFICATIONS: typ 50; couple yrs offc exp; knowl of bookkeeping helpful; ability to learn use of computer terminals & operate test/computer or be willing to learn; knowl of punctuation, syntax & spelling; exp in tech typing using Greek & math symbols, or willingness to learn.; B00/B12; $623-655/655-687. APPLY AT SLAC

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, April 12, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Bargaining unit

42304-TC (JCC:5644) LIFE SCI TECH II: TMS Unit; prep cell preparations; carry out experiments on membranes under supvn & analyze data; some exp w/ computer desirable; perform routine tissue culture work (maintenance of stock cultures); grow suspension cultures & batch cultures attached to growth surfaces; exposure of cells to precisely controlled environmental conditions and/or X-irradiation; asst investigators in a variety of experimental tech related to biochemistry & biophysics of cellular membranes; prep graphs & analyze data; participate in a variety of routine lab functions; QUALIFICATIONS: 2 yrs of relevant exp of described duties; 2 yrs of exp in Biochemistry or a related sci.; A24; $ 8.65/HR..

Jerzy Grotowski, Polish avant-garde dramatist, to speak here April 13

Jerzy Grotowski, a leading figure in avant-garde theater, will lecture on the "Theater of Sources" at 4:30 p.m. Wednesday, April 13, in the Little Theater.

His free public talk is sponsored by the Stanford Department of Drama and the University Lecture Fund.

Grotowski established the Polish Laboratory Theater in 1959 in Opole in southwest Poland with literary and drama critic Ludwik Flaszen. In 1965 the Laboratory Theater was moved to Wroclaw in western Poland, and Grotowski's direction focused on the great Polish and world classics such as Byron's *Cain*, Slowacki's *Kordian*, Shakespeare/Wyspianski's *Hamlet*, and Marlowe's *Dr. Faustus*.

He acquired world fame through his work by restricting his productions to a very small number of spectators, in which the space of the theater was recreated specifically for each play to give the audience the maximum illusion of being involved in the play and in direct physical contact with the actors. These productions toured many countries in the West and established Grotowski as one of the main influences in contemporary avant-garde theater.

Since 1976, Grotowski has been pursuing a transcultural experiment called the "Theater of Sources." Developed in various cultural contexts—in Poland, Italy, Haiti, Nigeria, Mexico, and Bengal—this work brings together people trained in different cultural and religious backgrounds. The work aims to discover the basic, technical, preritualistic elements in these traditions and to produce a practice that is simple rather than synthetic or eclectic.

Peter Brook, a leading British avant-garde director, world-famous for his productions of *Midsummer Night's Dream* and *Dream* and *King Lear*, says "since Stanislavski and Brecht no one has exerted a greater influence. He is known as a superb teacher of actors, and as a pioneer who has shaken all existing forms. . . .

"For Grotowski, theater is not a matter of art, it's not a matter of plays, productions, performances. . .theater is an ancient and basic instrument that helps us with one drama only, the drama of our existence, and helps us to find our way toward the source of what we are."

Grotowski has been named professor of theater arts at Columbia University, for the spring and summer 1983 and is presenting a series of lectures on his current field of research on the West Coast prior to beginning his residency there. He is the author of *Towards a Poor Theater* and was professor of drama at the University of Rome, Italy, before coming to the United States.

TMU displays Transart interiors

"Interiors of Transart Industries," a collection of fine-art, original limited editions, posters, and customed-designed prints will be on exhibit on April 7, 8, and 9, at 11-5 p.m., in the Tresidder lobby.

Miriam Cherry, an independent accessory designer, will represent Transart. Formerly of the Stanford campus ministry (1969-79), Cherry now directs an American Indian spiritual program, Spotted Eagle. She is also forming her own art business in connection with Transart.

Transart Industries, based in Atlanta, was founded in 1975 by William L. Crolley. The title "Entrepreneur of the Year" was conferred on him by Stanford Business School, Atlanta Chapter, in 1979.

Rental housing

HOUSING AVAILABLE

□ **June 20 to beg. Sept.:** Fully furn 4BR/3BA campus hse, lrg. study, FR, LR, pool, spa. $1500/mo. incl pool serv., grdnr. Call J. Evans, 493-3695.

□ **Beg. June (3 mos. to 1 yr.):** Fully furn. 2BR/2BA hse, W/D, DW, AEK, pool, grdnr. In Los Altos. $1000/mo. Call 968-7410.

□ **NOW:** Room in spacious 2BR Palo Alto apt. Piano, ktchn facil., W/D. $300/mo. Call Julie, 858-0887 (eve), (408) 252-1822 (day).

□ **Beg. May 1 to end Aug. (flex):** Fully furn. 1BR/1BA Pearce Mitchell adult condo, grnd flr. $675/mo. incl. util. (excpt phone). Call 857-9657.

□ **Early May to end July:** Dreamy studio cottage, fully furn., nr campus. Ideal for visit. female prof. or student. $200/mo. Call Ingrid, (415) 574-6151, 9 a.m. to 3 p.m.), 323-6201 (eves, wknds).

□ **June 14 to Sept. 15:** Old Palo Alto furn. 2BR/1½BA hse; secluded garden, bike to Stanf. $750/mo. incl. grdnr + water. Call 321-4614.

□ **July '83 to June 30, '84 (flex):** Berkeley hse, 5BR/3BA, LR, DR, library, frpl w/yr. of wood, piano, 1 acre, lush grdn, auto water, grdnr, sec. system. $1500/mo. Call (415) 483-8484 (day), (415) 548-1735, eve & wknd. Will also consider xchnge for Stanf. hse.

□ **Beg. Apr. 15:** Attrac., immac. 2BR/1BA hse, all appl., carpets, lge. fenced yd. Nr. Sunset mag., 3 mi. to campus. Nonsmokers, no pets, $800/mo. incl. water + dep. Call B. Lucas, 326-7195 (day), 321-0287 (eve).

□ **June, July, Aug.:** Portola Valley exec. 4BR/2BA fully furn. hse, nr. Stanf. Walk to tennis, pool. $2000/mo. Call (415) 326-5270, 9:30 to 3 p.m., M-F.

□ **Now:** Ski cabin, so. Lake Tahoe, 2BR, frpl, color TV, phone. Adj. Nat'l Forest, walk to lake, Tahoe Keys. $120/wknd, $200/wk (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3141 (eve).

□ **NOW:** Attrac. furn. hse, 2200 sq. ft., 4BR/2½BA, w/study, DR, FR, 3 car gar., patio. Incl. ktchn-ware, linens, 2 TV, grdnr. Yr. lease. Lrg. front & back yd. Quiet, safe nghbrhd. $1250/mo. Call (415) 965-1302 (eve).

□ **July 1 to Sept. 30:** Fully furn. 3BR/2BA hse, Crescent Pk, Palo Alto. Patio, grdn. Cul-de-sac. Walk to park, pool, tennis, schl. $1250/mo. Call 321-1142 or 497-4364 (day).

□ **June 15 to Aug. 15 (flex):** Fully furn. 1BR apt, piano, pool, sauna, sec. gate. 1 mi. to Stanf. Nonsmoker, female, no pets. Util. pd. $1100 for 2 mo. + refundable $200 sec. dep. Call Sheri at 858-0235.

□ **Beg. April 1:** Prof. woman or female student to SHARE furn. Sharon Hgts twnhse; patio, pool. Close to Stanf., #280. No pets, nonsmoker. $450/mo. Call 854-5893.

Low rent in xchng dog care. Nonsmokers. 857-9438, 497-2473.

□ **NOW:** Modern twnhse, Menlo Pk. 3BR/2½BA, AEK, air-cond, carpeted, lots of closet space. Walk to SRI, train, dwntwn. $1000/mo. Call 328-0606.

□ **June 7 to July 16:** Fully furn. 4BR/2BA hse in so. Palo Alto. Back yd. opens to Mitchell Pk. Call Bill, 497-1415 (day), or 494-1921 (eve).

□ **Sept. to June '84:** Sea & ski: S. of France nr. Cannes, Grasse. 16th c. 3BR stone hse, modern comforts. Call (415) 858-2590 or (415) 326-5521.

□ **July 27 to Aug. 31:** Spac. Victorian hse, 4BR/3BA, gourmet ktchn, DR, FR, lrg. yd. Nr. dwntwn P.A., Rinconada Pk, pool, tennis, libraries. Call (415) 328-6794 (eve).

□ **Sept. 1, '83 to July 1, '84:** On-campus furn. hse, 5BR/3BA, $1400/mo. or can be 3BR/2BA, $1200/mo. Nonsmokers, no pets; grdnr, water & cat incl. Call 326-3842 to 6 p.m.

□ **Late Aug. '83 to late March '84:** Campus hse, fully furn. 3BR/3½BA, guest/FR, DR, study. $1400/mo. incl. grdnr. Call 493-0777 or 497-1941 (day).

□ **Dec. 1, '83 to Aug. 1, '84:** Spacious 3BR/2BA hse; FR, new AEK, study, pool, spa; 1/3 acre in Los Altos. 20 min. to campus. $1400/mo. incl. grdnr. Call (415) 966-8242, eve.

□ **June 11 to Aug. 25, '83:** Fully furn. hse, 3BR/2BA, FR, baby grand, 2 car gar., no pets. $1500/mo., payable in advance + $200 clean. dep. Call Phoebe Rowles, 9415) 851-1940.

□ **Aug. 15, '83 to June 15, '84 (flex):** Fully furn hse in Palo Alto, 3BR/1½BA, den, gar., patio, W/D, quiet cul-de-sac, nr schls, park, com. ctr., auto sprinkl, grdnr, nonsmokers. Professor on sabbat. $1250/mo. Call 497-3095 (day), 493-8259 (eve).

□ **June 10 to Aug. 15, '83 (flex):** Beautiful, spacious fully furn. hse., 3BR/2½BA, all appliances. Santa Clara. $1000/mo. No pets. Call (408) 985-1866.

□ **Beg. April 1:** College Terr. Housemate(s) wanted to SHARE 3BR twnhse. 2BR avail. Frpl, DW, W/D, garden. $250/mo. + 1/3 util. Call Betsy 497-2569 (day), 857-0898.

□ **April 1 to Nov. 15, '83:** Lovely Swedish furn. contemp. hse. in Palo Alto. 3BR/2BA, FR, LR, all appl., many xtras. Lrg. cov. patio, lush grdn w/auto. sprinkl. Bike 2½ mi. to Stanf. No pets. $1000/mo. + dep. (incl. water/grdnr). Call 858-0880.

□ **April 15:** Fully furn studio in Palo Alto. Panoramic view of mtns. Sec. bldg., prkng, 1¾ mi. to campus. $485 + util. ($25) mo. Assum. lease. Sec. dep. req. Call 325-7009.

□ **Aug. to Dec. '83 (flex):** Fully furn. hse. 4BR/3BA AEK, W/D, 2 patios. 5 min. walk to campus ctr. Call Nancy Packer, 857-0908.

□ **May 30 thru June 24:** Campus hse, 2BR/2BA, pool. (1BR/BA sep. entr. & rentable), study, FR, 2 frpl.,

□ **Beg. April 1:** Partly furn. hse, 4BR/2BA, W/D, frig, stove, new carpets, drapes, recently refinished. No pets, nonsmokers. Lease or monthly. 3.5 mi. to Stanf., in Menlo Pk. $800/mo. Call H. Edwards, 497-9266 (day).

□ **July & Aug. '83:** Attrac. campus hse, 4BR/2½BA, study, fully furn. & equipped. Call 493-0997 (eve).

□ **NOW:** Rm. w/BA & priv. entr. on campus. $175/mo. or poss. exchange child care. Call 857-9298.

□ **June 18 to Aug. 28, '83:** Fully furn. campus hse, 4BR/2½BA, FR, DR, piano, lrg. fenced yd. Will EXCHANGE for London hse/flat or RENT for $1500/mo. incl. water, util, wkly clean, grdnr. Nonsmokers, no pets. Call 493-8874 (day or eve), (408) 279-5683 (day).

□ **June 14 thru Aug. 29, '83:** Fully furn. west Atherton estate. 5BR/3½BA, pool, maid serv., grdnr, util incl. No pets. $9750 total rent. Call 321-4100.

□ **Beg. Sept. 1:** Fully furn. 2BR/2BA Pearce Mitchell condo on campus. Yr-rnd pool, jacuzzi, rec. ctr. Adults, no pets. $850/mo. Call 497-1745 (day), 522-4917 (day).

□ **Aug. '83 to Jan. '84:** Fully furn. Cape Cod Colonial hse in Palo Alto, 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr. schls, park, com. ctr., prof. going on Sabbat. $1500/mo. Call 325-1709.

□ **July 1 to Nov. 1, '83:** Magnificent Crescent Park hse, fully furn. 4BR/3½BA, MBR suite w/sauna, jacuzzi, frpl. NO PETS. $1975/mo. Call (415) 326-7558, (415) 328-6112.

□ **Sept. to June '84:** Sea and ski. So. of France nr. Cannes, Grasse. 16th C. 3BR stone house, modern comforts. Call (415) 858-2590, (415) 326-5521.

HOUSING NEEDED

□ **Academic Year '83-'84:** Visit. scholar, wife, nonsmokers seek medium size hse on campus. Poss. xchnge for hse in Bethesda, Md., 10 min. to NIH. Call Gurley, 857-0169.

□ **Aug. '83 to June '84:** Father and son (13) seek furn. hse or apt. while on sabbatical at SLAC. Prefer bike dist. to Stanf. Call COLLECT (602) 323-8283 (eve).

□ **Beg. June 1, 2 wks to 4 mos:** Resp. prof. cpl., married, will care for pets, plants & your home all or portion of stated period. Call Jim (415) 393-8688 (day), (415) 346-8122 (eve).

□ **NOW:** Stanf. MBA, female, seeks unfurn. 1BR apt. or cottage. Resp., nonsmoker. Secure nghbrhd. Refs. avail. Call B.J., 497-4473 (day), (408) 257-1379 eve).

NOW: Mature, prof. cpl. seek 3BR/2BA unfurn. hse within 5 mi. of Stanf. Lease for 1 yr. Nonsmoker, no children, no pets. Call 854-7162 (eve).

□ **Mid-June to mid-Aug.:** SLAC summer visitor, spouse, 2 girls (10 & 6) seek 2-3BR hse. Flex. time period. Nonsmokers. Call Lela Sarnat, 854-6805 or Meadows, (513) 871-7756 COLLECT.

□ **July to Dec. '83:** Visit. scholars + 2 children (11 & 14) seek furn. 3BR hse on or nr. campus. Call Dr. S. Levine, 497-5781 (day).

□ **Nov. 15, '83 to June '84:** Furn. hse. or apt. for cpl. with 2-yr-old girl & grandmother. Nr. shops, parks, etc. desirable. Call Gwen Bowen, SLAC Hsng. Offc, 854-3300, x3111.

□ **July, August:** 17-yr-old French woman, half way thru Baccalaureate, seeks July, Aug. home stay w/American family. Interested in exchange from American student to follow her Calif. visit. Call Gwen Bowen, 854-3300, x3111 or 321-3803 (eve).

□ **Summer '83:** Harvard Law student wants to hsesit or sublet San Francisco apt. for summer. Call Kathy, (415) 329-1136, eves & wknds.

□ **July 1 for 1 to 4 mos:** Reliable Stanf. staff seeks hsesit for summer, returning from east. Nonsmoking cpl, no children, will give xclnt care to plants, pets, hse. Call COLLECT (617) 469-2040 or write: David Mark, M.D., 20 Walnut Hill Rd., Chestnut Hill, MA 02167.

□ **Mid-June to mid-July '83:** Careful tenant English woman seeks rent or hsesit apt. or hse on or nr. campus. Staying longer than planned. Call H. Himmelweit, 321-2052 (day) or 321-8979 (eve).

□ **Beg. Aug. 1:** New Stanf. prof. seeks long term rental, 2BR apt. or hse., Palo Alto, Stanf. area. Excellent refs. Call COLLECT (617) 492-5154.

□ **June 17 to Aug. 21, '83:** Institute for Humane Studies needs furn. apts for Visit. Profs. Stanf./Menlo area. Also need 2BR/2BA apt. nr. Stanf. May 7 to Aug. 1. Call Pat Dunbar, 323-2464, 7 a.m. to 3:30 p.m.

□ **Beg. anytime:** 1st yr. resident, xclnt refs, SU undergrad, seeks hsesit, short or long term. Call 564-2622 (eve) or 493-5000, pager 229, Marjorie Shuer.

□ **July 1 to Aug. 31, '83:** Swiss prof, wife, 4 yr. old son seek fully furn hse, 3 to 4BR/2BA, pool. Please send conditions, photos, to Prof. F. Weinberg, Freiestrasse 19, CH-8032, Zurich, Switzerland.

□ **Sept. '83 to Aug. '84:** Cpl on sabbat. lv. from NY w/15 yr. old son, nonsmokers, seek 2BR furn apt. nr Stanf. Call COLLECT (212) 598-7757. Will consider SWAP for 2BR village apt. in NYC.

□ **Beg. Aug. 21 for 3 to 6 wks:** Prof. cpl & daughter wish to hsesit in Stanf. area. Local refs. Write D.K. Nordstrom, c/o Oster, Gyllenstiernsgatan 18, 11526, Stockholm, Sweden, or call (415) 857-1641.

□ **April to July '83:** Female prof. on sabbat. at Stanf. seeks hsng. or hsesit. To $440/mo. Call COLLECT (213) 206-6121.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Endellion String Quartet

Endellion String Quartet to perform

The Endellion String Quartet, 1981 winner of the Young Concert Artists international auditions, will be presented by the Lively Arts at Stanford at 8 p.m., Wednesday, April 13, in Dinkelspiel Auditorium.

Quartet members are Andrew Watkinson and Louise Williams, violins; Garfield Jackson, viola; and David Waterman, cello.

Their program will consist of Haydn's "Quartet in C Major, Op. 74, No. 1"; Bartok's "Quartet No. 6"; and Beethoven's "Quartet in F minor, Op. 95, ('Serioso')."

Formed in 1979 in Britain, the Endellion Quartet, whose name means "near perfect" in Greek, had immediate success at the international string quartet competition in Portsmouth, England, where they placed second. Soon after they won first prize in the British string quartet competition in London.

The quartet has since made over 100 concert and festival appearances in Europe, including the "Schubertiade" in Rotterdam, and the Gstaad Festival, at the invitation of Yehudi Menuhin. They have also made numerous recordings for the BBC.

In the U.S., they have played at the 92nd Street Y in New York and at Washington's Kennedy Center. The Stanford concert is part of their first coast-to-coast tour.

Perspectives on modern Japan:

Colloquia planned

"Perspectives on Twentieth Century Japan," a series of colloquia focusing on various aspects of Japanese development, will begin with a lunchtime presentation April 8 in Room 241, Lou Henry Hoover. The remainder of the talks will be at 4:15 p.m. Thursdays, April 14, 21, 28, and May 5, 12 in Room 238, Lou Henry Hoover.

The talks are co-sponsored by the Center for East Asian Studies and the Stanford-Berkeley Joint East Asia Center.

Speakers and their topics are as follows:

April 8—Prof. Peter Duus, History Department, Stanford University, "Aspects of Meiji Imperialism";

April 14—Prof. Van Gessel, Oriental Languages Department, UC-Berkeley, "Japan's Lost Generation: Four Post-War Japanese Novelists";

April 21—Prof. Barbara Molony, History Department, University of Santa Clara, "Colonial Investment Decisions in the Pre-War Japanese Chemical Industry";

April 28—Prof. Koichiro Fujikura, Law Faculty, University of Tokyo, Visiting Professor, UC-Berkeley Law School, "Environmental Control—The Japanese Experience and Approach";

May 5—Dr. Ernest Notar, Post-doctorate Fellow, Center for Japanese Studies, UC-Berkeley, "Japan's Wartime Labor Policy: The Search for Method";

May 12—Col. David Holt, United States Air Force, "Japan's Defense: Remilitarization or Free Ride?"

Film series set

A free series of four Japanese Films will be shown on Thursday evenings in April and May under the sponsorship of the Center for East Asian Studies, the History Department, EAST House, and Okada House.

All showings will be held at 7:30 p.m. in Room 40, Building 420 (Jordan Hall, Psychology Department). The films are in Japanese with English subtitles:

April 7—*The Quiet Duel* (Shizuka Naru Ketto, 1949), directed by Akira Kurosawa, starring Toshiro Mifune and Takashi Shimura. A young doctor returns from war after contracting syphilis from a patient while operating on him; he decides not to marry.

April 21—*Sword of Doom* (Daibosatsu Toge, 1967), directed by Kihachi Okamoto, starring Tatsuya Nakadai and Toshiro Mifune. A professional political assassin is pitted against a high-minded instructor of swordsmanship.

May 5—*Twilight in Tokyo* (Tokyo Boshoku, 1957), directed by Yasuhiro Ozu, starring Setsuko Hara, Isuzu Yamada, Ineko Arima. Two women living with their father find out that their mother, whom they thought was dead, is alive and living with another man. This results in the dissolution of the family.

May 19—*Captive Island* (Shokei no Shima, 1966), directed by Masahiro Shinoka, starring Akira Nitta and Rentaro Mikuni. The son of an anarchist whose family was murdered sets out to get revenge but ends up burying his past.

I-Center hosts three Quebec programs

The culture and politics of the Canadian Province of Quebec will come to Stanford in three days of activities this month.

The presentations, which include lectures by a political scientist and a novelist, a film, and a dinner, are sponsored by Bechtel International Center, the Stanford Department of French and Italian, and the Delegation du Quebec a Los Angeles. All events are open to the public.

The program opens at 6:30 p.m. Sunday, April 10, with a dinner at Bechtel International Center. Tickets are $3.50.

This will be followed by a free "armchair travel series" slide show at Bechtel.

The film, "It Can't Be Winter, We Haven't Had Summer Yet," directed by Louise Carre, will be shown at Bechtel at 7:30 p.m. Monday, April 11, without charge. It is in French, with English subtitles. It tells the story of the discovery of independence by a woman, mother of eight, who is widowed at 57.

On Tuesday, April 12, as part of Bechtel's Tuesday Luncheon Series, Dr. Paul Painchaud, professor of political science at Laval University in Quebec, will talk on "Quebec Representation in the United States." He is director of research for the Quebec Center of International Relations. Luncheon tickets are $2.50.

This will be followed, at 4:15 p.m., by a conference in French conducted by Quebec novelist Louis Caron. The title of his talk is "Quebec, une partie' de l'Amerique." It will be given in Building 260, Room 268, Caron has been president of the Quebec Writers' Union, and also has written for television and radio.

Further information may be obtained by phoning the International Center at 497-1831.

Astronaut Schmitt to speak Monday

Harrison "Jack" Schmitt, the only geologist who has visited the moon, will speak at 4:15 Monday, April 11 in Room 320, Geology Corner, at Stanford University in the Harold W. Hoots visiting lectureship series.

His topic is "Science and Technology: Key to Freedom's Future."

As lunar module pilot for Apollo 17 and the only geologist in the space program, Schmitt landed on the moon in the Valley of Taurus-Littrow in 1972. As the last person to step on the moon, he named some of its craters in honor of famous explorers of geographical and intellectual frontiers. He has been elected to the International Space Hall of Fame.

Schmitt was born in Santa Rita, New Mexico, a town that subsequently disappeared and has been replaced by an open-pit copper mine. After he had earned a bachelors degree from California Institute of Technology, a Fulbright scholarship took him to the University of Oslo. As a teaching fellow at Harvard, he earned his doctorate in geology based on his work in Norway.

After spending a year with the U.S. Geological Survey, working on space-related projects in Flagstaff, Arizona, Schmitt joined the NASA Apollo program in 1965. Before piloting a lunar module, he learned to fly both jets and helicopters. After his space flight, Schmitt organized and directed NASA's various energy programs.

The Harold W. Hoots visiting lectureship is an annual, winter-quarter series sponsored by the School of Earth Sciences and featuring scientists from industry, the professions, and government. Hoots received his Ph.D. from Stanford in 1925. Until his death in 1979 he was known throughout the petroleum industry as a finder of oil fields. He and his wife, Thelma, endowed the lecture series in 1962.

Architectural critic Allan Temko to talk

Architectural critic Allan Temko will speak on "The Past 25 Years of Architecture in San Francisco: Construction and Destruction" at 8:15 p.m. Wednesday, April 13, in Annenberg Auditorium.

Temko is a visiting faculty member in Stanford's Art Department. His lecture is one of a series sponsored by the Committee for Art at Stanford. The speakers will explore the changing face of San Francisco architecture and its impact on the spirit of the city and the lives of its citizens. Others in the series will be Sally Woodbridge and Gray Brechin.

Stanford staffers meet

Stanford Staffers' Tuesday, April 12, lunch meeting will be held at the Center for Computer Research in Music and Acoustics (CCRMA) for a presentation on "Computers and Music: A Rich Interaction" by Prof. John Chowning, director of the Center.

Reservations must be made by April 8 by calling Jean McMillan, ext. 7-2680. Carpooling will be available.

CROW lectures focus on female sexuality

Current scholarship on female sexuality will be discussed in six Jing Lyman lectures sponsored by the Center for Research on Women at Stanford during spring quarter.

The free public talks, all scheduled for noon Wednesday in Terman Auditorium, are as follows:

April 13—"The Cultural Construction of Gender and Sexuality," Sherry Ortner, associate professor of anthropology, University of Michigan;

April 27—"Female Sexuality in the Nineteenth Century," Estelle Freedman, assistant professor of history, Stanford;

May 4—"Sexuality and Gender in Children's Daily Worlds," Zella Luria, professor of psychology, Tufts University, and Barrie Thorne, associate professor of sociology, Michigan State University;

May 11—"Lesbian Sexuality," Martha Kirkpatrick, psychiatrist, Los Angeles;

May 18—"Cross-Cultural Sexual Attitudes and Behavior: Hispanics and Anglos," Maria Luisa Flaherty, clinical social worker, San Jose;

May 25—"What is Female Sexuality," Marilyn Safir, senior lecturer in psychology, University of Haifa."

In addition, CROW will sponsor a symposium on "Sex, Pornography, and Violence" at 8 p.m. Monday, April 18, in the Tresidder Memorial Union Lounge.

Speakers will include Susan Griffin, author of *Women and Nature* and *Pornography and Silence*, and Deirdre English, editor of *Mother Jones* magazine.

Zella Luria, Tufts University professor of psychology and visiting scholar at CROW, will moderate.

Festival celebrants Martin Jackson as a vegetation figure with Suzette Craft and Jim Cadena as the Queen and King in the Stanford Drama Department/Black Performing Arts production of *Maskarade*.

Sylvia Wynter's *Maskarade*, a musical, opens at Nitery Theater on Thursday

Maskarade, a musical production jointly presented by the Stanford Drama Department and the Committee on Black Performing Arts, opens in the Nitery Theater at 8 p.m. Thursday, April 7.

Directed by Sandra L. Richards, performances continue Friday and Saturday, April 8-9, and Thursday through Saturday, April 14-16. Two matinees have been scheduled at 3 p.m. Sunday, April 10 and April 17.

Written by Sylvia Wynter, professor of African and Afro-American Studies and Spanish and Portuguese at Stanford, *Maskarade* is set in Jamaica in the 1840s. The play concerns a young couple from the country who come to the Kingston capital seeking work and fame via the Jonkunnu festival.

Jonkonnu is a celebration similar to the Mardi Gras of New Orleans or the Carnival of Trinidad and Brazil for it represents a time of year when society can renew its vitality through outrageous satire, fantastic costuming, and general merrymaking.

Jamaican festival

Historically, the Jamaican festival was an annual event held during the Christmas holidays. At that time slaves were allowed, or even encouraged, to participate in elaborate street parades. Often free people of color as well as some whites joined in the festivities.

In researching the Jonkonnu festival, Wynter found that many other folk cultures had devised similar occasions at which the passing of the old year was celebrated, as young people danced in hopes of ushering in a prosperous new season. Thus, the African slaves easily mixed their West African harvesting rituals with the folk practices of Scottish and Irish indentured servants and overseers.

Characteristic of the celebration was a central dancing figure known as the "Jonkonnu" or "John Canoe" who dressed in a wild, outlandish costume which included a large plantation house worn on his head. Accompanying him in dancing to the pulsating rhythms of African conga drums and British marching music were fully masked vegetation figures, clowns, kings, queens, and set girls wearing costumes reminiscent of the extravagant attire of the French Sun King, Louis XIV's court.

For this production music director Michael Britt has arranged typical Jonkonnu music as well as written more contemporary calypso and ska tunes. Fred Simpson has added drum rhythms which enhance the tremendous vitality of the dance pieces choreographed by Halifu Osumare.

Costume designer Douglas A. Russell has utilized copies of lithographs from the 1840s to design costumes which capture the exaggeration and swirl of color typical of Jonkonnu. Set and lighting designer David McLain has worked to suggest the interplay of African and European cultures which lies at the heart of the Caribbean identity.

The Drama Department and the Committee on Black Performing Arts will also host two auxiliary events in conjunction with the production of *Maskarade*. At 4:30 p.m. Wednesday, April 6, Prof. Errol Hill of the Dartmouth Drama Department, author of *The Trinidad Carnival: Mandate for a National Theatre*, and playwright Wynter will discuss the social significance of the Jonkonnu festival complex as part of the Drama Forum Lecture Series. The free public lecture will be held in the Forum Room of Meyer Library. Wynter also will answer audience comments following the April 10 matinee performance.

Tickets for *Maskarade* are on sale at the Tresidder Ticket Office and major Bay Area Agencies and by telephone (415) 497-4317 with major credit cards. General admission is $4; students and seniors $2. Because seating in the Nitery theater is limited, early purchase is advised.

Savoyards plan gala performance

Celebrating its 10 years of producing Gilbert and Sullivan opera repertoire, the Stanford Savoyards will present the 1983 Gala at 8 p.m. Friday through Sunday, April 15, 16, 17 and 22, 23, 24, in Dinkelspiel Auditorium.

The production features the one-act *Trial by Jury* in its entirety, along with the highly charged confrontation between *Islanthe's* Fairies and Fairy Queen and the entire splendid British House of Peeres; a fearsome encounter with the larger-than-life *Mikado* and his trembling minions, and highlights from performances of *Princess Ida*, *Patience*, and *Ruddigore* (in which Stanford dignitaries appear as ghostly ancestors of the murgatroyd family).

The Savoyards, named for the famed London Savoy Theatre in which Gilbert and Sullivan staged their many popular works, was founded in 1973 by four Stanford students; Armand Gilinsky, a freshman with professional G&S stage experience, Dan Robinson and Joe Haletky, both Stanford University music majors, and Mason Blacher of the School of Education as producer.

The Pirates of Penzance was chosen as the first show because of its popularity and because the costumes could be improvised easily; most of the cast provided their own.

From this humble start an exciting, quality production company was formed, which soon became self-supporting.

Ticket prices have been kept to a modest fee and proceeds are used to fund the next production, usually two per year.

Cast directors and musicians changed constantly over the years. In the early years SLAC librarian Rita Taylor, assisted by her husband Prof. Richard Taylor of SLAC, assumed the role of producer, maintaining continuity and standards in the company.

The Spring Gala provides a focus for a Savoyards reunion. Many devotees and performers are expected to return for the show and alumnae festivities.

The present cast is filled with seasoned favorites from previous casts.

Kevin Skiles and Jacqueline Dickey, recent real-life newlyweds, portray the plaintiff and defendant in *Trial by Jury*'s breach-of-promise suit.

Ella Asbury Harsin, veteran of nine productions (among them the first) returns as the Fairy Queen.

Rick Dehmel delights audiences with his roles as a love-struck judge and the imperial Mikado.

Dan Allen as Sir Roderick Murgatroyd entices from their picture frames the ancestors, as portrayed by faculty members Art Bryson, John Breakwell (also in the Mikado excerpt), Merton Bernfield, John Ellis, Kenneth Arrow, Lincoln Moses, and Barry Hennings.

Also returning from previous productions are Patty Wolfe, Armand Gilinsky, Liz Barbour, Ben Brink, Ed Finestone and many others.

Appearing in every show since 1977, Assistant Provost Keith Smith appears as a juror and in full peer regalia displaying supercilious disdain.

Behind the scenes and in the pit, Dan Powers directs music, assisted by Lita Libaek; Christopher Hahn directs staging and Wendell Cole designs sets. Bonnie Senko provides the grand assortment of costumes.

Tickets are available at Stanford's Tresidder Box Office (497-4317).

Ella Asbury Harsin

Suk Trio plays Sunday in Dink

Czechoslovakia's leading chamber music ensemble, the Suk Trio will perform at 2:30 p.m. Sunday, April 10, in Dinkelspiel Auditorium at Stanford.

The trio will perform Haydn's "Trio in D Major"; Schumann's "Trio in D minor"; and Dvorak's "Trio in F minor, Opus 65."

The members of the Suk Trio are violinist Josef Suk, cellist Josef Chuchro, and pianist Josef Hala. Each is a soloist in his own right and performs with orchestras and in recital.

The trio was founded by violinist Suk (Antonin Dvorak's great grandson) in 1952 and quickly established a reputation for being a major chamber ensemble. The trio has performed throughout Austria, Belgium, Egypt, Germany, Poland, Romania, the Soviet Union, South Africa, Yugoslavia, the Netherlands, Switzerland, France, England, and Australia.

Suk has won France's highest honor for his recording—the Gran Prix Du Disques—six times.

Chuchro, currently a professor at the Prague Conservatory, has received high critical acclaim for his concerts and was awarded the title "Soloist of the Czech Philharmony" by the Minister of Culture in 1961.

Hala, a professor at the Prague Music Academy, began playing at concerts in 1951 and has appeared as soloist with many orchestras. He has recorded extensively.

His recordings of Bohuslav Martinu's piano compositions have received critical acclaim.

Chuan to discuss Chinese music

A re-creation of music from ancient China will be the topic of a slide and tape recording presentation by Victoria Chuan at 7:30 p.m., Tuesday, April 12, at Bechtel International Center.

A set of 64 bronze bells from 433 B.C. was excavated in the Hubei province in 1978. These rare bells were inscribed with musical notations, which made possible a transcription of the notations re-creating the music of that era. Victoria Chuan, taught at the Shanghai Conservatory of Music for 28 years and is now affiliated with the Department of music, UC-Santa Barbara.

Presidential candidates, past and present, to speak in Law Forum series

Five former presidential candidates and one current candidate will be visiting the Stanford Law School during the next several weeks in a Stanford Law Forum Series entitled *Visions of America in the 1980s: The 1984 Presidential Elections*.

All meetings are open to the public without charge.

The series will include Sen. Gary Hart (co-sponsored with the Zale Lecture series at Stanford), Democratic candidate for president; former Democratic presidential candidates Eugene McCarthy and Morris Udall; former Republican presidential candidates Harold Stassen and Pete McCloskey; and former Libertarian Party candidate for president, Ed Clark.

The series will also include Stanford Profs. Seymour Martin Lipset, Richard Brody, Martin Carnoy, Steven Chaffee, and John Manley. Other potential and former candidates, party leaders, and commentators may also speak as part of the series, though dates for their visits are not yet confirmed.

The calendar for the series is as follows:

Friday, April 8—Prof. Seymour Martin Lipset, Hoover Institute—7 p.m., Branner Hall lounge;

Tuesday, April 12—Congressman Pete McCloskey—7 p.m., Branner Hall lounge;

Thursday, April 14—Gov. Harold Stassen—6:30 p.m., Branner Hall lounge;

Thursday, April 21—Ed Clark—7 p.m., Branner Hall lounge;

Friday, April 22—Sen. Gary Hart—7:30 p.m., Kresge Auditorium, Law School;

Monday, May 16—Sen. Eugene McCarthy—7 p.m., Bishop Auditorium, Graduate School of Business;

Friday, May 20—Congressman Morris Udall—4 p.m., Kresge Auditorium, Law School.

The series was developed by David Lempert, who is studying toward joint degrees in the Law School and Business School, and is president of the Law Forum. The purpose, according to Lempert, is to "present differing views on the directions America should be taking in the 1980s and to comment on the issues and intrigue which will surround the 1984 presidential contest."

The first two events include gatherings of professors to discuss political polls, the influence of the media, changing voter attitudes, and the issues which can and should be raised in the election.

Pete McCloskey, a former Republican candidate for president in 1972 and a challenger to then-incumbent President Nixon, is currently teaching a course at Stanford. He is an alumnus of the Law School.

Gov. Harold Stassen was the youngest governor ever elected in Minnesota, and is the only living signer from the U.S. delegation of the U.N. Charter. He is a former member of the National Security Council and a former Republican presidential candidate in 1948, 1952, 1956, 1960, 1964, 1968, 1972, 1976, and 1980.

Ed Clark ran for president in 1980 on the Libertarian party slate.

Sen. Eugene McCarthy, a Democrat from Minnesota, challenged Lyndon Johnson for the Democratic presidential nomination in 1968. In 1976, he ran as a third party candidate for the Committee for a Constitutional presidency.

Arizona Congressman Morris Udall sought the Democratic Party nomination in 1976.

Slide show, report on 'Nicaragua Today'

"Nicaragua Today" is the title of a presentation featuring a slide show and special report from the border by Olga Talamante, at 3 p.m. Saturday, April 9, at Stanford's El Centro Chicano (Old Union basement lounge).

The slides were made when a delegation from the Institute for the Study of Labor and Economic Crisis made a recent trip to Nicaragua at the invitation of the Nicaraguan Cultural Workers Association.

The group talked to government officials, trade union leaders, intellectuals, health workers, military officers, rank and file soldiers, the editor of an independent newspaper, and many people in the markets and on the streets.

The event is open to the public.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., April 6, to cover the week of Mon., April 18 through Sun., April 24.

CORRECTION

FRIDAY, APRIL 8

Law School Lecture: "Thinking About the Bill of Rights." with Sir Zelman Cowen, former governor-general of Australia and present provost of Oriel College, Oxford. 3 p.m. Room 290, Crown Quad. Free.

MONDAY, APRIL 11

Medieval Studies/ Religious Studies Lecture: "The Medieval University—The Influence of Academic Structure on Ideas," by William J. Courtenay, Univ. of Wisconsin. 4:15 p.m. History Corner, Room 205.

Numerical Analysis Seminar: "The Use of Nonrational Functions to Represent Steep Fronts," with John Greenstadt, IBM Scientific Center. 4:15 p.m. Room 380c, Math Corner.

Biological Science Seminar: "Yeast DNA Replication—A Model Eukaryotic System," by Dr. Judith Campbell, Dept. of Chemistry, Cal Tech, Pasadena, CA. 4:15 p.m. Room T-175 Herrin Hall.

Bechtel International Center Film: "Ca Peut Pas Etre L'Hiver on N'a Meme Pas Eu D'ete" (It Can't be Winter We Haven't Had Summer Yet). Full length color documentary in French produced by Quebecoise Louis Carre, formerly with the National Film Board of Canada. 7:30 p.m. I-Center.

TUESDAY, APRIL 12

Learning About Racism Lunch Series: "Dynamics of Racism/Sexism," by Cecilia Burciaga, Assistant Provost at Stanford. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Room.

Bechtel International Center Lecture: "Representation of Quebec Interests in the United States," by Dr. Paul Painchaud, Laval U. Quebec. Noon. Bechtel International Center. $2.50 for lunch, brown baggers free.

Tower Talks Presents: "Issues in Immigration Law Enforcement," by Ted Harwood, National Fellow. 3:30 p.m. Lou Henry Hoover Room, Hoover Tower. Free.

Genetics and Medical Microbiology Seminar: "The Genes Mediating Transportation and Tetracycline Resistance in Transposon Tn1721". 4 p.m. M112, Medical Center.

Applied Physics Colloquium: "Collective Properties of Neural Net—A Spin Glass-Like Model," by Prof. John J. Hopfield, Crellin Lab, Caltech. 4:15 p.m. Applied Physics 200.

WEDNESDAY, APRIL 13

CROW Lecture: "The Cultural Construction of Gender and Sexuality," by Sherry Ortner, Associate Professor of Anthropology, University of Michigan. Noon. Terman Aud.

Chemical Engineering Colloquim: "Ultra-Compact Bioreactors," by Professor Channing R. Robertson, Stanford. 4:15 p.m. Chemical Eng. Conference Room.

Men's Volleyball: vs. UC- Santa Barbara. 7:30 p.m. Maples Pavilion.

Lively Arts at Stanford: The Endellion String Quartet. 8 p.m. Dinkelspiel Aud. $7.50, $6.50.

THURSDAY, APRIL 14

Theology & Natural Sciences Lunch Series: "Cosmology," by Robert Wagoner, Professor of Physics at Stanford. Bring a bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

Men's Tennis: vs. UC-Santa Barbara. 1:30 p.m. Varsity Courts.

Stanford Magnetic Resonance Laboratory Seminar: "NMR Studies of the Filamentous Bacteriophages," by Dr. Stanley J. Opella, Dept. of Chemistry, Univ. of Pennsylvania. 4 p.m. Chemistry Gazebo.

Industrial Engineering Symposium: "Reliability of Offshore Structures," with Dr. Robert Bea , PMB Systems. 4:15 p.m. Terman Aud.

Berkeley at Stanford Lecture Series: "Japan's Lost Generation: Four Post-War Novelists," by Prof. Van Gessel, U.C. Berkeley. 4:15 p.m. Lou Henry Hoover Bldg., Polich Room.

Solid Mechanics Seminar: "Industrial Research in the Engineering Sciences," by Dr. Franz Geyling, Member of the Research Staff, Bell Laboratories. 4:15 p.m. Skilling Aud.

Condensed Matter Physics Seminar: "Commensurate-Incommensurate Transitions in Novel Systems," by Dennis McWhan, Bell Laboratories, Murray Hill, N.J. 4:15 p.m. Applied Physics 200.

Bechtel International Center: "Glasgow," and "Dublin". 7:30 p.m. I-Center. .75 donation requested.

Spirit of Japan Lecture Series: "Search for the Spirit of Japan" by Prof. John La Plante. 8:15 p.m. Annenberg Aud. Comm. for Art members & students:$5, non members $5.

FRIDAY, APRIL 15

The Stanford U.S. Intercollegiate Tournament: Men's Golf. All Day. Stanford Golf Course.

Men's Tennis: vs. USC. Noon. Varsity Courts.

Baseball: vs. UCLA. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

Nuclear Film Program Series: "Kennedy vs. Khrushchev". 7 p.m. & 9:30 p.m. History Corner, Room 2. Free.

STARTS: Sharon Gwatkin with Bob Valdez (acoustic guitar and vocals). 9-12 p.m. Coffee House. Free.

SATURDAY, APRIL 16

The Stanford U.S. Intercollegiate Tournament: Men's Golf. All Day. Stanford Golf Course.

Baseball: vs. UCLA. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Men's Tennis: vs. UCLA. 12 & 6:30 p.m. Maples Pavilion.

STARTS: Raskidus Roots Connection, the Bay Area's most popular reggae band. 8 p.m. Tresidder Lounge. $5.

Music Dept. Concert: Baroque Chamber Music. Judith Linsenberg, recorder; Jonathan Salzedo, harpsicohord; Patricia Halverson, viola da gamba. Works by Bach, Handel, & Corelli. 8 p.m. Annenberg Aud. Free.

SUNDAY, APRIL 17

Women's Tennis: vs. UCLA. Noon. Varsity Courts.

Baseball: vs. UCLA. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

University Public Worship: with preacher Kenneth Carstens, South Africa Defence and Aid, Cambridge, Mass. 11 a.m. Memorial Church.

STARTS and the Department of Community Medicine: George Gibson, piano and Rita Kingsley, cello. 2 p.m. Tresidder Upper Lounge. $3 general, $2 students.

The Lively Arts at Stanford: Phillip Glass. 4/17/83. Memorial Aud. $10.50, $9.50, $8.50, $7.50.

ASSU Sunday Flicks: "Reds". 8 p.m. Memorial Aud. $1.50.

Music Dept. Concert: Chamber Music by S. Dan Cher, violin; Shelley Whitehouse, flute; Camilla Passarelli, harp; Linda Shwetz, viola; Randy Walker, cello. 8 p.m. Tresidder Lounge. Free.

EXHIBITS

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

The Prints of William Nicholson. Tues.- Friday 10 a.m.- 5 p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

Photos from the Barrio Assistance Program by Phillip Baca. Coffee House Gallery. April 1 - April 30.

R. Raffaello Dvorak, works on rice paper. I-Center. April 1 - April 30.

Photographs of Africa by Sylvie Cohen. Tresidder Upper Lobby, 2nd. Floor. April 1 - April 30.

Etchings by Seymour Haden. Faculty Club. April 3 May 3.

"China's Elders," PRC senior citizens photographed by members of the Stanford Community. Faculty Club. April 3 - May 3.

Early Lithography: 1803-1830. Museum, Miedel Room. April 12 - June 19.

CAMPUS REPORT

Volume XV, Number 28 | A publication for Stanford University faculty & staff | April 13, 1983

Instructional TV brings $3 million revenue

A quiet revolution in professorial productivity has taken place in the Stanford School of Engineering.

Through the Stanford Instructional Television Network (SITN), graduate students in 100 Bay Area companies and research organizations receive regular classroom instruction, including audio feedback to their teachers.

At 30 sites beyond broadcast range, unedited videotapes, regular classroom materials, and local tutors are used in a program of tutored video instruction (TVI) with results comparable to those for students in a regular classroom.

Recently cited as a national model for lifelong cooperative education by MIT, SITN is the largest and most successful part-time graduate program in the U.S. providing quality education toward an advanced degree via television.

Gross revenues of $3 million annually are plowed back into additional support for faculty teaching.

Under the energetic, entrepreneurial leadership of Mary Lou Allen, SITN currently is exploring the interest of Stanford faculty outside engineering and science in televising their teaching. It recently submitted a proposal to the California Council on the Humanities for a series of half-hour symposia by Profs. Rene Girard, John Freccero and others.

Prof. Henry Riggs, Silicon Valley entrepreneur and industrial engineer, recently named Stanford's vice president for development, is one of Allen's enthusiasts.

Faced with overflow classes of 500 or more for his introductory course in accounting, Riggs already uses TV to broadcast his lectures to satellite rooms on campus.

Prior to acceptance of his new administrative job, effective July 15, he was planning to videotape a live series of 20 lectures on this subject. Besides being broadcast, these could be supplemented by 10 lectures in person by junior faculty or teaching fellows, providing more personalized instruction for students on campus in groups of 40 or so.

At present, SITN provides more than 170 Stanford courses per year in all fields of engineering and in computer science, math, applied physics, and statistics. It broadcasts 12 hours a day on four channels allocated by the Federal Communications Commission.

Nine faculty to receive Guggenheims

Nine Stanford faculty members have received Guggenheim fellowships for 1983, the John Simon Guggenheim Memorial Foundation has announced.

The Stanford recipients, their departments and field of study are:

Eve M. Clark, associate professor of linguistics, acquisitional principles in word formation;

John Felstiner, professor of English, Holocaust poetry and the process of translating Paul Celan;

William J. Goode, professor of sociology and senior fellow at the Hoover Institution, patterns of power;

Anne K. Mellor, the Howard and Jesse Watkins University professor of English and feminist studies, a critical study of Mary Shelley's life and writings;

David D. Perkins, professor of biology, the genetics and biology of *Neurospora*;

Frank E. Stockdale, professor of medicine and biology, studies in protein characterization;

Elizabeth Closs Traugott, professor of linguistics and English, semantic change;

Lenore J. Weitzman, social science senior research associate in sociology, the social and legal effects of divorce law reforms in England, Sweden, and the U.S.; and

Arthur P. Wolf, professor of anthropology, childhood association, sexual attraction, and the incest taboo.

Since 1974, 66 other Stanford faculty members have received Guggenheims.

Stanford's total for 1983 is exceeded only by Cornell, with 11, and tied by Harvard. Berkeley faculty received 8

Artificial Intelligence: Think about machines that *think*

BY JOEL SHURKIN

A physician in the Oncology Clinic at the Stanford Medical Center sits at a computer terminal at a nursing station. His patient is a 22-year-old woman with unclassifiable Hodgkins Disease.

In a matter of moments the computer and the physician are having a conversation. Generally, the computer asks the questions, the physician answers. When the computer has the information it seeks, it advises the doctor on when the woman should return to the clinic and what her treatment should be.

The protocol for treating most cancers is incredibly complex, involving combinations of dozens of drugs, most of which are toxic. Picking the correct drugs, weighing the inherent risks, is a complicated, and for the patient, a dangerous thing to do.

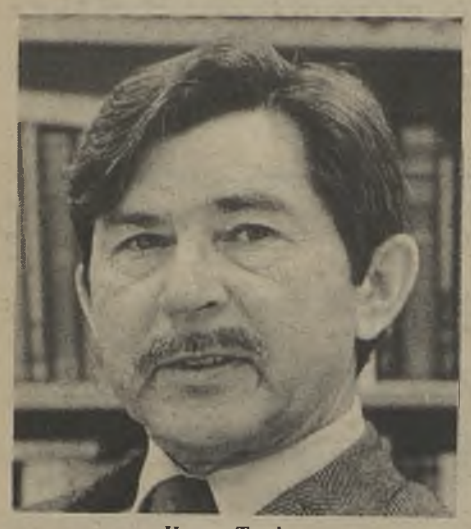
The computer program being used in the oncology center is called ONCOCIN, an example of artificial intelligence research in which a computer is being programmed to think like an expert. Yes, think!

The program is what is classified as an expert system, and the techniques used to build it fall under the rubric of heuristics. Much of the work in building expert systems is being done at Stanford, and the granddaddy of all expert systems was invented here.

"(Expert systems) emulate in particular fields what human experts do," says Thomas Rindfleisch, director of Stanford's Heuristic Programming Project (HPP). "They are characterized by trying to capture the knowledge an expert has, and are able to reproduce a seasoned solution in that domain that is understandable to another practitioner in that domain."

Expert systems and knowledge engineering are important for reasons that extend outside laboratories where they are being tested—by designing these computer programs, AI researchers are learning more about how the human mind thinks.

Writing these programs is among the most complex creative problems ever (some programs run 50,000 lines and are several inches thick when printed out), in part because the researchers are still dealing with first principles. They are confronted, like the ancient Greek philosophers, with the basic problem of epistemology.



"It seems complex because we haven't been able to distill the general principles yet," says HPP's Bruce Buchanan. "That's one of the things we're trying to do in this laboratory."

Key to understanding how expert systems works is the word "heuristics," which stems from the Greek heuriskein, to invent or discover. When computer scientists use it they mean proceeding on empirical lines, using rules of thumb to find plausible answers to problems.

"Judgmental knowledge" is the definition preferred by Rindfleisch. "There are things that are not justified in terms of some underlying theory or mathematics. There are rules for pièces of expertise

People

Henry Taube

Jerry Nightingale

Henry Taube, Theodor Hansch

Professors Henry Taube, of the Chemistry Department, and Theodor Hansch, of the Physics Department, are the recipients of two of the eight 1983 awards honoring outstanding contributions to science from the National Academy of Sciences.

Taube will receive a $5,000 prize for "pioneering work on inorganic reaction mechanisms, specifically his discovery of 'inner- and outer-sphere' mechanisms of electron transfer reactions." His work has profoundly influenced studies in biochemistry and organic chemistry. The Academy's award in chemical sciences was established in 1978 by the Occidental Petroleum Corp. in honor of Armand Hammer.

Hansch will share the $5,000 Cyrus B. Comstock prize with Peter Sorokin of IBM for "their pioneering efforts in the development of dye lasers and of dye laser spectroscopy." The Comstock Fund was established in 1907 and is awarded every five years in recognition of an important discovery or investigation in electricity, magnetism, or radiant energy.

The awards will be presented by the National Academy of Sciences at an awards ceremony on April 25, during the 120th annual meeting of the National Academy.

Jerry Nightingale

The Stanford Controller's Office has appointed Jerry Nightingale assistant controller for expenditure control and reporting.

Nightingale will be responsible for interpretation, application, and development of University policy in the Processing, Billing, and Reporting (PBR), Auxiliary Accounting, Student Aid and Receivables sections of the Controller's Office.

A Certified Public Accountant, Nightingale has worked as an auditor and senior management consultant with the CPA firms of Price Waterhouse and Coopers & Lybrand. He was also corporate accounting manager for Michigan Consolidated, a Fortune 500 energy organization in Detroit.

Nightingale was most recently in business for himself providing accounting services to small business owners.

Nightingale was educated at Lawrence University, Appleton, Wisconsin, where he received a BA with honors in mathematics, and at the University of Michigan, where he earned an MBA in operations research and management science.

Sarah E. Thomas

Sarah E. Thomas, manager of library coordination for Research Libraries Group (RLG) has been selected to participate in the 1983-84 Academic Library Management Intern Program by the Council on Library Resources, Inc.

Thomas is one of five chosen from a group of 90 applicants.

She will work with David Bishop, director of libraries at the University of Georgia.

Thomas graduated from Smith College and received her Ph.D. in German literature from Johns Hopkins University. Her master's degree in library science is from Simmons College.

Frances Allocca, Eric Larkin, Susanne Lee, Mark Shaw

Tresidder's Corner Pocket has a new group of student managers—juniors Frances Allocca, Eric Larkin, Susanne Lee, and Mark Shaw.

The new group will retain the popular pizza and frozen yogurt, but they'll also be responsible for further menu development, pricing, hiring student employees, marketing, public relations, and the day-to-day operation.

Last year's managers—Sally Boyce, Dan Burgess, and Steve Francis—saw the Corner Pocket experience a 1,500 percent growth in sales after they took over.

Alessa M. Johns James D. Herbert,

Two 1981 Stanford graduates are among the first 96 recipients of Mellon fellowships for graduate study in the humanities, the Woodrow Wilson National Fellowship Foundation has announced.

They are James D. Herbert, an undergraduate major in art history, and Alessa M. Johns, who majored in English.

Each will receive a $7,000 stipend plus tuition and standard fees during their first year of graduate school. The awards may be renewed for a second year, with a one-third contribution toward tuition and fees from the host institution. Those who excel in their studies and are in a position to complete their Ph.D. within five years also will be eligible for support during their final dissertation-writing year.

Created by the Andrew D. Mellon Foundation in response to rising concern over the increasing number of talented youth with scholarly potential who are not now entering academic careers, the new program is expected to involve 500 to 600 recipients at a total cost of $25 million over the next five to 10 years.

Administered by the Woodrow Wilson National Fellowship Foundation, the program is directed by Robert F. Goheen, former president of Princeton University. Prof. Albert M. Camarillo of the Stanford Department of History is one of seven faculty on a national committee assisting Goheen.

Faculty members at nearly 700 campuses nominated 2,267 candidates the first year. Of these, 1,374 completed applications to seven regional committees. About 200 were interviewed. Cornell had the most recipients (7), followed by Yale (5), Berkeley, Bryn Mawr, and Harvard (3 each).

The first recipients included 47 women and 49 men.

Corey Goodman gets Waterman Award

A 31-year-old developmental neurobiologist, whose research interests center on the embryonic development of the nervous system, has been selected to receive the National Science Foundation's eighth annual Alan T. Waterman Award.

Associate Prof. Corey S. Goodman of the Department of Biological Sciences at Stanford University was selected from among 153 nominees to receive the award which includes a medal and an NSF grant of up to $50,000 for three years of research and advanced studies. According to the NSF his studies are having a profound impact on broad areas of biological science.

The award, authorized by Congress in 1975, will be presented at a dinner ceremony on May 18, at the Department of State. Leading scientists and educators, members of Congress and other Washington officials concerned with the national research effort are expected to attend.

The award is given annually to an outstanding young research worker in any field of science, mathematics, or engineering. A recipient must not be over 35 years of age or not more than five years beyond receipt of the Ph.D. degree, and must be an American citizen who has exhibited quality, innovation, and potential for discovery.

Goodman has made a major contribution to the field of developmental neurobiology by defining for the first time the sequence of developmental changes that occur during the life of an identified population of nerve cells. More recently he has extended this work to study the way in which growing nerve fibers identify the course they should take and the targets with which they should form connections. The achievement of being able to watch neural development on a cell by cell basis, coupled with the possibility of doing physiological experiments on the same cells, has significant promise for understanding the development of the nervous system.

The award is named in honor of the first director of the NSF, who died in 1967.

Goodman, a native of Chicago, received his bachelor of science degree with honors and distinction in biology from Stanford in 1972. He received his Ph.D. from UC-Berkeley and did post-doctoral work at UC-San Diego.

Committee on Research open meeting

The annual open meeting of the Committee on Research will be held 3-5 p.m. Wednesday, April 20, in the Bechtel International Center assembly room. All members of the University community are invited to attend.

The meeting will be devoted primarily to a discussion of disposition of intellectual property rights arising from research activities. A proposed revision to the copyright policy will be presented.

Guggenheims...

continued from page 1

fellowships, while Northwestern, Pennsylvania, and Yale tied with 7 each.

The fellowships were awarded to 292 scholars, artists, and scientists from 102 institutions. They were chosen on the basis of "demonstrated accomplishment in the past and strong promise for the future."

The Committee of Selection included Nobel Laureate Kenneth Arrow, professor of economics and operations research at Stanford.

Japanese firms give workers broad span of control, delegate more responsibility to get high performance—Wheelwright

BY DONALD STOKES

Many firms in Silicon Valley will be in peril unless they change their view of manufacturing.

Whole American industries, including machine tools—key to U.S. heavy industrial production—face domination by foreign competitors.

One consolation: The U.S. is streets ahead of the Russians in all areas of production.

These views are among those of Steven C. Wheelwright, associate professor of manufacturing policy at Stanford's Graduate School of Business.

Wheelwright is one of the very small band of researchers nationwide that has for the last decade been probing the reasons for America's decline in manufacturing competitiveness with foreign rivals.

Until recently the voice of this band has been a lone one urging that American production methods need to be improved drastically. The U.S. has neglected many of the lessons it taught the rest of the world.

"One of the reasons why many American industries are in trouble is that they think about productivity incorrectly," said Wheelwright in a Stanford interview.

"Such pioneers of productivity research as Frederick Taylor back in the 1920s thought in terms of monitoring workers on the production lines with stopwatches. They thought of production in purely mechanical terms, of time and motion studies.

"They did not think about the problem-solving side. They tended to dissect individual jobs, with the result that the span of each job became narrower and narrower. You see the results on the auto assembly lines in Detroit today.

"There was little thinking about how integration of jobs was important. More recently, people have begun to wonder whether it might not be better to restructure the jobs, so that instead of being so concerned with the manual effort of the workers, we ought to concentrate their attention on problems, so that they work with the same set of issues as management.

"I think that much of what the Japanese have done in the manufacturing area is just that. They tend to have much broader spans of control; they delegate more problems and responsibilities to the work force; and they tend to involve workers much more in contributing to the overall improvement of the organization.

Wheelwright has spent considerable time in Japan studying industrial organizations on the spot. Among them were Sanyo, Toshiba (the General Electric of Japan), Matsushita-Reiki, and Daihatsu, an auto manufacturer affiliated with Toyota.

Asked if the Japanese were better motivated than Americans, Wheelwright said: "No, I don't think they are better workers. However, they are more homogeneous and more willing to submit themselves to the group. They are less individualistic.

"One of the strong contrasts between Japanese and American workers is how they are viewed by managements. Some very interesting studies have been made recently about factories that are run by Japanese firms. What they have found is that you can run manufacturing operations in the United States the same way they run them in Japan and get as good or better results.

"Sony, for example, carries out a worldwide rating of quality and efficiency among its farflung operations. Up till about two years ago their number one plant in the world was in San Diego. Then they built a new plant in the southeastern part of the U.S., and it surpassed the San Diego operation.

"No, I don't think there is any evidence that Japanese workers are superior."

How about quality of management?

"There are several important differences in the areas where management focuses its attention. First, a continuing emphasis on improvement is vital. In order to make that happen, you need to have some long-term direction setting. It is shortsighted to focus just on this month's shipments, or this quarter's profits.

"Second, manufacturing processes must be established that make sure we do it right the first time.

Steven Wheelwright

"Management should also take advantage of the human resources it has at every level of the organization. That means you want people to really stretch in terms of problem-solving, and to focus their efforts on improving.

"Some companies in the U.S. have pursued these aims. They are talked about as firms offering attractive environments. These include Hewlett-Packard, IBM, Eastman Kodak, Rolm, and several others. There is no reason why all American firms cannot do this.

"One of the pressing problems for firms such as General Motors is 'How quickly can we adopt the new ideas? We are now behind $1,500 in cost on every car we make as compared with the Japanese, so clearly we don't have much time.'

"This Fremont setup between General Motors and Toyota is a fascinating one to me, for it has brought into public focus the problems I research all the time. The public is asking: 'Why is GM, a firm three times the size of Toyota, signing up with Toyota to run this plant?' The reaction of the chairman of Ford was 'Can't GM figure out how to make a small car?'

The answer is that GM doesn't have time to figure it out. It is not just a question of getting out a new car, from blueprint to production, they also have to change their method of production. GM believes that the new partnership is a good way to get new methods of production firmly imbedded in their organization.

"There is nothing wrong with the capabilities of American managers. They need to focus more on areas where the greatest opportunities and leverage lie.

"One potential difficulty is that we may start to do better, and then, as that removes some of the

Stolz profoundly influenced child development research

BY MILLICENT DILLON

Second of two articles

Lois Stolz

Coming to Stanford in mid-life, after a career in administration, Lois Meek Stolz had a profound influence on the Psychology Department and its students and ultimately on national attitudes toward child development research and public policy.

"When she came in 1946, she brought with her a number of remarkable talents," says emeritus professor of psychology, Robert R. Sears. "She had a strong intellectual capability and a good background in social sciences, along with a strong interest in caring for children and the practical grasp of what could be done for them.

"Usually people have the mentality of hard scientists or they have the desire to change the world through social programs. She had both," notes Sears, an eminent child psychologist and former president of the American Psychological Association.

"The first research she did here on the relationship between war veterans and their children had a powerful effect nationally."

"It demonstrated how practical problems could be affected using good methods of research. In that work she provided substantial information to other returning veterans about these men and their difficulties with their children and how they tried to solve the problem.

"We now have state and national programs on the application of social science research to public policy. Lois Stolz was one of the forerunners. Her work helped to create this link."

Stolz's own story of her coming to Stanford is, typically low key.

"It was a fluke. Roger Barker (professor of psychology at Stanford) and I had met at the Institute in Chicago (the forerunner of the Center for Advanced Study in the Behavioral Sciences). In May of 1946 he came to Oakland to ask me if I'd teach one of his summer classes so that he could be released.

"I thought about that long trip to Palo Alto and I just kept shaking my head—no, no, no. And all the time I was doing this my husband was nodding his head—yes.

"Roger," I said, "I couldn't make that trip."

"I think we could do that for Roger," my husband said.

"*We*," she says, laughing.

"So that's how I came to Stanford, and it was a very lucky thing for me."

Stolz taught several summer sessions and in early 1947 Prof. Ernest R. Hilgard, then head of the Psychology Department, now emeritus, asked her to teach a course in child psychology during the winter term. " 'You'll really like it here, Lois,' he told me, 'we have very small classes. At the most 40 students.' "

Stolz agreed to teach the course and arrived early the first morning for the nine o'clock class—with 50 copies of the syllabus. "The class was held in Classroom 1 at Cubberley. When I started to go in, I saw that the front hall of Cubberley was packed with students. I had to work my way through to get to Classroom 1, and I found that absolutely jammed."

It was not the small class Hilgard had promised her. In fact, 300 students had showed up.

"I've always thought there were two reasons that they came," she says. "First, it was listed as child psychology and that sounded like an easy course. But the other thing was that many of the students were veterans who had returned and were having a helluva time with their children."

Once the class moved into Cubberley Auditorium, things settled down, says Stolz. She refused to teach the class from the platform—"I'm just not that kind of person"—so she had a table set up level with the first row and talked from there.

"In the first few classes I did notice that there were a number of men students at the back reading the *Daily*. I stood that for about two meetings and then I announced, 'There is a very nice lounge on the top floor of this building and if you want to read the paper, I suggest you'd be much more comfortable up there. And if you're not, I certainly would be.' " The newspapers disappeared.

According to Sears, up until the time Stolz came to Stanford, child psychology as a field here was only a minor division of clinical psychology. "The only important work in child psychology that had been done here was in the field of intelligence and achievement tests.

"But when Lois Stolz came, she changed that. She developed an entire program in child psychology."

Stolz maintains that the creation of the nursery school at Stanford did a great deal to enable her to expand the child development program, through providing facilities and children for observation, experimentation, and research.

"In the spring of 1947 a number of veterans and their families were living in Stanford Village, the Dibble Hospital during the war. Some of these men went to the acting president of the University, Al Eurich, and said they wanted a nursery school set up for their children.

"Eurich didn't know what a nursery school was, so he called Education Dean Bartky. He didn't know what a nursery school was either, so he called Hilgard. Hilgard said, 'I don't know anything about nursery schools, but I know somebody who does.'

"So they came over to me and we conferred and the nursery school was opened that next September.

"We did have two problems. The first was that we didn't have any money, and it takes money to run a nursery school. Jack Hilgard got the Peninsula Volunteers to raise money for us.

"The second thing was that we didn't have a nursery school teacher. But finally we did get one—and a very good one. It happened accidentally. That's the way most good things seemed to happen then at Stanford.

"The National Association for Nursery Education just happened to be having a conference in San Francisco, so Dean Bartky got one of his graduate students to go up there and see if he could find us a teacher. He came back with Lucy Mallet. When I saw her, I nearly passed out. She was such a beautiful young woman, I was convinced this student had just gone up there and picked the best looking woman he could find.

"Well, I was wrong. She was a fine teacher. Of course, we didn't manage to keep her very long. I used to send my students over to the nursery school to observe and one of them, Hawley Smith, went over there, but he didn't look at the children. He looked at Lucy. So at the end of the second year, Lucy left."

Luckily through another chance happening, Stolz found Edith Dowley, who had worked with her at the Kaiser Child Care Centers. Dowley, became

continued on next page

Stolz/ continued from page 4

head of the Nursery School and later a professor of psychology.

Many students, particularly veterans, came to talk to Stolz during her office hours. "They would come to see me about their observations but I soon saw that they stayed to talk about their own children.

"I had to extend my office hours to three days a week. It took so much time and energy I said to Jack Hilgard, 'You should have somebody doing research on this problem.' And he said 'Why don't you?'

"I said I didn't have the time. Then he told me that the National Institute of Mental Health had just gotten some funds and we might be able to get a grant."

Stolz applied for funds for research on war veterans and their children, and received the first grant that was ever given to Stanford by NIMH.

Assisted by ten graduate students, Stolz made a comprehensive study of the effect of postwar adjustments of fathers to first children born while the fathers were at war.

"Our research showed how the necessity for these men to adjust to the roles of breadwinner, husband, and father simultaneously—rather than in sequence—affected their behavior and attitudes.

"Coming from a military culture, the fathers used techniques of discipline and punishment to control their children, to require behavior often beyond their level of development.

"In consequence, the firstborns developed more problems, especially in eating and elimination, than children in the control families. They had more difficulties in relations with peers and with authority figures, including their fathers.

"They were in conflict about expressing agression; but they showed high levels of anxiety," says Stolz.

Out of this research new courses were developed. "For example, I had to have a seminar for graduate students on research methods. Among those who came were Alberta Engvall Siegel (now professor of psychology in the department of psychiatry and behavioral sciences of Stanford Medical School) and Harold Stevenson (professor of psychology at Michigan, currently at the Center for Advanced Study in the Behavioral Sciences.)

"Let me tell you how Harold got into child psychology. He was a graduate student specializing in the psychology of learning, doing some experiments with rats. That's how everybody used to learn about learning—with rats. I called them the 'rat boys.'

"Harold came to see me because he wanted to do the same experiment with children that he'd been doing with rats. He asked if he could work with some children in the nursery school.

"I said, 'Harold, do you know anything about children?"

"He said, 'No.

"I said, 'Well go down to the nursery school and watch some of them. And when you have made friends with a child and gotten him or her to go into a room with you—that's difficult to get a child to go into a room with a stranger—then you can try your experiment.'

"So he made friends with a few children and he took them into a room and he had them try the puzzle, the same material he'd used with the rats. And of course they finished it just like that.

" 'You know, they're a lot smarter than rats,' he said. He was so surprised and overcome that he began taking courses in child development."

Stevenson went on to become one of the leading child psychologists in America. (He and Siegel are now editing a volume on *Child Development Research and Social Policy* for the Society for Research in Child Development, of which he is a past president.)

And, in fact, the list of Stolz's former students is a roster of the most important professionals in the field of child development today. These students include, besides Siegel and Stevenson: William Langdon Faust at Pomona, Margaret Siler Faust at Scripps, Clara Baldwin at Rochester, Dr. Jerome Oremland at Children's Hospital and UC Medical Center in San Francisco, Dr. William Menninger and Constance Menninger of the Menninger Foundation in Kansas, Freya Owen of the Palo Alto school system, Lynette Friedrich-Cofer at Chapel Hill, North Carolina, Laverne Johnson at the Naval Research Center in San Diego, Eleanor Willemsen at the University of Santa Clara, Bob Gowin at Cornell, William Calvert at New Jersey State College, Nancy Guy Stevenson at Children's Hospital, Stanford, and Charles Nakamura at UCLA. Influenced by Stolz, they have all been involved in the application of scientific research to public policy.

Coming here was 'a fluke... a very lucky thing for me'

Recalling her student days with Stolz, Siegel says that one of the many important things she learned as Stolz's assistant was respect for the work of students. "For example, Lois would never write on a student's paper, when she was grading it. 'It's not respectful to do that,' she'd say. 'It's more courteous to write your comments on a separate sheet.' "

"She was also, at the same time, a person of great independence of mind. There's a story—I don't know if she told you—about the time that she and John Dewey went to vote in New York City. Dewey was an emeritus professor at Columbia, Lois a graduate student.

"They had registered Socialist but the officials at the polling place, controlled by the Democratic Party, refused to let them vote. 'Do you have a high school diploma you can show us?' Stolz and Dewey were asked. 'No,' they said, 'they didn't have one with them.' 'Well, you'll have to take a literacy test,' they were told. So the two of them took the subway downtown to an old public school building and they sat in a third grade classroom—you know the kind with inkwells in the desks—and they took their literacy tests. Then they went back uptown with the evidence that they'd passed, and they voted Socialist."

While Stolz was teaching at Stanford half-time (some half-time, she says), she was also producing a series of research studies. In 1951 appeared *Somatic Development of Adolescent Boys;* coauthored with Herbert R. Stolz, in 1954 *Father Relations of War-Born Children*; in 1957 "A Study of Maternal Employment and Children," published by the *Journal of Child Development;* in 1967, written with others at Stanford, *Influences on Parent Behavior;* and in 1971, with Freya Owen, a monograph on learning disorders in children.

She has received a number of national awards and in 1950 was an important participant in the White House Conference on Children.

During her years at Stanford Stolz was also active in a number of other projects. She initiated a study at the Children's Convalescent Home (now the Children's Hospital) of individual children, bringing together data from observations by students, therapy sessions by a graduate student and interviews with parents. These case studies were presented at Staff Rounds for discussion and planning.

Stolz was also chairman of a committee set up in the spring of 1957 to study the needs of women at Stanford. The Committee issued a report on "Motivation and Education of Stanford Women students" in 1958, which was expanded by Siegel for the Study of Education at Stanford in 1967.

Ten years ago at a reception given by the Association of Women Students, Stolz was asked to give an address on "Women in Stanford History."

In typical fashion she tackled the subject of endowed professorships, pointing out how women had contributed to the university, but noting that not one endowed professorship up to that time had been named for a woman professor and that not one woman professor had as yet been appointed to a named professorship.

She challenged the women present to do something to change the situation. "Well, they must have," she says, "because beginning with the professorship named for Helen C. Farnsworth, late of the Food Research Institute, and the one for Margery Bailey, late of English, the spell has been broken.

"In addition, Stanford now has several women on the faculty who hold endowed chairs, starting with Ruth T. Gross in Pediatrics."

When Lois Stolz first started commuting to Stanford from Oakland in 1946, she was one of the relatively few drivers who would cross the Dumbarton Bridge regularly.

The ticket taker on duty used to call out as she drove up, "Here comes the Professor."

So she was and still is.

AI/ continued from page 1

that have come out of experience, abstracted from lots of examples, and are judgmental kind of decision rules that experts have."

Example: the game of chess.

The number of possible sequences of moves in the game of chess probably exceeds the number of molecules in the universe, almost infinite. It is not possible to produce a computer program that could play chess by considering every possible sequence of moves.

Even early in the game, some potential moves would require a decade for a computer to analyze.

Clearly, something must be done to chess-playing programs to make them work realistically. This is accomplished in two ways: one, the program only considers the possibilities one or two moves in advance but considers them all (brute force); or two, the computer is made to consider only the most likely moves and to weigh their potential. In the latter case, the computer is exercising judgment. In many ways, experts play that way.

That is heuristics.

The first expert system program—and in some ways the most successful—was born at Stanford in 1965, out of a conversation between Nobel laureate Joshua Lederberg, then at the Stanford Medical Center, and Edward Feigenbaum, a former student of Herbert Simon at Carnegie, who had just joined Stanford's Computer Sciences Department by way of Berkeley.

"I began to get interested in a set of problems that it seemed to me hadn't been well explored by earlier AI work," Feigenbaum said, "namely tasks of empirical induction. Given a set of data elements, construct the hypothesis that purports to explain that set of data. And I viewed empirical induction as first of all being prototypic of scientific behavior."

"So I was interested in modeling what scientists were doing in their problem-solving, particularly in what they were doing in empirical-induction activity."

The computer is made to consider only the most likely moves and to weigh their potential... the computer is exercising judgment... That is heuristics.

Edward Shortliffe, who has helped marry the 'intelligent' computer to medical practice.

Lederberg suggested that a good field for Feigenbaum to explore in this matter might be analysis of organic compounds using mass spectroscopy. Lederberg, who had to learn computer science to help, was co-investigator.

The program was eventually called DENDRAL.

The task seemed enormous. The researchers had to devise ways of formulating hypotheses from the spectrography data. This involved looking at the data and trying to find which possible molecules would fit the parameters set by the data.

They then had to figure out a way of representing this logic in symbology a computer could understand.

Finally, the main task: picking the brains of the experts to determine what they know and how they make judgments.

Heuristics was the only model that could conceivably work; like the chess players, the computer could not simply try every possible molecule to see which fitted the bill. To give the heuristics a chance, Feigenbaum, Lederberg, and the chemists working on the project had to provide a huge knowledge base in the computer.

"In the early stages," Rindfleisch says, "in the very early systems that we built, (we) sort of hand-crafted the knowledge about the field in the sense of feeding into this program the factual knowledge, and trying to get out of the experts this judgmental knowledge that they used to solve problems."

DENDRAL was successful; eventually expanding to include data from analytical devices such as nuclear magnetic resonance (NMR), and reaching a level of expertise so high, the program has been licensed by Stanford and is sold to chemical laboratories around the country.

The success of DENDRAL stimulated the researchers to try again with something even more complex.

DENDRAL was what is called a rule-based program.

"Rule based is very little more than talking about associations as conditional rules," explains Buchanan, who came to Stanford just as DENDRAL was starting. "If you know A, B, and C, then you know D. We believed that this methodology is sufficiently strong to support expert-level inferences in another domain."

The domain was medicine.

Other attempts had been made to create "thinking" programs in medicine.

"Diagnostic programs that used statistical theory could be shown to reach excellent decisions, and yet somehow or other, never seemed to address the clinically important issues, or were never usable in a clinical setting," said Edward Shortliffe, assistant professor of medicine.

Shortliffe, who came to Stanford in the early '70s, is a rare species: a physician with a passion for computers, who had found the hoary halls of Harvard less hospitable to a student with such an odd outlook than Stanford. He was just what the AI people were looking for.

"AI seemed to present a different set of tools, for both modeling the cognitive issues that were involved, and for dealing with the issues of the human interface with the physician," he said.

Dr. Robert Carlson consults ONCOCYN, an AI program, with patient Jon Aguinaga

Shortliffe recognized that one problem AI would have to confront, would be that interface—convincing physicians the program could add something to their practice. In part, he felt, that was because the programs were written by computer people, not medical people. He proposed to be the first physician to try his hand at this problem as his Ph.D. dissertation.

"I was very fortunate to have Stan Cohen as my adviser. He believed in medical computing as encompassing a great deal of important basic medical issues, and he supported my application." (Cohen, of course, later became famous as co-developer of the techniques for recombinant DNA.)

After two conventional years at Stanford Medical School, Shortliffe went to work full-time on his project, which would be known as MYCIN.

Shortliffe picked infectious disease so he could borrow the expertise of Cohen and another physician, Stanton Axline. The program would

continued on next page

attempt to give advice to physicians on antibiotic selection.

"We just sat around, went over patient cases, and tried to understand how Axline and Cohen would decide how to treat those cases," Shortliffe says. "We'd stop them—those of us who knew a little medicine and were more computer scientists—interrupt and ask, 'Well, why do you say that?'

"We met once a week for an hour and a half. Axline would bring in an interesting case, a chart, and Cohen would ask him questions.

"Axline would answer them from the chart," Shortliffe says. "Cohen would be problem-solving, trying to figure out what he'd do for that case, and we would try to understand why Cohen was asking the questions he was.

We'd write down the rules that he'd told us, that Axline would help refine with him, and in the interim week, I'd put those rules into this developing and emerging computer system.

"And then we'd all have a good laugh the following week when I showed them how the computer had tried to handle the same case. What you did, in this way, interactively, you'd discover the great simplifications they made in explaining the rules the previous week, where they'd go wrong if you tried to run it on any kind of different case," Shortliffe explains.

Getting the rules seemed to be a lot easier than the fine tuning. "Plus, every once in a while, some issues would arise which caused a major change in the underlying structure of this developing program," Shortliffe said. "Suddenly it wasn't just a matter of writing the rules; you had to key in program changes."

The researchers believed it was crucial not only that the program operate at an expert level, but that it be able to explain to the user exactly how it came to the conclusions it did. This would be the only way they could convince users (here physicians) to trust what they were seeing.

"There were some new wrinkles here," Buchanan says. "Among other things, it became very clear that the inferences were not logical inferences so much as plausible inferences. We associated some degree of strength with the inferences, just as you need to associate some degree of strength with the evidence.

"If a person has a fever then he has a small chance of having a cold, a small chance of having lots of other things," Buchanan says. "If a person has a fever and a running nose then you can believe that he has a cold a little more strongly.

"But we were talking not just about probabilities, about something closer to strength of inference, or importance, because we were trying to codify in this new measure of strength, the risk involved in leaving the conclusions unattended.

"There's very little risk in failing to notice that a person has a cold, but big risk in failing to notice that a person has meningitis.

When you're gathering the evidence," Buchanan says, "you don't always believe your eyes if you're a physician and the test results come in ambiguously. And so, there's some degree of strength associated with each of the things that you say you know. The premises of each of those plausible rules is itself a plausible conclusion."

MYCIN proved the point: the heuristic approach could work in medical AI program. But what was to prove more important, MYCIN could be made to work in other AI fields both within and outside medicine.

The logical portion of the program, what came to be called the Inference Engine, seemed to be relatively universal. By extracting it and simply plugging in new data from a different domain than infectious diseases, the MYCIN program could work just as it did in its original form.

The Inference Engine became known as Essential

continued on next page

Bruce G. Buchanan, a leader in artificial intelligence work

The researchers believed it was crucial not only that the program operate at an expert level, but that it be able to explain to the user exactly how it came to the conclusions it did. This would be the only way they could convince users (here physicians) to trust what they were seeing.

Glossary

The following is a glossary of terms commonly used in artificial intelligence.

Algorithm—A method of solving problems mathematically; in computers problems within programs are solved by the creation of algorithms, usually a repetitive calculation.

Cognition—The process of knowing or perceiving, acquiring an idea.

DENDRAL—The first expert system, developed at Stanford by Joshua Lederberg and Edward Feigenbaum, used to help chemists identify organic molecules.

Domain—Field of knowledge. Organic chemistry is a domain as is infectious disease. The domain provides the knowledge base for AI programs.

ELIZA—An AI experimental program in which a computer emulates a conversation by a psychiatrist. It has been known to fool subjects, and has been credited by a few researchers with having therapeutic benefit. The program was developed by Joseph Weizenbaum of MIT and Kenneth Colby, a psychiatrist then at Stanford.

EMYCIN—The heuristic part of the MYCIN program, the Inference Engine which made MYCIN work.

Expert Systems—Computer software that attempts to make computers think like humans.

Heuristics—Judgment, in computers the method by which AI programs attempt to make intelligent guesses in order to emulate human thought.

Inference Engine—The part of an AI program containing the heuristics.

Knowledge base—The information drawn upon by AI programs, usually consisting of two parts, fact and heuristics.

LISP—The standard computer language used in AI, differs from other languages in that the instructions and the data are treated similarly. Developed by John McCarthy, now at Stanford.

MYCIN—An AI program that experimentally attempts to emulate the thought processes of an expert in infectious diseases, the best known of the medical AI programs.

Neuron—The basic unit of the nervous system, consisting of the nerve cell and its processes. Early in the history of AI it was assumed that digital computers could be designed to reproduce neuron processes, a theory now out of fashion.

Paradigm—Model.

Robotics—The study of the use of mechanical devices to reproduce human activity, now considered a subset of AI. Usually the robots are devices that can imitate only a few human functions.

AI/continued from page 7

MYCIN, or EMYCIN.

"EMYCIN is the program which knows how to use rules if there are some," Shortliffe says. "It knows how to explain those rules; it knows how to translate them into English; it knows how to select the rules for a given program, but it doesn't know anything about infectious diseases per se."

Implicit in the existence of the Inference Engine is the notion that perhaps human reasoning itself is structural in nature and can be duplicated by a machine.

"The inferences, looked at modularly speaking, were not terribly complicated," Buchanan says. "It's a question of either chaining backward from what you want to what you need to know; or chaining forward from data available to conclusions that you can make.

"Those are pretty straightforward kinds of inferences. It can get to be more complicated, it's just that for many problems those simple models suffice."

He points out that in some fields, say legal research, the model would not work. Human thought is very complicated.

The AI researchers, therefore, can be said to be exploring human reasoning from the bottom up—from putting together reasoning programs to see what the first principles may be. They are leaving the basic epistemology, reasoning from the top down, to scientists-philosophers like John McCarthy, who named the field back in the 1950s.

Shortliffe and the other MYCIN researchers obtained a National Institutes of Health grant to continue their work. The efforts in medical AI became SUMEX-AIM (Stanford University Medical Experimental Computer for Artificial Intelligence in Medicine), a nation-wide network plugged into a Digital Equipment PDP-10 at the medical center.

Other researchers around the country run their own AI programs on the SUMEX system on a time-shared basis.

MYCIN is not actually being used in a clinical setting—that was not its purpose—but it was tested out at Stanford and operated at an efficiency equal to that of a human expert. The MYCIN framework was used to develop another program, called PUFF, written in the commom computer language BASIC, which interprets pulmonary function tests on a small computer at the Pacific Medical Center in San Francisco.

A program called INTERNIST is running in a hospital in Pittsburgh. ONCOCIN is getting a test run at Stanford.

The researchers, however, had one more experiment they wanted to do on MYCIN: turn it into a tutoring program for medical students. The program had limitations, but in AI those limitations sometimes tell you more than your successes.

A medical student needs to know more than the expert about how decisions are reached, Buchanan points out.

"The practitioner, from years of experience, doesn't think things out from first principle any more. He remembers those distilled associations, compiled associations, because he was once able to learn from first principles, but then he throws (them) away. The teacher of medicine needs to know more."

The HPP lab is working on that problem now.

HPP is confronting other problems as well. For instance, how do you pick the knowledge from the expert's brain? Buchanan is working on this.

"The answer used to be that a programmer would become very knowledgeable about one domain and construct a program himself," Buchanan says. "That's just not workable."

Another way of doing it was the way Shortliffe obtained his knowledge from Cohen and Axline—sit them down with a programmer who extracts the information from the expert in a way usable to the computer.

"That activity came to be called knowledge engineering because it's the activity of transferring knowledge from a specialist for the program to use; it's an engineering activity. . . .

"That's the best method of the 1980s, but it is very time-consuming." The basic knowledge base can be obtained in about a week, Buchanan says, but it could then take several man-years to refine it and keep it from doing stupid things.

Buchanan is working on a new concept called "knowledge acquisition." Why not have the expert talk directly to the computer? Why not have a program that would enable the computer to build the knowledge base without the intercession of a programmer?

"That's not totally far-fetched," he says, "and we're pressing on those activities to see how far we can push them."

Another way of educating the computer is to have it learn from its mistakes.

At the moment the computer has to rely on the human to catch the mistakes and make the appropriate alterations.

"This whole area of knowledge acquisition is vast," Buchanan says, "but we keep chipping away at it. I don't see that we've made any great breakthroughs, nor are we about to, but we know an awful lot more about it."

Another Stanford-made program is called MOLGEN, which helps design laboratory experiments in molecular biology. MOLGEN is the work of Peter Friedland.

One of the most complex tasks facing engineers in the computer age is designing Very Large Scale Integrated Circuits (VLSI).

"Most design processes are not algorithmic; that is, when an engineer sits down to design a complex computer, or other chip, there's no procedure that he goes through in cranking out that design," Rindfleisch says. "There's a concept of what the machine or the electronic device ought to do. . . . There's a lot of lore about what works and what doesn't work, based on experience. . . .

"It's more complicated than it looks, and as the density of devices increases with the very heart of the VLSI, it becomes very difficult for human beings to cope with the complexity of the designs."

Sounds like a job for AI, and investigators, particularly Stanford's Harold Brown, have begun working on it. Penny Nii and Bruce Delagi (from Digital Equipment) are studying new computer architectures specially tuned to running the knowledge-based programs under development. Another task is a program that diagnoses computers much the way MYACIN diagnoses humans. Michael Genesereth is working on this.

"It would be nice if out of all of these experiments. . . ultimately, we'd get a theory of knowledge, a theory of knowledge-based information processing that sort of derives from general heuristics about problem solving. . . . "

"It's an empirical science so that each program is a data point. Given that it takes a few years to construct each new data point, it's no wonder that we're a little slow to reach the general principles."

After all you've heard on computers, the *real* revolution still lies ahead, Artificial Intelligence buffs believe

BY JOEL SHURKIN

. . . There is one question I would like to answer: What is the number, that a man may know it, and a man that he may know a number?

—*Warren McCulloch*

It is entirely possible that the computer revolution has yet to begin.

The real revolution may not be the silicon chips, microprocessors, and home computers of the 1980s, but in the new kind of software, almost psychogenetic in nature, that will run them. This revolution may come when scientists produce the software to make computers "think," to make them simulate human thought processes, and then to make the machines smarter than the humans who designed them.

The field of research is called artificial intelligence. If the experts in AI succeed, civilization could be altered in ways beyond our imagining.

"The AI paradigm, symbolic reasoning, is going to effect a revolution in the use of computers at least as big as the introduction of computers for data processing and scientific computation," says Bruce Buchanan, of Stanford's Heuristic Programming Project (HPP). That, agrees HPP's Edward Feigenbaum, may be the greatest revolution of them all.

The first results of this research are by now reaching the market place in such widely diverse forms as chess-playing programs for home computers, and software designed to help industrial chemists analyze and synthesize organic molecules from laboratory tests. AI programs are beginning to show up in clinics and hospitals to help diagnose lung disease, or to help refine treatments for some forms of cancer.

The world of science is beginning to take AI seriously. The excitement is almost palpable.

The three leading centers for AI research in this country are Massachusetts Institute of Technology, where the field began, Carnegie-Mellon in Pittsburgh, and Stanford. Considerable advance research is also being performed at places such as UC-Berkeley, Yale, California Institute of Technology, and other universities, and in companies such as SRI, Schlumberger, and IBM. Several firms whose sole business is developing and selling AI software have been formed.

Essentially, AI research can be divided into four areas. The best known is probably robotics, the study of machines that simulate human physical activity.

Another is known as expert systems, computer programming that attempts to solve problems and make decisions at the level of a human expert in a particular field. This is sometimes known by the general term "knowledge engineering."

Another field is language understanding, which includes things like translating from one language to another, a process which requires an understanding that goes well beyond word-for-word substitution.

Finally, there is what can only be described as epistemology, research using computers into human thought at its most philosophic, almost metaphysical, level.

Stanford researchers are now actively pursuing all aspects of AI.

Producing machines that "think," or producing unnatural organisms that simulate human thought, has been a common theme in the human psyche. Unfortunately for AI researchers, the literary history has not always been sunny and up-beat. For instance, writer Pamela McCorduck, who was on the staff at Stanford in the 1960s and has written the best-known textbook on AI, points out that the first real description of artificial intelligence in literature may have been Mary Wollstonecraft Shelley's

continued on next page

AI/ continued from page 8

Frankenstein, written in 1818 on a dare from Lord Byron.

That attribution makes most AI researchers cringe, as do more recent fictional characters, such as HAL, the homicidal computer in the Arthur Clarke-Stanley Kubrick film, *2001: A Space Odyssey*.

Byron's only legitimate daughter, Ada, may have been the first to actually attempt a rudimentary form of AI scientifically. She became, arguably, the world's first computer programmer when she helped her mentor, Charles Babbage, design the logic for a mechanical computer he was building which he called the Analytical Engine. Babbage, one of the great eccentrics of 19th century Britain, never completed the machine, but the design would have produced a machine which made decisions and acted on them.

The real possibility of artificial intelligence came 100 years later, however, when J. Presper Eckert and John Mauchly at the University of Pennsylvania produced ENIAC, the world's first electronic general-purpose digital computer. The machine, a military secret during World War II, was revealed in 1946, and opened the computer age.

Once the problem of storing and altering instructions in memory was solved, it was possible to produce complex programs which could not only solve complex problems, but could fulfill an ancient dream of scientists to simulate logic symbolically on a grand scale.

The work of several dozen scientists through the years converged at about this time. There was, for instance, the binary logic system devised by the Englishman George Boole in the 19th century, which represented logical processes using only the one and the zero.

In 1937, Claude E. Shannon, a masters student at MIT, used Boolean algebra to describe how electronic circuits behaved. Shannon would later go a step further—if logic could be used to describe circuits, couldn't circuits be used to describe logic?

In 1948, Shannon, then at Bell Labs, produced what is known as Information Theory, a pivotal paper that did for information what Newton did for energy. Shannon's paper was aimed at radio and telephone engineers, but it became almost a metaphor for nature.

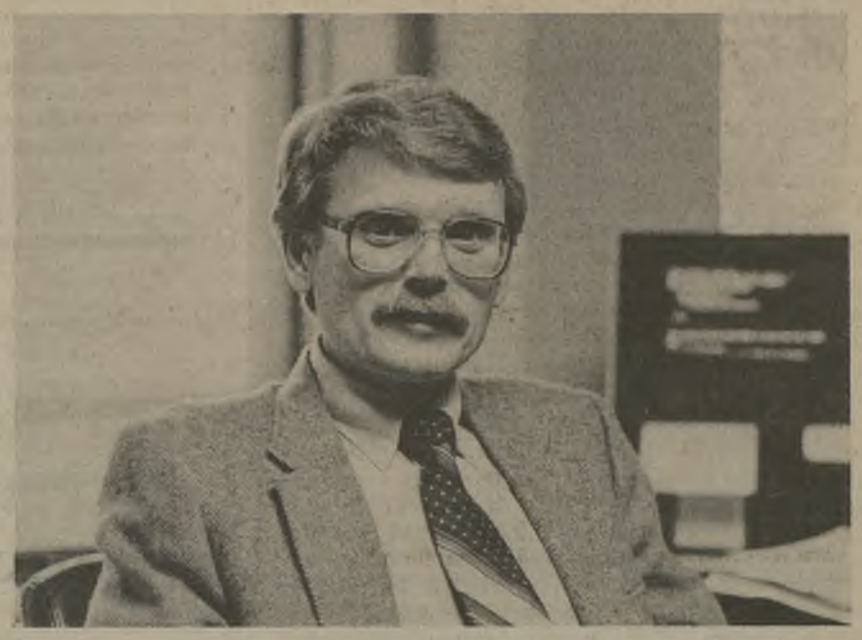
Essentially, Shannon held that information could be described in statistical laws that were universally true, that information, messages, could survive in the face of disorder and need never become unravelled. His equations were almost identical to the equations for entropy developed a century earlier.

Shannon's work was complemented by Norbert Weiner, also at MIT, whose book, *Cybernetics*, is considered a milestone in 20th century science. Weiner also believed that much of nature could be explained by information theory, objects could receive impressions and consequently perform acts. The theory bridged the gap between the physical sciences and biology and psychology.

The gap was further spanned by two men at the University of Illinois, Warren McCulloch and Walter Pitts, in a paper written in 1943. McCulloch and Pitts described cognition in purely physical terms, the logical calculus of neurons.

Implicit in all their work, and in the work of the English scientist Alan Turing, and the Hungarian-American John von Neumann, was that any process of human kind or behavior could be reproduced in a computing machine.

In an abstract to one of his papers, Turing wrote:



"The possible ways in which machinery might be made to show intelligent behavior are discussed. The analogy with the human brain is used as a guiding principle. It is pointed out that the potentialities of human intelligence can only be realized if suitable education is provided. The investigation mainly centers around an analogous teaching process applied to machines."

IBM ARCHIVES

Charles Babbage, 1860

They had trouble publishing the paper because no science journal wanted to publish a paper in which the proof was thought up by a machine.

Thomas Rindfleisch of Stanford's Heuristic Programming Project.

That's what AI researchers are trying to do.

Turing proposed actually building such a machine in 1947. He also devised what is now known as the Turing Test, a test that would determine when a machine could be said to be actually thinking: simply put, if a human could sit at a terminal and hold a conversation with a computer but could not tell whether the responses were coming from a computer or a human. (Most computer scientists now think the Turing Test is too easy.)

Scientists in the U.S. and Britain dabbled with programming in an effort to reproduce something that resembled thought. Many tried their hands at chess programs, understanding that chess is one of the most complicated games imaginable and hoping to learn something by trying to synthesize the logic of the game.

The turning point came in 1956 at Dartmouth College. Four researchers interested in the field had convinced the Rockefeller Foundation to fund a conference to discuss ways of simulating thought with computers. The four were Marvin Minsky, then of Harvard, John McCarthy, then at Dartmouth, Nathaniel Rochester of IBM, and Shannon. They invited others to join them.

It was at the conference that McCarthy dubbed the field "artificial intelligence," a name that rankled a few of the participants who were afraid the name would bring derision to their research. Several papers were given.

One, which received almost no notice at the time, actually reported the development of a thinking program.

The program, called Logic Theorist, was developed by Allen Newell and Herbert Simon of Carnegie Tech in Pittsburgh, and J. C. Shaw of the RAND Corporation of Santa Monica. Their program had proven several mathematical theorems proposed by Whitehead and Russell in Principia Mat' ematica, and had, in at least one case, provided a more elegant proof than the one provided by Whitehead and Russell.

They had trouble publishing the paper because no science journal wanted to publish a paper in which the proof was thought up by a machine.

Minsky now runs the Artificial Intelligence Laboratory at MIT. McCarthy is at Stanford. Simon, a Nobel laureate for his work in economics, and Newell are still in Pittsburgh, but their university is now called Carnegie-Mellon.

Now, there are about 500 scientists around the world working on programs and projects far more complicated than the Logic Theorist. They have branched out into several fields of science, pulling in experts in medicine, chemistry, biology, engineering, astronomy, geology, and most of the other natural sciences, in a unique marriage of knowledge. The goal is the understanding and emulation of human thought.

Their work is not without controversy.

Some critics, like the Dreyfus brothers, Hubert and Stuart at Berkeley, believe that machines will never "really" be able to think—at least not the way a human thinks. That criticism is not taken seriously by scientists in the field.

Others, like Joseph Weizenbaum of MIT, the co-author of the famed program ELIZA (which carries on conversations without understanding the subject matter), believes there are moral questions that must be answered by AI researchers. His criticism is taken more seriously, but most AI scientists think his fears are overblown.

Most seem more intent on the work itself than on what it will lead to at the moment. They are convinced the result will be a revolution, even if they are not sure just what kind of world that revolution will build.

Wheelwright/ continued from page 3

pressures, we may slip back into the bad old ways.

"The public is inclined to believe that many of our new industries, such as those in Silicon Valley, are very advanced in their methods. In fact, if you examine the methods of many of the firms around here, you'll find that their methods are not all that different from those used in our auto industry.

"They handle their people somewhat differently, but the way they handle the actual manufacturing task is not much different.

"If you ask many Silicon Valley managers, 'Don't you think manufacturing is important?' they will answer, 'Yes, but everything is relative, and product innovation, marketing, and so on are more important.

"Atari's response when it ran into trouble was to pack up and go to a low-cost labor area abroad. That 'solution' may gain you a little time, but it doesn't solve your basic problem.

"My guess is that we are going to see some other electronics firms move out of the U.S.

"If Silicon Valley wants to stay prosperous, it will have to get very serious about manufacturing. If not, many firms there will be in peril.

"A major shortcoming of most American planning systems," says Wheelwright, is emphasis on short-term results. "A firm should look several years ahead.

"Honda took the lead in the world motorcycle market by persisting in its U.S. efforts while running at a loss for seven years. After that it reaped a significant harvest. Most U.S. organizations would have given up before the seven years were up.

"An interesting fact about many Japanese methods is that they came from the U.S., and were refined by the Japanese. Ford, General Motors, and General Electric had systems 20 years ago that included many of the characteristics of the 'just-in-time' inventory system, which Toyota has now made famous.

"The Japanese executed the idea of keeping inventories down to a bare minimum much better than the American pioneers. The Japanese view inventory as a liability, while most U.S. firms look on it as an asset."

During periods of inflation, a large inventory may steadily grow in value. But Wheelwright points out that "interest rates are usually higher than the inflation rate, so it costs you more to keep your inventory."

Minimum inventories could result in frequent breakdowns in the pipelines of supply. "The heart of the problem," Wheelwright says, "is to eliminate the causes of uncertain supply, whether it is erratic quality control, transport, communication, or labor troubles."

The U.S. has the ability to catch up with Japan in productivity, he believes. "We are ahead in some areas, for example in some of the semi-conductor firms, and some segments of the computer industry. In spite of Caterpillar's strike problems (which are directly related to the firm's determination to get better productivity), it is ahead in many respects.

"In product-intensive industries such as paper and pulp the U.S. tends to be ahead.

"I think a good number of American firms are going to do much better than the Japanese. Some will not.

"Several industries in America are going to wake up, too late, and find that they have lost half their home market base. The machine-tool industry is well on its way to that position. The figures of our imports of German and Japanese machine tools are alarming.

"There is a distinct possibility that America may end up having to rely on Germany and Japan for many of the tools that are the core of much of our industry. They are basic to all fabricating metal-based manufacturing.

"The robotics industry is a branch of the machine-tool industry, and the Japanese have half of all the industrial robots in the world.

"Gomputers can also be looked at as robotics, and here also we have to be on our toes. This is an area of national competence that we should want to keep viable."

Wheelwright gave examples of practical work done in studying recent problems in production.

"Recent studies have shown that U.S. auto manufacturers are at a cost disadvantage, compared with their Japanese competitors, of about $1,500 per car. So the challenge to us is: How can we get even with them again?

"Caterpillar is right on the border now in its competition with Komatsu of Japan, and this sort of peril is spreading to other industries.

"Views vary greatly on what should be done about the situation. One theory is that industries mature and become less profitable, and when they do, it is better to move into something new and more profitable; therefore, we should be willing to forego autos and concentrate, say, on electronics, and when that becomes less worthwhile, to switch into something else. I don't buy that."

Can we derive any comfort from the fact that the U.S. is probably far more productive than the Soviets?

"All the evidence I see is that we are infinitely more productive than the Russians. Take the auto industry. If you compare us with the Russians on the same scale that we use for comparison with the Japanese, we are several times more efficient.

"The Soviets are not even close. They don't even have a set of organizational structures, a set of philosophies about management that are conducive to good practices."

The U.S. has the ability to catch up with Japan in productivity...

I think a good number of American firms are going to do much better than the Japanese. Some will not.

—Steven Wheelwright

Born and raised in Salt Lake City, Wheelwright belongs to a pioneer Mormon family. His great-grandmother pulled a handcart all the way from St. Louis, across the Great Plains, to get to Utah in the 1850s.

The second oldest of six children, Wheelwright always wanted to go to Stanford, which he visited several times with his printer father. The family firm printed the Stanford yearbook. His parents preferred that he stay closer to home, so he gained his bachelor's degree at the University of Utah.

After that he made his wish come true and went to Stanford. Within the space of four years he was awarded both an MBA and a Ph.D. from the Graduate School of Business.

He had married Margaret Steele, another Mormon, while a senior in college. After attending Stanford, they decided that he would pursue an academic career. He joined the Harvard faculty, teaching quantitative methods and decision sciences.

Prior to their first two years at Harvard the Wheelwrights, who then had two children, went on a sabbatical to France, where he taught at the European Institute of Business Management, at Fontainbleu. In 1973 they returned to Salt Lake, where Wheelwright helped manage the family printing business. Then it was back to Harvard.

"I decided to get out of quantitative methods, as I did not believe that was where the answers were," said Wheelwright. "I decided to concentrate on studying production. I like production people. They tend to be down-to-earth, pleasant to be with, and to have traditional values.

"It also looked like an area that had been grossly neglected by researchers.

"At that time the 20 or so people working on production at Harvard probably numbered half of all such teachers in the U.S. Today, of course, everybody is for production."

In the spring of 1979 Stanford offered him a tenured associate professorship, which he accepted. "At that time there was no required course in production, and there was nowhere near the interest in it that there was in business policy, the other area I was asked to work in.

In the last few years the School's interest has grown, and people such as Mike Harrison, Dave Kreps, Evan Porteus, Chuck Bonini, and Jerry Miller have taken a major interest in discussing production topics, with me and with Chuck Holloway.

"This group took on a major assignment. They said: 'Let's do a required course.' It turned out to be 'Analysis of Reductive Systems,' which essentially deals with manufacturing operations.

"Because growing pressure from business organizations finally convinced business schools across the country that they were missing a key element in training, the study of the production function and research into production are now being done widely."

Wheelwright's ideas have come into their own at last.

This fall he is in line to become a full professor.

Wheelwright is regarded as an outstanding teacher. He has developed extensive course materials, including well over 100 cases and teaching notes. In addition to teaching heavily in the production and operations management areas, he teaches business policy and strategy.

He has written, among other books, *Forecasting Methods and Applications* (Second edition: New York John Wiley and Sons, 1983). He is now at work on *Competing through Manufacturing* to be published this year.

The Wheelwrights have five children. Marianne, 16, is a sophomore at Palo Alto High School; Mindy is nearly 13; Kristin is 10, Matthew 7, and Spencer 4.

Margaret Wheeler is proud to call herself a homemaker.

The family has a couple of horses; they hike and fish in the summers and ski in the winters.

"We do a lot of things as a family," says Wheelwright. "Because I have to do a lot of traveling, I take each of my five children on a trip with me once every year. I try to pick places where arrangements can be made for them to be looked after while I am working.

"Of course, Margaret has a standing offer to join me on any trip she would like to, and she takes me up on this at least two or three times a year."

Partners program links juvenile offenders with 50 Stanford volunteers

When speaking with people involved with the Partners program at Stanford, one word enters into the conversation more than any other: "rewarding."

"I've learned a tremendous amount about the problems kids go through," said senior Jeff Maltzman, co-founder of the Stanford branch of the national organization. "Sometimes I learn about myself and it makes it easier to remember what it was like to be a kid. It's a highly rewarding experience."

Partners is a non-profit, privately funded organization which provides volunteer intervention services to juvenile offenders. And in just three years it has blossomed into a major force on the Stanford campus, touching the lives of troubled kids and students, who serve as senior partners, alike.

There currently are more than 50 Stanford students matched up with junior partners, who spend three to five hours a week with each other—talking, listening, and learning while oftentimes building lasting friendships.

Stanford student Lisa Naulls (left) and Becky Cooper (right) with junior partner Sherri.

Academic credit

Children aged 10 to 18 years old are referred to Partners by probation departments, schools, parents, and other youth service bureaus, and participation is on a totally voluntary basis.

Students who participate in the program receive two to three units of credit per academic quarter of involvement in the program, providing they attend training sessions, fulfill terms of a contract stipulating how often they meet with a junior partner, and turn in a journal (to be graded) on the experience. Students also write a paper examining an aspect of juvenile deliquency at the end of the program.

Stanford student Lorraine Stevens has experienced both the frustration and the enrichment that being a senior partner can bring.

"At first I was appointed a 15-year-old girl for two quarters, and it just didn't work out," Stevens said. "She really didn't want to spend the time with me, and she told me that." But that was not typical of the program.

Stevens tried again.

"Last spring, I got assigned another girl who just turned 14," she said. "She's great, and we get along really well. Shhe really appreciates the time i spend with her. And her family is great, too. Just as much as I've taken Vickie as a sister, they've taken me as a daughter. It's a rewarding feeling knowing that I'm helping out a child in need. I'm learning how other families live. It just feels good."

Stevens got involved immediately when she heard about the program. "I had always been interested in social work, particularly youth and the law, and I wanted to apply that interest but I didn't know how I could. Partners represented the perfect opportunity."

Worthwhile help

Though her Stanford schedule is hectic, Stevens nevertheless always finds time for her junior partner.

"It's not a lot of time, and it's time I enjoy," she said. "I say I don't have time and I always seem too busy, but I'm really not, and afterwards I always feel it is definitely worth the time I spent."

Another Stanford student who feels likewise is R. Keith Allaun. "It's very rewarding at times, it's very frustrating at times," Allaun said, when trying to relate his experience as a senior partner. "It's almost like being a parent."

Allaun and his junior partner meet two to three times a week and talk on the phone other days. Allaun also has his partner stay overnight every other weekend. "There needs to be a lot of contact. The physical presence is very important. You can't say, 'I care. . . see you in three weeks.'

"There were several people in my life who were instrumental as role models," Allaun, who grew up without a father, explained. "If I didn't have them as role models, things would have changed drastically in my life. It feels so good to give and get so much satisfaction in return."

Positive intervention

Partners is more than just another "Big Brother/Big Sister" organization. There are basic differences.

Partners deals with all children who need attention, regardless of their family status. It is not exclusive to children from single-parent families.

Partners attempts to reach the kids before they get into any major sort of trouble. Becky Cooper, director of the San Mateo County branch of Partners, said. "A lot of times we are notified by youth counselors at school if they think a child might be headed for trouble. We try to get them some positive attention to help turn them around." Less than one-half of one percent of all government money devoted to juvenile justice is related to prevention, Cooper said.

Partners is also less expensive than traditional juvenile justice programs. The cost figure at the California Youth Authority, for example, is approximately $24,000 per person per year, according to Cooper. Partners' cost per child is around $1,000 per year.

The results also seem more effective.

In studies conducted at Partners' home office in Denver, which has been in operation for 15 years, results showed that there was a 20 to 80 percent decrease in repeat offenses.

"The studies also showed that (participants') self-concept really increased and they were more effective in social relations," Cooper said. "Their attitudes towards school were much better."

Cooper, who graduated from Stanford with a bachelor's degree in psychology and a master's degree in early childhood education, was the head teacher at Bing Nursery School when she heard about the beginning of a Bay Area branch of Partners.

"I wanted to get out into the community and I thought it would be a good change for me," she explained. "It combined a lot of my interests, and I wanted to go where I could help kids who needed some immediate attention. Knowing I'd be on the ground floor of a new development and being in on the planning stages was also exciting."

Student organizers

Stanford's segment of Partners was organized three years ago by then-sophomores Bill Halter and Maltzman.

"We wanted to establish some sort of intern program where students could get experience in the juvenile justice system" Maltzman said. "The juvenile justice program most interested in working with Stanford students was Partners.

"We felt that Stanford students would serve as excellent role models," Maltzman continued, "and could serve as an advocate if a kid did get in trouble."

The next step was to seek out interested students. Halter and Maltzman recruited on campus, with 11 people becoming involved initially on a trial basis during spring quarter of 1981. The program met with enthusiasm and success, and has continued to expand over the last two years.

Halter, a senior who is a Rhodes Scholar, and Maltzman, destined for law school next year, designed and sponsored a one-quarter SCIRE (Student Center for Innovation in Research and Education) course entitled "Juvenile Justice Workshop," which taught senior partners how to deal with potential problem youngsters.

The course included weekly seminars focusing on a different aspect of the causes and cures of juvenile delinquency, with speakers from Stanford Law School and Psychology Department as well as from the San Mateo County Juvenile Probation Department and the public school system.

Program grows

SCIRE co-directors Guillermo Nodarse and Judy Adams were both very enthusiastic with the results of the Partners program at Stanford. "All of the students. . . thus far have enjoyed their experience with Partners tremendously and feel that the services offered by the program are extremely worthwhile," Nodarse said.

"We are pleased to have (the) program grow," Adams added. "It is a model for the kind of student initiative and innovation that we wish to encourage."

Partners is funded totally by private donations, primarily from over 100 corporations in the Bay Area. Maltzman said that Stanford students usually fund their own activities personally, but "if the junior partner wants to do something, the senior member might encourage the junior member to earn the money to do the activity, maybe have them wash some cars in the dorm or something.

"The only drawback at all to the Stanford program," Maltzman continued, "is that students often get too busy and have to really struggle to find time to maintain the friendship, especially around finals time."

The Bay Area Partners program is one of six branches nationwide, each of which was set up and is run independently. Partners sponsors free or discounted medical and dental care for children in the program, much of which is contributed by local practitioners; group activities for the partners; such as trips to amusement parks, and fundraising events.

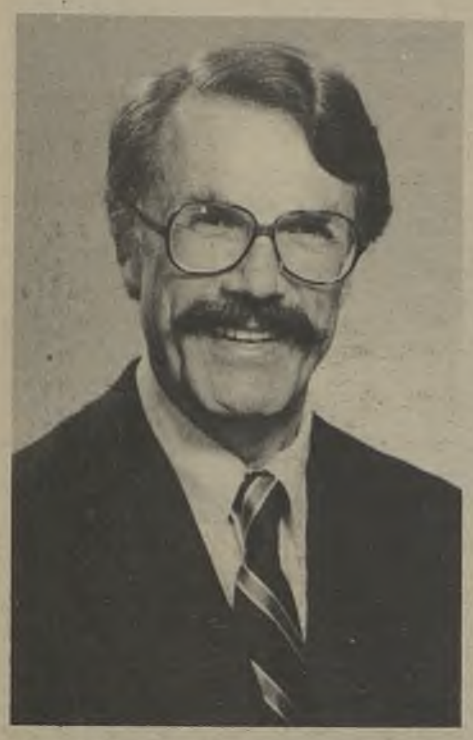
Volleyball fundraiser

One such fundraiser coming up which includes more Stanford students, both current and former, is the All-Star Volleyball tournament to be held May 6 at Homestead High School at 7 p.m.

Former Cardinal football players and current San Francisco 49ers Milt McColl and Rick Gervais will play, as well as 49ers Bill Ring and Randy Cross. The Stanford Men's volleyball team will play "The Village Host," a local club team that finished 11th in the nation last year, in the feature match.

Maltzman looked back on his three years as founder and co-director of the Stanford branch of Partners.

"We have found it to be a very successful program," he said.



"The kids really look up to Stanford students. They often come from an environment where college is not emphasized. This gives them a chance to come to Stanford and see that college is a lot of fun, and gives them a goal they can strive to attain. It teaches them the importance of doing well in school.

"And it really gives a child the feeling that somebody cares."

Statistics, dollar signs, and course credits aside, that is what really makes Partners the success it is.

—Steve Odell

Medical Center MEMO

John Farquhar

Prestigious award goes to Farquhar

Dr. John Farquhar, director of the Stanford Heart Disease Prevention Program (SHDPP), was honored by the American College of Physicians (ACP) Monday, for research linking changes in eating and smoking habits with decreased incidence of cardiovascular disease.

Farquhar, a professor of medicine in the Division of Family, Community and Preventive Medicine, received the 35th annual James D. Bruce Memorial Award, which recognizes outstanding contributions in the field of preventive medicine.

Former recipients include polio vaccine pioneers Jonas Salk and Albert Sabin.

"The Challenge for Physicians in Newer Forms of Preventive Medicine" was the title of Farquhar's Bruce Award speech at the San Francisco meeting.

Farquhar, who founded SHDPP in 1971, helped develop an interdisciplinary approach towards preventing and controlling heart disease. One aspect of this is a public health project in several California cities intended to educate people, primarily via newspapers, radio and community classes, on the health benefits of eating better and smoking less.

The recipient graduated in 1952 from the University of California School of Medicine at San Francisco and then completed his training in internal medicine and cardiology at UCSF and the University of Minnesota.

Other Stanford participants at the annual ACP meeting included Drs. Edwin Alderman, associate professor of cardiology; William Hancock, professor of cardiology; Jack Remington, professor of infectious diseases; Maurice Fox, clinical professor of medicine; Kate Lorig, Arthritis Center; Ronald Pearl, physician specialist in medicine; Eugene Robin, professor of medicine; and Howard Spiro of the Center for Advanced Study in Behavioral Sciences.

Associate dean leaves for Washington

Dr. Elizabeth Short, associate dean of student affairs, announced she will be leaving Stanford University School of Medicine for the Association of American Medical Colleges (AAMC) in Washington, D.C.

A new associate dean of student affairs has yet to be named.

Short's new position as director of the association's division of biomedical research and faculty development, and associate director of the department of academic affairs, will begin this summer.

In her new role, Short said she will deal with issues affecting the nation's academic medical centers, ranging from funding sources for biomedical research to faculty development and medical education.

"I think it's an exciting opportunity to obtain a national perspective on issues of concern to faculties and students," Short said. "It's a time when changes are occurring in public policy that will have major impact on academic medical centers."

Short will bring to her new position her experience in academics and administration at Stanford, and in shaping public policy on biomedical research as a member of the American Federation for Clinical Research (AFCR). She is on the AFCR executive and public policy commmittees, and is editor of its journal.

"Stanford is an exciting medical school, and I feel privileged to have worked with the students here. I will bring to the AAMC job perspectives gained at an excellent academic institution," she added.

Short has been associate dean of student affairs since 1978. "She has made substantial contributions to the clinical education of Stanford's medical students," said Dr. John Steward, associate dean of student affairs.

"Two of her major responsibilities have been assigning students to clerkships and writing letters to support students' applications for internships. In both of these important and major roles she has been an extraordinarily valued member of the Office of Student Affairs, and will be missed."

Short has also been an assistant professor of internal medicine, specializing in medical genetics. She came to Stanford in 1973 and served as chief resident in medicine the following year, after which she joined the faculty.

Short received her medical degree from Yale University School of Medicine. She completed her residency training in medicine and research fellowship in human genetics there also.

"It's a time when changes are occurring in public policy that will have major impact on academic medical centers."

—Elizabeth Short

Investigation proceeds. . .

VA panel to review incident of lab animal injury

An animal welfare panel at the Palo Alto Veteran's Administration Hospital will review the accident which resulted in injuries to a research dog, officials said last Wednesday.

Barbara Gleason, administrative officer for research at the VA hospital, said a general investigation of VA animal care facilities was inappropriate, since the animal's condition appeared to have resulted from an isolated incident and did not indicate more generalized difficulties.

"We are researching this incident basically to reassure everyone that while the accident involving this dog was unfortunate it does not reflect negatively on the high quality laboratory animal care provided at the VA center," Gleason explained.

Dr. Carolyn Reed, veterinarian at both Stanford Medical Center and the Palo Alto VA, said the dog was attacked by another dog in an adjacent cage in late March. The dog was being properly treated when it was removed by a medical student from a cardiovascular research lab, Reed said.

It was later euthanized after the student, who worked in the lab, brought the dog to a private veterinarian who said he didn't think the dog would recover.

At an April 1 news conference, officials of the Santa Clara County Humane Society contended that proper treatment may not have been provided the animal. In a position statement the society contended that after investigating the incident, the organization planned to file charges with the Santa Clara County district attorney's office under a county ordinance covering animal abuse.

On Wednesday, Larry Kemp, the society's chief humane officer, said the incident "is still under investigation by the Santa Clara and Peninsula Humane societies."

Deputy Dist. Atty. Robert Harpainter, supervisor of the Santa Clara County DA's Palo Alto office, said that he had spoken with Kemp and at least one other humane society official earlier in the week.

"At this point, I don't plan on doing anything further," Harpainter said Wednesday. He said his office lacked jurisdiction because the county ordinance didn't apply in the Palo Alto city limits where the VA is located.

A "fact sheet" issued at the humane society's news conference said the dog was found "in the Stanford Research Center."

However, Gleason said the VA's panel would investigate since the VA was responsible for the dog, which was owned by the VA and participating in a VA-sponsored study.

The internal review would be conducted by VA personnel, she said. Chairman of the panel would be Dr. Malcolm Anderson, a radiologist on the Stanford faculty assigned to research and patient treatment at the VA. Anderson is chairman of the VA's Animal Care Subcommittee of the Research and Development Committee.

Reed said because of residual anesthesia, the injured animal was unaware of the biting and didn't shift positions, "a regrettable, but fortunately unusual occurrence," she said.

The dog was participating in an an experiment intended to perfect techniques for repairing and replacing blood vessels.

The VA study was being conducted by faculty members and other researchers from the Stanford Medical School. Most VA physicians have dual appointments at the university.

Dr. James Dewson, director of laboratory animal medicine at Stanford, said no university probe was planned since the incident did not involve a Stanford research project.

"If a similar accident were to occur at Stanford, our Panel for Laboratory Animal Care would conduct an immediate and thorough review of the specific incident," Dewson said.

Stanford's participation in VA research stems from a contract with Stanford to faculty physicians for patient treatment and research at the VA.

Reed is chief veterinarian at the university and also works part-time supervising veterinary care at the VA, where she reports to VA officials, Dewson said.

—Mike Goodkind

We stand corrected

Beta Sigma Phi, an international philanthropic organization, was misspelled Beta Sigma Chi in the story on Dr. Bryan Myers' kidney research in the April 6 issue of the *Medical Center Memo*.

In addition to the $45,000 donated by the international organization, the California chapter of Beta Sigma Phi has donated more than $225,650 to Stanford medical research since 1970.

Precious drops of blood crucial for life's early entrants

Born about three months too soon, Geneva McKensie (pictured at right) needed periodic blood transfusions from her first days of life through an extended hospital stay, though, after the repair of a hole in her heart, she was "doing just fine," according to her nurse, Barbara Boyington (also pictured).

Even when healthy, most patients in Stanford's neonatal intensive care nursery need frequent, small transfusions to replenish the blood taken in the daily laboratory tests that help physicians monitor the delicate balance of each child's metabolism.

"It's also important to keep the hematocrit (ratio of red blood cells to blood volume) high," said Kathy Palange, clinical nursing coordinator for the unit. "Most of these kids have respiratory problems associated with their prematurity and need the boost in oxygen carriers."

To conserve the precious fluid, technicians usually match three or four infants to one unit of blood. The rich, packed red cells then may be diluted still further with sterile saline solution to find the mix appropriate for each child.

Today Geneva is home from the hospital and doing well, her happy mother reported.

Fifteen years ago, however, one of the biggest hazards for patients in neonatal nurseries was "cytomegalovirus" or CMV, a common virus that is harmless to most healthy adults, but can kill premature newborns and others who lack a fully developed immune system.

Dr. Anne Yeager, associate professor of pediatrics, reduced the threat in 1974 when she discovered that the virus often was transmitted through blood transfusion. Before that year, more than 13 percent of all infants transfused in the neonatal intensive care nursery contracted CMV virus.

By screening all blood given to newborns for CMV, the Stanford Hospital has now reduced the incidence of the disease acquired through transfusion to zero, and has prompted the American Association of Blood Banks to require each of its members to routinely screen blood for the virus.

Yeager's work is a prime example of how a top-notch blood bank serves as a "natural bridge" between research frontiers and the community, said Dr. Carl Grumet, associate professor of pathology and medical director of Stanford University Hospital's Transfusion Service.

"The cooperation in combining Dr. Yeager's experimental protocol with a broad screening program is the kind of thing this blood center is devoted to," said Grumet. "It's this cooperation that makes spin-offs possible."

The most recent issue of **The Healing Arts** *magazine deals with various aspects of the Stanford Blood Center's activities and roles. It profiles a sampling of the many ways blood is vital both to the health of current patients, and to the success of research into new ways to prevent and control disease. Copies are available by calling 497-6911, or writing to the News Bureau, Room TC-135, Stanford University Medical Center.*

Most grads get chosen internships

Internship match day at Stanford University Medical School was a happy occasion for 76 percent of this year's graduating students who have been appointed to one of their top three hospital choices.

According to Dr. Elizabeth Short, associate dean of student affairs, this shows improvement over the past decade's average of 70 percent.

What's more, 53 percent of the students were appointed to their first hospital choice, compared with the past decade's average of 44 percent.

About 18 percent of the graduates will be staying at Stanford. About 64 percent will be interning at university hospitals.

Internal medicine is the number one specialty choice, with more than 55 percent opting for it. Other popular specialties include surgery and family practice.

"In a time when the number of medical school graduates exceeds the number of internship positions, our graduates did extremely well," Short said.

Medical Center MEMO

Nigel Unwin

Unwin made fellow of Royal Society

Dr. Nigel Unwin, professor of structural biology, has been made a fellow of the Royal Society of London, as recognition for his contributions to electron microscopy in its application to structural studies of certain biological specimens.

The Royal Society of London for Improving Natural Knowledge, as it is formally titled, was founded in 1660, and is comparable to the National Academy of Sciences in the United States. Queen Elizabeth II is the Society's patron.

Unwin was born in Great Britain and received his Ph.D. from Cambridge University in 1968.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, APRIL 13

Dept. of Biochemistry Seminar: "The Role of Protein Phosphorylation in Branch Point Regulation: The Glyoxalate Bypass"—David LaPorte, Ph.D. (UC-Berkeley). Noon, M114.

Basic Science Research Colloquium: "Exploring Gene Expression and Protein Structure in Heterologous Cells"—Dr. Laurence Kedes. 5 p.m., Fairchild Auditorium.

Div. of Clinical Pharmacology Seminar: "Effects of Interferon on Hepatic Metabolism"—Glyn Taylor, Ph.D. 4 p.m., M110.

Dept. of Neurology Grand Rounds: "Pathophysiology of Nerve Regeneration"—Dr. Jeffrey Kocsis. 5 p.m., Palo Alto Veterans Administration Medical Center, bldg. 7, rm. B108.

Dept. of Biochemistry Oral Examination: "Tandem Duplications as a Genetic Tool in *Myxococcus xanthus*"—Leon Avery. 2:15 p.m., M316.

THURSDAY, APRIL 14

Dept. of Medicine Grand Rounds: "Potassium Homeostasis"—Dr. Samuel Thier, Stanford Community of Internists' Visiting Professor, from Yale. 8:30 a.m., Fairchild Auditorium.

Tickets go on sale for the Stanford Medical Alumni Association musical presentation "The Hypocritic Oaf" to take place at 8:30 p.m., Friday, April 29 in Dinkelspiel Auditorium. Tickets may be purchased from noon till 1 p.m. in the Medical Student Lounge or from the Medical Alumni Association Office, 800 Welch Road, Suite 221. A "Hypocritic Oaf" T-shirt will be available through the Alumni Association and at the performance. For further information, call 497-5064 or 497-6389.

Stanford Magnetic Resonance Laboratory Seminar: "NMR Studies of the Filamentous Bacteriophages"—Dr. Stanley Opella (Univ. of Pennsylvania). 4 p.m., Chemistry Gazebo.

Stanford Central American Action Network Special Lecture: "Medical Care Behind Rebel Lines"—Dr. Charles Clement. 7:30 p.m., M104.

Dept. of Pharmacology Seminar: "Expression of P-Glycoprotein and Multidrug Resistance in Tumor Cell Lines"—Dr. Victor Ling (Ontario Cancer Institute, Univ. of Toronto, Canada). 4:15 p.m., Pharmacology Library R358.

FRIDAY, APRIL 15

Dept. of Biochemistry Colloquium: "Membrane Proteins Involved in Cellular Cholesterol Metabolism"—Richard Anderson, Ph.D. (Univ. of Texas Health Center). Noon, M316.

The 1981 Stanford Album Quilt, hand-stitched by members of the Stanford Medical Faculty Women's Association, has been framed and mounted for display in the hallway beside the Hospital cafeteria. The quilt—with blocks representing such familiar scenes as Lake Lagunita, the Hoover Pavilion, the Stanford Stadium, and Memorial Church—is on long-term loan by its owner, Margaret Burchell (left), who said she "thought it belonged at Stanford." A tradition started by Gladys Kirkman (right) in 1974, the quilting leads to a handmade prize for a lucky winner each year, with chances sold to benefit the Medical Student Scholarship Fund. Burchell, who has joined in the quilting herself for the past eight years, spends only winter quarters at Stanford, while her husband Howard serves as a visiting professor in cardiology. At a reception last week for the association, Sheldon King (above), director of SUH, and Jeanne Kennedy, director of community relations, thanked Burchell and the group for their continued generosity and support. The 1983 quilt will be ready this month, with the drawing to take place May 13. Tickets will be sold May 8-13 in the hospital lobby, and at other locations to be announced.

Please register by today: for the Behavioral Medicine Program's 10-week workshop on starting and maintaining a regular physical exercise regimen. For further information or to register, call 497-7340.

Div. of Child Psychiatry Grand Rounds: "Treatment and Research at Stanford"—Dr. William Dement. 11 a.m., central conference room, Children's Hospital at Stanford.

Div. of Family Medicine: "Women's Health Movement"—Sheryl Ruzeck, M.P.H., Ph.D. (UC-Berkeley and UCSF). Noon till 1 p.m., M114.

Pediatric Grand Rounds: "Giardiasis"—Dr. William Liebman (Children's Hospital at Oakland). 8 a.m., M106.

Dept. of Gynecology and Obstetrics Grand Rounds: "Adolescent Pregnancy"—Nancy Moss, Ph.D. 8 a.m., A336.

Nursing Educational Services workshop: "Nursing and Anthropological Research: More than Passing Meds in the Congo." 8 a.m. till 4 p.m., Peninsula Covenant Church, 3560 Farm Hill Blvd., Redwood City. For further information, call 497-7062.

MONDAY, APRIL 18

Dept. of Medical Microbiology Seminar: "Plasmid Mediated and Temperature Regulated Surface Properties of *Yersinia Enterocolitica*"—Dr. Ralph Martinez (UCLA). 1:15 p.m., M114.

Registration deadline: for "Ethical Issues in Clinical Practice" sponsored by Friends of Nursing and Nursing Educational Services. To be held May 5 at Rickey's Hyatt Hotel. A fee is charged. The conference, which begins at 8:15 a.m. and includes lunch and a wine and cheese reception, will continue until 6:30 p.m. For further information or to register, call Carole Kidder at 497-6366.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Tinnitus and Tinnitus Therapy"—Dr. F. Blair Simmons and Holly Hosford-Dunn, Ph.D. 7:30 a.m., R117.

APRIL 18 and 19

Nursing Educational Services and Human Resources Development: "Writing for Professional Publication in Health Care." Hoover Cottage Lounge. For further information, call Carole Kidder at 497-6366.

TUESDAY, APRIL 19

Dept. of Structural Biology Seminar: "Actin Assembly"—Dr. Albrecht Wegner (Institute for Physiological Chemistry, West Germany). 4 p.m., Fairchild Bldg., D102.

Dept. of Biochemistry Colloquium: "Membrane Proteins Involved in Cellular Cholesterol Metabolism"—Richard Anderson, Ph.D. (Univ. of Texas). Noon, M316.

Div. of Orthopedic Surgery Grand Rounds: "Prevention of Spastic Paralytic Dislocated Hip"—Dr. Vicki Kalen. 8:30 a.m., M114.

WEDNESDAY, APRIL 20

Medical Center Auxiliary Volunteer Orientation. 9:45 a.m., W001. For further information, call 497-6636.

THURSDAY, APRIL 21

Dept. of Pathology Research Seminar: "The SOS Signal Generated by Miscarriage of mini F Plasmid"—Dr. Raymond Devoret (Gif Sur Yvette, France). 4 p.m., M104.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear.

Teller hails Reagan defense initiative as turn toward assured survival

President Reagan's March 23 speech may mark a historic turning point from "mutually assured destruction to mutually assured survival," according to Edward Teller, senior research fellow at Stanford's Hoover Institution.

A physicist who played a central role in development of the hydrogen bomb, Teller believes Reagan's decision may rank in importance with President Roosevelt's 1939 decision to proceed with the atomic bomb.

Teller spoke with the President a few months ago and "very strongly" urged this basic shift in research emphasis from offense to defense. He was among those at the White House the evening of Reagan's talk.

"What the President has said, in my hearing, is that the threat of retaliation has prevented war. As a solution of indefinite duration, this will not do. We must look for a real defense.

"And I," said the President, "am ordering research on real defense, as best we can do it. And that, of course, includes against ballistic missile attack, but it includes defense against every other kind of possible attack. It has a component of space, but it has many other components."

Telephone interview

In a telephone interview on campus, Teller said the President's talk marks a "very broad" shift in emphasis of "what we do to prevent war. . . ."

"It is incomparably more practical than what we have today. . . .

"An equilibrium based on the balance of terror is inherently unstable," Teller said. "An equilibrium based on impregnable defense is inherently stable.

"No defense is impregnable. But the Soviets are inherently cautious." Improved defense will make them more reluctant to attack. "By the time we have defenses they probably can't overcome, then we're practically safe," he added. This could take years to achieve.

Switching from offense to defense in research was a gradual process of change which took "roughly 25 years" in Teller's own mind. The change was based on "an accumulation of technical information, much of it secret."

The main point always has been which was more effective. "In the antiballistic missile (ABM) debate of the late 1960s, I believed that defense was still more expensive than offense, but only marginally so," Teller said. "But the chance of a turnaround (then) was great enough (that I thought) we ought to pay serious attention to the ABM.

"In the meantime, younger colleagues produced really splendid ideas—at least half a dozen excellent proposals. I consider it practically a certainty that one—or possible two, three, or four (ideas)—will work out to give defense a predominant position."

Simple common sense

What the President said was "simple common sense," and may attract highly qualified young research talent.

"I believe that people who got used to the idea that defense (against nuclear attack) is very difficult, if not hopeless, will not change their minds.

"To change (your) mind is not easy. You have to get thoroughly familiar with new proposals. You have to question, experiment.

"The more I looked, the more (the ideas) stand up, the more they appear to be substantial and promising."

While the President sought no additional funding, Teller said, basic research "costs little enough to provide for (this change). . . ."

"When research yields enough results so that one begins to think seriously about deployment, additional money will be needed. By that time, the proposals will be much more solid." Current treaties permit research but not deployment of new ABM systems.

"My hope is that by the year 2000 of the money spent for strategic purposes, 95 percent will be on defense and 5 percent on offense," Teller continued. "This will be the best insurance to avoid war. Under those conditions, the Soviets would be bound to follow suit."

Cooperate with allies

The U.S. should cooperate closely with its allies. "Where we can help each other is not sufficiently emphasized," Teller said.

"I'm very definitely for sharing (new defensive) technology with our allies.

"To be so sure of ourselves to share (the technology) with our opponents is something I may hope for, but it is in the distant future.

"Sometimes we look at the Soviets as people who don't understand technology. We should look at them as people who have concentrated their technology on military purposes. We too often underestimate them.

"If the Soviets were willing to fully reciprocate, that would be wonderful. But how many think they will?

"If the Free World becomes strong by emphasizing defense and cooperation, we might gain strength so that the children of the present Soviet leaders might genuinely want to cooperate.

"If the desire is mutual, the proposition is very much worth discussing."

Questioned about recent government efforts to apply export arms regulations to academic activities, Teller said: "I would not like to see government regulations applied to conferences, travel, papers, or publication independently of classification. I know some things have to be classified. . . .

Conference safeguards

"I do not favor indiscriminate conference going with people against whom we have objections." It is quite appropriate, for example, for psychiatrists to object to conferences with the Soviets when psychiatry is applied for purposes of torture. Similarly, physicists may decide that so long as Sakharov is mistreated they may withhold invitations or refuse to attend conferences with the Soviets.

"I like to see scientists decide (these questions) for themselves," Teller said.

At a recent international conference he attended on the prevention of nuclear war "the Soviets sent along an uninvited man who was clearly KGB. No other country sent a single person who was not invited."

The KGB man advised Soviet colleagues what to do and what not to do. "We should not close our eyes to irregular behavior" of this kind, Teller said.

Blood Bank drive at GSB Tuesday

The Stanford University Blood Bank will hold a blood drive from 11 a.m. to 4 p.m. Tuesday, April 19, in the downstairs lounge of the Graduate School of Business.

Faculty and staff are urged to donate blood and, whenever possible, to announce the drive to students and colleagues.

Demand for all blood products is high—Stanford Hospital and Children's Hospital use more than 100 units of blood each day.

Letters to the editor

Separate weapons work, UC proposal

Editor, *Campus Report*:

President Donald Kennedy's remarks concerning the controversial weapons-related research at SSRL (*Campus Report*, April 6, 1983) deserve some response.

Kennedy points to the grave difficulty involved in making a judgement as to the desirability of certain research based on the presumed end use, particularly in the case of such a broadly written and extensive proposal as the one in question. Kennedy states: "A careful reading of the proposal reveals that in fact a wide variety of work. . . is to be conducted. . . " And he goes on to point out that this "demonstrates clearly just how tricky and difficult it is to judge end use."

It would be unwise of me to suggest the President Kennedy is politically naive in these matters, but in the face of these statements it is difficult to avoid that conclusion. Surely he understands that the unnecessary and artificial collaboration between the nuclear weapons laboratories and the University of California has from the first been intended to create exactly this "tricky" situation. After all, as the proposal clearly states, the institutions represented in the collaboration "have over three thousand researchers who could potentially benefit" from the use of this facility. That is, there are about 50 times the number who could conceivably be accommodated.

And surely nobody is going to suggest that the nuclear weapons laboratories, with a combined budget around the one-billion level, needed to form a collaboration with the University of California to gain access to the $1 million which is their share of the $6 million budget.

The fact that the weapons work is embedded in the midst of a wide range of experiments in general science is clearly intentional. In fact the scientific proposal carefully avoids any mention of weapons-related work altogether. This presentation was very evidently designed to provoke precisely the response that President Kennedy has presented.

The main proponents, the people involved with the nuclear-pumped, x-ray laser work, were well aware that if they presented their proposal openly and separately it would not be "tricky and difficult" to make a judgement about the social benefit of that research, and their application would be rejected. Every knowledgeable person that I have spoken to who has experience with the politics that surround this particular proposal understands that very well. The collaboration with the University of California is a Trojan horse.

Given these facts one can suggest that there is a way to make the judgement in this case easier: the University can require that the artificial juncture between the weapons laboratories and the University of California be separated for clarity. The weapons laboratories should be required to present their proposed work by itself, with the understanding that any work not specifically outlined in the proposal may not be carried out without further application.

It seems to me that this step is in any case required to conform with the 1971 "Statement of Principles Concerning Research," which requires that research decisions be made "based on the scholarly and educational merits of the proposed research. . . " It would not, I think be "tricky and difficult" for the University to make a judgement as to the scholarly and educational benefits of a program of "development of a number of. . . fast response detectors to characterize absolutely the intensity, time, and energy distribution of weapons-generated x-rays," which is what the Livermore Laboratory told the Department of Energy was the purpose of this proposal.

In any case, where a research proposal is so widely different in content from the information provided to the funding agency I would think that the University should require some clarification before proceeding with a review. To do otherwise is to put the University in the position of a collaborator in an act of deception.

Affordable housing top staff concern

Editor, *Campus Report*:

I was amazed to read, in the Staff Task Force Report published in the Feb. 16 *Campus Report*, that parking is the staff's No. 1 gripe.

Personally, I think that housing, and salaries woefully inadequate to cover it, are the No. 1 concerns of staff, along with treatment of staff as third-class citizens.

Faculty are lured here with generous housing subsidies; students are provided with subsidized housing on campus. Staff, on the other hand, who make up 85 percent of the work force, get no help at all (other than the housing ads in *Campus Report*) in either locating affordable housing or paying for it—except for top-level management, who obviously need help the least.

This sorry situation seems to exemplify the University's attitude that staff are third-class citizens—definitely more expendable than faculty or students. Stanford has already failed, in too many cases, to attract and retain top-notch staff due to the salary/housing dilemma. Prestige doesn't pay the rent.

As for the proposed Stanford West project, it may well be another case of too little too late. The average price of a unit at Stanford West, according to the March 23 *Campus Report*, would be $125-130,000. What staff member could afford that, except those who already own houses?

How could the many single staffers afford such a price? And how much competition for the much-vaunted "BMR" units, if built, would there be? Wouldn't subsidized faculty immediately have the advantage? Even the average rental unit at Stanford West would require an income of $32-33,000, which again presupposes two incomes.

The University's mission is obviously education and research, but without the underpinning of a consistent, high-quality, motivated staff, the effectiveness of this mission is eroded and diluted, as I think it already has been.

If Stanford truly cares about the morale and productivity of its staff, I suggest that helping us find a place to live is more important than finding us a place to park.

Julia Sommer
Staff, Department of Music

Summer institute in microcomputers brings teachers better jobs quickly

Despite the fact that many teachers cannot find jobs, school districts today are suffering from an acute shortage of computer educators. "I have no trouble placing computer teachers. They are in high demand," says Mary Beth Robinson, coordinator of the Stanford Teacher Education Program.

Educators seeking to prepare for these positions find help at the summer Institute on Microcomputers in Education at Stanford University.

"I got the job!" says Meg Self, a former second grade teacher who attended the institute last year. She now teaches computer science at Bret Harte Middle School in San Jose.

"I wouldn't have been rehired if it hadn't been for my computer training. The administration is impressed with my knowledge. More important to me is the fantastic response from the kids."

When Joan Schreiner came to Stanford last summer, she had taught pre-school and kindergarten for 22 years and knew nothing about computers. After attending the institute's program she said, "I am suddenly viewed as an expert."

At the Stanford Institute, Schreiner had extensive hands-on experience with programming and word processing. She also learned how to set up and run a computer center and about the future of computers in education.

Now, besides using computers in her kindergarten class at the University of Chicago's Laboratory School, Schreiner conducts workshops for other teachers.

Schreiner and Self are typical of the graduates of the institute. Most institute attendees have no special background in computers or math.

Follow-up studies of those who attend the institute show that they have started innovative programs and teacher training programs all over California and the nation.

"Last summer's participants are a dynamite group," says Jeff Levinsky, one of the institute faculty. "They have been effective far beyond what any of us had even hoped for."

Ken Sakatani, an art teacher in San Mateo, views the institute as the "catalyst which got me involved with the uses of computers in my own field. It was more than just programming. Through field trips and guest speakers, it made me aware of the important overall issues of the educational uses of computers."

Another institute graduate, Jackie Meyer of San Francisco, has been appointed to the policy board of the San Francisco Teacher Education and Computer Center. The TEC Centers were established by Governor Brown in 1982 to improve the quality of instruction in math, science, and computers.

The institute receives major support from computer manufacturers including IBM, Apple, and Radio Shack. Lectures and tours by leading figures from California's "high tech" Silicon Valley and observation of programs in action at Computer Tutor camps complement the hands-on activities.

More information about the institute, which starts June 27, may be obtained through the Stanford School of Education, (415) 497-2102

Seaver summarizes review of interdisciplinary major in human biology

Following is a March 4, 1983 memo to the Faculty Senate from Prof. Paul Seaver, chairman of the Committee on Undergraduate Studies concerning the review of the Interdisciplinary Major in Human Biology:

The Ad Hoc Committee to Review the Interdisciplinary Major in Human Biology, chaired by Prof. William Clebsch, made its report to the Dean of Humanities and Sciences on June 22, 1982. Prof. William Chace, associate dean, forwarded to C-US the report with the dean's endorsement on December 15, 1982.

In the course of its discussion of the report and of the Dean's covering letter C-US met with Prof. Richard Thompson, chairman of the Interdisciplinary Program, and with both Profs. Clebsch and Chace.

The Ad Hoc Committee to Review the Interdisciplinary Major in Human Biology consisted of Prof. Albert Bandura, William Clebsch, chairman, Lincoln Moses, Saul Rosenberg, and Richard Simoni. It reviewed the structure of the faculty of the program, the manner in which the faculty was recruited, the curriculum, the system of advising, and the program space and staffing.

The Ad Hoc Review Committee in recording its high regard for the program and its participants and in recommending its continuation noted that, while "the program continued to meet the needs in undergraduate education at Stanford for which a dozen years ago it was designed by several distinguished professors," nevertheless "the number of students majoring in Human Biology and the number and variety of courses that the program currently undertakes to generate have far outstriped the resources in terms of faculty and funds that are available to the program."

On the assumption that the resources available on Human Biology "are, like those of the rest of Humanities and Sciences, in a steady state," and that the program "represents interdisciplinary innovation. . .rather than an emerging academic discipline, and therefore. . .should not be developed into a Department," the Ad Hoc Committee made seven recommendations for the strengthening and reviewing of the program in the coming years:

1) that the program regard as its faculty those members of the Stanford professoriate who are committed or obligated to the program for terms of no less than three years;

2) that the program refine and adopt current plans to increase its graduation requirements by making each of the three concentrations more rigorous, more extensive, and more dependent upon reliable departmental sequences of courses;

3) that the courses developed and sponsored on an ongoing basis by the program itself be restricted to the core courses and one or two foundational courses in each of the three areas of natural sciences, behavioral and social sciences, and public policy;

4) that courses taken by majors in these three areas beyond these foundational courses be regular, reliable offerings by departments, particularly their advanced sequences of courses;

5) that the program's advising continue to be done both by student advisers and by faculty advisers, the first concentrating upon study plans and the second providing supplemental advising on course programs but emphasizing graduate study and career advising (and recommending);

6) that as long as the Chairman of Human Biology must devote heavy energies to disciplinary research and to policy planning for the program (which strikes us as entirely appropriate), authority for day-to-day administration of the program be delegated to an administrative officer; and

7) that the Associate Dean of Humanities and Sciences who has charge of Human Biology schedule a detailed review of the program's needs for staff and space at a time after current revisions of the major's demands have had their impact.

The intention of the recommendations is to make the program more rigorous and more dependant on sequences regularly offered by departments and on faculty committed to teach in the program for at least three years at a time. The recommendations themselves are not seen as binding but rather as a basis for the next quinquennial review.

The deans of Humanities and Sciences in turn endorsed the nonbinding recommendations with the exception of that which recommended "that the courses developed and sponsored on an ongoing basis by the program itself be restricted to the core courses and one or two foundational courses in each of the three areas of natural sciences, behavioral and social science, and public policy."

This recommendation, it was noted, seemed too restrictive; instead it was suggested that "the program should be able to develop and solicit 'ongoing' courses, and should in particular, be encouraged to have courses within the program that would not otherwise be offered by members of the regular faculty."

C-US was concerned that the exigencies of budgetary limitations not lead to discriminatory treatment of this program. There was some fear that the statement that the program "cannot, and should not, expect to grow" implied that the program was to be subject to some kind of "freeze" of enrollments. However, Associate Dean Chace assured the Committee that such was not the intention and that the program would not be subject to restraints other than those common to all departments and programs in these difficult times.

In the course of our deliberations Prof. Richard Thompson informed us that reforms leading to a more rigorous program had already been instituted, although it was too early to tell whether the number of majors would decline in consequence. In the light of these clarifications C-US concurs in recommending to the Senate that the authorization for the major in the Interdisciplinary Program in Human Biology be extended for a further five years.

Copies of the report of the Ad Hoc Committee and of the Associate Deans' covering letter are available from the office of the Academic Secretary.

Summary of review of Humanities Special Programs

Following is a March 15, 1983 memo to the Faculty Senate from Prof. Paul Seaver, chairman of the Committee on Undergraduate Studies concerning the review of the Humanities Special Programs:

The Ad Hoc Committee to Review the Humanities Special Programs, chaired by Prof. Peter Stansky, made its report to the dean of Humanities and Sciences on Oct. 5, 1982. Prof. David Kennedy, associate dean, forwarded to C-US the report and the deans' endorsement on Oct. 29, 1982.

In the course of its discussion of the report and of the dean's covering letter C-US met with Prof. Lawrence Ryan, chairman of the Humanities Special Programs, and with Prof. Kennedy (Prof. Stansky was on leave).

The Ad Hoc Committee to Review the Humanities Special Programs consisted of Prof. Albert Elsen, Alex George, John Perry, Peter Stansky, chairman, and Albert Gelpi and David Kennedy, ex-officio. The committee met to interview Prof. Lawrence Ryan, chairman of the program since 1973, to interview a group of students majoring in the honors program, and to formulate the report.

In addition the committee solicited the views of faculty who had taught in the program, reports from Prof. Albert Gelpi, chairman of the American Studies Program, and Prof. Herbert Lindenberger, chairman of the Comparative Literature Program, and various memoranda issued by the Humanities Special Programs office.

The Review Committee believed that "the evidence available. . .indicates a strong and lively program" which provides "an important educational experience for its students." The program has been in existence since 1947 and during the years since has provided the "incubator" under which programs, such as Religious Studies, have sheltered while developing into departments or degree-granting programs.

At the moment Humanities Special Programs is serving that function for the programs in American Studies, Comparative Literature, and Modern Thought and Literature. In particular the Committee believed that the Honors Program procedures in Humanities Special Programs "might serve as an example to Honors programs in other majors, which are often far less formal and less rewarding."

The Review Committee did have two concerns, a major and a minor. Humanities students complained that they "scarcely know one another," and the Review Committee recommended that "the students be encouraged to establish a student organization."

More troubling to the Committee was the discovery of the anomaly by which premedical students enrolled in the Honors Program are permitted to substitute for the "concentration," consisting of 40 units of work in a humanistic sub-field—e.g., Comparative Literature or Medieval Studies—the course work they have done in the premedical area.

Although the Committee could come to no final agreement on the matter, the Committee "expressed some concern that the premedical students who are Humanities majors may not be receiving instruction in a body of knowledge that is defined with sufficient coherence to qualify as a major comparable with other majors in the University."

The Deans of Humanities and Sciences shared the Review Committee's concern about the anomalous premedical "concentration" and recommended that "the program's degree granting authority be renewed on condition that the program take immediate steps to insure that the future premedical students in the program have a major in a defined humanistic sub-field."

In the course of the discussion of the Review Committee report before C-US Prof. Ryan stated that the Humanities Special Programs committee is willing to rethink the premedical option, if so instructed.

With the understanding that the Humanities Special Programs committee is willing to rethink the premedical option, C-US concurred with the Review Committee and the Deans in recommending to the Senate that the degree granting authority of the Humanities Special Programs be extended for a further five years.

Copies of the report of the Ad Hoc Review Committee and of the Associate Dean's covering letter are available from the Office of the Academic Secretary.

Procedures outlined for review of graduate programs

Following are procedures for the establishment and review of graduate interdisciplinary programs approved by the Committee on Graduate Studies Feb. 11, 1983.

1) Interdisciplinary programs are initially presented to the Committee on Graduate Studies, after having been reviewed by the appropriate school Deans and Dean of Graduate Studies.

2) If CGS approves a new program, it will recommend it to the Senate of the Academic Council. The new recommendations will designate the Dean to whom the program reports.

3) Senate approval of a new program will normally be for a period of no longer than five years.

4) All programs will be subsequently reviewed early in the fourth year of the five-year term.

5) The review is to be conducted by an independent *ad hoc* committee appointed by the cognizant dean in consultation with the chair of the program. The responsibilities of this committee are: to study the history of the program including the Senate legislative history and previous reviews; to interview faculty, staff, and students who are actively involved in the program, as well as recent graduates; to submit a written report to the Dean, including a recommendation on renewal, and (if necessary) suggestions for program modification.

6) The report will be forwarded to the program for correction of fact and general written comment. This material will be forwarded to the Dean of Graduate Studies.

7) The dean will forward the *ad hoc* committee report and the program comments to CGS. CGS will then review the report, meet the program directors, the cognizant dean, and *ad hoc* committee chairmen and recommend for or against program renewal by the Senate of the Academic Council.

8) The Chairman of the Committee on Graduate Studies will forward a summary of the *ad hoc* committee report and CGS recommendation to the Senate for final approval. The Chair of the *ad hoc* committee and the Chair of the program will be present at the Senate meeting which will consider the program, to respond to any questions the Senate may raise.

9) It is recommended that all programs on the attached sheet should be reviewed on a regular basis by the appropriate dean. Each dean is requested to submit to CGS a suitable schedule for reviewing the programs within his jurisdiction.

Phillip McLean services today

Phillip P. McClean, librarian of the Hoover Institution for 45 years, died Wednesday, April 6, at his home in Menlo Park. He was 79 years old and had been in failing health for many months.

McClean came to Stanford soon after his graduation in 1925 from Pomona College in southern California and had lived in the Palo Alto area for almost 60 years.

He was well known in local music circles, a lover of opera, and sang in the All Saints Episcopal Church choir for many years. He was also an active singer in the Fortnightly Music Club of Palo Alto.

When McClean joined the Hoover staff, its collections were housed on the first floor and basement of the Old Main, now Green Library, and rapidly filling every space that could be allotted to them. He started as an assistant reference librarian, achieved the position of librarian in 1949 and held that post until his retirement in 1969.

His wife Nancy, a daughter, Allison Lamboglia, a son, Andrew McClean and four grandchildren survive him.

Memorial services at All Saints Church are scheduled for 2 p.m. Wednesday, April 13.

The family suggests that memorial gifts be sent to the Community Association for the Retarded (CAR) or to All Saints Episcopal Church.

TV network. . .

continued from page 1

Academically qualified employees of SITN member firms may enroll as fully matriculated graduate students in the honors cooperative program at Stanford. Alternatively, they can take courses as non-registered students or simply as auditors.

Largest users

At present, the largest users of SITN include Hewlett-Packard, NASA Ames, IBM, Lockheed, Lawrence Livermore, Sandia, and SRI International.

Hewlett-Packard President John Young, a Stanford trustee, says SITN is "the only case I know of where a top-flight university has been able to increase its productivity without in any way degrading the quality of its educational program."

Every fall, about 350 students are enrolled in the honors cooperative program, more than 400 in the non-registered option, and more than 1,000 as auditors. The HCP students average 4.5 academic units per quarter; those not registered or simply auditing take about 3 units each.

Organized in 1968, SITN has a full-time staff of 15 with 40 Stanford students as part-time camera and recorder operators. The TVI technique, pioneered by Stanford Prof. James Gibbons, electrical engineering, has been used for nearly a decade.

TVI classes usually range from three to 10 students, with the optimum about six or seven. The tutor may be well versed in the subject, but this is not essential. The tutor's main function is to foster class discussion, seeing that students are encouraged to stop the video playback every five or 10 minutes, if they have a question. Students are encouraged to resolve questions through discussion among themselves, using the tutor only when they are unable to do so. Questions the tutor cannot answer are referred back to the Stanford lecturer by phone, with the explanations discussed at the next TVI meeting.

All off-campus students registered for academic credit do the same homework and take the same tests as those on campus, with grading done by the same teaching assistants.

MIT experiments

Experiments conducted by the MIT Center for Advanced Engineering Study confirm that TVI students perform at least as well as comparable students attending the same class on campus and usually better than comparable students who view the instruction remotely by TV. They also perform better than students who view the same videotapes alone, with or without a tutor.

As an MIT report noted: "The TVI methodology offers a simple, economical way of providing instruction to a large number of students scattered at a great many locations. It permits flexible scheduling of classes and does not require special experience on the part of local tutors; they only need to be good discussion leaders and have a somewhat better technical preparation than their students.

"The educational style is more informal and participatory than that of traditional classes, and therefore is likely to better fit the needs and taste of older engineers. We strongly recommend its general adoption."

MIT "really publicized what we've been doing for 10 years," Allen said. A steady stream of visitors from other institutions has come to her offices in the Durand Building at Stanford.

"The companies most important to us would like to see a consortium of the best universities develop programs, including educational material from industry and from faculty research," she noted.

Stanford President Donald Kennedy met recently with MIT President Paul Grey, University of Michigan President Harold Shapiro, and executives from IBM, Bell Labs, GE, DEC, and Hewlett Packard to discuss these possibilities.

Allen believes the new Center for Integrated Systems (CIS) at Stanford, soon to start construction with support from 19 major firms, may provide another focal point for cooperative educational efforts using TV in computer science, electrical engineering, material science, and related fields.

She's also talking with Prof. Patrick Suppes, a national leader in computer-assisted instruction, on cooperative ways in which the two technologies might be used together.

Professorial improductivity

Several years ago, Suppes told a Stanford alumni audience that unless professors become more productive they will "continue their slow slide into genteel poverty around the world." Taking his own advice, Suppes teaches 15 courses—three seminars and 12 courses taught totally by computer, on subjects ranging from Armenian to logic to music.

While science, engineering, and "hi tech" fields have become increasingly involved in using new media to meet acute teacher shortages, Allen and her colleagues also have used their talents to help students prepare video programs on women's self-defense, career planning, and other non-technical topics.

Professors in applied earth sciences, biological sciences and education are among those who have expressed interest in televising courses.

The availability of new TV studios in the Communication Department and the prospect of cable TV service for the campus and surrounding communities may enhance future programming possibilities, Allen believes.

She's also exploring possible satellite transmission of Stanford educational materials to Colorado, Texas, Massachusetts, New York, and Washington state.

At present, two of her staff members drive to 75 different Silicon Valley companies a day with classroom materials. In the future, data transmission technology might reduce this load and permit faster distribution and feedback of information from students.

Faculty oversight for SITN comes from an advisory committee. Its members are Fabian Pease, Tom Hughes, Dan DeBra, Tom Kailath, Bill Nix, Bob Kincheloe, Tom Kane, and Ken Down, Allen's predecessor as head of SITN.

Well-done lectures

Writing in *The Chronicle of Higher Education* on "The Misfortune of College Courses on Television—or Why 'Big Bird Can't Teach Thermodynamics," Richard W. Smith of the Maryland Center for Public Broadcasting suggested that "It may well be that. . .the inexpensive, well-done lecture will, with proper campus support, be more effective and more acceptable to students than all of the hoopla television today.

"It doesn't sound very glamorous to say the future of national television instruction lies in efficient course registration forms and prompt and simple means of getting study guides and library materials to the student. It is not glamorous but it is necessary if television is ever to be more than the plaything of a few enthusiasts of audiovisuals.

"The colleges must take more of a role in producing television courses, and members of the standard academic disciplines must show more interest.

"Mistakes will still be made, and the next generation of TV courses will not be perfect. However, such courses do stand a chance of being better—and even cheaper—than those that have been produced to date."

Because SITN simply transmits and videotapes regular classroom presentations by professors, its production costs are extremely low by industry standards. SITN brings about $1 million to the University in tuition and provides $1.3 million more to academic departments. The rest goes for operations and capital equipment.

—Bob Beyers

Peter Coutts Hill eligibility expands to all Academic Council, senior staff

Eligibility to own a Peter Coutts Hill condominium has been extended temporarily to all those who are eligible to live on the campus (now including those who own houses within a 15-mile radius of Hoover Tower).

Furnished models of the units will be open for viewing from 10 a.m. to 4 p.m. Saturday, April 16, and 1-4 p.m. Sunday, April 17.

The Peter Coutts Hill community, designed by the architectural firm of Fisher Friedman, consists of 140 one- and two-story condominiums. There are six floor plans ranging in size from two bedrooms/two baths to three bedrooms/3½ baths, most with dens or study lofts.

Recreation facilities include pool, spa, and clubhouse.

Construction was completed March 1, and to date 44 units have been sold. Some will be retained as rentals to be sold in subsequent recruiting seasons.

For a short period all active members of the Academic Council and senior staff will be eligible to buy at Peter Coutts Hill, whether or not they own houses nearby.

For more information call the Peter Coutts Hill sales office at 497-3649 or the rental office, 493-1471.

Ph.D. oral exams

TUESDAY, APRIL 19

Sverre C. Munck, economics, "An Energy Policy Simulation Model of the Norwegian Economy," 10:15 a.m., 414 Encina Hall. **Georgea Mohlman Sparks**, education and psychology, "Inservice Education: Teacher Attitudes and Behavior Change," 9:30 a.m., 105 CERAS. **Darrell L. Tanelian**, neurosciences, "Neurobiology of the Rabbit Cornea," 2:15 p.m., Neurobiology Library D202.

THURSDAY, APRIL 21

Michael L. Hogan, statistics, 2:15 p.m., s120. **Allyn Lea Romanow**, sociology, "Performance and Promotion: A Stochastic Model of Decision Making by Performance Evaluation," 2:15 p.m., Rm. 010C, Bldg. 10. **Sandra H. Slivinsky**, applied earth sciences, "Selective Nitride Precipitation—Reprocessing Scheme for Thorium-Based Nuclear Fuel," 2:15 p.m., Mitchell Room 350.

FRIDAY, APRIL 22

Susan Lynn Aronstein, English, 2:15 p.m., Rm. 41-F. **Adam N. Rosenberg**, operations research, "Numerical Solution of Systems of Simultaneous Polynomial Equations Using a Continuous Homotopy Method," 3 p.m., Terman 453.

Former astronaut foresees settlements on the moon, Mars in a generation

It's only a matter of time until there is a permanent settlement on the moon, according to Harrison "Jack" Schmitt, former astronaut and lunar explorer, who lectured at Stanford University Monday, April 11. Schmitt predicted that the moon settlement will serve as a base for regular travel to Mars.

The moon will serve humankind as "the ultimate radio telescope facility" and as a source of valuable minerals, especially titanium, Schmitt said. Settlements on the moon and on Mars will "help to insure the preservation of the species."

Schmitt spoke to Earth Science faculty, students, and guests in the final lecture of the Harold W. Hoots visiting lectureship series for 1982-83.

"The rocks and soils of the moon are very rich in titanium," he said, "and since it has been pulverized by meteor impact, it is already mined." Also of potential value economically are gasses such as hydrogen and helium, which have accumulated on the moon as a result of the flow of protons from the sun.

Besides hastening the age of Titanium, settlement of the moon will increase scientific and technical options in such fields as bioengineering.

The Age of Titanium may be also the Age of Biomedicine, when humans will finally learn how to prevent disease. Schmitt, who serves on the board of a medical foundation, believes "we are well on the way to a breakthrough" in the actual cure and prevention of diseases.

The former astronaut predicted that some of the young children in the audience might be among the first people to land on Mars. "Some people alive today may permanently settle on the planet Mars. The issues that still need to be resolved are political, psychological, and economic. The technical problems are already solved."

As lunar module pilot for Apollo 17, Schmitt landed on the moon in 1972. He described the Valley of Taurus-Littrow, only 4½ miles wide, surrounded by 7,000-foot mountains, where the lunar landing party watched the "earthrise."

"Imagine a valley deeper than the Grand Canyon and a blacker-than-black sky, and hanging over the southwestern rim of the valley, the beautiful planet Earth!"

"Mankind has evolved to the point where humans could live in an environment that is wholly foreign—where we can actually decide whether to return to Earth or settle permanently on Mars or on the moon."

While he "remains an optimist," Schmitt has misgivings about the U.S. Congress, in which he served from 1976 to 1982 as a senator from New Mexico. "Congress has become increasingly illiterate about the sciences," in Schmitt's opinion. "Our school systems have failed to prepare the voter—or the Senators and Representatives—to make informed decisions on scientific issues."

Consequently, Americans have made some "terrible decisions." As an example, Schmitt cited the adaptation of nuclear submarine technology to the generation of power on land.

Land-base reactors should be cooled by gas, not by water, Schmitt said. Today we have "twenty-first century reactors in 19th century power plants," according to Schmitt, who organized and directed NASA's energy programs following his space flight.

Herpes on the limbs or trunk

Persons with recurrent herpes on the arms, legs, or trunk, but *not* on the lower face, around the eyes or genitals, are urgently needed to assist in medical research. Volunteers will be paid a fee. For more information please contact:

Tony Cunningham, M.D.
Division of Infectious Diseases
Stanford University
School of Medicine
(415) 497-5908
between 9 a.m. and 5 p.m.

SUZETTE CRAFT and JIM CADENA as the Queen and King in the play within the play in *Maskarade*, a new musical set in the mid-19th century during a Jamaican Jonkonnu Festival. Performances are at 8 p.m. Thursday through Saturday, April 14-16 at the Nitery theater. There is also a matinee performance on Sunday, April 17 at 3 p.m. Tickets are on sale at Tresidder Ticket Office and at the door. General admission $4; students and seniors $2.

Don Liebendorfer dies at 82

Private funeral services were held Tuesday, April 14, for Donald Liebendorfer, who served Stanford 45 years as the first full-time sports publicity director in the country.

Liebendorfer died Thursday. April 7, at Veterans Hospital in Palo Alto following a lengthy illness. He was 82.

Survivors include his wife, Catherine, and one son, Donald, a 1961 Stanford graduate who lives in Portland.

"His integrity and dedication won him the respect of all the sportswriters with whom he came in contact," sportswriter Jack McDonald once wrote of Liebendorfer. "Above all, his information was always accurate and unbiased."

Born in New Brighton, Pa. on Sept. 8, 1902, Liebendorfer grew up in Modesto. He entered Stanford as a freshman in 1920 and remained on the Farm from then on, except for 45 months service as a Navy officer in World War II.

He served part-time as a sports publicist in the spring of 1924, when he was a senior and editor of *The Stanford Daily*. Following his retirement in 1969, he became the Athletic Department's official historian.

His 350-page book, *The Color of Life is Red*, chronicled Stanford athletics events from the beginning through the 1972 Rose Bowl victory.

Liebendorfer's 1962 press guide was judged best in the U.S. by the Football Writers of America. He was a charter member of the Helms Athletic Foundation Hall of Fame for sports information directors.

Often asked his nomination for Stanford's most outstanding athlete, Liebendorfer consistently replied Hank Luisetti, the player who introduced one-handed shots to basketball at the Stanford Pavilion, now home of the Personnel Office. The Stanford All-American of 1935-38 "was to basketball what Babe Ruth was to baseball and Bobby Jones to golf," Liebendorfer told *The Palo Alto Times* when he retired.

When it came to football, "Without any question, Ernie Nevers (0f 1923-25) was the best." Liebendorfer served for many years on the Football Hall of Fame selection committee. He also was a driving force in the construction of the press box at Stanford Stadium.

Ogden to lecture on deaf children

Dr. Paul W. Ogden, author of *The Silent Garden: Understanding the Hearing Impaired*, will lecture on "Deaf Children/Hearing Parents: Communicating Better" at 7 p.m. Monday, April 18, in Bishop Auditorium at the Graduate School of Business.

His free public talk is sponsored by the Linguistics Department and the Office of Student Affairs.

Deaf himself, Ogden received a bachelor's degree in mathematics and computers from Antioch College in 1973. That same year he was research assistant to Prof. Patrick Suppes at Stanford's Institute for Mathematical Studies in the Social Sciences. He went on to receive his M.A. and Ph.D. degrees in psychology and deafness from the University of Illinois, and is currently an associate professor of communicative disorders at California State University in Fresno.

Among his achievements, he has organized a Deaf Awareness Week in Tulare, cofounded the Central California Association of the Hearing Impaired in Visalia, Calif., and established such organizations as Youth Affairs Committee and the Oral Deaf Adults Section of the Alexander Graham Bell Association of the Deaf. His play "Come Dance With Me" received its premiere performance in 1981 from California Theatre for the Deaf in Visalia, for which he won the Ford Foundation of New American Playwrights Award in 1978.

Paul Ogden and his wife Anne

Following his talk, there will be a reception where copies of his book will be available. An interpreter will be provided.

Jobs for undergrads

The half-time positions as codirectors of SWOPSI and SCIRE, described in the March 30 *Campus Report*, are open only to undergraduates, not all students, as the article indicated.

The undergraduates share the positions with a professional staff employee; the salary is in the administrative range.

Applications are due April 20; more information is available at 497-4504.

3081 Node weekend schedule changes

Users of the 3081 Node should be aware that installation of the new operating system described in the April 6 *Campus Report* will result in an altered weekend schedule, beginning Saturday, April 30.

Presently, the system is down for routine maintenance on Saturdays and Sundays from 6 a.m. to noon. As it is necessary to use large, contiguous blocks of time for installing the MVS/XA, the downtime hours have been extended on Sundays to 3 p.m. On Saturdays, however, the system will be available starting at 9 a.m. The total number of hours that the IBM 3081 will be unavailable to users will remain unchanged.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

33725-LL (JCC:2262) FIN/MGMT ANALYST II: 7:45-5pm; position is accountable for both Mgmt & proj respon in area of computer & manual sys analysis; as sys analysis mgr, position oversees the operations of Data Control & Credit Balance which currently has a combined staff of 12 employees; as sys analyst, the Sys Support Mgr will be assigned projs such as: Test & implement new FPP computerized billing sys; integration of FPP into SUH new admitting Computer sys, select & implement new Clinic Appt Computer Sys, Ongoing Account-ability for Modifications/Enhancements of several sys; QUALIFICATIONS: BS in Computer Sci or Sys Engrg or equiv combination of edu & exp; Math, Business or MBA bkground helpful; should have extensive exp and/or training in conceptual analysis of both manual & computer based paperwork sys; able to perform flow charting, needs assessment & design of control sys; functioned in supvry position & be familiar w/ related personnel practices; good interpersonal & coordinating skills.; C07; $2113-2724.

29335-JB (JCC:3972) A-V SPEC I: Performs videotape & edit lectures, conferences, & special projs, under the direction of Asst Dir, using portable 3/4" color video eqpt; plans all aspects of mat'l to be produced, such as location scouting, lighting, eqpt set-up, & titles; supvs 40 student employees who function as camera operators & recording assistants for Stanford's Instructional TV Network w/ aid of 2 assistants; QUALIFICATIONS: basic tech & mech skills needed; 1-2 yrs exp in all aspects of video production; requires knowl of scripting, lighting, & editng tech; supvry & organizational skills needed to manage a large workload; knowl of still photography helpful; AA or BA, Communications or equiv exp; available to work hrs other than 8-5.; C05; $1670-2086.

44408-PM (JCC:2094) ADMIN ASST II: Dept Administrator; respon for mgmt of Dept's financial operations, grant & contract admin, supvn & organization of Dept's non-exempt personnel & mgmt of bldg facilities; asst Chairman w/ faculty & student affairs; liaison w/ Dean's offc, Controller's offc, etc; involved in long-term budget planning & forecasting; QUALIFICATIONS: knowl of Stanford admin policies & procedures; exp in acctg, personnel mgmt & offc admin; work independently; make decisions; ability to work effectively w/ faculty & to respond to changing financial & personnel needs; prev supvry exp required; send appl/resume to Glenna Li, Math Dept, Bldg 380 Rm 381 R2, 497-2214.; C05; $1670-2086.

SLAC

91524-JM (JCC:6638) S&E TECH - ELECTRON: TMS Unit; asst engrs in development of specialized analog & digital circuits & sys for high energy physics data acquisition; breadboard prototypes, test utilizing standard bench instrumentation & computerized test eqpt; program firmware; test; asst w/ engrg sketches, instructions to shops, field related problems, etc; QUALIFICATIONS: AA degree in electronics or equiv; 1-2 yrs exp; strong interest in development work; demonstrated aptitude for electronics.; A28; $1647. APPLY AT SLAC

91523-JM (JCC:6646) SR S&E TECH - ELECTRON: TMS Unit; asst engrg group in detailed design of new modulator, sub-booster & related sys components prior to fabrication; lab test of completed subchassis components & sys; field installaion & testing of on-line sys; field trouble-shooting; QUALIFICATIONS: AA degree in electronics or equiv; several yrs directly applicable exp on one or more of the following: high voltage, high power pulsed sys; high voltage, high power dc sys; instrumentation for precision measurement of pulsed & dc high voltage, control & protection interlocks, trigger devices, etc; exp in digital programmable controllers desirable; A34; $1901. APPLY AT SLAC

91600-JM (JCC:6646) SR S&E TECH - ELECTRON: TMS Unit; asst engrg group in detailed design of new modulator, sub-booster & related sys components prior to fabrication; lab test of completed subchassis components & sys; field installaion & testing of on-line sys; field trouble-shooting; QUALIFICATIONS: AA degree in electronics or equiv; several yrs directly applicable exp on one or more of the following: high voltage, high power pulsed sys; high voltage, high power dc sys; instrumentation for precision measurement of pulsed & dc high voltage, control & protection interlocks, trigger devices, etc; exp in digital programmable controllers desirable; A34; $1901. APPLY AT SLAC

95059-JM (JCC:2070) ADMIN ASST II: Respon for administering grad student program at SLAC; coord students assignments; maintain liaison between SLAC & various Univ depts re stipends, tuition grants, etc; administer Summer Institute Program; supv institute staff; QUALIFICATIONS: excel written & verbal commu skills w/ broad range of people; ability to coord work of others; work w/ minimal supvn; use good judgment & exercise discretion; several yrs exp preferably in univ environ; tech typing exp desirable.; C05; $1670-2106. APPLY AT SLAC

95093-JM (JCC:2562) SECRETARY III: Genl & tech typing, dictation, schedule mtgs & appts; filing; prep reports & memos generated by engrs & supvrs; inventory control of klystrons; reconciliation of physical inventory; put klystron data into computer; keep attendance records, leaves of absence & time cards of dept personnel; QUALIFICATIONs: high sch'l & business training or equiv; several yrs related offc exp; familiarity w/ data processing & computer tech desirable; knowl of acctg methods desirable; typ 60-7 s/h of 80-100.; B14; $1440-1514. APPLY AT SLAC

94636-JM (JCC:6532) LAB MECH SUPT: Respon for overall planning, organizing & initiation of work to be performed for multi-shift operation; respon for activities of 18 to 35 machinists; apply current state-of-the-art tech for machining practices & advanced machine tools in market place incl CNC & EDM; respon for reviewing & interviewing employment applications & applicants incl selection in hiring; solve personnel problems; respon for recommendation for capital machine tool acquisitions & expendable tools; consult w/ engrs & physicists; perform spot inspection; give guidance to machinists; QUALIFICATIONS: AA engrg courses bkground or equiv; extensive exp in all phases of machine shop practices & proven exp in mgmt attributes; ability to teach, guide & train; ability to provide performance appraisals, & understand & implement AA goals when applicable.; S20; $2795-3750. APPLY AT SLAC

95441-JM (JCC:8880) Civil Engineer: Design, develop schedules, write specifications, make cost estimates & coord all phases of major construction projs; inspect field work; design & evaluate change order requests; QUALIFICATIONS: BS in Civil Engrg (Structural); several yrs related exp in civil/structural designing & proj engrg; must have demonstrated ability to coord all phases of a construction proj which incl mechanical, electrical, civil/structural, specifications, scheduling & cost estimating; prior exp as a drafter, designer & checker of civil/structural projs required; prior exp in inspection & change order negotiation desirable.; C99; $2800-3800. APPLY AT SLAC

93837-JM (JCC:2462) OFFICE ASST III: Respon for ensuring delivery schedules in contracts are met; advise requisitioners on status of orders; reconcile delivery receipts; prep shipping documents, discrepancy reports, etc; monitor rentals; type & perform other misc duties; QUALIFICATIONS: high sch'l or equiv plus some exp in purchasing environ, acctg or related; knowl of purchase orders, packing slips & shipping documents; ability to work effectively under pressure; legible handwriting; effective commu; accuracy in filing & other clerical duties essential; exp in detail work; typ 35-40.; B11; $1246-1310. APPLY AT SLAC

94933-JM (JCC:7886) LABORER: TMS Unit; genl labor serv such as moving furniture, eqpt, mat'ls, etc; operate eqpt for excavation & trenching, such as jack hammers, tampers, shovel, pick, etc; may drive trucks or forklifts; may be assigned to crafts group to help & cleanup; related exp required or willingness to be trained; ability to handle some heavy type work; able to qualify for gov't driver's license.; A16; $1241. APPLY AT SLAC

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, April 19, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Nonexempt

40378-BP (JCC:2562) SECRETARY III: Serv as sec to Dir; screen calls & visitors; screening requires an intimate knowl of the Lab; screen mail & handle complex appt calendar; heavy dictaphone & word processing; able to compose memos & answer simple corresp; editing skills & statistical ability; also serv as Conference Administrator for the Lab; handle all admin matters for annual Users Conf & over the next 2 yrs 3 important International Conf which will center around the Lab; QUALIFICATIONS: typ 60; good command of written & spoken English; knowl of word processing, Wylbur & spires helpful; excel typing & transcription abilities essential; send appl/resume to K. Cantwell, SSRL, SLAC Bldg 120.; B14; $1440-1514.

33200-PM (JCC:2596) SECY II-SPEC: 50%; receptionist/sec in Neurology Dept; answer phones; transcribe patient-related dictation & corresp; typ manuscripts; sort & distribute mail; order & maintain offc supplies; maintain files; act as a float to fill in for other secs in their absence; work in clinic on a relief basis; asst Admin Assistant as needed; QUALIFICATIONS: typ 65; accurate typing & proofing a must; ability to transcribe fr tape dictation in finished form; med terminology a must; familiarity w/ NBI word processing sys helpful; send appl/resume to Phyllis Friedman, Dept of Neurology, Med Ctr C338 (497-5072).; B12; $655-687.

27051-TC (JCC:6810) SOC SCI RES ASST I: Research & clerical assistance for Sr. Fellow writing books on Soviet foreign policy & East European gov'ts; library searches; reading for content & abstracting mat'l following search; compiling & presenting data in organized, usable, visually pleasing format; offc admin, incl corresp, filing, telephones; QUALIFICATIONS: typ 50; knowl of Russian & East European langs; research exp on politics of USSR & Eastern Europe; familiarity w/ word-processing sys or ability & willingness to learn (training provided); applying lib res & writing skills as well as knowl of genl offc procedures; ability to carry out assignment w/ a minimum of instruction.; B12; $1310-1373.

33724-PM (JCC:2562) SECRETARY III: 7:45-4:30; collects, organizes & reports statistical productivity data for FPP; makes appts for supvr & reminds him of appts or other matters; performs finished form typing on corresp & reports which may require a knowl of specialized computer terminology; participates in drafting, editing, writing, and/or layout of dept'l publications; respon for purchasing offc supplies; filing; sorting mail, etc; QUALIFICATIONS: typ 60; several yrs of sec'l exp, preferably in a med computer, or acctg environ; excel command of spelling, punctuation, syntax, etc; knowl of computerized billing sys & word processing is advantageous; accurate typing; send appl/resume to Mike Bass, 525 University Ave., Suite 400.; B14; $1440-1514.

42652-PM (JCC:1747) LIBRARY SPEC I: 50%; night/wkends flexible as needed; charges out reserve books & other circulating mat'ls; prov genl informa to lib users; issues lib cards; registers patrons; monitors eligibility of the public for access to lib & for borrowing; assts w/ circulation controls based on an electronic accurity sys; interprets & carries out lib policies & procedures; prepares mat'ls to be placed on & off reserve; send out notices; files & maintains records; answer phone inquiries; collects fees & fines & maintains cash records; collects & reports statistics; QUALIFICATIONS: typ 35; ability to work w/ public in an effecient, calm, mature & always courteous manner; exp in interpreting & carrying out detailed, written procedures; phone answering skills needed; able to remain on feet for better part of the day; legible writing & good commu skills nec; lib exp is a major advantage; send appl/resume to Karen Kieffer-Gillette, Jackson Lib - GSB, Room 119, 497-2162.; B10; $595-623.

31155-PM (JCC:1747) LIBRARY SPEC I: 50%, 8-12; performs duties in Filing Unit of Catalog Dept; files in Main Catalog; validates access points; does authority work for heading changes in SUL catalogs; files in Shelf Lists which are arranged alphabeto-numerically; files in Special Collections & Reference Room catalogs; QUALIFICATIONS: typ 30; ability to maintain accuracy & to master a complex set of filing rules; ability to master the file structures of a large, complex research lib catalog; ability to master guidelines for authority work; physical ability to lift heavy catalog trays; ability to remain standing for long periods of time; desirable: prev exp in proof-reading or editorial-type work; some bkground in non-English Western European langs; exp in working w/ lib card catalogs; send appl/resume to Bob Johnson, Green Library, Room 223 (497-3152).; B10; $595-623.

39352-PM (JCC:2078) ADMIN ASST I (N): Admin Asst for Div of Plastic & Reconstructive Surgery, w/ respon to Div Chief as his assistant & executive sec & w/ respon for interpretation & application of admin policies to divisional faculty members & staff; personnel admin, incl supvn of clerical staff; prep & monitoring of div'l budgets; analysis & control of expenditures; involvement in faculty affairs, incl prep of appt & promotion papers; QUALIFICATIONS: typ 65; knowl of Univ, Med Sch'l & Hospital policies & procedures & w/ Stanford acctg & payroll sys; supvry exp desirable; commu skills both verbal & written; college grad or equiv exp; send appl/resume to Lars Vistnes, M.D., NC104 Nurses' Cottage.; B16; $1593-1671.

41741-PM (JCC:2210) ACCOUNTING ASST III: Prov financial analysis & special funds coord for Financial mgr, monitoring & reviewing receivables & payables, assisting & training staff & students when nec; prepares financial reports w/ in-house computer sys; prov detail analysis of expense activity; monitors budgets; assts w/ internal acctg & related computer sys; coord internal records mgmt for operating budget, expense activity & fund activity; assuring accurate record-keeping for permanent repository of Law Sch'l financial records; QUALIFICATIONS: several yrs exp in finance, acctg or closely related field, degree desirable but not required; exp in data processing/personal computers (Apple III desirable); BASIC, VISIALC, SUPERCALC lang ability helpful; 10 key touch; send appl/resume to Emily Chatfield, Room 113 Crown Quad (497-0352).; B14; $1440-1514.

28278-BP (JCC:2454) OFFICE ASST II: Xerox, process mail, process P.O.'s, log in & follow up; receive items ordered, check them in & distribute; file & organize files; maintain offc supplies; maintain inventory control of lab supplies; answer phones & work w/ 7 or 8 sr. staff members & lab personnel; type & learn word processing; gather time sheets; do lib serarch; QUALIFICATIONS: typ 40-45; must be organized & able to deal w/ many people; be punctual & have some exp in offc procedures; send appl/resume to Beverly Yates, AEL 107.; B09; $1130-1189.

22829-BP (JCC:2462) OFFICE ASST III: Respon for Food Serv Dept's accts payable sys; partially respon for Food Serv Dept's Meal Ticket Sys; answer phones; open & distribute mail; some genl receptionist work, etc; QUALIFICATIONS: thorough knowl of standard offc & acctg procedures; requires effective verbal skills & ability to relate effectively to a variety of people; send appl/resume to Kay Gaskin, 765 Pampas Lane.; B11; $1246-1310.

Bargaining Unit

14288-TC (JCC:7316) FOOD SERVICE WORKER III: TMS Unit; 11am-8pm; works fry station during lunch; broiler and/or saute station during dinner; grills steaks; prepares hot & cold food for table service; in afternoon helps preparation of a la carte & banquet foods; QUALIFICATIONS: cooking exp in restaurants, hotels, hospitals, or w/ a catering service required; usually associated w/ at least 2 yrs directly applicable, on-the-job exp.; A12; $6.54/HR.

24650-TC (JCC:5638) LIFE SCI TECH I: 50-75%; 4-5 days/wk; participate in proj analyzing the mitochondrial genome of maize; restriction enzyme digestion & analysis of fragments by gel electrophoresis; assist w/ prep of mitochondria for protein & nycleic acid extraction; characterize mitochondrial nucleic acids & proteins by gel electrophoresis; prep media & sterile supplies required for the above procedures for the mitochondrial working group; primary analytical procedures is gel electrophoresis using agarose of acrylamide gels; QUALIFICATIONS: genl biology-biochemistry lab exp; subcellular fractionation such as differential centrifugation; gel electrophoresis; black & white photography using a Polaroid or 35mm camera; knwol or interest in computers helpful.; A18; $7.50.

43544-AW (JCC:8890) MISC TECHNICIAN: TMS Unit; fixed term 6 mos fr date of hire; shift work; operate the tape station & all other associated peripherals under genl supvn of supvr and/or lead operator; monitor tape consoles for setup procedures; identify unusual problems; prov informa upon request; perform routine operational maintenance on all eqpt; maintain an adequate supply of computer supplies; QUALIFICATIONS: knowl of WYLBUR or an approp text editor; able to work on any of 3 shifts, & overtime as required; able to lift & carry boxes up to 50 lbs; 1 yr of direct operating exp on IBM sys running MVS JES 2; exp w/ tape lib mgmt sys preferred; high sch'l diploma or equiv edu or exp; proficient application & comprehension of English lang & arithmatic skills.; A21; $ 8.08.

Seismic graphics—movies help computers change raw data into subsurface maps

On the screen it looks like a chunk of marbelized halvah, but this computer movie represents a two-mile cube of the earth's subsurface using more than a million bits of data.

As the movie penetrates deeper into the earth, the reflection lines from different types of rocks shift to reveal buried hills, rivers, and other features.

These can be interpreted to indicate niches where oil may accumulate and breaks where earthquake faults are likely to occur.

"We can slice through the three-dimensional data cube in any direction and make a 'movie of it," says Rick Ottolini, the Stanford geophysics graduate student who developed the method.

Ottolini is a member of Prof. Jon Claerbout's Stanford Exploration Project, which analyzes the data from reflection seismology. Geophysicists obtain this data by setting off explosions on the surface of the earth and sea and measuring the sound waves that reflect off underground structures.

Claerbout pioneered the use of computers to analyze the reflections and ascertain what used to be a matter of guesswork. Ottolini's technique animates the computer-processed data.

Movie machines are a timely invention because seismic surveys have collected tremendous amounts of data. Conventional paper plots of such data can be hundreds of feet long and hard to manage.

Scan or focus

The movie machine can rapidly scan the entire data set or focus on a small area of interest. It can compare data from different locations or from other geophysical measurements.

The movies also clarify how computers transform the raw data into subsurface maps. Sometimes a program for the same data is repeated several times with slight changes. A movie made of the results is like the focus knob on a camera and helps choose the sharpest program.

One of the unexpected features of these movies are flows of texture across the screen, like droplets from a waterfall. Previously these textures were considered to be random noise in unanimated seismic images. Now the moving patterns yield more information about the data set.

Seismic graphics is in its infancy. Future machines will provide higher resolution pictures and respond more quickly to the geophysicist's needs. They will make it even easier for the scientist to control the display of data and manipulate the computations that form the images.

As Ottolini says, "Exploring the earth's subsurface is as much fun as playing a video game."—**David Weissmann**

Rental housing

HOUSING AVAILABLE

□ **Beg. June '83:** Arlington, VA, 2BR apt. fully furn., in suburban home, priv. entr., kitchen, frpl, lndry, pool mbshp. Nr. parks, tennis, shops, pub. transp. Minutes to dwntwn D.C. Long or short term rental. Call (703) 524-1513.

□ **July 28 to Aug. 29:** Lovely London hse. fully furn., Chiswick area, nr. transp. Open flr plan, new ktchn, DR, W/D, 3BR/1BA, garden. $1200/mo. Write Mrs. Jack Abramsky, 13 Van Brugh Rd., London W41 DB, England, or call 011-441-995-2747 or (415) 649-6049.

□ **Beg. Aug. '83:** Fully furn. 3BR/2BA Crescent Park, Palo Alto hse. $900/mo. Call 328-2677 (eve).

□ **Jan. to June '84:** Peter Coutts condo, 2BR, study, fully furn., pool, gar., 1450 sq. ft. Bike to campus. $1050/mo. Call (415) 493-6273 (eve or wknd).

□ **Sept. 1, '83 to end Aug. '84:** Two fully furn. Palo Alto hses, 3BR/2BA, nr. Stanf., shops, schls. Children welcome, no pets. $975 & $1125 per mo. incl. water, gardener. Call Lindzey, (415) 948-9097.

□ **Aug. '83 to July '84:** Nicely furn. 3BR apt. in Jerusalem. Good location. EXCHANGE for similar in So. Palo Alto. Call Prof. Larry Cuban, 497-1483 (day), (415) 328-6540.

□ **May 13 to July 1:** Oak Creek apt. 1BR, quiet, fully furn. Gym, pools, tennis. Call 321-0771 (eve).

□ **April 18 thru June 18:** Furn. rm, share bath, lndry, ktchn. priv. Summer optional. $200/mo. Call 493-8338.

□ **June 18 to Aug. 28 (flex):** Fully furn. campus hse, 4BR/2½BA, FR, DR, piano. Lrg. fenced yd. $1500/mo. incl. util., water, cleaning, grdnr. Nonsmokers, no pets. Call 493-8874 (day or eve), (408) 279-5683 (day).

□ **NOW:** Rustic cabin, Arnold, Ca. Highway #4 nr. Bear Valley Ski. Wooded location, fully furn., sleeps 9. Inexpensive, short-term rentals. Call 493-0997.

□ **June 13 to Sept. 5:** Lrg. furn. 2-story hse, 3BR/2BA, LR, den, lrg. ktchn, W/D, enclsd yd., cov. patio, BBQ. Nr. park, tennis, shops. 10 min. bike to campus. $900/mo. + util. Call Dekker, 321-7963.

□ **Beg. Mid-April:** Furn. studio apt., Oak Creek. 5 pools, jacuzzi, sauna, steam, gym, tennis, view, cov. prkng. Very nr. campus. Call 497-4939 (day), 857-1885 (eve & wknds).

□ **Aug. to Dec. '83 (flex):** Fully furn. 4BR/3BA hse (1BR/BA w/sep. entr. & rentable), study, FR, 2 patios, 2 frpl, AEK, W/D. 5 min. walk to campus ctr. Call Nancy Packer, 857-0908.

□ **Aug. '83 to Jan. '84:** Fully furn. Cape Cod Colonial hse in Palo Alto. 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr. schls, shops, park, commun. ctr. Prof. going on sabbat. $1500/mo. Call 325-1709.

□ **May 30 thru June 24:** Campus hse, 2BR/2BA, pool. Low rent in exchange dog care. Nonsmokers. Call 857-9438, 497-2473 (day).

□ **June 18 to Aug. 28, '83:** Fully furn. campus hse, 4BR/2½BA, FR, DR, piano, lrg. fenced yd. Will EXCHANGE for London hse/flat or RENT for $1500/mo. incl. water, util, wkly clean, grdnr. Nonsmokers, no pets. Call 493-8874 (day or eve), (408) 279-5683 (day).

□ **June 20 to beg. Sept.:** Fully furn 4BR/3BA campus hse, lrg. study, FR, LR, pool, spa. $1500/mo. incl pool serv., grdnr. Call J. Evans, 493-3695.

□ **Beg. June (3 mos. to 1 yr.):** Fully furn. 2BR/2BA hse, W/D, DW, AEK, pool, grdnr. In Los Altos. $1000/mo. Call 968-7410.

□ **NOW:** Room in spacious 2BR Palo Alto apt. Piano, ktchn facil., W/D. $300/mo. Call Julie, 858-0887 (eve), (408) 252-1822 (day).

□ **Beg. May 1 to end Aug. (flex):** Fully furn. 1BR/1BA Pearce Mitchell adult condo, grnd flr. $675/mo. incl. util. (excpt phone). Call 857-9657.

□ **Early May to end July:** Dreamy studio cottage, fully furn., nr campus. Ideal for visit. female prof. or student. $200/mo. Call Ingrid, (415) 574-6151, 9 a.m. to 3 p.m.), 323-6201 (eves, wknds).

□ **June 14 to Sept. 15:** Old Palo Alto furn. 2BR/1½BA hse; secluded garden, bike to Stanf. $750/mo. incl. grdnr + water. Call 321-4614.

□ **July '83 to June 30, '84 (flex):** Berkeley hse, 5BR/3BA, LR, DR, library, frpl w/yr. of wood, piano, 1 acre, lush grdn, auto water, grdnr, sec. system. $1500/mo. Call (415) 483-8484 (day), (415) 548-1735, eve & wknd. Will also consider xchnge for Stanf. hse.

□ **Beg. Apr. 15:** Attrac., immac. 2BR/1BA hse, all appl., carpets, lge. fenced yd. Nr. Sunset mag., 3 mi. to campus. Nonsmokers, no pets, $800/mo. incl. water + dep. Call B. Lucas, 326-7195 (day), 321-0287 (eve).

□ **June, July, Aug.:** Portola Valley exec. 4BR/2BA fully furn. hse, nr. Stanf. Walk to tennis, pool. $2000/mo. Call (415) 326-5270, 9:30 to 3 p.m., M-F.

□ **Now:** Ski cabin, so. Lake Tahoe, 2BR, frpl, color TV, phone. Adj. Nat'l Forest, walk to lake, Tahoe Keys. $120/wknd, $200/wk (5 days). Call Janine, (415) 497-2501 (day), (408) 739-3141 (eve).

□ **NOW:** Attrac. furn. hse, 2200 sq. ft., 4BR/2½BA, w/study, DR, FR, 3 car gar., patio. Incl. ktchn-ware, linens, 2 TV, grdnr. Yr. lease. Lrg. front & back yd. Quiet, safe nghbrhd. $1250/mo. Call (415) 965-1302 (eve).

□ **July 1 to Sept. 30:** Fully furn. 3BR/2BA hse, Crescent Pk, Palo Alto. Patio, grdn. Cul-de-sac. Walk to park, pool, tennis, schl. $1250/mo. Call 321-1142 or 497-4364 (day).

□ **June 15 to Aug. 15 (flex):** Fully furn. 1BR apt, piano, pool, sauna, sec. gate. 1 mi. to Stanf. Nonsmoker, female, no pets. Util. pd. $1100 for 2 mo. + refundable $200 sec. dep. Call Sheri at 858-0235.

□ **Beg. April 1:** Prof. woman or female student to SHARE furn. Sharon Hgts twnhse; patio, pool. Close to Stanf., #280. No pets, nonsmoker. $450/mo. Call 854-5893.

□ **May 30 thru June 24:** Campus hse, 2BR/2BA, pool. Low rent in xchng dog care. Nonsmokers. 857-9438, 497-2473.

□ **NOW:** Modern twnhse, Menlo Pk. 3BR/2½BA, AEK, air-cond, carpeted, lots of closet space. Walk to SRI, train, dwntwn. $1000/mo. Call 328-0606.

□ **June 7 to July 16:** Fully furn. 4BR/2BA hse in so. Palo Alto. Back yd. opens to Mitchell Pk. Call Bill, 497-1415 (day), or 494-1921 (eve).

□ **Sept. to June '84:** Sea & ski: S. of France nr. Cannes, Grasse. 16th c. 3BR stone hse, modern comforts. Call (415) 858-2590 or (415) 326-5521.

□ **July 27 to Aug. 31:** Spac. Victorian hse, 4BR/3BA, gourmet ktchn, DR, FR, lrg. yd. Nr. dwntwn P.A., Rinconada Pk, pool, tennis, libraries. Call (415) 328-6794 (eve).

□ **Sept. 1, '83 to July 1, '84:** On-campus furn. hse, 5BR/3BA, $1400/mo. or can be 3BR/2BA, $1200/mo. Nonsmokers, no pets; grdnr, water & cat incl. Call 326-3842 to 6 p.m.

□ **Late Aug. '83 to late March '84:** Campus hse, fully furn. 3BR/3½BA, guest/FR, DR, study. $1400/mo. incl. grdnr. Call 493-0777 or 497-1941 (day).

□ **Dec. 1, '83 to Aug. 1, '84:** Spacious 3BR/2BA hse; FR, new AEK, study, pool, spa; 1/3 acre in Los Altos. 20 min. to campus. $1400/mo. incl. grdnr. Call (415) 966-8242, eve.

□ **June 11 to Aug. 25, '83:** Fully furn. hse, 3BR/2BA, FR, baby grand, 2 car gar., no pets. $1500/mo., payable in advance + $200 clean. dep. Call Phoebe Rowles, 9415) 851-1940.

HOUSING NEEDED

□ **Academic Year '83-'84:** Visit. scholar, wife, nonsmokers seek medium size hse on campus. Poss. xchnge for hse in Bethesda, Md., 10 min. to NIH. Call Gurley, 857-0169.

□ **Aug. '83 to June '84:** Father and son (13) seek furn. hse or apt. while on sabbatical at SLAC. Prefer bike dist. to Stanf. Call COLLECT (602) 323-8283 (eve).

□ **Beg. June 1, 2 wks to 4 mos:** Resp. prof. cpl., married, will care for pets, plants & your home all or portion of stated period. Call Jim (415) 393-8688 (day), (415) 346-8122 (eve).

□ **NOW:** Stanf. MBA, female, seeks unfurn. 1BR apt. or cottage. Resp., nonsmoker. Secure nghbrhd. Refs. avail. Call B.J., 497-4473 (day), (408) 257-1379 eve).

NOW: Mature, prof. cpl. seek 3BR/2BA unfurn. hse within 5 mi. of Stanf. Lease for 1 yr. Nonsmoker, no children, no pets. Call 854-7162 (eve).

□ **Mid-June to mid-Aug.:** SLAC summer visitor, spouse, 2 girls (10 & 6) seek 2-3BR hse. Flex. time period. Nonsmokers. Call Lela Sarnat, 854-6805 or Meadows, (513) 871-7756 COLLECT.

□ **July to Dec. '83:** Visit. scholars + 2 children (11 & 14) seek furn. 3BR hse on or nr. campus. Call Dr. S. Levine, 497-5781 (day).

□ **Nov. 15, '83 to June '84:** Furn. hse. or apt. for cpl. with 2-yr-old girl & grandmother. Nr. shops, parks, etc. desirable. Call Gwen Bowen, SLAC Hsng. Offc, 854-3300, x3111.

□ **July, August:** 17-yr-old French woman, half way thru Baccalaureate, seeks July, Aug. home stay w/American family. Interested in exchange from American student to follow her Calif. visit. Call Gwen Bowen, 854-3300, x3111 or 321-3803 (eve).

□ **Summer '83:** Harvard Law student wants to hsesit or sublet San Francisco apt. for summer. Call Kathy, (415) 329-1136, eves & wknds.

□ **July 1 for 1 to 4 mos:** Reliable Stanf. staff seeks hsesit for summer, returning from east. Nonsmoking cpl, no children, will give xclnt care to plants, pets, hse. Call COLLECT (617) 469-2040 or write: David Mark, M.D., 20 Walnut Hill Rd., Chestnut Hill, MA 02167.

□ **Mid-June to mid-July '83:** Careful tenant English woman seeks rent or hsesit apt. or hse on or nr. campus. Staying longer than planned. Call H. Himmelweit, 321-2052 (day) or 321-8979 (eve).

□ **Beg. Aug. 1:** New Stanf. prof. seeks long term rental, 2BR apt. or hse., Palo Alto, Stanf. area. Excellent refs. Call COLLECT (617) 492-5154.

□ **June 1 to Sept. 30, '83 (flex):** English prof. on sabbat. seeks campus hse. RENT/EXCHANGE attrac hse. N. Oxford, Engl., 3BR, LR, grnd. piano, DR, fully equip. ktchn, grdn, 1 mi. to Univ. Owners at Caltech. Arr. Stanf. summer '83. Call Neville Robinson, (213) 356-4728 (day), (213) 449-0399 (eve).

□ **July 1 thru Aug. 18, '83 (flex):** Visit. prof, wife, child seek furn. 3+BR hse on or nr campus. Call Michelle or Susie, 497-2218 (day).

□ **June, July, Aug.:** Architect & wife, nonsmokers, responsible, owner of home in S.F. seek fully furn. hse in Palo Alto area. Architect. & maintenance serv. nego. for HOUSESIT. Call (415) 567-0722.

□ **Beg. Sept. 9 mos. to 1 yr.:** Stanf. Humanities Ctr. Fellow & wife seek furn. 1BR apt. nr. campus in secure, quiet nghbrhd. Call Sue Asch, 497-3054 (day).

□ **Beg. Aug. (flex.) for academic yr:** Visit. scholar, wife, 1 child seek 2-3BR furn. hse. or apt. nr campus. Nonsmokers, clean living, home-owners. Will care for plants & pets. Local refs. Call (314) 875-2858 COLLECT, eves.

□ **July & Aug.:** Resp. mature cpl, no pets, nonsmokers, former Burlingame homeowners, seek peninsula hsng. Excellent area refs. Hsesit or rent. Write Nappan, 9506 Granada Dr., Sun City, AZ. 85373 or call (602) 972-8730.

□ **Sept. 15 to Mar. 31:** German prof, wife, 15 yr. old son, nonsmokers, seek furn. hse, 2-3BR on or nr campus. Call History Dept. Chrman. James Sheehan, 497-2651 (day), 321-7536.

□ **June thru Aug.:** Visit. prof. needs 4BR/2BA furn. hse. Call Veinott, 497-4094 (day).

□ **Sept. '83 to Dec./Jan. '84:** Visit. prof. with 2BR hse in Rhode Is. seeks to rent or EXCHANGE furn. 1BR apt. or small hse. in Stanf. area. Write or call: R. Marsh, Sociology Dept., Brown Univ., Providence, RI 02912, (401) 272-0197, AM or after 6 PM.

□ **June 1 to Aug. 31 (flex):** Visit. profs. need 2BR furn. apts. or hses to rent or sit for 1 or 2 summer mos. Nonsmokers, Stanf. refs. Call COLLECT (201) 232-4913.

□ **May 7 to Aug. 1; June 17 to Aug. 21:** Institute for Humane Studies needs furn. apts. for visit. profs. Nr. Stanf. Call Pat Dunbar, 323-2464, 7 AM to 3:30 PM.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

New England Ragtime Ensemble to play works by Scott Joplin, Eubie Blake

The Grammy Award-winning New England Ragtime Ensemble will perform at 8 p.m. Saturday, April 23, in Memorial Auditorium under the auspices of the Lively Arts at Stanford.

The program will feature works by Scott Joplin, Eubie Blake, Jelly Roll Morton, and others.

Formed in 1972 at the New England Conservatory by then-president Gunther Schuller as part of a Romantic American Music Festival, the Ragtime Ensemble has been an instrumental part of the recent Ragtime revival.

Their repertory has expanded from the eight pieces by Scott Joplin originally recorded for the Festival, to include works by other ragtime masters and early jazz greats. The Ensemble now has three recordings and hundreds of performances to their credit.

The ensemble has played at the Tanglewood, Blossom, Ravinia, Ambler, Wolf Trap, Meadow Brook, and other summer festivals, at major universities and arts centers coast to coast, and at Lincoln Center, Carnegie Hall, and the Kennedy Center.

They have been featured in two public television specials, and have made two European tours, in addition to appearances at the White House and at the Inauguration of President Carter.

In 1978, they took a month-long State Department-sponsored tour of the Soviet Union.

The 17 ensemble members who will play at Stanford all have graduated from the Conservatory and are pursuing careers as freelance musicians.

For ticket information, call Tresidder Ticket Office, (415) 497-4317, BASS, and other Bay Area ticket agencies.

Bernstein to talk on industry ties

"The University and Knowledge: Who is Served? The Relationship of the University to Defense, Industry, and Economic Growth" is the subject of a lecture by Prof. Barton J. Bernstein, history, at noon Tuesday, April 19, at Bechtel International Center.

The talk is one of a series planned by the International Center, with those during spring quarter addressing the responsibilities of the academic sector toward world conflict and poverty, among other issues.

Bernstein received his bachelor's degree at Queens College in New York and his Ph.D. at Harvard. He taught at Queens College and at Bennington College before coming to Stanford, where he has received the Dean's Award for Excellence in Teaching.

Luncheon tickets are available at a cost of $2.50 one week before the event at the I-Center office or at the door as they last. Brown baggers are also welcome at no charge. For more information about this and other programs please call 497-1831 or stop by the I-Center.

Michels to open geothermal talks

The Stanford Geothermal Program seminars will be held at 1:15-2:30 p.m. Thursdays in Room 113, Mitchell Building. The schedule follows:

April 14—"Carbonate Chemistry in Geothermal Wellbores" by D. E. Michels of Republic Geothermal.

April 21—"Pressure Transient Analysis of Reservoirs with Linear or Internal Circular Boundaries" by A. Sageev of Stanford University.

April 28—"Reinjection Testing in 1982 in Svartsengi, Iceland" by J. S. Gudmundsson of Stanford.

May 5—"Production Decline Caused by Deposition in Wellbore" by E. E. Granados of Stanford.

May 12—"Volcanic and Seismic Hazards in Geothermal Areas" (tentative title) by C. G. Bufe of the U.S. Geological Survey.

May 19—"Deep Drilling into the Salton Sea Magma-Hydrothermal System" by W. A. Elders, UC-Riverside.

May 26—"Evolution of the Geothermal System in the Lassen Volcanic National Park Area" by S. Ingebritsen of Stanford and M. L. Sorey, U.S. Geological Survey.

Hart to deliver Zale lecture

U.S. Senator Gary Hart, Colorado Democrat, will give the third annual Zale lecture at 7:30 p.m. Friday, April 22, in Kresge Auditorium at Stanford.

Sponsored by the School of Humanities and Sciences, his free public talk will concern "Arms Control: The Ultimate Issue."

Founder and cochair of the Congressional Military Reform Caucus, Hart served as Congressional adviser to the SALT II negotiations. He is the author of policy initiatives on "The Case for Military Reform" and "A New Arms Control Agenda," among others.

He is a member of Senate Committees on Armed Services; Budget; and Environment and Public Works.

The Zale lectureship was created by gifts from a Dallas family in honor of Morris and Edna Zale, founders of the nationally known jewelry firm.

Tsongas speaks on arms race

Senator Paul Tsongas, D-Mass, member of the Senate Foreign Relations Committee, will speak on "The Importance of Public Involvement in Arms Control" at 12 noon Monday, April 18, in Terman Auditorium.

Tsongas is among the leaders of the opposition to the nomination of Kenneth adelman for director of the Arms Control and Disarmament Agency. Last year, Tsongas called for the resignation of Edward Rowney, U.S. ambassador to the START talks, and has successfully led the effort to have the Rowney memo released. He describes the INF talks on missles in Europe as a battle for the hearts and minds of the Europeans.

Tsongas was a vigorous proponent of the SALT II Treaty on the Senate floor. He was an original cosponsor of a freeze resolution in the Senate last year, and he calls for a negotiation to ban all weapons from space.

Student soloist award winners, l to r: Donna Lee, Chris Christensen, Cristina Ruotolo, and Eric Kujawsky.

Stanford Symphony, Chamber Orchestra concert features two student soloists

The Department of Music will present the Stanford Symphony and Chamber Orchestras, featuring two student soloist award-winners, at 8 p.m. Thursday, April 21, in Dinkelspiel Auditorium.

The Chamber Orchestra, under the direction of doctoral conducting candidate Eric Kujawsky, will perform Mozart's *Violin Concerto No. 4 in D Major* with violinist Cristina Ruotolo, and *Suite from Concertos 2 & 3 for double orchestra* by Handel arranged by Kujawsky.

The Symphony Orchestra, under the direction of doctoral conducting candidate Chris Christensen, will perform Chopin's *Piano Concerto in F minor* with pianist Donna Lee.

Andor Toth, director of the two orchestras, is on sabbatical this quarter.

Cristina Ruotolo is a sophomore at Stanford majoring in music. She soloed with the Palo Alto Chamber Orchestra when a senior at Gunn High School in Palo Alto, and has also soloed with the Junior Bach Festival and the Palo Alto Junior Chamber Orchestra. She studies violin at Stanford with Gennady Kleyman.

Donna Lee is a senior at Stanford majoring in Human Biology prior to entering medical school. She, too, has appeared with the Junior Bach Festival, and in 1976 was one of three winners of the San Francisco Conservatory concerto competition. In 1977 she soloed with the California Youth Symphony, and in 1976 and 1979 was the San Francisco finalist in the Young Musicians Awards Competitions. She studies piano at Stanford with Naomi Sparrow.

Kujawsky, a native of Los Angeles and a UCLA graduate, conducted the Los Angeles premiere of the *Berlin Requiem* by Kurt Weill, as well as concerts by the UCLA Symphony Orchestra and the UCLA Dance Company. Last quarter he conducted Bartok's *Violin Concerto* with soloist Andor Toth.

Christensen attended the San Francisco Conservatory and graduated from UC-Berkeley. He has conducted the San Francisco Ballet in performances of *The Nutcracker Suite*, including portions for this year's 50th anniversary gala performance. Christensen was formerly music director of the San Francisco Dance Theater and Peninsula Chamber Players.

Tickets for the April 21 concert are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door. Advance purchase of tickets is strongly advised. The Music Guild will serve refreshments.

Jerzy Grotowski, leading figure of avant-garde theater, will lecture on "Theater of Sources" at 4:30 p.m. Wednesday, April 13, in Little Theater. The lecture is open to the public without charge.

Students to give chamber concert

The Stanford Department of Music presents undergraduate and graduate students in a free program of chamber music at 8 p.m. Sunday, April 17, in Tresidder Lounge. Violin/viola teacher Gennady Kleyman, violist with the San Francisco Symphony, is coaching the students.

Their program will include a Trio Sonata by Bach; a Flute Quartet by Mozart; Beethoven's *Serenade* for flute, violin, and viola; a Schubert string trio; and Ibert's *Deux Interludes* for flute and harp.

Performers will be Dan Cher, violin; Shelley Whitehouse, flute; Alex Strong and Linda Schwetz, viola; Diane Harris, cello; Camilla Passarelli, harp; and David Achenbach, harpsichord.

Philip Glass Ensemble will feature *The Photographer* in April program

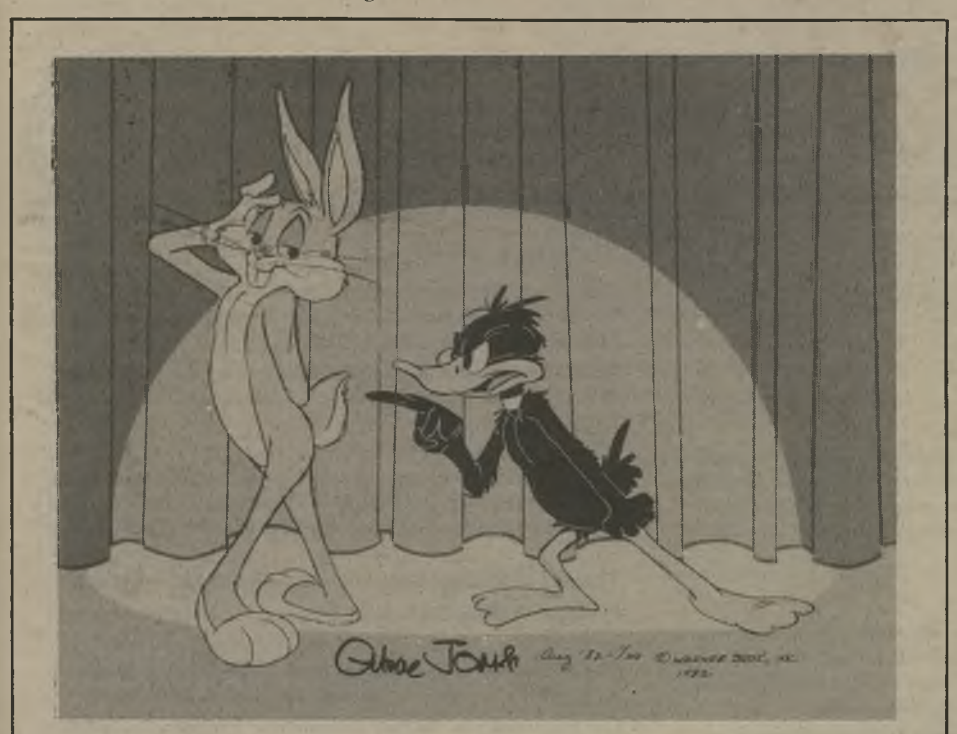
The Philip Glass Ensemble will perform at 2:30 p.m. Sunday, April 17, in Memorial Auditorium, Stanford.

The program will feature two pieces from Glass' new chamber opera, *The Photographer*, "A Gentleman's Honor" and Act III. *The Photographer* is a three-act music theatre piece about Eadweard Muybridge, a pioneer of modern photography. It debuted in June, 1982, at the Royal Palace in Amsterdam for the Queen of Holland. (A recording of *The Photographer* was recently released by CBS Masterworks.)

In addition, the program will also include "Rubric" and "Facades" from *Glassworks* (1981) and "No. 15" from *Koyaanisqatsi* (1982).

Glass, a pioneer in modern music, composes music for opera, theater, dance, film, chorus, and his own ensemble. He is a graduate of the Juilliard School in New York and has received numerous commissions and awards, including a composer-in-residence grant from the Ford Foundation, a Rockefeller Fellowship, and a Fulbright Scholarship which enabled him to study with Nadia Boulanger in Paris.

Glass' most celebrated collaboration was with noted American stage director/designer Robert Wilson on the opera *Einstein on the Beach*. *Einstein* premiered at the Avignon Festival in 1976 and went on to tour throughout Europe. In November 1976, two special performances of the work were given at the Metropolitan Opera in New York City.



Glass is a CBS Masterworks recording artist, the first composer to be offered a contract since Aaron Copland.

Glass' first film score was *North Star*, for the film, *North Star: Mark Disuvero*. He also wrote a full score for the film, *Koyaanisqatsi* which premiered at Radio City Music Hall on October 4, 1982, as a New York Film Festival selection.

Members of the ensemble include Jon Gibson, flute, soprano saxophone; Philip Glass, synthesizer; Jack Kripl, flute, piccolo, soprano saxophone, baritone saxophone; and Kurt Munkacsi, live sound mix.

Dora Ohrenstein, soprano, emulator; Richard Peck, flute, alto saxophone, tenor saxophone; Michael Riesman, piano, keyboards, bass synthesizer; and Paul Suits, keyboards, are also members of the ensemble.

The Philip Glass Ensemble is presented by the Lively Arts at Stanford. For ticket information call Tresidder Ticket Office, (415) 497-4317.

Bugs Bunny and Daffy Duck.

Original cel paintings shown in April

Original animation cel paintings of cartoon characters will be the subject of an exhibit and sale Thursday and Friday, April 14-15, in the Tresidder second floor lobby.

The sale highlights the work of Academy Award winners Chuck Jones and Friz Freleng, both veterans of the golden era of cartoons at Warner Bros.—the 1940s. Included are characters like Bugs Bunny, Daffy Duck, Tweety, Sylvester, Yosemite Sam, Mickey Mouse, and others.

The cel paintings have become a popular item for collectors.

Accidents and injuries

Accidents and Injuries Occurring During Week of Apr. 4-8

Type of Accident or Injury	Number of Incidents	Days Lost
Impact with object	1	0
Cut by sharp object	1	0
Pinched, squeezed, crushed	1	0
Lifting improperly	1	0

Raya Dunayevskaya

Rosa Luxemburg topic of lecture

Philosopher, feminist, and Marxist scholar Raya Dunayevskaya will lecture at 8 p.m. Thursday, April 21, in History Corner Room 2, on the occasion of the centenary of Karl Marx's death, and the publication of her latest book, *Rosa Luxemburg, Women's Liberation, and Marx's Philosophy of Revolution* (NJ: Humanities Press, 1982).

Her lecture on "Women as Thinkers and Revolutionaries: Rosa Luxemburg and Others," will explore the theories of Luxemburg, Sojourner Truth, as well as ideas emergent from historical events such as the 1929 Nigerian Igbo Women's War and the 1979 Iranian revolution.

Dunayevskaya, secretary to Leon Trotsky during his exile in Mexico, is the founder of Marxist-Humanist philosophy in the U.S. A microfilm edition of her Archives, "The Raya Dunayevskaya Collection," is held in the Hoover Institution. She has spoken to audiences as diverse as West Virginian coal miners and the Hegel Society of America.

The lecture, sponsored by the Stanford Program in Structured Liberal Education, is open to the public. For further information, please call 497-4205.

Raskidus Roots reggae opens STARTS series

Raskidus Roots Connection, a popular Bay Area reggae band, will open the STARTS (Student Arts at Stanford) spring series at 8 p.m. Saturday, April 16, in the Tresidder Union Lounge.

Jon "Raskidus" Cornelius drew the attention of Jamaican audiences with his hit single, "Exile Song," before charming the Bay Area several years ago with his nine-member group. Tickets are $5.

Alive!, the all-female jazz ensemble, will perform at 8 p.m. Saturday, April 23, in the Tresidder lounge.

The five women perform pop/jazz music with a feminist message on percussion, acoustic bass, piano, drums, and voice. The concert, cosponsored by STARTS and the Women's Center, will be $8.50 general admission ($6.50 with Stanford ID).

Rock guitarist **Jorma Kaukonen**, formerly of Jefferson Airplane and Hot Tuna, will appear in solo concert at 8 p.m. Saturday, April 30, in the Tresidder lounge.

Kaukonen left the Airplane in the early '70s and formed Hot Tuna with bassist Jack Cassady. After eight albums and years of performing, he launched his solo career. Tickets are $8.50 general admission ($6.50 with Stanford ID).

Tickets are available at the Tresidder Ticket Office or through BASS outlets. For more information on the series call Annie Mudge or Jean Martin, 497-9671

Baroque music concert April 16 in Annenberg

The Stanford Department of Music will present a free program of Baroque chamber music, featuring the recorder, at 8 p.m. Saturday, April 16, in Annenberg Auditorium.

Members of the trio are music graduate students Judith Linsenberg, recorder, and Patricia Halverson, viola da gamba. Accompanying them will be well-known local harpsichordist Jonathan Salzedo.

Their program will include sonatas by Bach, Handel, and Corelli; suites by Dieupart and De Lavigne; and *Daphne Variations* by Van Eyck.

Linsenberg is working toward her Ph.D. in musicology and early music. She graduated from Princeton with a degree in art history, then studied recorder in Holland with Jeannette van Wingerden and Ricardo Kanji, and baroque oboe with Bruce Haynes and George Houle.

Halverson graduated from Brandeis and is a doctoral candidate in early music. She has performed on viola da gamba, as well as a variety of renaissance and baroque wind instruments, throughout the U.S. and abroad.

Salzedo studied mathematics at Oxford and harpsichord with Valda Aveling at Trinity College in London. He was founder and director of the Albany Consort in London, where he also played with the Praetorius Consort, London Vivaldi Ensemble, Vincento Ensemble, and recorded for BBC. Currently he tunes, builds, and maintains harpsichords.

Glasgow, Dublin films at I-Center

The British Isles capital cities of Glasgow and Dublin will be featured in the Other Cultures Film Series at 7:30 p.m. Thursday, April 14, at the International Center. The two films are from the Cities of the World Film Series.

R. D. Laing, a noted psychiatrist and poet, narrates the film as he leads the viewers through "Glasgow," a city of stark, clashing contrasts of "commerce, industry, learning and people, violence and tenderness and great warmheartedness."

In "Dublin," the film director and raconteur John Huston serves as an entertaining and at times eccentric guide to the Irish capital. Says Huston of the citizens of Dublin. . . they "believe that the worst is inevitable and must be ignored."

The films are free to the public though a donation of 75 cents will be requested at the door to defray the cost of the films. Enjoy "Cafe" at the I-Center after the films for homemade pastry and coffee.

Sharp talk on reading

Dr. Stanley Sharp will address the Stanford Faculty Women's Club at 1 p.m. Tuesday, April 19, in the Meyer Library Forum Room on "Why Johnny Still Can't Read."

All members of the Stanford community are welcome.

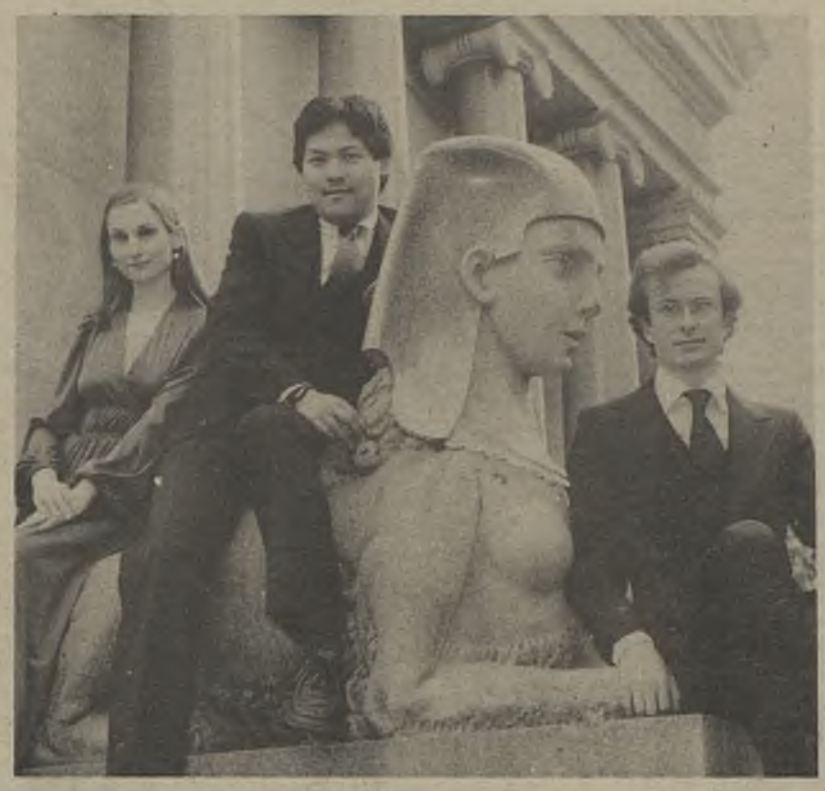
Sharp has spent 10 years in research on various methods of teaching reading, culminating in a book on his ideas on the best method.

Lydian Ensemble to present 17th, 18th Century music Tuesday in Dinkelspiel

The Lydian Ensemble will perform vocal and instrumental music of the 17th and 18th centuries at 8 p.m. Tuesday, April 19, in Dinkelspiel Auditorium at Stanford.

The ensemble's program will include works by Roland de Lassus, three toccatas for lute by Kapsberger, canzona *L'Altera* by Frescobaldi, *Lagrime mie* and *Donna maesta* by Barbara Strozzi, and songs and instrumental pieces from Elizabethan-Jacobean England by Dowland, Lawes, Robinson, Hume, and Cutting. Also on the program will be three arias by J.S. Bach.

Members of the ensemble are Randall Wong, countertenor; Margaret Panofsky, viol; and Kent Underwood, lute and theorbo. The concert is presented by the Department of Music and the San Francisco Early Music Society.



All three musicians are well-known virtuosos in the area. Wong is a founding member of the highly acclaimed vocal ensemble *Chanticleer*, which took one of the three prizes awarded to ensembles at the 1981 International Early Music Competition in Brugges, Belgium.

Robert Commanday, music critic for the *San Francisco Chronicle*, has called him "an exceptional male soprano." The *Peninsula Times-Tribune* said "his vocal control is unbelievable, covering the gamut from pure, lyric soprano to sobbing basso."

Panofsky received her B.A. in music from Stanford and an M.M. from the New England Conservatory. She has been a member of many early music groups, including the New England Consort of Viols, the San Francisco Baroque Ensemble, La Corte Musical, Consortium Antiquum, and the Arcadian Ensemble.

Underwood is currently completing his Ph.D. at Stanford in music. He graduated from the San Francisco Conservatory of Music, where he studied classical and baroque guitar with Michael Lorimer. Underwood has appeared in Italy and the U.S. with the Complesso Barocco under Alan Curtis, and also performed with the San Francisco Chamber Opera, California Bach Society, and San Francisco Contemporary Music Players. Last year he was a visiting artist at the Idyllwild School of Music and the Arts.

Tickets are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and the door.

Margaret Panofsky, viol, Randall Wong, countertenor, Kent Underwood, lute and theorbo

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., April 13, to cover the week of Mon., April 25, through Sun., May 1.

Wednesday, April 13

Department of Classics T.B.L. Webster Memorial Lecture: "Rhetoric and Passion in Latin Literature" by Michael Winterbottom of Worcester College, Oxford. 8:15 p.m. History Corner, Room 205.

MONDAY, APRIL 18

Biological Science Special Seminar: "Mechanism of Induced Synthesis of Colicin E1," by Dr. Atsushi Nakazawa, Dept. of Biochemistry, Yamaguchi University, Japan. Noon. Room T-175, Herrin Hall.

Numerical Analysis Seminar: "Calculation of Vibrational Energy Levels in H3," by Gregory Doherty, Univ. of Wollongong. 4:15 p.m. Room 380c, Math Corner.

Electrical Engineering Dept. Lecture: "Pulsar Observations Using High Speed Signal Processing," by Ivan Liscott of Stanford Univ. & NASA/AMES Research Center. 4:15 p.m. McCullough 134.

Biological Science Seminar: "Species Selection and Large-Scale Evolutionary Trends," by Dr. Steven M. Stanley, Dept. of Earth & Planetary Sciences, Johns Hopkins Univ., Baltimore, Md. 4:15 p.m. Room T-175, Herrin Hall.

CROW Symposium: "Sex, Pornography and Violence," with Susan Griffin, author of *Women and Nature* and *Pornography and Silence*; Deirdre English, editor of *Mother Jones*; and Zella Luria, visiting scholar at CROW. 8:00 to 10:00 p.m. Tresidder Union, Living Room. Free.

TUESDAY, APRIL 19

Learning About Racism Lunch Series: "Racism & the Media," by Don Gomez, former news reporter for San Jose TV and film producer. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Hall.

Stanford Art Museum Lunch Hour Tour: "American Indian Art". 12:15 p.m. Stanford Art Museum.

Music Dept. Concerts: Vocal & Insrumental Music of the 17th & 18th Centuries. Randall Wong, countertenor; Margaret Panofsky, viol; Kent Underwood, lute & theorbo. Works by Monteverdi, Rameau, Telemann, J.S. Bach, Barbara Strozzi, Piccinini. 8 p.m. Dinkelspiel Aud. $4/$2.

WEDNESDAY, APRIL 20

Stanford Art Museum Lunch Hour Tour: "American Indian Art". 12:15 p.m. Stanford Art Museum.

Biological Science Special Seminar: "Changes in Myosin Structure in Skeletal Muscle Differentiation," by Dr. Frank Stockdale, Div. of Onocology, Dept. of Surgery, Stanford Med. Center. 4:15 p.m. Room T-175, Herrin Hall, Dept. of Biological Sciences.

THURSDAY, APRIL 21

Theology & Natural Sciences Lunch Series: "Speculations on the Boundaries of Science," by Peter Sturrock, Professor of Applied Physics at Stanford. Bring a bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

Grads in Common presents: "Analysis and Interpretation: Truth, Proof and Prejudices of the Modern Mind". 3:30 p.m. Tresidder 281.

Cities in China Film Series: "Xian," a cultural history of the ancient Chinese Imperial city. 7:30 p.m. Bechtel International Center. 75 cents donation requested.

Nuclear Film Program Series: "The Leninist Peace Policy"(1982). 7:30 p.m. & 9:30 p.m. Meyer Forum Room. Free.

Music Dept. Concert: Stanford Symphony & Chamber Orchestras. Chopin - piano Concerto in F minor; Mozart - Violin Concerto No. 4 in D Major. 8 p.m. Dinkelspiel Aud. $4/$2.

FRIDAY, APRIL 22

Mathematics Dept. Lecture: "Stability of Circular Couette Flow with Variable Inner Cylinder Speed," by Prof. Paul Neitzel, Mech. and Aerospace Eng., Arizona State Univ. 3:15 p.m. Math 380-c.

Men's Volleyball: vs. Pepperdine. 7:30 p.m. Maples Pavilion.

SATURDAY, APRIL 23

STARTS & The Women's Center: "Alive," an all women's jazz quintet. 8 p.m. Tresidder Lounge. $6.50 with Stanford I.D., $8.50 general admission.

The Lively Arts at Stanford: The New England Ragtime Ensemble. Students $3 off regular price. 8 p.m. Memorial Aud. $10.50, $9.50, $8.50, $7.50.

SUNDAY, APRIL 24

The Lively Arts at Stanford: Charles Treger, violin & Andre Watts, piano. Students $3 off regular price. 2:30 p.m. Memorial Aud. $12.50, $11.50, $10.50, $9.50.

ASSU Sunday Flicks: National Lampoon's "Animal House". 7 & 9:30 p.m. Memorial Aud. $1.50.

EXHIBITS

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

The Prints of William Nicholson. Tues.- Friday 10 a.m.- 5 p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

Photos from the Barrio Assistance Program by Phillip Baca. Coffee House Gallery. April 1 - April 30.

R. Raffaello Dvorak, works on rice paper. I-Center. April 1 - April 30.

Photographs of Africa by Sylvie Cohen. Tresidder Upper Lobby, 2nd. Floor. April 1 - April 30.

Etchings by Seymour Haden. Faculty Club. April 3 May 3.

"China's Elders," PRC senior citizens photographed by members of the Stanford Community. Faculty Club. April 3 - May 3.

Early Lithography: 1803-1830. Museum, Miedel Room. April 12 - June 19.

VISITORS FROM OTHER COUNTRIES

Apr. 18: Dr. Bodo Heimann, dept. head. Institute of Mechanics. East Berlin, East Germany.
Apr. 21: Dr. Hans Leussink, former minister and board member of the Alfried-Krupp von Bohlen and Halbach Foundation, West Germany.
Dr. Chen Li, president, Hangzhou University, People's Republic of China.
Apr. 25: Group of four French defense specialists.
Group of five cross-cultural training study team; preorientation in the People's Republic of China.

For further information please call 497-1984. Maria Bun, International Visitors.

CAMPUS REPORT

Volume XV, Number 29 | A publication for Stanford University faculty & staff | April 20, 1983

Long-term job outlook called bleak

The job outlook for college graduates "appears bleak" for the rest of this decade, says Russell W. Rumberger, research associate in the Institute for Research on Educational Finance and Governance at the Stanford School of Education.

"College graduates may continue to hold a competitive advantage in the labor market, but an increasing number will be forced to accept jobs incommensurate with their level of training," he declares in a new IFG report on "The Job Market for College Graduates, 1960-1990."

In 1960, four-year college graduates earned 65 percent more than workers who only completed high school, while those who completed only one to three years of college earned "essentially the same" as high school graduates, he notes.

"Over the last 20 years, the relative earnings of four-year college graduates changed very little, declining a mere seven percentage points" in comparison with high school graduates. Most of this decrease occurred during the 1960s.

During this 20-year interval, the relative earnings of black four-year college graduates increased somewhat, but earnings of whites did not. Black college graduates improved their earnings relative to white males, but white females did not.

By 1990, more than a quarter of the mature civilian labor force and close to a third of all young workers will have completed four years of college, Rumberger estimates.

Total employment is projected to increase by 22 million between 1978 and 1990. But the share of total growth in high-level professional jobs will be lower in the 1980s (28 percent) than either the 1960s (36 percent) or the 1970s (45 percent).

During the 1980s, clerical and service occupations will account for about 40 percent of the total job growth, about the same as in the previous two decades. The remainder of total job growth will come in other occupations.

"Although educational attainments will not rise as rapidly as they did in the 1970s, employment opportunities in high level occupations will increase much more slowly than they did in the 1970s," he adds.

Frost Amphitheater will have firm, level tiers and new grass in time for Commencement in June, according to those in charge of the renovation. The old rotten wooden headers are being replaced with concrete ones which, in addition to being sturdier, will make mowing a breeze.

Faculty petition asks study of Hoover ties

Two Stanford faculty members concerned about alleged partisanship of the Hoover Institution are enlisting their colleagues' support to ask for an independent inquiry into its ties with the University by the Board of Trustees.

"The existence of a partisan research and policy organization, whether liberal or conservative, within the University raises serious questions concerning the academic independence, integrity and reputation of the University," Profs. John Manley, political science, and Ronald Rebholz, English, declare in petitions asking for the trustee inquiry and a public report.

Hoover Public Affairs Director George Marotta told *The Stanford Daily* that the Institution's "ideas are not all monolithic" and said its scholars reflect an increasing diversity of views.

Hoover Instiutution Director Glenn Campbell declined comment.

The Daily quoted Stanford President Donald Kennedy as saying the prominence of some individual Hoover fellows in the Reagan administration has created a "distorted impression of Hoover influence. . . .

"I don't think it's correct to say that somebody cannot get an appointment with Hoover unless their politics are Hoover politics."

Kennedy was out of town, so his comment could not be confirmed.

Manley and Rebholz said "the legitimacy and influence of the Hoover Institution and the causes for which it stands are immeasurably enhanced by sharing the prestige of a great university."

Rebholz seeks a Faculty Senate resolution urging an inquiry by the trustees, while Manley's petition is addressed directly to the board.

In a telephone interview Tuesday, April 19, Manley said the Hoover's "close ties" with the Reagan Administration "raise disturbing questions about whether the university is embroiled in political and partisan activities, direct or indirect,

1,500 sign petition opposing nuclear weapons testing

More than 1,500 Stanford students, faculty, and staff have signed a petition opposing "any research explicitly dedicated to nuclear weapons testing instrumentation undertaken. . .anywhere on campus, even if unclassified."

The Student Senate will be asked to adopt a similar position at its regular meeting at 7 p.m. Tuesday in the Stanford Graduate School of Business, Room 83, according to Jon Adelstein, chief organizer of the petition drive.

"It's going to pass," he said Monday. "The only question is by what margin." The Senate has 20 voting members, five of whom already are cosponsors: Peter Spivack, of the newly elected Council of Presidents, David Porter, Al Tira, Nick Gault, and Jim Steyer. Adelstein, a junior political science major from Rapid City, S.D., is an alternate member.

More than 40 supporters of Stanford Against Nuclear Weapons Research, a newly formed voluntary organization, are circulating the petitions. "We're trying to bring back the climate of the 1960s," of concern and opposition to "institutionalized militarism," Adelstein said.

"We don't want Lawrence Livermore Laboratories to start using Stanford in the same way as they have Berkeley," he added. "It's very damaging. We want to stand up to them now before they get any further."

People

Rev. David H.C. Read to deliver baccalaureate

The Rev. David H.C. Read, minister of the Madison Avenue Presbyterian Church in New York City, will deliver the baccalaureate sermon for Stanford's 92nd annual commencement.

Read, who also delivered the 1966 baccalaureate sermon here, will speak at 9:30 a.m. Saturday, June 11, on the Inner Quadrangle in front of Memorial Church.

One of America's leading preachers, Read's sermons have been published in *The Atlantic Monthly*, *The Scottish Journal of Theology*, *The 20th Century Pulpit*, *Best Sermons*, and other editions.

He is the author of 25 books, of which the latest include *The Faith is Still There* (Abingdon, 1980), *Unfinished Easter* (Harper and Row, 1978), and *Go and Make Disciples* (Abingdon, 1978).

Read has received honorary degrees from Yale, Edinburgh, Trinity, and the Japan International Christian University.

Ordained in the Church of Scotland in 1936, he served in churches there until he came to his present U.S. post in 1956. He has been the baccalaureate preacher at Princeton Seminary and at Duke University, as well as at Stanford.

The featured speaker at commencement exercises, scheduled for 10 a.m. Sunday, June 12, in Frost Amphitheater, will be Secretary of State George Shultz, on leave as professor in the Stanford Graduate School of Business.

Michelle Rosaldo Fund

Stanford undergraduates carrying out summer field research may apply for an annual award of about $500 from the Michelle Zimbalist Rosaldo Memorial Fund.

The fund honors the late Associate Prof. Michelle Zimbalist Rosaldo, who died in October 1981 in a hiking accident in the Philippines while doing field research with her husband.

The award will be granted by a committee including members of the Department of Anthropology and the Feminist Studies program at Stanford. Preference will be given to projects concerning issues in feminist thought or symbolic anthropology.

The head of the Anthropology Department will be responsible for organizing the selection committee and announcing how students may apply for the award.

Individuals desiring to contribute may send checks to the Michelle Zimbalist Rosaldo Fund, 301 Encina Hall, Stanford, Ca. 94305.

James R. Patterson

The Career Planning and Placement Center has appointed James R. Patterson coordinator of engineering and science advising.

Patterson comes to Stanford from Wentworth Institute of Technology in Boston, where he was executive director of the Massachusetts Pre-Engineering Program for Minority Students. Previously, he was department chief of human resource development for Western Electric Co., and coordinator of minority programs for the Office of Career Planning and Placement, Minority Programs, at the University of Michigan.

Patterson is a Ph.D. candidate at the University of Michigan School of Education, where he also received his master's degree. He earned his bachelor of science degree from Coppin State College in Baltimore.

He can be reached at the Career Center, 497-1782.

Renato Rosaldo

Associate Prof. Renato Rosaldo of the Stanford Department of Anthropology has received the $500 Harry J. Benda prize of the Association for Asian Studies.

Awarded biennially to an outstanding younger scholar in any field of Southeast Asian studies, the award cites Rosaldo's book, *Ilongot Headhunting 1883-1974*, as "certain to be a classic." It was published by Stanford University Press.

The award selection committee said "Rosaldo has produced among the best modern studies of hill peoples in Luzon," the Philippines. His book is "a work of literature as well as anthropology and history, beautifully written."

Rosaldo received his Ph.D. from Harvard in 1971 and conducted field research in the Philippines from 1967 to 1969, in 1974 and 1981.

Jed Dempsey

Jed Dempsey took a roundabout route to become Stanford's 23rd graduate to win a Marshall scholarship, the most prestigious academic award of the British government.

Dempsey, who in October will go to Cambridge University to study mathematics for two years, started off with the aim of becoming a tennis star.

The son of a professor of psychology at California State University, Sacramento, he was a very promising young tennis player. He persuaded his parents to allow him to go to high school in Newport Beach, where he had friends and tennis coaching contacts. They agreed reluctantly.

For much of the time in Newport Beach, Dempsey lived alone. He did well in tennis and was nationally rated in the Juniors ratings. When he entered Stanford he continued his tennis, but gradually his interests broadened. He found himself attracted to several academic disciplines, especially physics and math.

His first visit to Europe will come when he joins the other 29 Marshall winners from all across the U.S. in October for the trip to England. "They tell me Cambridge is the most beautiful university in the world" he says.

Dempsey thinks that he will eventually go into some areas of applied math or physics, or perhaps computer science. "What I am particularly interested in is extending math to systems where it is comparatively novel, such as biology."

Tennis? "Oh, I still play about once a week," he says, "but there are so many other things to do."

The successful Marshall Scholars for 1983-85, 20 men and 10 women, come from 21 American colleges or universities, and from 16 home states. Over a thousand of the outstanding students of America compete each year for the coveted awards.

Joel P. Smith

Joel P. Smith, former Stanford vice president for development, has announced his resignation as secretary of the Stanford Board of Trustees, effective June 30, for reasons of health.

President Donald Kennedy has accepted his resignation with the greatest regret.

"Stanford is deeply grateful for Joel's service, in each of its phases and in each of his roles," Kennedy said. "All of us will miss his extraordinary leadership and his grasp of the University's purposes, and we likewise all wish for his return to health."

Smith, 49, resigned as vice president for development in June, 1982. Under his leadership, private gift support for Stanford rose from $54 million in 1978 to $79 million in 1981, an all-time high.

A Marshall scholar, he joined the Stanford staff in 1965, becoming associate vice provost and dean of students in 1967. He was elected president of Denison University in 1969, but returned to Stanford in 1976 as special assistant to the vice president for development.

I.B.M. gives grants to two departments

The Stanford Departments of Chemistry and Applied Physics have received unsolicited grants of $25,000 each from I.B.M. Corp.

The grants recognize "outstanding efforts in science or engineering" of particular interest to the company. They reflect I.B.M.'s "concern about the importance of academic science and engineering to our nation and the burdensome restrictions which apply to many of the usual mechanisms for support of academic research," according to the company.

The funds may be used for the initiation of new research, the hiring of untenured faculty, the purchase of scientific equipment—except computer hardware or software—or for the development of new courses.

The grants are renewable for a maximum of two additional years.

The Applied Physics Department was chosen for the grant upon the basis of its "outstanding competence in laser optics and superconductivity research," while Chemistry was cited for its works in laser spectroscopy and molecular dynamics.

Prof. Robert L. Byer heads applied physics, Prof. John Brauman is chairman of chemistry at Stanford.

Ted Hansch's team uses super-lasers to probe atomic theory

Stanford work could lead to discoveries affecting fundamental laws of physics

BY DONALD STOKES

Working in a Stanford physics laboratory with some of the most advanced lasers in the world, a tall German-born physicist is measuring the simple hydrogen atom more accurately than anyone has ever done before.

Prof. Ted Hansch and his team, continually improving their lasers, hope eventually to reach a line width of one part in a million billions. Their present lasers are far from reaching this goal, but when they do it could lead to discoveries which profoundly affect the known laws of physics.

"Our lasers are very exciting and intriguing tools," said Hansch. "As we improve resolution and frequency range we are entering new areas of exploration."

Long noted as a pioneer in the development of the widely tunable and highly monochromatic dye-lasers, Hansch has led an ever-changing team of graduate students and visiting scholars.

The team is looking for any weak links in the fundamental atomic theory called quantum electrodynamics, which permits very precise calculations of the spectrum of the simple hydrogen atom.

"More than once, seemingly minute discrepancies between observations and theory provided the impetus for revolutionary advances in our understanding of the microscopic world of atoms and electrons," said Hansch.

"Our work has made it possible to study the spectral lines of hydrogen with much higher resolution than could be achieved with classical methods, and dramatic further improvements appear feasible."

The importance of revealing the nature of the spectrum of light sent out by the hydrogen atom is that it has inspired the laws of quantum mechanics. These laws apply to all atoms and matter in bulk, they are the ultimate foundations of chemistry, of solid state physics and even of applied sciences such as electronics.

The new types of laser beams are able to find out more about the stable hydrogen atom, with its one solitary electron orbiting round a single proton.

The goal: Lasers that will reach a line width of one part in a million billion

Theodore Hansch

In the early 1970s the pulsed "Hansch-type" dye laser was unique. It was the first laser that was both widely tunable in wavelength or color, and at the same time highly monochromatic, with a line width of about one part in 10 millions. Today, there are hundreds of these lasers in use in laboratories throughout the world.

"The narrowest line-widths are achieved nowadays with continuous wave dye lasers," said Handsch. "However such sources are not yet readily available for the ultraviolet spectral region, where some of the most interesting atomic transitions are found.

"During the past year, our group has made some important advances in the development of a widely ultrawave continuous-wave source.

"In addition to the laser, other tools and tricks are needed before the spectral lines of atoms can be studied with extreme spectral resolution.

"A principal difficulty in classical spectroscopy has always been the Doppler effect; atoms that move toward an observer appear to emit or absorb light at higher frequencies than atoms at rest, and atoms moving away appear to emit or absorb at lower frequencies.

"In a gas, with atoms moving at random in all directions, the lines appear blurred and smeared out by Doppler broadening, and important details in the shape and structure are often obscured."

Hansch has been a pioneer in the development of a number of techniques which can overcome this troublesome Doppler broadening. For this work, he has just received the 1983 Herbert P. Broida Prize from the American Physical Society. He is also sharing, with another researcher, the 1983 $5,000 Cyrus B. Comstock prize, which is awarded every five years by the National Academy of Sciences.

Two conceptually different approaches to "Doppler-free" spectroscopy have so far been used successfully. The first is saturation spectroscopy. This technique is best illustrated with the popular "Hansch-Borde" method, in which the light from a laser is divided by a partial mirror into two beams which are sent through a gas sample in nearly opposite directions. Each beam is absorbed only by those atoms which have the right velocity to be Doppler-shifted into resonance.

If the laser frequency is tuned to the exact line center, both beams can be absorbed by the same atoms, those which are standing still or are moving only sideways. One beam can then bleach a path to the other, providing a signal that is free of Doppler-broadening.

The second is Doppler-free two-photon spectroscopy. With this, Doppler-broadening can be eliminated without any need to select slow atoms, if an atomic transition is excited by two photons or quanta of light, which together provide the necessary energy, but which come from opposite directions, so that their equal and opposite Doppler shifts cancel.

An interviewer asked where there is possibly a link between the world of the atom and the infinity of the universe. Is it possible that Hansch and the rest of the worldwide network of physicists delving into the mysteries of the atom may one day link matter, energy, and time into one master law of the universe?

Hansch shrugged his shoulders. "The first extended series of atomic-hydrogen lines was found not in the laboratory but in the spectra of stars, and that was over 100 years ago. Work with the latest lasers has revealed some of the subtler features of the hydrogen spectrum.

"Discoveries in the stars and in the laboratory are in tune. Measuring the position of the spectral lines remains a significant test of the predictions of the quantum theory. The laser has become a spectroscopic instrument of unprecedented resolution."

The Stanford physicists continue to peel away veil after veil from the atomic kernel of ultimate knowledge. Notable work has been done by Siu-An Lee, Carl Wieman, Richard Wallenstein, Gert Meisel, Jim Lawler, John Goldsmith, Erhard Weber, Augustin Siegel, Philip Dabkiewicz, Bernard Couillaud, and Harald Gerhardt.

Asked the practical uses of his discoveries, Hansch said that some basic research was worth pursuing for its own sake, even though there may not be at the time any applications that are easily recognized.

"In the past, many unexpected discoveries have led to important new technologies and applications which could not possibly have been foreseen or planned by their discoverers.

"For some time Stanford was the only place in the world that had the laser tools with which to explore the atomic world more accurately. We did

Grant Barnes, executive director of UC Press, to succeed Leon Seltzer here

Grant Barnes, 50, executive editor at the University of California Press in Berkeley, has been named director of the Stanford University Press, effective Aug. 1.

He will succeed Leon Seltzer, who has headed the Press since 1956. Seltzer plans to work in copyright law after reaching normal University retirement age.

Barnes currently is responsible for planning and directing a program of 70 new titles per year, concentrated mainly in history, social science, and science.

He has organized and directed copublications programs involving more than two dozen British and European commercial publishers.

"Book for book, Stanford Press is one of the best scholarly publishing houses in the world," Barnes said. "Its list is small, only just recently moving up to 50 books per year, and specialized in relatively few subject areas.

"Most of its books are solid, traditional scholarly monographs intended for the specialist scholar. But there is widespread desire for growth and change on the part of the faculty and administration.

"Whatever we decide to do in the future, publishing by its nature is a long-term proposition. Changes will come gradually.

"We will choose some books because we believe they will prove to be seminal for an academic discipline; some partly for the opportunities they provide for beautiful design and rich illustration;

Grant Barnes

some for the light they shed on a dark corner of political practice or public policy; some for their usefulness to the general public; and many for their sheer brilliance as works of scholarship.

"Publishing is an exciting enterprise, with tangible products that have lasting value. It is the best and only method we have for validating new ideas and original research. I would like to find ways to draw the Stanford community and alumni into our work."

At the University of California, Barnes initiated new programs in sociology, political science, and economics; physical, biological and medical sciences; Asian, Latin American and East European studies; history of science, public administration, social and political theory, women's studies, and urban studies.

Announcing Barnes' appointment at a Faculty Senate meeting April 14, Provost Albert Hastorf observed that Stanford "is a forgiving institution" in hiring talent from its traditional trans-Bay rival. He expressed "every expectation" that Barnes "will build on what Leon Seltzer created and extend vigorously" the publication program.

Hastorf said Seltzer has done "an absolutely superb job" in creating a first-class Press for Stanford. "He's a true institution builder," who served as president of the American Association of University Presses in 1968-69.

Prof. Robert Hofstader, Nobel laureate in physics, recalled his efforts to recruit Seltzer from Columbia. When the two met in a New York City bar "there was an immediate reaction. . .a chemical reaction," Hofstader said, drawing laughter from his colleagues. Herb Bailey, director of the Princeton University Press, who also is nearing retirement this year, was among those recommending Seltzer.

Hastorf praised Prof. Lee Bach of the Graduate School of Business for "a superb job" of heading the national search which culminated in Barnes' selection. Others on the committee included Profs. William M. Chace, English; Walter P. Falcon, Food Research Institute; James L. Gibbs, anthropology; Thomas Grey, law; Gerald J. Lieberman, operations research, vice provost and dean of graduate studies and research; and Patrick Suppes, philosophy.

Barnes was born Aug. 24, 1932, in Ukiah, graduated from Lowell High School in San Francisco, and received his bachelor's degree with honors in political science from Berkeley in 1961.

Before joining the UC Press, he worked with C.I.T. Corporation in San Francisco and Los Angeles during 1954-60 and was an administrative analyst in the Berkeley College of Letters and Sciences, University Extension, and President's Office during 1960-65.

A charter member-delegate to the International Association of Scholarly Publishers in 1972, he has served as a consultant to the Urban Institute in Washington, D.C., and continues in this capacity with the Wilderness Press in Berkeley.

His hobbies include mountain climbing, skiing, tennis, woodworking, and long-distance running.

He married Irina Mozoroff of Kobe, Japan, in 1954. She now is manager of the Storefront Museum, branch of the Oakland Museum. She has curated many exhibits of art and archaeology and worked on archaeological sites in Greece. They have three children.

Hansch. . .

not have to go to the library to check whether anybody else had done a certain experiment before, because we knew that with our new laser we were entering a fresh area.

"Since the first simple laser in 1970 much more sophisticated versions have been developed. A full-fledged commercial system, including the pump laser, will easily cost more than $100,000."

Hansch speaks warmly of his senior colleague, Arthur Schawlow, who had to wait almost two decades for the Nobel Prize which he had widely been expected to receive back in the 1960s. Some of Schawlow's work was closely mingled with that of Hansch.

The two researchers recently discovered a fascinating fact: laser light may cool a gas to a low temperature. This may seem to be paradoxical, since an intense light usually supplies heat; but laser light, being coherent, represents a low state of entropy, or low disorder, and a state of low entropy can be made to yield a low temperature.

Hansch gave a hint as to the present line of research of the Stanford group. "We are studying what is perhaps the most intriguing transition in atomic hydrogen: that is the transition from the ground state to a metastable state, which can be observed by Doppler-free two-photon spectroscopy.

"This transition has an expected natural linewidth of less than one part in a million billions. Unfortunately, its observation requires ultraviolet laser light with a wave-length where there are still no good tunable lasers available.

"In early experiments, we employed a pulsed dye laser system with frequency doubler crystal, whose linewidth was about 100 million times broader than the atomic linewidth.

"However, during the past few months, we have made important progress toward the development of a much more monochromatic continuous wave source.

"We have kept on pursuing the hydrogen atom. It seems that there are challenging opportunities left for the next 20 years. We have made tremendous progress, but much remains to be done. One of our hopes is that as we keep improving the precision of our measurements, one day we shall again find a small discrepancy between theory and experiment.

"If that happens it will be very exciting, for nowadays physicists believe that they understand hydrogen very well, so if a discrepancy occurs, we shall all have to go back and revise the fundamental principles on which theory is built.

"It could be that we shall find quantum electrodynamics is not the ultimate answer. Maybe there is a better way of description. Of course, it is a long shot, and if it does happen there is nothing to say that the Stanford group will be the one to discover it."

Hansch was asked whether the team's work at Stanford had relevance to the ongoing research by physicists and mathematicians for a unified field theory, which will link together all the basic laws of physics into one that governs the entire structure of the universe.

"In one sense our work has relevance," Hansch replied, "because any discrepancy we may find would perhaps be a hint as to where we might look for a better unified field theory."

I never dreamed I would end up in California," says Hansch. He was born during the height of World War II in Heidelberg, Germany, and was reared in that well-known university city during the Gotterdammerung of the Third Reich. He gained his doctorate at Heidelberg, and taught there as an assistant professor till April 1970.

The following month, aged 28, he came to Stanford as NATO Fellow, to work with Schawlow.

"At that time, dye lasers, which had been discovered a few years earlier, looked as if they might become interesting tools for spectroscopy, because their color or wavelength was widely tunable, whereas earlier lasers could only operate at a few fixed wavelengths," said Hansch.

"Dye lasers pumped by a pulsed nitrogen laser appeared particularly intriguing, because they easily reached high efficiency. Unfortunately, it seemed difficult to obtain narrow line-widths from such lasers.

Hansch became convinced that it should be possible to obtain much higher spectral purity. Schawlow found Hansch's suggestions interesting and agreed to purchase a nitrogen laser for research. After months of work, the first highly monochromatic pulsed dye laser was working in time to be announced at a conference of the American Physical Society.

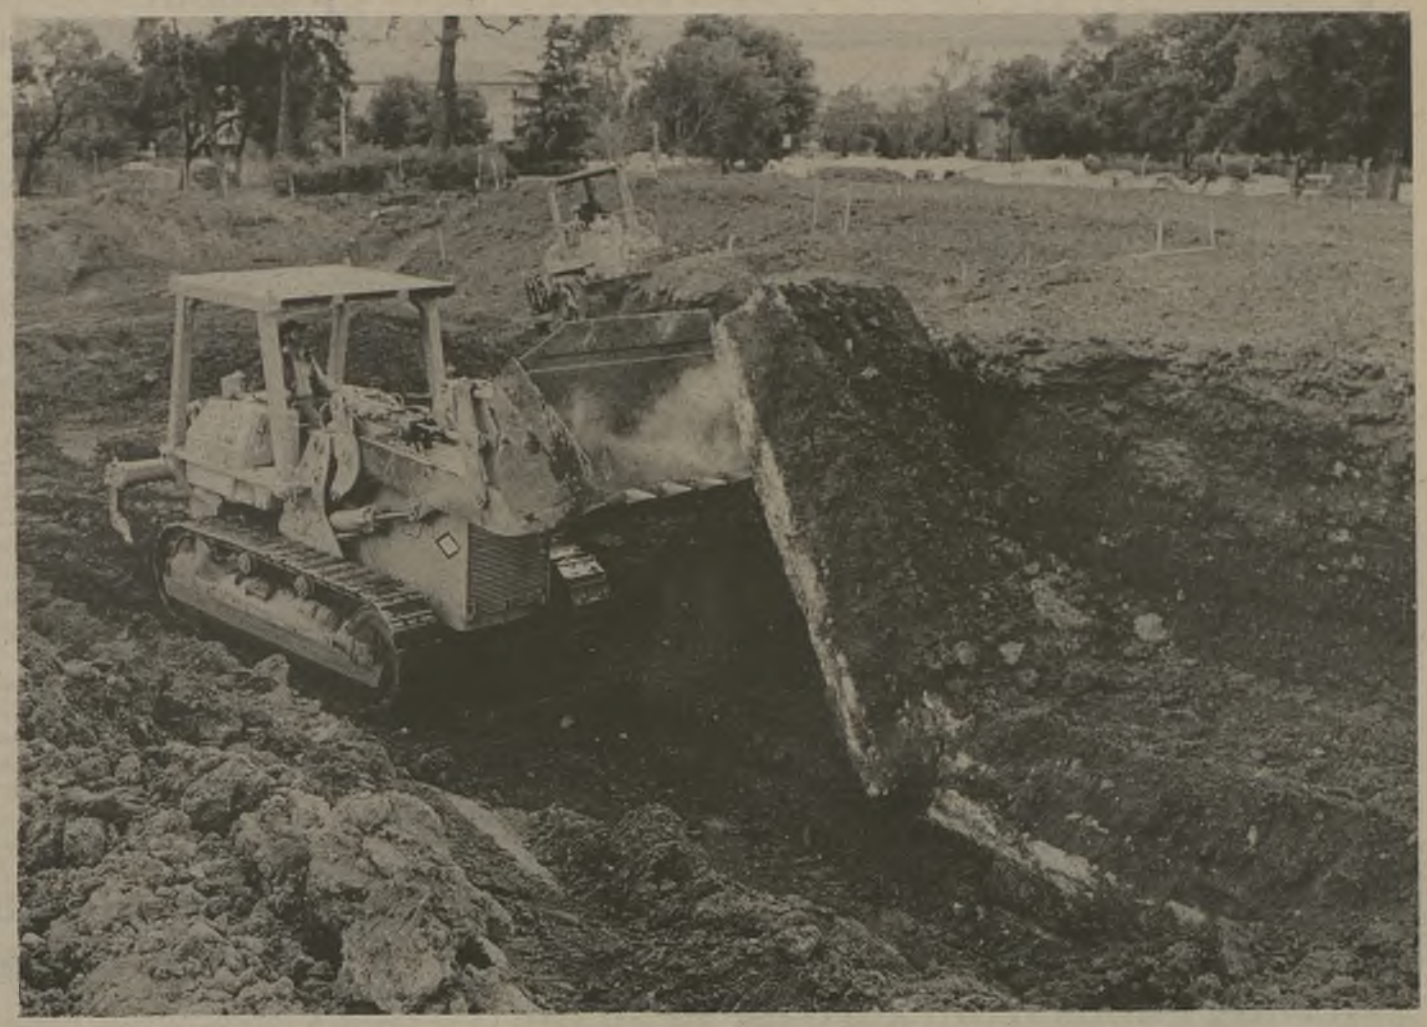
Hansch laughed: "I felt quite a bit of pressure because I had submitted an abstract before the conference. In effect, I had announced that I had done what I planned before all the results were in. You can imagine my anxiety!

"The successful results came in just before the conference opened. We were deeply relieved."

Only a year after being appointed associate professor of physics at Stanford, Hansch was named California Scientist of the Year. In 1975, at the age of 34, he was made full professor. In 1977 he was awarded an Humboldt Senior U.S. Scientist award. In 1980, he received the $17,000 Otto Klung Prize as an outstanding German physicist under the age of 40.

Hansch's new laser was soon adopted by many laboratories, and it has made possible numerous pioneering experiments in laser spectroscopy. It has also been incorporated into more sophisticated laser systems.

Hansch explained the significance of these new developments: "By these means you can tune the wavelength of the laser so that it is in resonance with some transition in an atom or molecule, and you can study the energy levels in much better detail."



Hansch predicts that the exploration of the hydrogen spectrum will continue for decades, because of the vast amount of work that lies ahead. Probably the eventual tools to accomplish all the work have not yet been conceived.

"So far all the recent findings tend to confirm the predictions of theory. It is worth remembering, however, that several major upheavals in 20th century physics were instigated by the discovery of minute discrepancies between theory and observation in this very spectrum.

"The hydrogen atom may hold surprises yet to come. On the other hand, perhaps the greatest surprise would be none at all."

Buried foundation reveals unbuilt dorm the size of Encina

Stanford's historical sleuths quickly came up with the answers to the puzzle.

Bulldozer lifts piece of concrete foundation left from an 1891 women's dormitory that was never completed. Crews discovered the old foundation while excavating the site of the Center for Integrated Systems.

Construction crews excavating the site of the soon-to-be-built Center for Integrated Systems have uncovered a bit of Stanford history: the foundation of what would have been the first women's dormitory, abandoned in spring 1891 because it couldn't be completed before the University's October 1891 opening.

The find was made April 7, according to construction manager Don Price, while workers were excavating 12 to 14 feet for the CIS basement. Price expected all the concrete to be removed by Tuesday, April 19. Crews worked overtime two weekends so the project could stay on schedule.

CIS project manager Roger Cairns sought help from University archivist Roxanne Nilan identifying the concrete bulldozers had run into.

Using 1889-91 architectural drawings by University Planner Frederick Law Olmstead, Nilan determined that contractor Howard J. White had discovered the foundation of a dormitory that would have been virtually identical in size and appearance to Encina Hall, which was the first men's dorm. The women's dorm, located near what is now Serra Street and Via Palou, would have been the same distance west from the center of the Oval as Encina Hall was to the east.

Price estimated removal of the dormitory foundation will add $15,000 to $30,000 to the cost of the CIS building. Only sections of the foundation that interfere with the new building will be removed, he added.

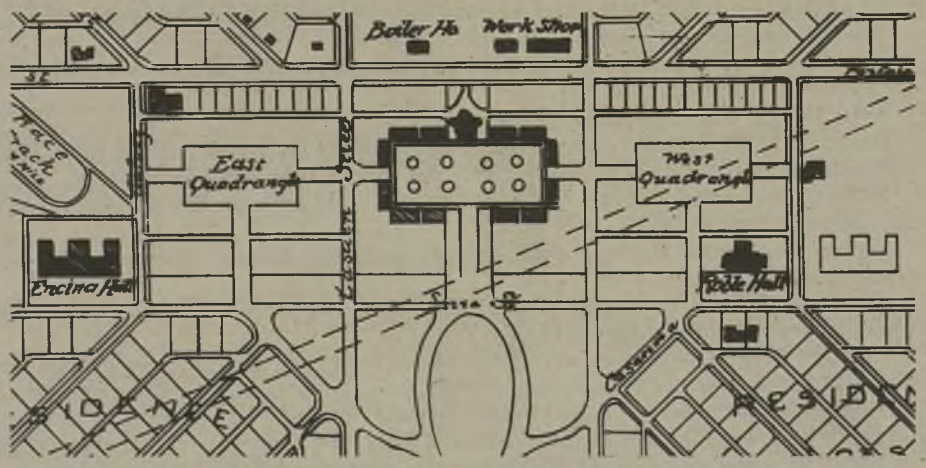
Knowing the size and shape of what they ran into has helped "appreciably" in its removal, Cairns said. "We never dreamed we'd run into something like this. Many oaks and redwoods were growing right on top of the foundation," which was six feet under the ground, Cairns said.

Building abandoned

The original dormitory, designed to house several hundred women, was planned with an 1892 completion date. It would have been about 300 feet by 70 feet in size.

Jane Stanford and the University's first president, David Starr Jordan agreed in April 1891 that construction of the original women's dormitory must be abandoned because it would not be finished in time to allow women to enter with the University's first class.

In his 1922 autobiography, "The Days of a Man," Jordan said, "It seemed to me that they (women) should be present from the beginning, so that their admittance might not appear in any sense an afterthought, or their relation that of an 'annex.' "



Thus construction began in May 1891 on a smaller women's dorm, the first Roble Hall. Because of the hurried timetable, it was built of reinforced concrete instead of sandstone. This dormitory, about one-third the size of the abandoned dorm nearby, housed many of the 142 women who, along with 417 men, attended the University in its first year.

By 1918 the number of women needing on-campus housing spurred the University into building the present Roble Hall near Lagunita. Old Roble, renamed Sequoia Hall, then became a men's dormitory. Today in a much altered form but still located on Serra Street, it houses the Statistics Department.

Construction of CIS has necessitated the move of two early University buildings. Ventura Hall, built around 1918 to house single male faculty members, is now at the corner of Campus Drive and Panama Street.

Serra House, home of the Center for Research on Women, will be moved Sunday, April 24, to be among the complex of houses on Salvatierra Street that divides the Law School parking lot. Serra House was built for $24,000 in 1923 as the retirement home of then-Chancellor Jordan. It was designed by Palo Alto Architect Birge Clark.

—Karen Bartholomew

Frederick Law Olmstead's 1889-91 plan for the University shows the Inner Quad, flanked by East and West Quadrangles that were never built. To the left is Encina Hall, the first men's dormitory, and to the right is Roble Hall, constructed quickly of reinforced concrete in the summer of 1891 so women could be admitted when the University opened in October. Next to Roble is the outline of the originally planned large women's dormitory, construction of which was abandoned in April 1891.

Ph.D. oral exams

WEDNESDAY, APRIL 20

Richard Gooch, electrical engineering, "Adaptive Pole-Zero Filtering: The Equation-Error Approach," 10 a.m., 191 Skilling.

THURSDAY, APRIL 21

Michael G. Ward, mechanical engineering, "Attitude Dynamics of the Galileo Spacecraft," 4 p.m., Applied Mechanics Seminar.

WEDNESDAY, APRIL 27

Martha S. Feldman, political science, "Information Use in Policy Making: A Case Study in the Department of Energy," 2:15 p.m., Political Science Faculty Lounge. **David Alan McCormick**, neurosciences, "Cerebellum and Learning: Essential Involvement in a Simple Learned Response," 2:30 p.m., Room D202 Fairchild.

THURSDAY, APRIL 28

Miguel Vasquez-Vega, Spanish and Portuguese, "Becquer in lo teoria y la practica e Marti en su *Ismaelillo* (1882)," 1:15 p.m., 274, Bldg. 260.

FRIDAY, APRIL 29

Robert McCutcheon, English, 2:15 p.m., 41-F. **Laura A. Wagner**, education, "Organizational Adaptations to a Control Policy: School Responses to Minimum Proficiency Legislation in California," 2:15 p.m., e114 (Education Bldg.—Cubberley).

Letters to the editor

Europe debates computers, humanities

Editor, *Campus Report*:

The campus polemic on computers and the humanities seems to have been conducted in total ignorance of the debate in European humanistic circles. Prof. Klaus Haefner of Bremen University recently published *Die Neue Bildungskrise* (The New Crisis in Education), promoting *homuter*, i.e., the humanities liberated from menial tasks by the computer.

Naturally Bremen is opposed by Hamburg, where Sigrid Muller questions the *homuter* idea. She respectfully summarizes it thus: "If our youth is to be prepared for a *homuter* society, schools must rid themselves of rational-intellectual subjects (which would be taken over by the computer) in favor of social, philosophical, and religious subjects, i.e., the humanities in general."

This does not necessarily make sense, but Stanford should be aware of this serious debate in Europe.

Ronald Hilton
Prof. of Humanities, Emeritus

. . .lift up your eyes unto the cloud

Editor, *Campus Report*:

I thoroughly enjoyed the first round of the Cohn/Barnett discourse and couldn't resist a comment.

Now the second round is completed and I think it's my turn again. . . .

Of course the two sides of this issue are so compelling because Cohn and Barnett come from two apparently diametrically opposed arenas. We'd all be much more interested in a conversation between Mae West and Pope Paul than one between Pope Paul and Billy Graham.

But what about those "two sides?" S. I. Hayakawa has chuckled at the Western mind for being so naive as to talk about the "two sides" of an issue, "as if that's all there were."

. . . This little discourse has been most entertaining to follow, but I fear we are much like children tossing firecrackers at each other in the shadow of a huge mushroom cloud which offers the ultimate challenge of the compatibility of Humanity and Technology.

I'd feel a lot better if I knew Prof. Cohn and Mr. Barnett were monitoring that cloud together.

Maggie Ranahan R.N.

Getting goods from abroad? Read on!

To import anything, Stanford must follow many rules and regulations. By following the procedures described in this article, departments can help ensure that their shipments will comply with all government requirements and will reach Stanford quickly.

Stanford has authorized an outside supplier to act as the institution's customs broker. This allows shipments to be imported without Stanford's having to pay duty or other fees on the spot. Customs charges are later charged to the ordering department's account. The Traffic Department, a part of Procurement, is the only Stanford office which deals directly with the customs broker.

Traffic can direct the customs broker to release a shipment to Stanford only after Traffic receives written departmental authorization to pay the charges. When a shipment arrives, the customs broker notifies Traffic, describing the shipment's contents. This description includes the number of pieces, country of origin, consignee's name and department, etc.

Traffic then calls the department, describes the shipment, and investigates whether the shipment may require unusual handling. Is it a rush delivery? Should a Customs inspection be done at Stanford instead of at the port of entry? Should the department pick up the shipment?

Traffic also requests authorization from the department to pay the charges. Departments which import only occasionally submit a purchase requisition, form *SU-10* to Traffic, showing the account number to be charged. Traffic recommends that the form be hand-carried to Traffic to prevent delays. Traffic then tells the customs broker to release the shipment the carrier Traffic designates.

If your department imports items frequently, please consider establishing a blanket order arrangement with Traffic. Then for each shipment, your department would hand carry a blanket order relase, form *SU-11*, to Traffic. This will simplify Stanford's, the customs broker's, and your department's accounting procedures, and avoid costly delays.

Importation of Organisms

Departments which import organisms, vectors, animal sera, etc., should be sure they have copies of the June 11, 1982, and September 30, 1982, memos from M. H. Geistlinger, director of procurement, to the Stanford community.

The memos concerned Department of Agriculture requirements that organizations importing such materials have a permit on file. Given the information needed on the permit application, only the requesting department can apply for a permit, and it should do so well in advance of ordering the material through Procurement.

If the requesting department has not obtained a permit for each shipment, or each series of substantially identical shipments, then the Department of Agriculture will hold the shipment pending inspection. This will cause delays, which would be of concern if perishable or other urgent shipments were involved.

For copies of these memos, and for any other information on imports in general, please call Traffic at 7-3002.

Committee on Research open meeting

The annual open meeting of the Committee on Research will be held 3-5 p.m. Wednesday, April 20, in the Bechtel International Center assembly room. All members of the University community are invited to attend.

The meeting will be devoted primarily to a discussion of disposition of intellectual property rights arising from research activities. A proposed revision to the copyright policy will be presented.

CIT publishes 90-page guidebook to computing, information resources

The Center for Information Technology has just published the 1983 edition of the booklet, *Computer and Information Technology Resources at Stanford*.

The 90-page guide describes the academic, research, and administrative projects that at present are using computers in their work. It is published as a community service by CIT as a means of sharing information about computing among members of the Stanford community.

Copies are available for $2.50 from CIT's Document Sales office in Forsythe Hall, 497-4877. Hours are 9:30 a.m.-12 noon and 1:30-4 p.m. (Copies have been mailed to University deans, department and division heads, the President's Office, University administrators, and heads of projects involving computers.)

There are 17 mainframes and almost 700 smaller computer systems in use at the University, including the Medical Center and SLAC. Individual descriptions are included for computing in the schools' departments, institutes, and laboratories, and in the library and bibliographic services. The University's management of computing—the committees, administration, and allocation of funds—also is described. References to other publications and names and phone numbers of resource people are included as well. Especially useful is the detailed section on text and word processing.

CIT publishes the brochure annually and already is seeking updated information for the next edition, which is projected for January 1984. Those wishing to submit new information or to update material that is already in the document should contact editor Jane Kingston, at Pine 127, 497-4807; or Judy Windt, Pine 145, 497-9793.

The booklet was published using the latest information technology available. Text was entered into CIT's IBM computer and formatted for transmission via telephone line to the phototypesetting system at Word Graphics, thus enabling efficient updating.

Starting Sept. 1, Library to charge $15 fee for processing film rentals

General funding for the Meyer Library film rental service will be eliminated as part of the University's 1983-84 budget reductions, according to Elizabeth M. Salzer, head librarian at Meyer.

Starting Sept. 1, in addition to the film rental fee, the library will charge a $15 fee for processing costs. This is about one half the actual cost. In September, 1984, the full cost will be charged.

"We realize that these charges may cause some difficulty for the few departments that use the film rental service frequently, but we assume that the majority of our users, who request films only once or twice a year, will be able to absorb these costs with little difficulty," Salzer said in a memo to campus departments.

Residential education, Anthropology, and Psychology account for half the total film rentals on campus from Meyer. Total rentals have risen from 360 in 1980 to an annual rate of more than 500 now.

The film rental service will operate 20 hours a week, effective in the fall. Salzer suggests that those with a scheduling preference—i.e., weekdays 9 a.m. to 1 p.m., or 1 to 5 p.m. weekdays, or all day on specified days—should let her know. Film rental forms can be mailed or dropped off at Meyer at any time.

Salzer emphasizes that the $15 processing fee will apply only to film rentals. Films owned by Meyer Library will continue to be circulated in the normal manner, without charge to users.

Auto rental discounts summarized

Auto rental discounts are available to all faculty and staff members for official travel, as well as personal, through the use of corporate rate Agreements negotiated by the Procurement Department.

The discounts are substantial and everyone is encouraged to take advantage of them.

The following are the *general* discounts:

American International: Subcompacts, $25; compacts, $28; intermediate, $30; full size two-door, $32; four-door, $34.

Avis: 30% off daily time and mileage rates.

Hertz: 10% off flat-rate daily, weekly, and monthly unlimited mileage rates. This will probably save you more than Avis's 30% discount on time and mileage rates.

Budget: Discounted flat-rate daily charge, unlimited mileage: $29 per day for any car, economy through full size.

Dollar: Discounted flat-rate daily charge, unlimited mileage: compact, $29; intermediate, $31; full size, $34.

American International and Dollar also have discounted weekly rates, with American's rate slightly lower than Dollar's.

Gasoline is not included in any of the above rates, nor are the extra charges for dropoffs. The American International, Budget, and Dollar rates normally are less than the other agencies' rates for daily charges. Special rates such as weekend or monthly rates may be lower than any of the discounted daily rates, and some of the above rates are higher in a few locations. Discounts are also offered in foreign countries, but vary among countries and rental companies.

To take advantage of auto rental discounts, the traveler must present to the rental company a sticker (which is attached to the traveler's charge card) with Stanford's corporate number. Stickers for the five companies are available from Procurement at 7-1751.

Director Grotowski moves toward a new form of theater

BY MILLICENT DILLON

The Jerzy Grotowski who lectured at Stanford last week was seemingly a much more moderate man than the radical director of the Polish Laboratory Theater, who so shook the international world of drama in the Sixties.

In fact, though more moderate in tone, he remains as intense as ever in his pursuit of the basic core and origins of drama, as he revealed in his lecture on "The Theater of Sources."

Speaking in a heavily accented English (occasionally requesting assistance from drama Prof. Martin Esslin for a more precise word) while pacing back and forth on the stage of the Little Theater, Grotowski described his current research as an attempt to discover the first fragments of old liturgy. With these rediscovered fragments—sounds and movements—he will arrive at a new form of theater.

Asked by Esslin if the eventual aim of his work was performance, he answered that he did not yet know.

Grotowski spoke of his own progression in the theater from his interest in subjective drama to his current preoccupation with objective drama. From 1959 to 1969 at the Laboratory Theater he created and directed what he called a "poor theater," one in which lighting, costume, and even the text were reduced in importance.

The basic element remaining was the relation between the actors and the spectators. The numbers of spectators who watched any production were severely limited. He worked to give the audience the maximum illusion of being in the play and in direct physical contact with the actors.

During those years he worked with each of his actors, using very specific physical techniques to get them to a point where their resistances were scraped away and the time between the felt impulse and the expression of that impulse was almost zero. He used the term "holy actor" to describe his aim, though he insisted he was not speaking in a traditional religious sense.

His productions, including *Akropolis* by Wyspianski and Byron's *Cain*, toured many countries in the West and established Grotowski as one of the main influences in contemporary avant-garde theater.

"Subjective drama is a very high art," Grotowski said. "The life of the stage director is in the work. The life of the actor is in the work, what he wanted to have, what he didn't have."

In 1969 Grotowski began to develop a form of participatory theater, a more objective form of drama, in which he worked with individuals from many countries, in many cases people who were untrained as actors.

From 1976 on he has been working on the "Theater of Sources," a transcultural experiment coming out of various cultural contexts, in Poland, Italy, Haiti, Nigeria, Mexico, and Bengal.

With a core group of people of diverse backgrounds he has moved from country to country, attempting to recognize the mind structure in the culture and to find the principle technical elements of movement and sound in the old rituals. He has carefully studied objective drama in these countries, including the Noh Drama and the Voodoo Theater of Haiti.

In his own culture he examined the elements of the Mass. "The very old Mass is an example of the objective drama. The ancient rituals were like a training session, for some a renewal of their knowledge, for others a reaffirmation of the community and its memories.

"At a precise moment a man kneels and touches his head to the floor, while uttering a series of phrases. Then he repeats the motion. You think he makes a symbolic action. Not at all.

"If you investigate you will discover the exactness of the movement—the centering of the body, the bracing of the spine, the impulse from the base of the spine that leads to the displacement of the center of gravity.

"The movement is done and then it is repeated. It begins to affect the breathing of the person who is moving. Inside of him some melody begins. The rhythm is felt throughout the body. All this by kneeling.

"Accompanying this motion are precise words, used not for significance but for their sonority, which affect the body-mind relationship of the participant and of the spectator.

"This I am calling objective drama.

"The place itself, the cathedral where this happens, is of crucial importance in focusing attention. Even the necessary dimensions of the cathedral are part of the old knowledge that has been lost."

According to Grotowski, watching the rituals, people see only symbolic action. "But the symbolic action is not primary."

It is what is primary, what is before symbols, that Grotowski wants to get to.

He is searching in each culture to find the simple actions, including the ways of breathing, and the movements of daily life that will elicit primary responses from the participant and the observer. His ultimate aim, he says, is not synthesis. He wants to find what existed "before differences."

In his research he works "by night, by day, in the open air, in the forests—walking, running, with eyes closed." He searches for precise actions, for the simplest possible movements "rooted in repose." And he seeks to find the connection between daily life and these movements.

"Like hidden roots of a tree. . . " he suggests.

Jerzy Grotowski

"I am not against the theater of performance or the theater of participation but for me this is what I do now."

Grotowski has been named professor of theater arts at Columbia University for the spring and summer of 1983. His lecture at Stanford was part of a West Coast tour, prior to his taking up residence at Columbia.

Asked by a student what he expected to find when he worked in the U.S., he said, "I think this work could be a bridge for the American culture.

"I see a potential here, but what I see is not yet working. You are at the point of a meeting of different cultures.

"For me, your chance is to make the bridge between the Judaeo-Christianity of the culture and the many other parts of the culture. To have both multiplicity and unity. Not to destroy the differences, but to make the connections clear."

The government employs one-third of all college graduates—Rumberger

continued from page 1

"Between 1960 and 1980, the educational attainments of the U.S. labor force grew phenomenally. The number of persons with four years or more of college increased 200 percent."

Even before this expansion, not all college graduates were assured high-level jobs. A third were employed outside professional and managerial occupations in 1960.

In retrospect, "the decade of the 1960s was a golden era" for college graduates, with a higher proportion finding high-level jobs despite the large gains in the numbers completing four years of college.

During the 1970s, "opportunities deteriorated greatly," Rumberger says. By 1980, new graduates faced a situation similar to their counterparts in 1960.

The rise and fall in opportunities was especially pronounced for women, who were much more dependent than men on changes in the teaching profession.

In a separate analysis of "Social Mobility and Public Sector Employment," Rumberger notes that the public sector currently employs one sixth of the U.S. work force and has generated a quarter of all new jobs in the economy over the past two decades.

"The type of jobs created by government is as important as the number of jobs created," Rumberger emphasizes. "The proportion of high-level jobs in the public sector is twice as large as in the private sector.

"One third of the growth in high-level positions over the last two decades has occurred in the public sector. The government also employs one-third of all college graduates."

The growth in public sector employment has particularly benefited women and minorities.

"The government employs larger proportions of these groups than white males," he notes. "More important, the government provides relatively more high-level opportunities for (women and minorities) than the private sector. The government employs from one third to two thirds of minority and female college graduates."

Moreover, while earnings of women and minorities are lower than white males in the public sector, this gap is generally smaller than in the private sector.

"In fact, minority males with similar characteristics actually earn as much as white males in the government sector, at least in high-level occupations," Rumberger says. "Yet this may simply reflect the lower earnings associated with high-level positions in government."

While some progress has been made in reducing earnings discrimination in the private sector over the past two decades, this has mainly benefited minority males in high-level occupations. Little progress can be noted in middle- and low-level occupations, where most workers are concentrated.

The relative economic position of women has changed very little over the past two decades. They continue to earn substantially less than white or minority males, even with the same qualifications.

While earnings vary widely within both the public and private sectors, the likely decline of the public sector in the near future "will curtail an important source of jobs for minorities and women and. . .may severely reduce social mobility for these groups."

Copies of Rumberger's reports may be ordered at $2 each from IFG, CERAS Building 402.

Medical Center MEMO

Research centers oppose pound animal bill

Proposed state legislation which would bar pound animals from medical research would be an enormous disservice to pet owners, the general public, as well as research, officials of two research-oriented California medical schools said Friday.

The protests against Senate Bill 883, scheduled for a hearing Tuesday (April 19) by the Senate Judiciary Committee, came from Lawrence Crowley, vice president for medical affairs at Stanford University; Dominick Purpura, dean of the Stanford School of Medicine; and Julius Krevans, chancellor of the University of California, San Francisco.

The bill, sponsored by Senate Majority Leader David Roberti, D-Los Angeles, would prohibit the selling of unclaimed pound animals—which are routinely euthanized—to research institutions and would instead require that such organizations buy animals especially bred for research.

The bill would do nothing to improve the humane treatment of animals, "a concept we are genuinely committed to," said Purpura. However, he added, the measure would dramatically increase the cost of most biomedical research, eliminate some research, result in the death of thousands of additional dogs and cats annually, as well as make it more difficult in some cases for pet owners to reclaim their animals from pounds.

The legislation "would be damaging to our institution and to research and scientific progress generally," Purpura said in a letter dated Friday (April 15) to Sen. Barry Keene, chairman of the judiciary committee.

"But it would be more realistic for you (committee members) to oppose this measure because of the very real disservice it does to all Californians. . .

"If the bill is adopted, you would be faced with even stronger outcries from supporters of animal rights after they discover that the real dilemmas of humane treatment to animals have been exacerbated by well-intentioned but ill-conceived legislation," Purpura added.

Supporters of the measure have contended that the bill would prevent animals which had been kept as pets from being used in research.

"The legislation creates a great irony by increasing the number of animals which each year will be euthanized instead of being transferred to research facilities.

"Meanwhile, other dogs and cats will be bred specifically for use in the laboratory. Surely this is a grotesque misuse of resources, an abomination to conservationists," Purpura wrote.

Millions of dogs annually are euthanized at pounds because they are not adopted or reclaimed by their owners. For example, a report by a committee of the Santa Clara County Board of Supervisors said that one humane society alone—The Humane Society of Santa Clara Valley—euthanized nearly 75 percent of the 39,736 animals brought to the shelter in 1982.

Purpura said that legislation prohibiting the humane use of animals in research will swell already overcrowded shelters, increasing the likelihood that humane societies will have to put to death animals sooner.

"We are disturbed that the proposed legislation ignores the fact that less than five percent of animals which are impounded annually nationwide are used in research and teaching while more than 95 percent are disposed of with no benefit whatsoever to life," Crowley said.

Crowley, Purpura and Krevans said they supported a measure backed by Assemblyman William Filante, R-Marin, which would require stringent standards of humane care for research institutions seeking to use pound animals. The measure, which has not yet been introduced in the legislature, would also establish a statewide identification system which would help persons locate stray animals at pounds.

The measure, titled the Pet Protection Identification Act, would also give the person turning in an animal the option of refusing to allow the pound to release the animal for research.

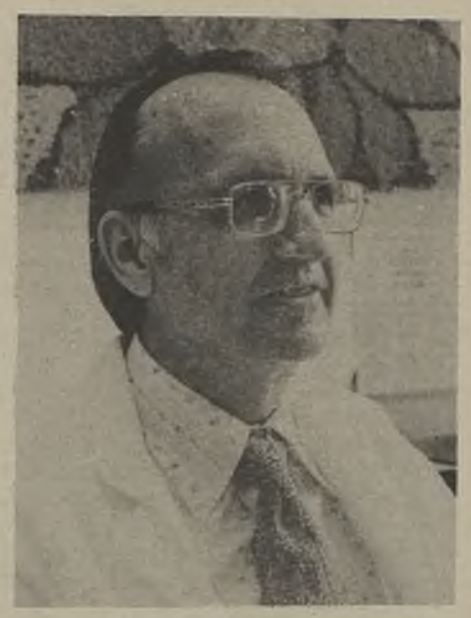
Crowley said if Stanford were required to purchase all of its dogs and cats from commercial suppliers, the cost of these animals would at least quadruple from current levels of about $65,000 per year to $260,000 annually. Such an increase, Purpura said, could jeopardize already tightly funded projects.

In addition, Crowley said breeders could not provide the institution with sufficient animals and those that were provided "could not meet the qualitative needs of the biomedical community as in fact much research necessitates a genetically-mixed animal model rather than a pure-bred strain."

Alternatives, such as tissue cultures and computer modeling, cannot substitute for all biomedical research, although modern methods have reduced the number of animals, particularly dogs and cats, which are needed each year in research, said Dr. James Dewson, director of the division of laboratory animal medicine at Stanford.

For example, 795 dogs were bought for research at Stanford in 1978, compared with 506 in 1982. The number of cats in the same period dropped from 206 in 1978 to a total of 109 last year.

Dewson said his division houses between 5,000 and 10,000 animals at any given time. In addition, between 15,000 and 70,000 mice are held in special colonies.



The officials of both research institutions reaffirmed that they were committed to the humane care of animals.

Stanford currently is completing a $10 to $12 million centralized animal research facility which Dewson said "will provide state of the art animal care" exceeding current standards which are nevertheless adequate or better.

"Our campus is extremely concerned about the humane use of all animals in our research program," Krevans said in an April 14 letter to Keene.

Krevans said SB 883 "would have the effect of terminating many important research projects because if it passed we would be unable to obtain an adequate supply of dogs—an essential model in many scientific investigations."

—Mike Goodkind

Roy Maffly

Maffly is new associate dean

Dr. Roy Maffly, professor of medicine (nephrology), has been appointed associate dean of student affairs at the Medical School.

Maffly succeeds Dr. Elizabeth Short, who is leaving Stanford to join the Association of American Medical Colleges in Washington, D.C.

In his new position, Maffly will be involved with the clinical education of Stanford's medical students. His responsibilities will include assigning students to clerkships and writing letters to support their applications for internships.

"I look forward to working with the students in a closer capacity," Maffly said. "I hope to continue teaching, which I feel will make me more effective as associate dean."

Maffly came to Stanford in 1961 as assistant professor of medicine. He was promoted to full professor in 1970. He has co-headed the nephrology division since 1971, and was acting chairman of the department of medicine from 1977-78. He is a staff physician and chief of the renal service at the Veterans Administration Hospital in Palo Alto.

Maffly also directs StanMed, the School's computer system for medical education.

Maffly is actively involved with student affairs. He is a member of the National Board of Medical Examiners Part II Medicine Test Committee. He has chaired Stanford Medical School's Minority Admissions Committee, Faculty Senate, and Committee on Courses and Curriculum. He has been director of admissions since 1981.

A new director of admissions has yet to be named.

Maffly has been often honored for his teaching. He has received the Henry J. Kaiser Award for excellence in teaching three times, the Henry J. Kaiser Award for outstanding and innovative contributions to medical education, the Arthur L. Bloomfield Award for excellence in teaching, the Walter J. Gores faculty achievement award for excellence in teaching, and the Award for Outstanding Teaching from the medical school class of 1971.

Study needs agoraphobic volunteers

Women presently suffering from agoraphobia are needed to participate in a study of a program designed to alleviate the phobia symptoms and actively involve the woman's spouse or partner in her progress.

Agoraphobia is a fear of going out in public places, especially unaccompanied.

Principal researchers in the study are Drs. C. Barr Taylor, assistant professor, and Stewart Agras, professor, both in the Department of Psychiatry.

The initial phase will require a four-week treatment aimed at overcoming the woman's fears. During this time, her partner must be willing to help her practice confronting feared situations, with the help of a therapist.

In the second phase, both partners will participate in a weekly program to help them cope with changes that occur in their relationship as a result of the woman's treatment. This part of the study lasts eight weeks.

Psychiatry intern Bruce Arnow, who is coordinating the study, said the agoraphobic's success in overcoming his or her fears "constitutes a major life change" and often affects marriages. For this reason, the researchers have designed a continued support program which reinforces the positive effects of success by involving spouses actively. They hope to assess the long-term effectiveness of this "two-pronged" approach.

Participants will be charged a modest fee for the program. For further information or to apply to the program, call Arnow at 497-7871.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

Edgar Engelman

SMASH of the week

This Friday's S*M*A*S*H lecture will be given by Dr. Edgar Engelman, assistant professor of medicine and pathology, and medical director of the Stanford Blood Bank.

Engelman will discuss "T-lymphocytes and their function in man," 4:30 p.m. April 22 in the Fairchild Auditorium. A TGIF gathering will follow the presentation, to which all interested members of the Medical Center community are invited.

All invited to med school play

Stanford Medical School faculty and members of the class of 1983 will present a musical play, *The Hypocritic Oaf*, 8:30 p.m., April 29, in Dinkelspiel Auditorium.

Produced by the Medical Alumni Association and directed by students Laura Esserman and Joe Sachs, the musical features songs written, composed, and performed by students and faculty.

The two-act play follows a medical student through his education and training, according to Esserman. "In the beginning, God created the medical student, and indoctrinated him to the culture, and he matured, and he differentiated, and he reached the top!," reads the story line.

The play includes the scores: "I Hope I Can Get In," "A Day In The Life Of Dr. Paul Berg Nobelovitch," "This National Bored Test," "My Heart Belongs To Shumway," "Leukemia Rag," "Matchmaker," and "I've Grown Accustomed To This Place."

Tickets will be sold in the medical student lounge from noon to I p.m. April 22, and are available at the Medical Alumni Association Office, 800 Welch Rd., Suite 221. Commemorative T-shirts are available as well.

A complimentary happy hour will be held before the show, from 6:30 to 8 p.m. at the Stanford Faculty Club. For further information, call 497-6389, or 497-5064.

Medical faculty opening

Stanford University is an equal opportunity employer and welcomes nominations of women and minority group members and applications from them.

The pharmacology department of Stanford University School of Medicine invites applications for a position at the assistant or associate professor level. Applicants are expected to have strong orientation to modern biochemistry and molecular biology and the application of these disciplines to pharmacological investigations.

Applicants should send curriculum vitae, summary of research interests, and names of three references to: Dr. Tag E. Mansour, Chairman, Department of Pharmacology, Stanford University School of Medicine, Stanford, CA, 94305.

News Notes

Norma Varon has been appointed executive secretary in the office of Dr. Lawrence Crowley, vice president for medical affairs.

Varon was most recently a secretary in the department of psychiatry and brings to her new post extensive experience at both Stanford and UCLA. She will replace Lynda Schrotenboer who, after playing a vital role in the office for the past 15 months, is leaving to pursue other interests.

* * * *

Three Medical Center professionals have authored chapters in the recently released third edition of **Applied Therapeutics: The Clinical Use of Drugs**.

- *Dr. Richard Mangini, research associate in clinical pharmacology, wrote the section on "Kidney Diseases."*
- *Dr. Charles Depew, pharmacist in the medical and surgical intensive care units, contributed "Intensive Care Therapeutics."*
- *Dr. Lawrence Witt, a Hospital pharmacist, wrote "Alcohol Abuse" for the textbook.*

Previously called **Applied Therapeutics for Clinical Pharmacists**, *the book is published by Applied Therapeutics, Inc. of Spokane, Wash.*

* * * *

Tom Connelly, manager of general accounting, has announced plans to retire after 18 years at Stanford Medical Center. He served in the audit department, as the Clinics business manager, and in budgeting, before assuming his general accounting post in 1971.

He will spend some time consulting in accounting and plans to travel and play more golf.

* * * *

Hospital employees are eligible for discounts on various amusement and recreation attractions, including Golfland, the Red and White Fleet, Ripley's Believe It or Not, Happy Hollow Park and Baby Zoo, Great America and Marine World Africa USA.

These and many other discounts are regularly available at Employee Relations, in Room E009 of the Hospital. For further information, contact Susan Cabral of SUH personnel, at 497-6251.

* * * *

As of April 15, the ground floor corridor on the west side of the "P" wing is being closed off at night, according to Ron Kepner, director of Materials Management.

The walkway, which extends from C003 at the gray double doors, past the hospital storage area and around almost to the receiving dock, is secured by a locked gate just past the exterior stairwell leading to the first floor of the "P" wing. The lock remains from 6 p.m. till 6:30 a.m. and around the clock on weekends and holidays. During these times, employees exiting in this area will have to take the stairwell to the first floor to reach the parking lots.

Security and safety considerations due to ongoing construction have led to installation of the gate, in order to restrict access to only those employees who must work in the area. In addition, Kepner emphasized that use of the stairwell is encouraged at all hours.

SUH employees to be honored at 25th annual service awards banquet

Invitations are in the mail to those Stanford University Hospital employees who will be honored at the hospital's 25th annual employee service awards banquet May 10.

The banquet honors all hospital employees receiving awards for five, 10, 15, 20, 25 and 30 years of service, and all other employees and retirees who have served more than 20 years.

The banquet will begin with no-host cocktails at 6:30 p.m., followed by dinner at 7:30 p.m., at Rickey's Hyatt House. The Tony Davis Trio will provide the evening's music.

Dan Robinson, acting director of Personnel, will be master of ceremonies. Guest speakers will be Sheldon King, executive vice president and director of the hospital; Dr. Donald Kennedy, chairman of the Hospital Board and president of Stanford University; Dr. Lawrence Crowley, vice president for medical affairs and president of the hospital; and Dr. James Silverman, chief of staff.

A highlight of the banquet each year since 1976 has been the naming of the winner of the Thomas A. Gonda Award. The award honors a hospital staff member who has been employed for at least five years and has given dedicated and exemplary service at SUH. The award is named for the present chairman of the Department of Psychiatry, who served as hospital director from 1968 to 1974.

Traditionally, five additional employees are selected for special awards for their outstanding contributions and achievement, as recognized by their coworkers, supervisors and patients.

Banquet invitations have been sent to employees receiving awards, to the hospital administrative staff and to department heads with eligible employees. Employees being honored may bring guests to the event. A separate fee will be charged for guests.

The award recipients will be presented with SUH pins. Those serving 20 years or more will receive their choice of accessories—such as a watchband, a key ring or a bracelet—on which the pin has been mounted.

Approximately 350 employees are eligible to receive service pins this year. In addition, 78 employees who have served more than 20 years at the hospital have been invited to attend the event.

In an effort to maintain the traditional program for awardees while also reducing expenditures, a reception will not be held this year for employees whose years of service fall between the five-year increments.

For reservations or more information about the awards banquet, call Susan Cabral at 497-6251.

*News Notes/*continued

Rhea Priest, R.N., M.S., was appointed clinical nursing coordinator of pediatrics/pediatric intensive care effective March 28, said Judy Lanigan, assistant director of Nursing/medical and pediatric region.

Priest, who graduated from Stanford's School of Nursing in 1964 and has been a staff nurse in pediatrics in the past, returns to SUH from a post as clinical nurse specialist and program director in the East Midlands Health District for the state of South Carolina.

Rhea Priest

Reference librarian draws on rich science background

Gloria Linder briefly considered becoming a chemist during her freshman year in college, but a laboratory chemistry class dissuaded her.

"You spend a lot of time in the lab standing in line, waiting for chemicals," she said, laughing. "I did well in the sciences but—you know how it is when you're young. I soon dropped science and became interested in history and liberal arts."

A decade later, with a master's degree in biology, a graduate degree in library science, and several summers of laboratory research behind her, Linder draws often on her mixed scientific and liberal arts education, as chief sleuth in Lane Medical Library.

As head reference librarian, Linder spends much of her time guiding physicians and researchers through the labyrinth of computerized medical literature to help them pinpoint tough diagnoses or complicated therapies.

It helps to be able to speak their language.

"Recently a student came in who wanted information on 'southern and northern blots,' " Linder said. Though a novice might think he was talking about a remote spot in the Antarctic, Linder knew the scientist was referring to a technique used in recombinant DNA research.

And that's just the beginning. As she searches deeper and deeper into the computer's file of books and journal articles, Linder needs to be familiar with the rich vocabulary of the field, and to be able to think not only like the researcher, but like the person who indexed the articles.

In part to aid her work, but primarily because she loves learning, Linder began in 1969 to supplement her full-time job with course work at Stanford in fields ranging from biochemistry, immunology and genetics to microbiology, physiology and ecology—more than 150 units in all.

"I wasn't finished learning, by any means, when I finished my undergraduate work," Linder said. "I knew that." But when she began her graduate science courses, she had no plans to earn a third degree. "I didn't want to be in a program where I had to follow other people's requirements," she said. "I wanted to be able to take just the classes I was interested in."

But after several years of part-time course work, Linder soon realized that she had the makings of a master's degree. She wasn't satisfied with simply taking classes, and sought to delve a layer deeper into the inner workings of the scientific process.

Intrigued especially by studies of the brain, Linder worked part-time for credit in the laboratory of Dr. Karl Pribram, professor of psychology, where she gained a first-hand glimpse of neuropsychological research. She followed up the experience with another two summers of directed readings and lab work under the guidance of Dr. Klaus Bensch, professor of pathology.

Despite her enthusiasm for her research experience, Linder said that she enjoys her current career niche as a professional generalist.

"Most people don't expect librarians to know anything about science," said Linder. "They ask me, 'Why aren't you using your biology degree?' I am using it, but it's hard for people to understand how. In reference work, particularly in computer searches, I use it for nearly every question.

"Having a question, and trying to figure out what the answer is—that's the really interesting part of library work. That's what I like about reference work, and that's what I like about research."

—Deborah Franklin

"Having a question, and trying to figure out what the answer is—that's the really interesting part of library work."

—Gloria Linder

Construction Corner

Boswell Clinics Renovation Update: The demolition phase of the first floor, south side, has been completed, and reconstruction of that area is proceeding on schedule. (*See photo above.*)

Preparation for renovation of the third floor is currently in progress, under the direction of Langston Trigg, Jr., assistant director of SUMC facilities/projects.

Lane Library Renovation: Peter Stangl, director of Lane Library, and two members of his staff have been relocated from the first floor to the ground floor of the library, into a newly constructed office suite. The copying machines were also moved to an alcove by the staircase on the ground floor. The project was coordinated by Christina Anaya and Norm Berge of the SUMC Facilities Projects Office.

Edwards Deck: Now that the rains have subsided, the contractor has been able to seal the roof on the Edwards Deck and proceed with the interior construction as planned. According to project manager Wells Hoeltje of SUMC facilities, the inclement weather created some delay in the schedule, and completion is now expected in mid-August. However, the dishwashing area should be available for occupancy sooner.

Medical Center Parking Lots Expansion: John Lerry of the University Facilities Project Management Office reports that construction for the south parking lot project is scheduled to begin April 25. The first phase, which will provide a temporary parking lot during the other phases, should be completed and ready for use May 12.

The next four phases will involve the sealing, striping and signing of lots as noted on the illustration below. Lot SE-1 should be completed May 22, lot SE-2 May 29, lot SW-1 June 12, and lot SW-2 June 19. The entire project is scheduled for completion June 24. Access to the temporary lot will be maintained for the duration of the project.

Tim Foley (center with glasses), a nurse in the Hospital's emergency department, demonstrates MAST (military anti-shock trousers) which are used to counteract low blood pressure suffered by victims of shock. The trousers are inflated with air, which increases venous return to the heart. The device was among a variety of equipment on display during the April 5-8 Fourth Annual Conference on Critical Care Transport, sponsored by the department of critical care transport at SUH. The symposium was intended to provide information about issues in critical care transport and their practical application. SUH coordinates hundreds of such transports of critically ill patients each year from other hospitals to this regional facility where highly specialized care is available 24 hours a day. Janet Mohs, field operations supervisor for critical care transport, said 270 health professionals from around the nation and several foreign countries attended the symposium.

Social Work offers series of events

Stanford University Hospital's department of clinical social work is sponsoring a conference April 29 entitled "Oncology Social Work and Clinical Research."

The event is one in a series planned as part of the continuing 70th anniversary celebration of social work at Stanford. These events are free of charge, and the public is invited.

Licensed clinical social workers Isabel Walker, Patricia Fobair, Sherry Feld, Jill Lehman, and Susan Weisberg will take part in the day-long conference, which is geared primarily toward other professionals in social work or related fields. It will take place from 9 a.m. to 4 p.m. at Fairchild Auditorium in the Medical Center.

Among the topics to be addressed are "The Value of Clinical Research in a Medical Setting," "Studying the Silent Majority," and "Medical Ethics in Research Design." Part of the afternoon will be devoted to small group workshops addressing more specialized topics.

Other events planned by the department are:

- April 27—Rose Grobstein, C.S.W., will lead a seminar entitled "Genetic Counseling and Prenatal Diagnosis," from 2:30 to 3:30 p.m. in Faber Auditorium at Children's Hospital at Stanford.
- May 20—Elizabeth Garifalos, L.C.S.W., Dr. Alan Ringold, and Pam Simmons, R.N., will conduct a workshop on "Adaptation to Hemodialysis," from 10 a.m. to noon in the Nursing Cottage at Hoover Pavilion; and
- June 24—"Approaches to Psychotherapy With Borderline Patients" will be addressed by Sandra Bacon, L.C.S.W. and Dr. Richard Laude, from 1 to 3 p.m. in TE-110 of Stanford's Psychiatry Building.

For further information on any of these events, call 497-5091.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, APRIL 20

Medical Center Auxiliary Volunteer Orientation. 9:45 a.m., W001. For further information, call 497-6636.

Dept. of Pathology Surgical Pathology Conference: "Chromosomal Abnormalities IV"—Dr. Jeffrey Sklar. 8 a.m., L201.

Basic Science Research Colloquium: "Exploring Gene Expression and Protein Structure in Heterologous Cells"—Dr. Laurence Kedes. 5 p.m., Fairchild Auditorium.

THURSDAY, APRIL 21

Dept. of Pathology Research Seminar: "The SOS Signal Generated by Miscarriage of mini F Plasmid"—Dr. Raymond Devoret (Gif Sur Yvette, France). 4 p.m., M104.

Div. of Otolaryngology/Head and Neck Surgery: "Conservation of Hearing in Acoustic Neuromas 'State of the Art' "—Dr. Mansfield Smith. 6 p.m., R117.

Dept. of Medicine Grand Rounds: "Newer Agents in Acute Gastroenteritis"—Dr. John Mills. 8:30 a.m., Fairchild Auditorium.

FRIDAY, APRIL 22

Registration deadline: for Nursing Educational Services Critical Care Course Level I: "Intra-Aortic Balloon Pump—Current Concepts," to be held May 3 from 8 a.m. till 4:15 p.m. at 900 Welch Road, Suite 15. The course will describe normal cardiac physiology and explain the indications, contraindications and complications of intra-aortic balloon pumping. A fee is charged and continuing education credit is available. For further information or to register, call Carole Kidder at 497-6366.

Tickets on sale: for the Stanford Medical Alumni Association musical program **The Hypocritic Oaf**, to be presented 8:30 p.m., Friday, April 29 in Dinkelspiel Auditorium. Tickets may be purchased from noon till 1 p.m. in the Medical Student Lounge. A "Hypocritic Oaf" T-shirt will be available through the Alumni Association and at the performance. For further information, call 497-5064 or 497-6389.

SMASH lecture: "T-lymphocytes and their Function in Man"—Dr. Edgar Engelman. 4:30 p.m., Fairchild Auditorium. Second in a three-part spring series.

Div. of Child Psychiatry Grand Rounds: "Age Changes in Children's Modesty"—Dr. Alvin Rosenfeld. 11 a.m., Faber Auditorium, Children's Hospital at Stanford.

Div. of Family Medicine Friday noon lecture series on Women and Health: "Abusive Images of Women in Mass Media and Pornography"—presentation by WAVPM (Women Against Violence in Pornography and Media). Noon, M114.

Dept. of Pediatrics Grand Rounds: "Peptic Ulcer Disease in Children"—Dr. John Kerner. Case Presentation by Dr. Lawrence Mathers. 8 a.m., M106.

Dept. of Gynecology and Obstetrics Grand Rounds: "Clinical and Basic Approach to the Hirsute Female"—Dr. George Mikhail (prof. and chairman, dept. of ob/gyn, St. Louis University). 8 a.m., A336.

Div. of Otolaryngology/Head and Neck Surgery Resident Lecture Series: "Referral Sources for the Hard of Hearing/Communications with the Hearing Impaired"—Sally Johnson, M.A. and Cheryl Runge, M.S. 7:30 a.m., R117.

MONDAY, APRIL 25

Dept. of Medical Microbiology Seminar: "Studies on the Mechanism of Splicing in Yeast"—Dr. John Abelson (UCSD). 1:15 p.m., M114.

TUESDAY, APRIL 26

Registration deadline: for Nursing Educational Services Critical Care Course Level I. This four-part course, to take place all day May 10, 17, 24 and 31, is intended to instruct nurses already working in a critical care setting on the theoretical base for nursing care of critically ill patients, expanding knowledge of the special anatomy, physiology, and pathophysiology of such patients. It is not intended as an entry level crtical care program. A fee is charged, and continuing education credit is available. For further information or to register, call Carole Kidder at 497-6366.

Dept. of Pathology and Medical Scientist Training Program Seminar: "An Internal Transcriptional Control Region in Adenovirus EIA and Evidence for Activation of Early Transcription by the Assembly of Stable Transcriptional Complexes"—Dr. Arnold Berk (UCLA). 4:15 p.m., M114.

Dept. of Dermatology Grand Rounds: "Leukocyte Hormones that Modify Cellular Response to Glucocorticoids"—Dr. Robert Mischelle. 10 a.m., Dermatology Library R136.

Palo Alto Medical Research Foundation Tuesday luncheon seminar: "Hepatitis B Virus and Liver Cancer"—Dr. William Robinson (SUMC dept. of medicine), 12:15 p.m. (seminar begins 12:45 p.m.), 860 Bryant St., Palo Alto. For further information, call 326-8120.

WEDNESDAY, APRIL 27

Registration deadline for Dept. of Clinical Social Work course: "I Can Cope," on living with cancer, intended for cancer patients and their families. For further information or to register, call 497-5091.

Dept. of Clinical Social Work: "Genetic Counseling and Prenatal Diagnosis"—Rose Grobstein, C.S.W. 2:30 till 3:30 p.m., Faber Auditorium, Children's Hospital at Stanford. For further information on this and other upcoming social services programs offered as part of the department's 70th anniversary celebration, call 497-5091.

Div. of Orthopedic Surgery Grand Rounds: "Nerve Entrapment Syndromes"—Dr. Jeffrey Saal. 8:30 a.m., M114.

THURSDAY, APRIL 29

Dept. of Clinical Social Work lecture: "Oncology Social Work and Clinical Research"—with Isabel Walker, Patricia Fobair, Sherry Feld, Jill Lehman and Susan Weisberg, all licensed clinical social workers. 9 a.m. till 4 p.m., Fairchild Auditorium. For further information, call 497-5091.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

A mother duck shows off her clan as welcome sign of spring

A brand new family was born at SUH last week, but this time not in the delivery room. Attracting much attention and even some offers of bread from passers-by, the ducklings had hatched in one of the planters near the fountains facing the hospital. They were about two days old when this photo was taken Friday, and about to leave the premises so as not to be harmed by chlorine and other substances in the water.

Manley, Rebholz seek Trustee inquiry on Hoover, University relationship

continued from page 1

which it should not do."

"The Institution's annual report, its publications, and its extensive ties with national and international networks that comprise conservatism. . .(support) at least a *prima facie* case that the Hoover has a discernable political bent. To the extent that it does, there's a problem. . . .

"Predominantly, the institution is conservative. They don't all see the world the same way. There might even be some liberals there. . . .

"In recent years, Hoover has diversified itself, thus enhancing its own reputation and academic respectability."

But while it draws on Stanford's reputation, it follows its own hiring and retention practices, he added. It is not subject to the same checks and balances as regular academic departments.

Several years ago, President Richard W. Lyman appointed an informal faculty group to review and advise him on proposed appointments of senior fellows at the Hoover Institution. Search committees for curators at the Hoover include two Stanford faculty or administrators chosen after consultation with the University president as well as three selected by the Institution itself.

Manley said he discussed his concerns two or three weeks ago with University Provost Albert Hastorf as well as Humanities and Sciences Dean Norman Wessells. He expressed confidence that President Kennedy would greet the petition as "a serious, concerned effort" to learn more about the present relationship.

"If the results of debate and inquiry show that the Hoover Institution is in fact a politically partisan organization of researchers who advance disproportionately and overwhelmingly one viewpoint on a range of public policies. . .then we should discuss severance of its research organization from the University.

"The library is an important asset. The research organization is, I think, the issue."

Controls on Hoover

In a separate interview, Rebholz said he personally favors the alternative of bringing the Hoover budgets and appointments "directly under the control of the Provost," the same as other departments. But there's no reason why the Institution might not pay rent and become completely independent of the University, he added.

A Board of Trustees statement adopted May 21, 1969 states in part: "The Hoover Institution is an independent institution within the frame (sic) of Stanford University. Its relation to the University is that the President of the University will propose all appointments, promotions, and budget directly to the Board of Trustees. There will be no reference to any faculty committee between the President and the Board of Trustees."

The Institution received about $4 million of its $8.4 million budget this year from the University. This includes about $1.3 million from earnings on endowment restricted to the Hoover Institution and nearly $2.8 million in general funds to support its library and archives.

About 40 percent of the total Hoover budget comes from corporate and individual gifts made directly to the Institution.

Asked what triggered his interest in having a trustee inquiry, Manley said it stemmed "from a growing body of evidence suggesting that Hoover was, intentionally or not, blurring or obscuring the lines that separate it from the University through joint appointments, the national fellows program, requests to departments to open curricula to Hoover scholars—a whole variety of things.

"They increasingly made their presence clear in my department and in others. It's a two-way street: people go to Hoover, too.

"The general impression for a long time was that it was separate, in its own building, with a library.

"As Hoover has gotten more prosperous and well-endowed, financially as well as politically, it can no longer be put out of your mind.

"It's now too prominent in its connections with the University. It's not just a separate thing—if it ever was."

Correction

Philip T. McLean's name was spelled wrong in the notice of his death in the April 13 *Campus Report*.

We apologize to those who were offended by the mistake.

Over-50 Fun Run set this Saturday

The Fun Run for runners 50 years of age or more, announced in the March 30 *Campus Report*, will start at 9 a.m. Saturday, April 23, not on April 24 as originally reported.

The run begins at the south end of Stanford Stadium near El Camino Real and covers a four-mile course (twice around the two-mile Peterson loop).

The event is sponsored by Fifty-Plus Runners Association, which has its headquarters at the Stanford Heart Disease Prevention Program.

For more information call Don Carpenter evenings at 327-8043.

Faculty Senate considers self-study, expansion, and reapportionment

The Stanford Faculty Senate, formed in September, 1968, may conduct a self-study and review of its own operations next year.

The Senate Steering Committee is "seriously considering" appointing an ad hoc committee for this purpose, according to Prof. Alexander Fetter, Senate chairman.

"Whether any changes should be made is not clear," Fetter told the Senate April 14. Any comments and suggestions should be directed to the Steering Committee, which plans to discuss this issue at its regular meeting Wednesday, April 20.

One purpose of the self-study might be to "consider the possibility of expanding the Senate," Fetter said. Since its creation, the size of the entire Academic Council has grown 30 percent, to about 1,100 members.

The Senate has 53 voting representatives from 12 electoral units. It also has 12 ex-officio members, serving without vote, including the president, provost, deans of the seven schools, vice provosts overseeing graduate and undergraduate education, and the academic secretary.

At its April 14 meeting, the Senate voted unanimously to retain the current appointment of seats for one more year. Following further study, a reapportionment plan will be considered by the Senate next year for implementation in elections held during 1983-84.

The Senate's action followed a report, based on past apportionment procedures, which would have reduced the seats allocated to the School of Humanities and Sciences by two and increased Engineering and Medicine by one each.

Required every five years under the Senate's constitution, the proposed changes were based on faculty size and student enrollments. Students without declared majors were allocated in exact proportion to those with declared majors. Postdoctoral fellows were added to the Medical School tally as students for the first time.

Several faculty representatives questionned the proposed reapportionment, including the manner in which the present system "rounds" data up or down to determine the number of seats allocated by school. Fetter suggested that another basis for apportioning seats might be the number of course units taken by students in addition to the number of faculty by field.

Presumably, these questions and suggestions would be included in a study of the Senate's method for apportioning seats.

A key policy-making group within the University, the Senate was carefully planned by the late Prof. Herbert Packer and approved by vote of the entire faculty. Its creation was quickly followed by a series of major decisions on curricular reform, classified research, and academic credit for ROTC, among other topics.

Since its creation, no policy decision of the Senate has been reversed by vote of the full faculty.

Unlike many other representative bodies created on other campuses in the late 1960s and early 1970s, the Senate's basic structure has not undergone any major change since its inception.

Letters to the editor

Western Culture courses found lacking

Editor, *Campus Report*:

We, Kusema Ukweli (the African History Committee of the Black Student Union), strongly object to the manner in which the current Western Culture program is taught. By teaching from a Euro-centric perspective and concentrating exclusively on European civilization, the program makes two fallacious assumptions.

First, the inordinate emphasis (i.e. 15 units and 3 quarters) on Western Culture implies that the study of non-European cultures and people is insignificant. This attitude insults those not of European background.

Second, most tracks start their study with the Greeks and imply that western civilization developed independently and free from outside influences. This is simply not true. Humanity, civilization, religion, and science first developed in Africa and then spread to Greece and the rest of the world. As it now stands, the Western Culture program does more distorting of the truth than educating students.

We were encouraged, however, to hear that President Kennedy recognized the shortcomings of the program and that Carolyn Lougee had called a meeting to discuss improving the program. We sincerely hope that out of this meeting comes the first positive steps to correct the biases and misrepresentations in the Western Culture program. Furthermore, we hope that this meeting marks the beginning of a serious effort to include the study of the cultures of *all* Stanford students within the mainstream of the undergraduate curriculum.

Having the benefit of experience in the present Western Culture program coupled with extensive education in African history, we would like to offer a few suggestions for improvement. One immediate step is revision of the syllabus to include different reference materials instead of the current book, *Western Civilizations*. One particularly useful book is George James' *Stolen Legacy* which explains the African origin of many European ideas.

Another constructive improvement is the installation of a new track. This track could retain its European flavor but also examine the influences on and evolution of European society. This track should explain that Pythagoras, Democritus, and Socrates got their ideas from African thinkers. It should show that the Greek gods were imitations of African gods. It should teach that Asian and African religions had a virgin mother and divine child long before the birth of Christ. It should detail how Christianity first flourished in Africa. This new track should also illustrate how Europe's economic growth in the Industrial Age was directly linked to its exploitation of African resources and people.

Since this knowledge unfortunately is not acquired through the traditional routes of education and is missing from the backgrounds of most Stanford students and faculty, the University should hire an expert in this field if it wishes to provide the superior quality education that it claims to offer. Dr. Artee Young of the University of Washington presently teaches a very successful world literature course which highlights the African origins of the classics. Other experts that the University should contact are Asa Hilliard of Morehouse College, Dr. Richard King of San Francisco State, and Yosef ben-Jochanon of Cornell University.

While the above changes would improve the present program they still fail to reach the very heart of the problem: the unwarranted and unfounded glorification of one culture over another. Ultimately, the Western Culture program should become a program in North American Cultures and study the contributions and interrelationships between the cultures of Native American, Euro-Americans, Chicanos, Asian-Americans, and African-Americans. The mutual study of one's own and other cultures is the first step toward eliminating the misunderstanding between cultures that spawns racism.

In order to create changes of a lasting and effective nature, a faculty-student committee should be established to examine the program's deficiencies from all viewpoints. Student input will be crucial to a successful reformation of Western Culture. Experienced in this area where the University is lacking, we are most eager to meet with a representation of faculty members and to begin the task of pointing the curriculum toward teaching the truth about the development of mankind.

Senate reviews undergrad programs

The Faculty Senate at Stanford has renewed the degree-granting authority of undergraduate programs in human biology and humanities special programs for five years each.

After extensive discussion, the Senate ended the special treatment now given premed students in the honors program in humanities special programs. This has permitted students to substitute premed courses for 40 units of work in a humanistic subfield, such as comparative literature or Medieval studies.

Prof. Paul Seaver, history, who heads the Committee on Undergraduate Studies, called the honors program "a model of its kind." The "anomalous situation" of those few premed students enrolled has existed since 1961. The change will not affect those currently in the program.

Humanities and Sciences Dean Norman Wessells noted that premed course requirements now are "not that heavy." Prof. Leon Rosenberg, medical microbiology, said it was "very important to maintain a core of humanistically-oriented premed students," including the top talent attracted to the honors program.

Associate Prof. Craig Heller, biology, saw "no justification for treating premeds differently" from other students.

Provost Albert Hastorf opposed the tendency to "over label and stereotype premeds. It might be better to call them science students. We don't label students prelaw the same way."

Prof. Kenneth Melmon, chairman of medicine, agreed with Wessells that premed requirements are "very minimal."

"A premed needs no coddling," he said. "It's prejudice—not fact" that students with humanities majors have a tougher time earning admission to medical schools.

Admissions committees "can spot a cheap (i.e., easy) degree," he added. Ending the special treatment of premeds in the honors program may attract more students, not less.

"Anything that looks cheap attracts the wrong people," he declared.

The ad hoc committee which reviewed humanities special programs said "the evidence available. . .indicates a strong and lively program." It has been headed by Prof. Lawrence Ryan since 1973. Prof. Peter Stansky, history, headed the review group.

Prof. Richard Thompson, head of the interdisciplinary program in human biology, noted that the number of academic majors in this field has grown from 244 in 1979-80 to 403 currently.

The review committee, headed by Prof. William Clebsch, religious studies, expressed support for current efforts to make the program even more rigorous. It expressed "enthusiastic endorsement" in recommending a five-year renewal.

Anti-weapons research feeling grows

continued from page 1

The new petition supports 280 Stanford Linear Accelerator Center staffers, who have opposed unclassified weapons-related research proposed by Lawrence Livermore, Sandia, and Los Alamos national laboratories at the Stanford Synchrotron Radiation Laboratory, which depends on electron beams from SLAC. "They would be unwilling collaborators in a program they find unacceptable and of a kind they understood would not be undertaken at SLAC," the petition declares.

The national laboratories proposal was not included in President Reagan's budget for fiscal 1984. It is still being reviewed by SSRL's scientific advisory panel, a group of 10 scientists outside Stanford. SLAC Director Wolfgang Panofsky has assured SSRL that SLAC will "cooperate fully" if the project is approved.

On April 1, Stanford President Donald Kennedy said he planned no change in present Stanford research policy, which imposes no end-use restrictions on research that is unclassified. On March 31, the Faculty Senate asked its committee on research to examine "the character and volume of weapons-related research" at Stanford but deleted a request for study of possible end-use criteria which might reduce the volume of such research.

Time Management

Mary Leigh Burke, local freelance writer and health educator, will teach a Time Management class at Escondido Village, beginning Wednesday, April 20.

The class, which will run from 7-8:30 p.m., will explore ways to enhance self-awareness and personal well-being, as well as practical time-creating techniques.

The fee for the six-week course is $15; for more information, call 7-1101.

Senate report

Senate approves extension of human biology, humanities special programs

TO MEMBERS OF THE ACADEMIC COUNCIL
FIFTEENTH SENATE REPORT NO. 11

Summary of actions taken by the Senate
April 14, 1983

At its meeting of April 14, 1983, the Senate took the following actions:

1. On the recommendation of the Committee on Undergraduate Studies, the Senate, by unanimous voice vote, extended the degree-nominating authority of the Program in Human Biology for a further five years, effective with the autumn of 1984.

2. On the recommendation of the Committee on Undergraduate Studies, the Senate, by divided voice vote, extended the degree-nominating authority of the Humanities Special Programs for a further five years effective with the autumn of 1983, but without the exceptional treatment of pre-medical students.

3. On the recommendation of the Committee on Graduate Studies, the Senate, by unanimous voice vote, approved an amended version of *Procedures for the Establishment and Review of Graduate Non-Departmental Degree-Nominating Programs* (formerly titled *Procedures for the Establishment and Review of Graduate Interdisciplinary Programs*).

4. The Senate, by unanimous voice vote, approved a recommendation of the Committee on Graduate Studies that the program in Latin American Studies be subject to regular review by the Senate, like all other non-departmental degree-nominating graduate programs.

5. On a motion made by A. Hastorf, seconded by G. Gillespie, the Senate voted unanimously to retain the present Senate apportionment of representatives for one more year, so that a more appropriate procedure for reapportionment may be adopted and implemented prior to the 1983-84 elections.

MINUTES OF THE FIFTEENTH SENATE
OF THE ACADEMIC COUNCIL
April 14, 1983

A meeting of the Fifteenth Senate of the Academic Council was held on 4/14/83, beginning at 3:18 p.m. in Room 180 of the School of Law with A.L. Fetter, chair, presiding. Present were 33 representatives, 6 *ex officio* members, and a number of invited guests.

Approval of Minutes

The minutes of the meeting of the Fifteenth Senate held on 3/31/83 (SenD#2488) were approved as submitted.

Report of the Steering Committee

In the report from the Steering Committee, A.L. Fetter, chair, reported that the committee is currently considering the possibility that it might now be appropriate for the Senate to appoint an *ad hoc* committee to review its own organization and procedures, to determine how well it has been performing its task and what changes, if any, need to be made. The Senate was organized in 1967, and now represents an Academic Council approximately 30 percent larger than it was when the Senate was founded. Many of the Senate's founders are currently available for consultation on the rationale for the original organizational decisions and on whether that rationale is equally valid today. The Steering Committee will consider proposing the establishment of such a review committee, and welcomes any comments or suggestions to members of the Steering Committee.

He also called attention to two new items on the forthcoming agenda: a review of the Freshman/Sophomore Seminar Programs and a preliminary report from the Committee on Research on the study of weapons-related research at Stanford.

Report from the Committee on Committees

A. Mellor, chair, reported that the Committee on Committees is currently considering the revision of the charge to the Committee on Computing and Information Technology to bring that charge more into line with the charges to other Council committees. In last week's meeting, the CoC was joined by four guests (C. R. Dickens, A. L. Fetter, J. R. Miller, Jr., and A. E. Siegman) who were extremely helpful in giving the CoC an idea of what some of the issues facing that committee are. The CoC will be reporting back to the Senate later this quarter with recommendations for changes in the C-CIT charge.

Report of the Provost

The Provost reported first that the Film Rental Service in Meyer Library will continue to be available at least 20 hours per week, with only a small increase in fees for outside rentals.

Secondly, he reported that nine Guggenheim Fellowships had been awarded to Stanford faculty, adding that the following awards had also been made: Cornell 11, Harvard (like Stanford) 9, UC-Berkeley 8, and Yale 7. He specifically congratulated Senate representatives E. Traugott and A. Mellor, who were two of Stanford's nine awardees.

His third report reminded the Senate that a search committee had been seeking a replacement for Leon Seltzer, Director of Stanford University Press, who will retire in June. Seltzer came to Stanford as the new Director of the Stanford Press on April 14, 1956. He did a superb job in creating a first-class university press, now publishing some 40-45 titles per year. The new incoming director of Stanford Press has described Seltzer as one of the clear and obvious institution-builders among university press directors in this country. He came to Stanford from Columbia University Press, and received a law degree from Stanford in 1974. After his retirement, he plans to work in copyright law.

The new director of the Stanford Press as of August 1, 1983 will be Grant Barnes, now executive editor of the University of California Press. He has 18 years of distinguished service in scholarly publishing, primarily at UC-Berkeley.

The provost expressed warm thanks to the search committee and its incomparable chair, G. L. Bach. The other committee members included Professors W. Chace, J. Gibbs, Jr., T. Grey, G. Lieberman, and P. Suppes.

C-US Report on the Program in Human Biology

P. Seaver (chair of the Committee on Undergraduate Programs) presented the committee's report on the review of the Program in Human BIology (SenD#2489). The review committee praised the program and recommended its continuation, but expressed concern that the number of majors and variety of courses offered were beyond the resources of the program. It made seven non-binding recommendations intended to guide and strengthen the program over the next five years. The Dean of Humanities and Sciences endorsed all but one recommendation, considering that one too restrictive. The program is to be encouraged to have courses that would not otherwise be offered by members of the regular faculty, and will not be subject to budgetary constraints other than those common to all departments and programs. Since program was reviewed in its third year of the current five-year period, this five-year renewal, if approved, would become effective in autumn of 1984.

R. Thompson, the new director of the Program in Human Biology, commented that earlier concerns about possible restrictions on advanced courses have now been resolved. The rigor of the program has been increased significantly. The budget in actual dollars has gone up about 7 percent a year, which means at best holding even; the number of majors has gone up 15 percent. In 1979-80, there were 244 Human Biology majors; in 1980-81, 273; in 1981-82, 365; and this year, 403. The number of majors has increased significantly even though the rigor of the major has also significantly increased. He concluded by adding that the recommendations from every level of the review were extremely helpful.

W. Clebsch pointed out that the review took place in 1981-82 with the assumption and charge that the renewal was to take effect in autumn of 1983. Nevertheless, he expressed the enthusiastic endorsement of his committee that the program be renewed for a five-year period, effective autumn 1984.

The Senate unanimously approved a five-year extension of the Program in Human Biology effective autumn 1984.

C-US Report on the Humanities Special Programs

In presenting the report on the Humanities Special Programs (SenD#2490) P. Seaver (chair of C-US) pointed out that the program, in existence since 1947, has performed a valuable function in sheltering emerging majors as they developed. It offers a model honors program. The only major concern at all levels of the review was the anamolous situation which permits pre-medical students to substitute an equivalent amount of pre-medical course work for the 40 units of work in a humanities subfield which is required of other majors in the program. The deans of Humanities and Sciences were prepared to recommend that "the program's degree-granting authority be renewed on condition that the program take immediate steps to insure that the future pre-medical students in the program have a major in a defined humanistic subfield." With the understanding that the program faculty was willing to reconsider the pre-medical option, C-US recommended that the program be extended for another five years.

L. Ryan, currently director of the Humanities Special Programs, reviewed the history of the B.A. in Humanities with a pre-medical concentration from 1961. At that time, it required 30 units of predominantly advanced work in a single humanistic department. Since 1963, no such requirement has been made. After that time, recommendations were made about acquiring substantial background for the prospective senior essay, but even these had disappeared from Courses and Degrees by 1971. Ryan speculated on what factors might have created this situation, but there is no clear explanation for the change.

With the reinstitution of a Western Culture requirement, the Humanities Special Programs faculty has been concerned that the major for pre-medical students currently requires only 27 units of concentration beyond the Western Culture requirement, plus a foreign language requirement equal to five quarters of instruction (instead of the University requirement of three). While the program has few pre-medical majors, graduating only 3 or 4 per year, the feeling now is that the program should require of them a four-course major concentration in a single humanistic department.

The faculty believes that the program provides valuable flexibility to pre-med students, enabling them to go overseas or to explore other courses in the University. They would like to preserve some of that flexibility, but themselves see the need to increase the requirements for the pre-medical students.

Dean Wessells remarked that pre-medical requirements in the sciences are not all that heavy. A very significant number of students come in with enough advanced work that they need take very few of those courses. These are some of our brightest students. At the very least those four additional required courses should be 5 unit courses.

Ryan indicated that the courses normally required would be five units or very substantive four-unit courses; even so, this program would be easier than other majors within Humanities Special Programs, and would give greater flexibility for pre-medical students than for others in the program.

Associate Dean Lougee expressed a preference for the conditional approval recommended by the deans rather than the less specific reservation expressed by C-US. She commented, however, that to meet the Senate-mandated requirements for a major, the program would be obligated to increase significantly the requirements of the pre-medical option.

It was pointed out that this program has never before been reviewed and that if approved (conditionally or not) the five-year renewal period would begin with autumn 1983. Ryan expressed the hope that the program itself, about which there has been only this one major reservation expressed, might be approved for fall 1983, with the pre-medical option considered as a separate issue.

L. Rosenberg spoke in support of retaining as much flexibility as reasonable in order to encourage pre-medical students to follow a humanities program. We need to encourage a core of humanistically-focused pre-medical students, and such students must take more than the minimal science requirements as well or they won't get into the best medical schools.

Both C. Heller and C . Degler objected to the practice of treating pre-med students differently from others in the requirements for a given degree. Dean Wessells pointed out that these bright students do take much more course work than is required; the thing they lack is focus—a concentration, which they don't get in their pre-medical studies. The message is that this program doesn't require enough of them.

Vice Provost Katchadourian pointed out that we have no formal pre-medical program, and that the statement of intent to apply to medical schools is taken as the fact. In effect, this amounts to permitting the substitution of a certain number of science units for the same number of

continued on next page

Senate/ continued from page 14

humanities units. Other science students would logically be just as eligible for this option.

On request, L. Ryan summarized the types of programs which Humanities Special Programs offers. These include 1) an Humanities honors program, open to any B.A. degree candidate whatever his or her major; 2) a major program, with honors required, for the B.A. degree in Humanities, and 3) an individual 40-unit concentration, beyond the 27 required units in the humanities, which integrates an interdepartmental set of courses into a unified program of study. The pre-medical option falls in the third category, except that it exempts the student from the 40-unit concentration. The four-course requirement currently being considered by the Humanities Special Program faculty would impose roughly half the usual 40-unit requirement on pre-medical students. Imposing the entire requirement, it is felt, would eliminate pre-medical students from the program. They would not have sufficient units to spare for the program after satisfying all other requirements.

In discussing the inequity of treating pre-medical students differently on these degree requirements, several commented that it is not uncommon that the requirements for a given degree may be different, but comparable. This is not the same, as M. Bratman pointed out, as the difference between requirements for a degree and lack of those requirements. He emphasized that the humanities requirements are needed to prepare students to take best advantage of the honors level.

K. Melmon remarked that science requirements for admission to medical school are really very minimal. The prejudice that a full humanities program will prevent acceptance at a medical school is not supported by the facts. A harder track of study may attract even more good students.

J. Adams moved to amend the recommended program renewal to exclude the exceptional treatment given to pre-medical students. C. Degler seconded the motion. The amendment passed on a divided voice vote.

If passed, the amended recommendation would mean that future pre-medical applicants for a B.A. in Humanities would have the same status as all other candidates, i.e., would have to meet the same requirements. The understanding is that an exception to standard requirements could be proposed for Senate approval anytime within the five-year period if it had the support of the Associate Dean of Humanities and Sciences for Undergraduate Programs and the Committee on Undergraduate Studies.

At the close of the discussion, the Senate, on a divided voice vote, approved the five-year renewal of the Humanities Special Programs degree-nominating authority without exceptional treatment of pre-medical students, effective autumn 1983.

C-GS Report on Procedures for the Establishment and Review of Graduate Interdisciplinary Programs (See revised title in Senate Report No. 11)

P. Robinson, chair of the Committee on Graduate Studies, presented the *procedures for the Establishment* and Review of Graduate Interdisciplinary Programs (SenD#2493), which had been developed by C-GS at the request of the Senate.

The procedures were outlined in nine steps from the inception of a new program through its approval and subsequent review and renewal by the Senate. Attached was a list of graduate programs to which the procedures were intended to apply. By consensus, the Senate divided the procedures and the attached list of programs for separate consideration, and discussion was opened on the procedures.

Associate Dean Lougee inquired if the procedures should not include specific mention of a cognizant dean's responsibility to comment on the financial impact of a program, in conformance with the instructions of the Senate in spring 1982.

Dean Lieberman and P. Robinson both responded that the Procedures document does not specify the nature of the cognizant dean's comments and that financial impact could be expected to be only one of a number of such decanal comments.

There being no further discussion, the document was accepted by unanimous voice vote.

As discussion opened on the attached list of programs to be reviewed, Dean Kays pointed out that the two programs listed in Engineering were intradepartmental programs and thus not appropriate for Senate review. He moved that those two programs be deleted from the list. Dean Lieberman seconded the motion. E. Cohen agreed with Dean Kays and pointed out that the term "interdisciplinary," if interpreted literally, would designate many such programs, including one of her own in the School of Education.

P. Robinson explained that the programs at issue were those not attached to a single department (or a School which has no departments, like Education), programs lacking a single faculty with continuing responsibility for the quality of that program.

Dean Lougee commented that it was her understanding that the Senate has the sole authority to grant degrees and to approve degree-nominating entities. The point of the list is to capture for cyclical review all the non-departmental programs which nominate degree candidates to the Senate for the awarding of degrees. The Senate grants such degree-nominating rights to departments without limit of time. This document attempts to capture all graduate-level degree-nominating entities which are not departments. For that reason, she questioned the omission of the Graduate Special Programs from this list, pointing out that the parallel undergraduate program (the individually-designed major program) is subject to five-year review by the Senate and was approved for a further five-year period by the Senate last April.

J. Adams questioned the commonality of the programs on the list and asked that their common attributes be indicated by a descriptor. Dean Lougee and P. Robinson agreed that the list is intended to include all and only those graduate programs which are non-departmental degree-nominating programs. The procedures document should be retitled with those more appropriate terms. That's why the two School of Engineering programs don't belong on this list.

Dean Lieberman commented that Graduate Special Programs differs from those on the list in a different way. Since there is no single curriculum, there is some question what is to be reviewed. It might be appropriate for C-GS to report to the Senate on the activities of that program, but it is not clear that program review and renewal is appropriate in the way that it is with the other programs.

When urged to return to the question of deleting the two engineering programs from the list, Chairman Fetter suggested an alternative. The Senate could consider that the approved *Procedures* satisfied the basic request, and that this list is in preliminary form and subject to change. Subtracting or adding programs would demand more information than is immediately available to the Senate, and a Senate vote now would be premature. The list should be put in final form before approval is asked of the Senate. In light of this discussion, Dean Kays withdrew his motion.

R. Hofstader enquired whether information about program enrollments could be made available. P. Robinson pointed out that those figures are reported with each program review.

There was consensus that the more appropriate terms suggested by Dean Lougee would replace the word "interdisciplinary" in reporting these procedures.

In closing his report, Chairman Robinson called attention to the fact that C-GS has proposed that the Senate pass a motion recommended by C-GS that Latin American Studies, like all other non-departmental degree-nominating programs, be subject to regular review (SenD#2487). The recommendation was approved without dissent.

Reapportionment of Senate Representation Within the Academic Council

In presenting the proposal for reapportionment, the Academic Secretary pointed out that the proposed resolution (SenD#2492) recommends a reallocation of Senate seats based on autumn 1982 Academic Council and student populations within constituencies. It would also mandate the appropriate changes in Senate Rule VIII to reflect the Senate decisions on reapportionment and any subsequent decisions within constituencies regarding changes in Electoral Units.

The base figures and allotment ratios were given, together with the method traditionally used for assigning student-based seats. It was pointed out that these calculations for the third reapportionment of the Senate were based upon historical precedent, following assumptions and methods used in the original apportionment and in the first and second reapportionments. If the Senate does establish a review committee, there are many questions and assumptions about reapportionment which may well bear scrutiny, among them the relative sizes of the Senate and Academic Council, the method of assigning students to constituencies, the criteria for major constituency status, the question of minimal and proportional representation, and many other related questions.

Attention was also called to the fact that in the allotment proposed, all three of the biggest schools are adversely affected in the sense that, by the system used, all "earn" more seats than have been assigned: Engineering and Humanities and Sciences 1 more each, and Medicine, 2 more. The constraints of a fixed Senate size and mandated minimal representation for smaller major constituencies forces hard decisions and prompts many questions about the appropriateness of a given allocation.

The proposal is late because of the change in the Academic Secretary's office this year. If passed, and possible to implement at this late date, the reapportionment would become effective with the Sixteenth Senate, which might be organized as scheduled on May 5th if there are no major changes within the schools, or could be organized as late as June 2 if necessary. If major changes are to be made in electoral units, those cannot be implemented for the Sixteenth Senate but would be put into effect for the 1983-84 elections for the Seventeenth Senate. It was pointed out that certain types of changes in Senate electoral units can have a complicated secondary effect on Advisory Board units as well.

The reapportionment data regarding subsections of the two multi section schools goes directly to the schools, since that reallocation is an intraschool affair.

The question was asked how decisions were made about rounding totals to determine seat allotments, since the results appeared inconsistent. Some allotments are dictated by Charter-mandated minimal representation per major constituency. Others were the result of arbitrary decisions, influenced by factors regarding the composition of both Academic Council and student populations, e.g., proportion of post-doctoral or research fellows in the total student population within a constituency.

K. Melmon remarked that the use of double-decimal figures to present data interpreted in that way was totally unjustifed.

J. Gere commented that, given a fixed number of seats, rounding upward to ensure Charter-mandated representation for the smaller constituencies would necessitate rounding downward for the larger electoral units.

R. Street suggested that, if precedent must be followed, it would be more logical to round down the totals for all four of the larger schools, after satisfying the minimal representation requirement for the small constituencies. This would give a more fair distribution of the remaining seats in the fixed pool.

Dean Wessells asked why the figure for Medical School students doubled between 1977 and 1983. Dean Lieberman responded that it was the result of an administrative reclassification of post-doctoral fellows to student status during that period. This had a more profound effect upon the Medical School student population than on any other single constituency.

The manner of assigning undeclared majors was mentioned, as was the possibility that students might be assigned to major constituencies in some relationship to numbers of course registrations, rather than by declared major with undeclared majors proportionately assigned. E. Webb expressed the hope that the pattern of representation in the Senate could be determined on the basis of less equivocal figures and a more considered analysis. G. Gillespie questioned the propriety of applying new allocation figures to an election already completed, even if that proves possible to do.

A. Hastorf proposed that the Senate might vote to retain the current apportionment of the Senate for one more year since, because of a change in Academic Secretary, the proposal had come too late to implement for the Sixteenth Senate. The present apportionment of seats would be kept in place for the Sixteenth Senate, and whatever review the Senate decides to put into place should at least determine a more careful procedure with regard to reapportionment. The proposal was seconded by G. Gillespie.

A vote was taken on the modified motion that the present Senate apportionment of representatives be retained for one more year for the Sixteenth Senate so that a more appropriate procedure for reapportionment may be adopted and implemented prior to the 1983-84 elections. The motion passed unanimously.

The meeting adjourned at approximately 5:20 p.m.

Clara N. Bush
Academic Secretary

School of Education numero uno again

Stanford's School of Education has again been ranked first nationally for research.

UCLA ranks second, followed by Illinois, Wisconsin, and Berkeley.

The new rankings were published in the spring issue of the American Education Research Journal by Maurice Easch, professor of urban education research at the University of Illinois-Chicago.

According to *The Chronicle of Higher Education*, the study ranked schools of education by a formula that included the number of articles published by faculty in leading education research journals between 1975 and 1981 and the extent of faculty participation in the program of the American Educational Research Association's annual meetings, among other factors.

The University of Illinois at Chicago ranked sixth, followed by Minnesota, Harvard, Penn State, and Ohio State. UC-Santa Barbara ranked 11th.

Staff employment opportunities

Exempt

29680-JB (JCC:7650) CUSTODIAN WKG SUPVR: 7:30-4pm; supv the cleaning, training & other duties of the custodians assigned to you; create & maintain a clean, safe, 'home-like' atmosphere for residents; daily check of bldgs/grounds & promptly report security, damages, maintenance & housekeeping problems to approp offc; submit monthly bldg maintenance & housekeeping report; order supplies & maintain inventory control over mat'ls & keys; attend approp classes; work & commu effectively w/ students, Residential/Edu, Resident Fellows & co-workers; QUALIFICATIONS: flexible performing job, can accept organizational changes fr outside depts; good supvry skills; demonstrated admin skills; ability to acquire exp & knowl regarding employee relations & USE contract; supvry exp rquired; excel commu skills a must; prev custodial skills desirable but not essential.; S09; $1632-2046.

15595-BP (JCC:2070) ADMIN ASST II: Acts as Personnel Officer, Offc Mgr, & Staff Assistant to Dir of CPPC; prov supporting analysis for budget planning; reviews monthly budget, projs trends & expenditure patterns; assists in cost control; assists in drafting annual budget letter; manages CPPC fee acct; trains unit heads & supvrs in personnel policies; coord all hires; prov informa to staff about Univ policies, benefits, promotional opportunities; coord annual Career Faire; prov CPPC orientation to all new employees; supv purchase & maintenance of supplies & eqpt; QUALIFICATIONS: knowl & work exp in personnel, budgeting, & supvn; ability to plan, organize, proj, & implement; ability to win coop fr diverse group of clients; write clearly & effectively; familiarity w/ Stanford policies & procedures; contact: Ruth Schneider/Deborah Duncan, 497-3963.; C05; $1670-2086.

14256-LL (JCC:3732) GRAPHICS ARTIST II: 75%; design & prep of exhibit (full scale design & prep); design & prep of camera ready art for Brochures & Pamphlets, Logos, Poster Presentations, Posters & Signs; biological drawings & diagrams for slides & publication; illustration as required for brochures & pamphlets: in line, color separated or w/ applied color; line, bar & flow graphs for publication in books & journals, for lecture slides in color or black & white; QUALIFICATIONS: BAF or BA in Art preferred; all skills required related to prep for press incl color separation, knowl & use of stat camera & typesetting products, photographic sizing, composition, etc; proficiency in drawing, inking, color theory & applied design; good commu skills.; C04; $1133-1410.

20475-AW (JCC:4084/4092) Programmer/Analyst III/IV: Work effectively w/ computing professionals, hospital administrators, dept heads, med & supervisory staff; interface w/ SUMC users to identify services & understand & resolve problems; data base mgmt exp essential (CICS/DL1); QUALIFICATIONS: min of approx 5 yrs (PA III) or 8 yrs (PA IV), programming w/ emphasis on hospital applications; exp in a serv oriented, production shop, serving health care institution; exp w/ CICS/DL1; knowl of ADS, DCL coding, & at least one of the following langs COBOL, PL1 or Assembler; must have med information sys exp & able to work w/ large multiprocessors in both centralized & distributed environments.; C07/C08; $2113-3344/2464-3848.

29445-LL (JCC:5042/5050) Sys Programmer II/III: Asst in sys programming, applications programming, & facilities support; primary emphasis is on software, but consulting for users, hardware repair & supvn of vendor-provided hardware repair, & the writing of sys documentation also important; update, modify, maintain, rewrite, & redesign portions of TOPS-2 operating sys, RSX-20F operating sys, & various other sys programs for all GSB computing eqpt, incl peripherals; write utility programs as needed; in the absence of mgr, perform admin duties as required; QUALIFICATIONS: prev TOPS-20/TOPS-10 sys software internals exp required w/ substantial exp in MACRO assembly lang in non-trivial applications; exp in PDP-11 & other large-scale programs assembly lang & exp in a consulting environ essential; exp in several high-level langs, incl FORTRAN, C, Pascal; knowl of microcomputer architecture & assembly lang programming helpful; non-smoking area.; C06/C07; $1854-2733/2113-3344.

41657-AW (JCC:5042/5050) Sys Programmer II/III: Coterminous to 12/31/83; team member w/ respon for implementing & maintaining commu software written in Pascal & PDP-11 Macro Assembler for DEC PDP11 minicomputers acting as commu processors in RLIN; detailed program specification & documentation, program development sys integration, testing, & maintenance; initial assignment will be development of program-to-program commu between remote large scale host computers in support of Linked Sys Proj/Standard Network Interconnection using emerging state-of-the-art data commu procedures; QUALIFICATIONS: knowl & understanding of PDP11 minicomputers, RSX11M operating sys, & Pascal programming lang; commu effectively in clear, concise & complete written & oral reports; thorough working knowl of PDP11 programming w/ 2 yrs exp; 2-3 yrs of exp w/ PDP11 minicomputers for SP II & 3-5 yrs of exp for SP III.; C06/C07; $1854-2733/2113-3344.

16406-AW (JCC:8880) MISC PROFESSIONAL: Coordinator, Western Regional Program on Japan; w/ guidance, coordinator is responsible for planning/execution of workshops for teachers, participation/presentation s at professional conferences & coordination of periodic network mtgs/conferences; mgmt of proj planning, budget/expenditures & corresp; exploration of funding opportunities & preparations of proposals, reports; QUALIFICATIONS: ability to coord/admin; ability to make formal presentations to various audiences; living exp and/or coursework on Japan.; C05; $1670-2086.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, April 26, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

28219-LL (JCC:4076) PROGR/ANALYST GEN II: 50% or 100% depending on funding; Programmer/Analyst for Data Bank Network (17 US & Canadian data banks) which use to TQD (Time-Oriented Database) Software Sys; write TOD programs in PL/I on IBM 3081 computer, incl editing, debugging, & documenting (using Script & Wylbur); maintain TOD schemas for data banks, check & transpose data, & maintain user-specified coding & compute routines; transfer & convert data fr other sys to TOD; troubleshoot hardware & data commu problems; QUALIFICATIONS: BA w/ emphasis on applications programming & sys analysis skills or a combination of edu & exp in computer programming area; required to work flexible hrs (evenings and/or wkends); commu skills (oral & written) commensurate w/ facilitating instruc of users; ability to develop effective work methods & work thru projs to their completion.; C06; $927-1156/1854-2312.

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Nonexempt

41745-PM (JCC:2596) SECY II-SPEC: Work for various faculty members as assigned; heavy course work preparation incl typing, cut & paste & handling of all classwork needs; handle corresp; make nec arrangements for expense reports, travel, etc; cover phone calls & faculty scheduling of appts, if preferred by faculty member; QUALIFICATIONS: typ 75+; excel sec'l skills mandatory; familiarity w/ offc eqpt & standard offc procedure extremely helpful; knowl of IBM-PC (or other word processing eqpt) helpful; willingness to learn; some legal bkground helpful but not required; send appl/resume to Emily Chatfield, Room 113, Law School, (497-0352).; B12; $1310-1373.

28280-BP (JCC:2462) OFFICE ASST III: Process reqs, typing contract & acct numbers, requestor's name & delivery point, mat'ls and/or services ordered & estimated cost & deliver for approval; resolve problems; reconcile budget statements; file reqs, purchase orders, & mat'l received records into commitment books by contract, proj & numerical sequence; answer phones; respon for safe file, respon for filing invoices, etc; QUALIFICATIONS: 2-3 yrs offc exp; exp w/ adding machine, calculator helpful; send appl/resume to Beverly Yates, AEL 107.; B11; $1246-1310.

31501-BP (JCC:2462) OFFICE ASST III: Fixed term to 8/31/83; act as Research Assistant in Offc of Med Development; use of a variety of reference files, lib resource mat'ls & other misc records; development of informa & prep of res worksheets on Individuals, corporations & foundations w/ a demonstrated interest in supporting the work of SUMC; prepare or assist w/ prep of, special reports as required by fundraising staff & related officers, etc; QUALIFICATIONS: typ 45; able to compose written text; basic understanding of simple financial reports; able to type, proofread & correct one's own errors; good memory for names & familiarity w/ Offc of develop't helpful; send appl/resume to Liz Trujillo, 301 Encina Hall.; B11; $1246-1310.

41742-PM (JCC:2478) OFFICE ASST IV: Act as Law Placement Recruitment Coordinator; oversees all aspects of employer recruitment process at Law Sch'l incl primary contact w/ employers, publication of recruiting mat'ls, & the orientation of students to interviewing program; interacts w/ legal employers; interprets & enforces guidelines for recruiting; coord schedules; maintains computerized records; compiles statistics on recruiting; oversees all written & telephone commu regarding job openings for students & alumni; QUALIFICATIONS: typ 50; evidence of ability to work well w/ people; supvry or clerical admin exp helpful; excel written & oral skills; able to work under pressure; ability to handle sensitive & delicate matters; either exp in entering data on CRT or willingness to learn Wylbur & Word Star; send appl/resume to Emily Chatfield, Room 113, Crown Quad.; B14; $1440-1514.

6625-PM (JCC:2554) SECRETARY II: 50%, 1-5pm; typ corresp, forms & manuscripts for professor & members of group fr dictaphone & rough drafts using dictaphone, typewriter & word processing sys; handle dept mail; make travel arrangements for professor; act as bkup when needed for other members of offc staff; answer phones; xeroxing; genl offc duties; QUALIFICATIONS: typ 55-60; good typing skills; exp w/ word processor preferred (Wordstar on Apple II); use of dictaphone; good phone answering skills; good interpersonal skills; ability to meet deadlines; send appl/resume to Gweneth Wood, Physiology, Room 2.; B11; $623-655.

29339-BP (JCC:2554) SECRETARY II: Sec/receptionist for busy, hectic TV Network Office; extensive typing (NBI word processor); heavy phone calls; performs accurate finished-form typing & proofreading on corresp, manuscripts & forms & proposals; makes appts for Dir; picks up & delivers US & ID mail; helps to arrange dept mtgs; sets up, revises & maintains a variety of files; respon for processing & maintaining records of grades for 1,800 students, entering them & maintaining a Wylbur file; respon for petty cash & dispersing of money; order offc supplies; prepares all purchase reqs, I.D. reqs & expense reports; QUALIFICATIONS: typ 60; excel phone skills required; accurate finished typing; requires comprehensive knowl of TV Network; compose corresp & reports; send appl/resume to Anne Benker, Durand 345.; B11; $1246-1310.

31631-PM (JCC:2562) SECRETARY III: Sec to Dir of Lab of Developmental Neurochemistry; respon for dept'l residency selection, & Chairman of Faculty Senate; must deal effectively w/ faculty, residents & lab personnel in a busy environ where deadlines are commonplace; typing grants & manuscripts; initiating & processing orders, purchase reqs, etc; budget & authorize fr several funding sources; handle day to day programs efficiently; QUALIFICATIONS: typ 60-80; s/h preferred; superior organizational skills & able to handle multitude of complex respon; familiar w/ Wordprocessing & dictating eqpt; some acctg skills helpful but not mandatory; knowl of univ rules, regulations & acctg sys & working knowl of Med Sch'l operations very helpful but not essential; contact: Dea Eisner, S253 Med Ctr, 497-6049.; B14; $1440-1514.

28279-BP (JCC:2562) SECRETARY III: Sec for Solar Terrestrial Physics Group of Institute for Plasma Research; prov support for growing group of 11 people; screen visitors & phone calls; schedule appts, arrange mtgs, schedule seminars, etc; maintain extensive mailing list & see to the timely distribution of tech reports & journal publications; extensive travel arrangements for group & visiting scientists; type corresp, notes, tech articles & report quickly & accurately; prep class work for Astronomy course & Freshman Seminar, etc; QUALIFICATIONS: typ 65; 5 yrs exp in basic skills, equiv to an executive sec; heavy dictaphone use; strong tech typist; initiative, judgment, maturity & tact needed; send appl/resume to Beverly Yates, AEL 107.; B14; $1440-1514.

27149-PM (JCC:2562) SECRETARY III: Work for 4 sr. anesthesiologists; scheduling appts, mtgs, travel arrangements; typing manuscripts (tables) & grant applications; ability to follow through on problems & assignments during periodic absence of faculty on business trips; make decisions independently; exercise good judgment & deal w/ people at all levels; familiar w/ dictating eqpt; med terminology; word processing (Apple II/Wordstar available & willing to train); QUALIFICATIONS: typ 70; several yrs sec'l exp, preferably in a med environment; training or exp working w/ word processors; contact: Adena Goodart, 497-7555.; B14; $1440-1514.

Watch electricity use on Sunday—PG&E to do routine maintenance

The campus electric power load must be reduced by approximately 20 percent from 6 a.m. to 5 p.m., Sunday, April 24, to allow PG&E distribution equipment to be taken out of service for maintenance.

All nonessential uses of electricity must be deferred during this time.

Curtailment is especially important in the following areas: electric cooking, heating, space conditioning, and lighting. Scheduled activities need not be postponed, although air conditioning and ventilation should be reduced.

It is anticipated that voluntary efforts will be adequate but emergency load shedding will be implemented by the Utilities Department if overloading occurs.

The following areas will not be affected: faculty/staff housing, new student housing at Governor's Corner, Biology greenhouses, main Medical Center (Stone buildings and Phase I), Hoover Pavilion (hospital), and Carnegie Institute.

This curtailment was requested by PG&E to allow routine maintenance on the large substation transformers without a complete shutdown. It has been scheduled at this time to coincide with relatively light loads and availability of substation personnel.

For information and assistance please contact your building energy manager or the Utilities Department at ext. 7-3765.

Carpools

Ongoing carpool needs another partner. Leaves Oakland at 8 a.m., leaves Stanford at 6 p.m., M-F. Call Dan Crump, ext. 7-4433.

Ongoing carpool needs another partner. Leaves Oakland at 8:30 a.m. Leaves Stanford at 6 p.m. M-F. Call John Bundor at 7-4480.

Carpoolers wanted. Dublin/San Ramon/Pleasanton to Med Ctr. Hours 9-5:30, M-F. Call Ed at 7-5569.

Carpoolers wanted for existing carpool. Marin County to Stanford University. M-F, 8-5. Contact Kyle at 7-5602.

Hospital

Please submit all applications/resumes to the Hospital Personnel Department to the attention of Celia Corchado, 770 Welch Rd., Suite 100.

DIETETICS SUPVR: Dietetics—#8163—(C-31); responsibilities: under direct supvn of Food Svc Mgr is respon for one or more of following sections: trayline, traycarrier, or sanitation; respon for scheduling, training, discipline, & evaluation of employees assigned to section; respon for efficient preparation of patient trays, & for timely serving of same; maintains standards of sanitation estabi by Dietetics Dept; qualifications: high schl grad or equiv reqd; demonstrated supv ability reqd; 3 or more yrs of experience in food preparation of service preferred; copmletion of food svc supvy course preferred; permanent, part-time; hours & days off varied; $7.63-$10.29 hrly

Education School plans public conference Saturday on history, outlook

Crisis or opportunity?

The Stanford School of Education will hold a public conference on "Education Faces the Future: Crisis of Confidence or Dynamic Opportunity?" starting at 1:30 p.m. Saturday, April 23, in Annenberg Auditorium on campus.

Prof. David Tyack will give the keynote address on "The Embeddedness of Public Education: A Different View." He holds the Vida Jacks professorship in education and also is a member of the history faculty at Stanford.

Two panels on the history and outlook for education will follow. Education Profs. Hans Weiler, Nell Noddings, and Larry Cuban will consider "The Issues and Values in Historical Perspective," with Prof. Myra Strober as moderator.

"New Barriers or New Pathways: Assessments of Current Policies in Education" will be discussed by Profs. Michael Kirst, Robert Calfee, and Marianne Amarel, visiting lecturer from Educational Testing Service. Prof. Elizabeth Cohen will moderate.

Coordinated by Mollie S. Rosenhan, director of special projects in the School of Education, the conference was planned in conjunction with several professional educators. It reflects a concern that education is becoming an "illegitimate" social institution, suffering from a crisis of confidence.

Conference registration fee is $12 in advance or $15 at the door.

Advance registration is required for those desiring to participate in a cocktail party and cabaret dinner at the Faculty Club following the conference ($21).

Further information may be obtained by calling Rosenhan at (415) 497-4465, Shirley Stein at 497-0127 or the School of Education at 497-2111.

Research seminars held Friday noon

Friday noon hour research seminars sponsored by the School of Education are continuing in Cubberley Building, Room 114. The seminars are meant to provide a forum for faculty, academic research staff, and visiting scholars in the School of Education, but all members of the academic community are welcome.

The remaining seminars are:

April 22—Jack Nelson, School of Education, Rutgers University; "Teacher Self-Censorship and Academic Freedom";

April 29—Ed Bridges, School of Education, Stanford; "The Management of Incompetence";

May 6—Vincent Tinto, School of Education, Syracuse University; "Patterns of Departure from Higher Education";

May 13—David Ragosa, School of Education, Stanford; "Analysis of Change and Stability";

May 20—Martin Carnoy, School of Education, Stanford; "Education and Theories of the State";

May 27—Roberto Jarry, School of Education, University of Paraiba, Brazil; "Rural Educational Services: The Case of Brazil";

June 3—Denis Phillips, School of Education, Stanford; "Tender-Mindedness in Educational Thought and Social Science Research Methodologies."

Rental housing

HOUSING AVAILABLE

□ **Sept. '83 to Aug. '84 or longer:** Architect designed campus hse, 4BR/3BA, study, frpl, pool, jacuzzi. Sep. rent. unit w/frpl, BA. Partly furn. $1550/mo. incl. all serv. Call 497-3992 (day), 857-0476, 5-9 pm & wknds.

□ **Aug. '83 to Jan. '84:** Fully furn. Cape Cod Colonial hse in Palo Alto. 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr. schls, shops, park, commun. ctr. Prof. going on sabbat. $1500/mo. Call 325-1709.

□ **July '83 to June 30, '84 (flex):** Berkeley hse: 5BR/3BA, LR, DR, library, frpl w/yr of wood, piano. 1 acre, lush grdn, auto water, grdnr, sec. system. $1500/mo. Call (4154) 483-8484 (day), (415) 548-1735 (eve & wknd). Will also consider exchange for Stanf. hse.

□ **Regularly Avail.:** 1 & 2BR furn & unfurn apts & twnhses, & 3BR/2BA hses; in Palo Alto & Menlo Pk in good nghbrhds. Close to campus. $595 to $1200/mo. Call Shirley, 856-6049 or June, 968-4957.

□ **July '83 to July '84:** Unfurn. 2BR/2BA hse, 2 car gar., pool, tennis, frpl, hot tub, W/D, in quiet hsng develop, 15 min. to Stanf. Poss. furn. Prefer non-smoker, no pets. Call 497-7001 (day), lv message for Dr. Kulick.

□ **Late June to early Aug.:** Quiet, cool, furn. West Menlo 3½BR/2BA hse, deck, fenced yd, bike to campus. $900/mo. All terms nego. Call 854-0344.

□ **Beg. Sept. 1:** Fully furn. 2BR/2BA Pearce Mitchell condo on campus. Yr-round pool, jacuzzi, rec. ctr. Adults, no pets. $850/mo. Call 497-1745 (day), 522-4917.

□ **NOW:** Furn. 4BR/2½BA hse, 2200 sq. ft., study, DR, FR, 3 car gar., patio, w/yr lease. Incl. kitchenware, linens, 2 TV, grdnr. Lrg. front & back yd. Quiet, safe nghbrhd. $1250/mo. Call 965-1302 (eve).

□ **Beg. May 1:** Designer's hse, Menlo Pk, 2BR/1BA, den, patio w/priv. fenced yd. AEK, dbl oven, W/D, gar., frpl. Prefer no children or pets. $1100/mo. incl. grdnr & water. Call 854-2727.

□ **Aug. 15 to Dec. 1:** Decorator's hse, 3BR/3BA, fully equipped. Pool. 20 min. to campus. $1200/mo. or nego for caring people. Call Virginia Owen, (415) 349-1828.

□ **Mid-June to end Aug. (flex):** Fully furn hse, 5BR/3½BA, FR, study, pool, jacuzzi, on campus. $1800/mo. incl. grdnr. Call 494-9401.

□ **Beg. May 15:** Twnhse in Sunnyvale, 2BR/2BA loft, frpl, W/D, 2 car gar. (attached). Nr. schls, & 280. Priv. w/extensive common grnds. Pool. Call (408) 733-[illegible] (eve).

□ **June thru Aug.:** 1BR apt in Boston/Cambridge area. Fully furn. in sec. complex. Walk to Harvard Sq. & pub. transp. Will sublet or trade for your attrac. apt. or hse for summer. Nonsmokers. Call COLLECT (617) 876-1232.

□ **Sept., yr. lease:** Fully furn. hse, 4BR/2BA, spacious, elegant, all appl., piano, garden, patio, gar., 10 min. to Stanf. $1050/mo. incl. grdnr. Call 322-0189 (eve).

□ **June 20 to Aug. 30:** Attrac. furn. hse. 3BR/2BA, lrg. grdn, in No. Palo Alto, nr. prk, pool, library, shops. Children welcome. $950/mo. Call 497-6878 (day), 328-4681 (eve).

□ **Late Ju ne thru July, Aug. (flex):** Fully furn campus hse, 3BR/2BA, garden, view. For careful tenant. $1200/mo. Call Feferman, 857-0323, 497-2349, or 497-1978.

□ **Beg. May 13:** Oak Creek apt., fully furn., 1BR, twin beds, pools, tennis, Call 328-4180.

□ **Mid-May to Sept.-Oct. (flex):** Fully furn. hse, 2BR/2BA, den, all appl., 10 min. bike to Stanf. Non-smokers, no pets. $800/mo. Call 326-1799.

□ **July-Aug.:** Attrac. summer rent, dwntwn Palo Alto, 1BR/2BA fully furn. condo, suitable for cpl., lib. w/spiral staircase, balc, pool, security. 18th C. European. $1200/mo. Call 324-1624 (eve) 327-3505.

□ **Beg. June 1:** Summer rent and/or 1 yr: High Portola Val. (Ladera). 3BR/2BA fully furn hse. Atrium, lrg. self-maint. grdn, oaks, pool, tennis. 7 min. to Stanf. $1300/mo. Call 324-1624 (eve), 327-3505.

□ **Sept. 1 to Dec. 28, '83:** Fully furn 2BR/2BA hse, LR, DR, study, frpl., W/D, DW. 10 min. to campus in Redwd City. Piano, above-grnd pool, patio. Must be willing to share yd w/in-laws lvng in back cottage. $700/mo. incl. yd care. Call 497-3285 (day), 363-1658.

□ **June 16 to Sept. 5:** Fully furn hse, classic Spanish, 5BR/5BA, remodelled ktchn, spiral staircase, crtyd, pool, jacuzzi w/dress. rms. Creek flows thru prop. No pets. $3000/mo. + util. Call 327-1142.

□ **Dec. 1, '83 to Aug. '84:** Spacious 3BR/2BA hse, FR, new AEK, study, pool, spa, in Los Altos, 20 min. to Stanf. $1400/mo. incl grdnr. Call 966-8242 (eve).

□ **June thru Aug.:** Portola Valley exec. hse fully furn 4BR/2BA. Walk to tennis, pool. $2000/mo. Call 326-5270, 9:30 to 3 p.m. M-F.

□ **NOW:** Ski cabin, So. Lake Tahoe, 2BR, frpl, color TV, phone. Adj. Natl forest, walk to lake, Tahoe Keys. $120/wknd, $200 wk (5 days). Call Janine, 497-2501, (408) 739-3141 (eve).

□ **June 14 to Sept. 15:** Old Palo Alto furn. 2BR/1½BA hse; secluded garden, bike to Stanf. $750/mo. incl. grdnr, + water. Call 321-4614.

□ **Beg. July 15:** Oak Creek apt. fully furn, 2BR/1-1/3 BA, gar, pools, sauna, foothills view. Call Melanie, 327-4800, x228.

□ **Aug. '83 to July '84:** Nicely furn. 3BR apt. in Jerusalem. Good location. EXCHANGE for similar in So. Palo Alto. Call Prof. Larry Cuban, 497-1483 (day), (415) 328-6540.

□ **May 13 to July 1:** Oak Creek apt. 1BR, quiet, fully furn. Gym, pools, tennis. Call 321-0771 (eve).

□ **April 18 thru June 18:** Furn. rm, share bath, lndry, ktchn. priv. Summer optional. $200/mo. Call 493-8338.

□ **June 18 to Aug. 28 (flex):** Fully furn. campus hse, 4BR/2½BA, FR, DR, piano. Lrg. fenced yd. $1500/mo. incl. util., water, cleaning, grdnr. Nonsmokers, no pets. Call 493-8874 (day or eve), (408) 279-5683 (day).

□ **NOW:** Rustic cabin, Arnold, Ca. Highway #4 nr. Bear Valley Ski. Wooded location, fully furn., sleeps 9. Inexpensive, short-term rentals. Call 493-0997.

□ **June 13 to Sept. 5:** Lrg. furn. 2-story hse, 3BR/2BA, LR, den, lrg. ktchn, W/D, enclsd yd., cov. patio, BBQ. Nr. park, tennis, shops. 10 min. bike to campus. $900/mo. + util. Call Dekker, 321-7963.

□ **Beg. Mid-April:** Furn. studio apt., Oak Creek. 5 pools, jacuzzi, sauna, steam, gym, tennis, view, cov. prkng. Very nr. campus. Call 497-4939 (day), 857-1885 (eve & wknds).

□ **Beg. June '83:** Arlington, VA, 2BR apt. fully furn., in suburban home, priv. entr., kitchen, frpl, lndry, pool mbshp. Nr. parks, tennis, shops, pub. transp. Minutes to dwntwn D.C. Long or short term rental. Call (703) 524-1513.

□ **July 28 to Aug. 29:** Lovely London hse. fully furn., Chiswick area, nr. transp. Open flr plan, new ktchn, DR, W/D, 3BR/1BA, garden. $1200/mo. Write Mrs. Jack Abramsky, 13 Van Brugh Rd., London W41 DB, England, or call 011-441-995-2747 or (415) 649-6049.

□ **Beg. Aug. '83:** Fully furn. 3BR/2BA Crescent Park, Palo Alto hse. $900/mo. Call 328-2677 (eve).

□ **Jan. to June '84:** Peter Coutts condo, 2BR, study, fully furn., pool, gar., 1450 sq. ft. Bike to campus. $1050/mo. Call (415) 493-6273 (eve or wknd).

HOUSING NEEDED

□ **June 1 to Sept. 30, '83 (flex):** English prof. on sabbat. seeks campus hse. RENT/EXCHANGE attrac hse. N. Oxford, Engl., 3BR, LR, grnd. piano, DR, fully equip. ktchn, grdn, 1 mi. to Univ. Owners at Caltech. Arr. Stanf. summer '83. Call Neville Robinson, (213) 356-4728 (day), (213) 449-0399 (eve).

□ **July 1 thru Aug. 18, '83 (flex):** Visit. prof, wife, child seek furn. 3+BR hse on or nr campus. Call Michelle or Susie, 497-2218 (day).

□ **June, July, Aug.:** Architect & wife, nonsmokers, responsible, owner of home in S.F. seek fully furn. hse in Palo Alto area. Architect. & maintenance serv. nego. for HOUSESIT. Call (415) 567-0722.

□ **Beg. Sept. 9 mos. to 1 yr.:** Stanf. Humanities Ctr. Fellow & wife seek furn. 1BR apt. nr. campus in secure, quiet nghbrhd. Call Sue Asch, 497-3054 (day).

□ **Beg. Aug. (flex.) for academic yr:** Visit. scholar, wife, 1 child seek 2-3BR furn. hse. or apt. nr campus. Nonsmokers, clean living, home-owners. Will care for plants & pets. Local refs. Call (314) 875-2858 COLLECT, eves.

□ **July & Aug.:** Resp. mature cpl, no pets, nonsmokers, former Burlingame homeowners, seek peninsula hsng. Excellent area refs. Hsesit or rent. Write Nappan, 9506 Granada Dr., Sun City, AZ. 85373 or call (602) 972-8730.

□ **Sept. 15 to Mar. 31:** German prof, wife, 15 yr. old son, nonsmokers, seek furn. hse, 2-3BR on or nr campus. Call History Dept. Chrman. James Sheehan, 497-2651 (day). 321-7536.

□ **June thru Aug.:** Visit. prof. needs 4BR/2BA furn. hse. Call Veinott, 497-4094 (day).

□ **Sept. '83 to Dec./Jan. '84:** Visit. prof. with 2BR hse in Rhode Is. seeks to rent or EXCHANGE furn. 1BR apt. or small hse. in Stanf. area. Write or call: R. Marsh, Sociology Dept., Brown Univ., Providence, RI 02912, (401) 272-0197, AM or after 6 PM.

□ **June 1 to Aug. 31 (flex):** Visit. profs. need 2BR furn. apts. or hses to rent or sit for 1 or 2 summer mos. Nonsmokers, Stanf. refs. Call COLLECT (201) 232-4913.

□ **May 7 to Aug. 1; June 17 to Aug. 21:** Institute for Humane Studies needs furn. apts. for visit. profs. Nr. Stanf. Call Pat Dunbar, 323-2464, 7 AM to 3:30 PM.

□ **Beg. Aug. 1:** New Stanf. prof. seeks long-term rent. 2BR apt. or hse in Palo Alto, Menlo Pk, Stanf. area. Excellent refs. Call COLLECT (617) 492-5154.

□ **July 15 to Aug. 15:** Furn. 2BR hse or apt needed on campus for visit prof from Nigeria. Call Dr. Gann, 497-2072 (day).

□ **June to Sept.:** Mature 3rd yr law student w/12-yr-old seeks home to caretake. Local refs. avail. Call 854-5270 (eve).

□ **Beg. mid-June for 1 yr. min:** M.D., wife (no children, no pets) seek 2 or 3BR unfurn hse in Palo Alto area. Refs. avail. Will pay to $1000/mo. Call (313) 996-1800 or write: Stuart Flynn, MD, 1810 Virnankay, Ann Arbor, MI 48103.

□ **July 10 to Sept. 10:** Visit Canadian prof. w/wife & 2 daughters (5 & 7) seeks furn. campus hse. Stanf. refs, exceilent tenants. Call COLLECT (514) 484-1965, 6 to 7 p.m. Calif. time.

□ **Aug. '83 thru June '84:** Visit. law prof. w/wife & 3 children seeks hse w/3BR on or nr campus. Furn or unfurn, apt. or hse. Call Kaltenbach, 497-3574.

□ **NOW:** As soon as possible, for approx. 12 mos., family seeks unfurn. hse in Gunn High Schl. Dist. Time per. nego. Nonsmokers. Call 857-0753 or (415) 793-7918.

□ **NOW to Sept. 1 or longer:** Stanf. staff w/Univ & local refs wants caretake (Palo Alto area only). Will give loving care to your home, business, yd, pets. Will consider signing contract and/or paying minimal rent. Call Donna, 497-3967 (day).

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

Hanratty to deliver Mason lectures

Thomas J. Hanratty, Shell professor of chemical engineering at the University of Illinois, will give the David M. Mason lectures in chemical engineering at Stanford Tuesday and Thursday, April 26 and 28.

The first lecture will cover "Interfacial Instabilities Caused by Air Flow over a Liquid," and the second "Mechanism of Turbulent Mass Transfer." Both will be given at 4:15 p.m. in Carl F. Braun Lecture Hall of the Seeley G. Mudd Chemistry Building.

A member of the National Academy of Engineering, Hanratty has taught and done research at Illinois since 1953. He has developed new electrochemical techniques to study flow fields, new theoretical understanding of turbulent mass transfer, and improved methods for the design of gas-liquid flows, among other advances.

The first chemical engineer awarded a Shell distinguished chair, he has received three major awards from the American Institute for Chemical Engineers and two from the American Society for Engineering Education.

Initiated by a grant from the Atlantic-Richfield Company in 1975, the lectures are sponsored by a gift from the David and Lucile Packard Foundation and by contributions from alumni and friends.

Altmann to give talk on Judaism

Prof. Alexander Altmann of Brandeis and Harvard will discuss "Moses Mendelssohn's Conception of Judaism" in the 1983 Aaron-Roland lecture at 8 p.m. Tuesday, April 26, in the Tresidder Memorial Union lounge at Stanford.

His free public talk will be followed by a reception at the Faculty Club.

An associate at Harvard's Center for Jewish Studies, Altmann is the emeritus Philip W. Lown professor of Jewish philosophy and history of ideas at Brandeis.

Rabbi of the Berlin Jewish community during 1931-38, he founded the Institute of Jewish Studies in Manchester, England, and later edited the *Journal of Jewish Studies* and *Scripta Judaica*.

After emigrating to the U.S. in 1959, he edited a four-volume *Studies and Texts*, published by Harvard University Press. He is the author of *Moses Mendelssohn: A Biographical Study*, published by the University of Alabama Press in 1973. The University of New England Press published his *Essays in Jewish Intellectual History* in 1981.

Sharp, Sher set concert Friday

Irene Sharp, cello, and Bonnie Sher, piano, will present a concert at 8 p.m. Friday, April 22, at Tresidder Union.

The program will include the Sonata for Arpeggione and Piano by Franz Schubert, the Sonata, Op. 6, by Samuel Barber, Gestures and Interludes Two by David Bates, and the Sonata in e minor, Op. 38, by Johannes Brahms.

Sharp has given concerts throughout the U.S. and in Europe. Her repertoire includes works ranging from the baroque to contemporary.

Sharp is instructor in cello at the San Francisco Conservatory of Music and also teaches privately at her studio in Palo Alto.

Sher studied in New York at the Metropolitan Music School and the Third Street Settlement and later with Aube Tzerko and Adolph Baller.

She received her master's degree in music performance from San Jose State University as a student of Aiko Onishi.

Sher has given many chamber music concerts in the Bay Area and teaches privately at her studio on the campus.

Journalist to talk on German outlook

"Germany—Where is it Heading? Germany After the Election and before the Missile Deployment" will be discussed by Wolfgang Borgmann, foreign political writer for the *Stuttgarter Zeitung*, and currently a Professional Journalism Fellow at Stanford in the Department of Communication, at noon Tuesday, April 26, at Bechtel International Center.

Borgmann earned a diploma in political science, economics, and sociology from Hamburg University and then spent a year at the London School of Economics. He specializes in international affairs, arms control, and East-West relations, having covered major international and summit meetings such as the SALT II negotiations for his paper.

Luncheon tickets are available at a cost of $2.50 one week before each event at the I-Center office or at the door as they last. Brown baggers are also welcome at no charge. For more information please call 497-1831 or stop by the I-Center to explore opportunities for multi-cultural experiences.

I-Center showing of film on Xian

"Xian," a new and much acclaimed documentary about China's ancient imperial city, will be featured at the International Center's Other Cultures Film Series at 7:30 p.m. Thursday, April 21, in the International Center.

Once the greatest capital in the world and the Eastern terminus of the famed Silk Road, Xian is the locale of one of the world's most spectacular archaeological sites, the tomb of China's first emperor, Qin Shi Huang Di.

The highlight of the film is its extensive and unique footage of the Emperor's immense underground army vault, which is larger than a football field and filled with a life-sized pottery army numbering some 6,000 startlingly lifelike warriors, plus horses, chariots, and weapons.

The film is free to the public, but a donation of 75 cents is requested at the door to help defray costs of the program. The I-Center weekly cafe is open after the film, featuring homemade pastry and hot beverages.

Hammond plans talk

Michael Hammond of the University of Toronto will speak on "A History of Bioconstraint Theory: Interesting Failures and a New Proposal" at 3:30 p.m. Friday, April 22, in Building 120, Room 021/059, Department of Sociology.

All members of the campus community are invited to attend.

ALIVE!, the all-female jazz ensemble, will perform pop/jazz music with a feminist message at 8 p.m. Saturday, April 23, in the Tresidder lounge. The concert, sponsored by STARTS and the Women's Center, costs $8.50 ($6.50 with Stanford ID).

Chilaquiles plan poetry reading, dramatic presentation April 28

Chilaquiles, a newly formed student organization, will present "Visiones Poeticas Chicana," a free poetry reading, and dramatic presentation of contemporary Chicana political poetry, on Thursday, April 28.

Chicana poets Lorna Dee Cervantes, Bernice Zamora, Margarita Robles-Segura, and Patricia Montenegro will read from their work at 7 p.m. in Skilling Auditorium.

Marta Carrillo, a Stanford drama student, will adapt poetry written by herself, Cervantes, and Chicago poet Sandra Cisneros to dramatic performance at 6 p.m. at El Centro Chicano, the Nitery, before the poetry reading.

Entitled "Visiones," her performance choreographs lyric and dramatic verse that evokes major preoccupations of Chicana artistic vision.

Cervantes, whose book *Emplumada* was published in 1981 by the University of Pittsburgh Press in the Pitt Poetry Series, is editor and publisher of Mango Press of San Jose. She was a recipient of a 1978 National Endowment to the Arts grant and a Walker E. Hudson fellow. Her work has appeared in numerous magazines, journals, and anthologies including *Poetry*, *Antaeus*, *Latin American Review*, *Third Woman*, and *Fiesta in Aztlan*.

Zamora has taught expository and creative writing at UC-Berkeley and at Stanford. The author of *Restless Serpents*, Zamora is a major figure in Chicano literature today. She resides in the Bay Area.

Robles-Segura, a San Jose poet, has published widely in North American and Latin American publications. She writes both poetry and fiction.

Montenegro is a Stanford graduate student in Spanish from El Paso, Texas. Montenegro's first collection of poetry will be published this year by a major editorial house in Mexico City.

SWOPSI sponsors three films on Gays

Three classic films dealing with Gay topics will be shown on Thursday evenings in April and May under the sponsorship of SWOPSI.

Entitled "The Celluloid Closet: Gays in Film," the free series is being offered in conjunction with SWOPSI 169, "Supressed Perspectives: A Literary and Historical Analysis of Gay Experience."

The films are:

April 28—"The Damned" (Goetterdammerung, 1969), directed by Lucio Visconti, starring Dirk Bogard, Helmut Berger, and Ingrid Thulin. An analogy of the Krupp family in Nazi Germany, concerning the coup which destroyed Ernest Roehm, the Nazi homosexual who headed the SA corps, in the "Night of the Long Knives." Showing at 8:30 p.m. in History 205.

May 11—"Teorema" (1968) directed by Pier Paolo Pasolini, starring Terence Stamp, Silvana Mangano, and Massimo Girotti. An ambisexual Eros enters the lives of an upper-class Italian family and then vanishes abruptly, leaving the seduced family members to reformulate their lives. A beautiful modern version of Greek allegory. Showing at 7:30 p.m. in Casa Italiana.

May 19—"Boys in the Band" (1970) directed by William Friedkin, starring Laurence Luckinbill, Keith Prentice, and Leonard Frey. Hollywood's first film in which all the principal characters are Gay, and which coincided with the Stonewall riots. "Band" begins as a 60s cocktail party and grows into a witty and vituperative examination of pretensions, a tragicomedy of love. Showing at 8:30 in History 205.

WISE to discuss industry research

Science and Engineering Research in Industry will be the topic of discussion at 4:15 p.m. Thursday, April 28, in Room 420-041 (basement of Mathematics Department) for the next in lecture series sponsored by Stanford Women in Science and Engineering (WISE).

Participants in the discussion are: Jane Gitschier, postdoctoral scientist at Genentech; Adele Goldberg, manager of the Software Concepts Group at Xerox; and Barbara Grant, manager of exploratory optics at IBM.

All members of the Stanford community are welcome. Refreshments will be served after the presentation.

Oberlin dancers come to Stanford Friday, April 29

The Lively Arts at Stanford will present the Oberlin Dance Collective in concert at 8 p.m. Friday, April 29, in Memorial Auditorium.

The San Francisco-based troupe will perform: "Plane of Change," "Course of Time," "Ocean," "Diminishing Returns," and "In One Ear."

In addition, they will give a free lecture-demonstration at 8 p.m., Wednesday, April 27, also in Memorial Auditorium.

The Oberlin Dance Collective was founded in 1971 by Brenda Way as a touring outlet for performance work that had been developing at Oberlin College and Conservatory of Music in Ohio.

The company's dancers and choreographers shared a desire to explore new and provocative ideas. Calling upon a wide range of performing skills, the ODC created a repertory that runs the gamut from rigorous formalism and comic theater to pure kinetics.

In 1976, the company relocated to San Francisco to establish permanent residence.

The ODC is under the coartistic direction of choreographers Brenda Way, Kimi Okada, Pam Quinn, and Kate Nelson. Eight dancers and one apprentice complete the full troupe of 13.

The company is committed to developing the diverse skills required for each choreographer's work.

The ODC has performed extensively in the Bay Area and California through the Young Audiences program and the California Arts Council Dance Touring Program (DTP), and has toured the US under the aegis of the National Endowment for the Arts DTP. Along with the Margaret Jenkins Dance Company, they are permanent residents of New Performance Gallery in San Francisco.

For ticket information, call Tresidder ticket office, 497-4317.

Canadian films shown this spring

The Stanford Department of Communication is offering a series of free screenings of films produced by the National Film Board of Canada.

All films will begin at 3:30 p.m. in the Department of Communication subbasement screening room.

The schedule is:

April 20: "Sad Song of Yellow Skin"—A film about the ordinary people trying to live ordinary lives in wartime Saigon. (60 mins.)

April 27: "A Scream from Silence"—A docu-drama which attempts to touch upon the many aspects of rape—physical, emotional, spiritual, and legal. (95 mins.)

May 4: "Grierson"—A portrait of John Grierson, the man who saw in films a means to realize social responsibility. (57 mins.)

May 11: "Les Beaux Souvenirs"—A feature film about two women and their father. (90 mins.)

May 18: "The Dionne Quintuplets"—This film follows the quints through 21 years of a very strange upbringing, growing up as prize exhibits, living in a hospital-cum-exhibition hall built to house and display them. (87 mins.)

Left to right: Pianist Jodi Gandolfi; William Ramsey, baritone; Lila Stuart, soprano; Wendy Hillhouse, mezzo; and Gregory Wait, tenor. (Pianist Naomi Sparrow is missing.)

Hillhouse joins faculty musicians for Brahms, Schubert

The Stanford Department of Music will present faculty singers Lila Stuart, soprano; Gregory Wait, tenor; and William Ramsey, baritone, in concert at 8 p.m. Tuesday, April 26, in Dinkelspiel Auditorium.

They will be joined by well-known mezzo-soprano Wendy Hillhouse and faculty pianists Naomi Sparrow and Jodi Gandolfi.

Their program of duets and quartets will feature *Liebeslieder Walzer* by Brahms for vocal quartet and two pianos. Hillhouse and Ramsey will also perform *Vier Duette* by Brahms.

The remainder of the program will be Schumann lieder: Two Quartets from *Spanisches Liederspiel*, *Liebhabers Standchen*, *Vier Duette* (sung by Stuart and Wait), *Die tausend Grusse*, *Ich bin dein Baum*, *o Gartner*, and *Blaue Augen hat das Madchen*.

Stuart joined the voice faculty at Stanford this year, giving her first recital April 5 with pianist Gandolfi.

Hillhouse has performed with the San Francisco Opera Center, Pocket Opera, and recently with the San Francisco Concert Orchestra in *Le Bourgeois Gentilhomme*. In 1981 she participated in the Merola Opera Program, winning the Kent Family award. The same year she won the Puccini award while a member of the San Diego Opera Program.

Wait teaches voice at Stanford and is a well-known tenor soloist in the Bay Area and beyond. He conducts the Memorial Church Choir.

Ramsey is director of choral activities at Stanford, and conducts the Chorus and Chorale. An active soloist around the country, Stanford audiences don't often get a chance to hear him.

Tickets for the concert are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and at the door.

Foreign policy conference set for this weekend

Stanford alumni Walter Stoessel, recently retired as undersecretary of state for political affairs, and John Steinbruner, director of foreign policy studies at the Brookings Institution, will be among the featured speakers at a Stanford conference on U.S. foreign policy Thursday through Saturday, April 21-23.

Sponsored by the University's Program in International Relations, the free public session also will include talks by Prof. Ronald I. McKinnon, Stanford economist, and Prof. John S. Nye of the John F. Kennedy School of Government at Harvard.

Stoessel, who has served as U.S. ambassador to Moscow, Warsaw, and Bonn, will discuss U.S. relations with the Soviet Union at 7:30 p.m. Thursday, April 21, in Room 281 of Tresidder Memorial Union.

Commenting on his remarks will be Strobe Talbott, diplomatic correspondent of *Time* magazine and author of several books on Soviet-American relations; Coit Blacker, associate director of the Stanford Arms Control Program; and Assistant Prof. Condoleezza Rice, political science.

Steinbruner will speak on "Foreign Policy: The Relation of Academy to Policy" at 1 p.m. Friday, April 22, in Tresidder 281. He is a noted analyst of military and international affairs.

McKinnon will discuss "U.S. Economic Policy Abroad" at 2:15 p.m. Friday, April 22, in the Forum Room at Meyer Undergraduate Library.

Prof. Harry Harding, political science, vice-chairman of the Program in International Relations, will chair a panel discussion at 3:45 p.m. Friday, April 22, in the Forum Room.

Panelists will include:

Richard H. Solomon, who has served on the staff of the National Security Council and is currently director of international security policy research at the Rand Corporation, who will discuss U.S. relations with China and Japan;

Helga Haftenforn, professor of international relations at the Free University of Berlin, currently a visiting professor in political science at Stanford, who will discuss U.S.-European relations; and

Assistant Prof. Judith Goldstein of the Stanford Political Science Department, who will consider Israeli-American relations.

Nye will discuss "Domestic Constraints on U.S. Foreign Policy" at 10 a.m. Saturday, April 23, in the Meyer Forum Room. A Rhodes scholar, he formerly served as deputy assistant secretary of state for security assistance, science and technology. The session will be chaired by Prof. Alexander George, Stanford political scientist.

Further information concerning the conference may be obtained from Barbara Gaerlan at (415) 497-4547.

Pianist Fukui to give recital

The Department of Music presents pianist Ikuko Fukui in a free concert at 8 p.m. Friday, April 29, in Tresidder Lounge.

Fukui is an M.A. candidate in music from Osaka, Japan. This will be her first recital at Stanford, where she studies with Naomi Sparrow.

Her program will include: J.S. Bach—Toccata in E Minor; Beethoven—Sonata "Das Lebewohl"; Chopin—Barcarolle, op. 60; Debussy—Preludes, l'Isle Joyeuse; and Rachmaninoff—Prelude, op. 23, Nos. 5 and 6.

Charles Treger, Andre Watts perform Sunday

Soloists Charles Treger, violin, and Andre Watts, piano, will perform together at 2:30 p.m. Sunday, April 24, in Memorial Auditorium at Stanford.

The program will include Mozart's "Sonata in E flat Major, K. 380," Beethoven's "Sonata in G Major, Op. 36" and Saint-Saens' "Sonata in D minor, Op. 75."

Treger and Watts first collaborated in May of 1978 to commemorate the 150th anniversary of Schubert's death in a series of special concerts and, as a result, a rare and unique musical partnership was born. They found their musical union so satisfying that they tour together part of each year, and in the past few seasons, the Treger/Watts Duo has presented joint concerts throughout the country.

The Treger/Watts Duo is presented by the Lively Arts at Stanford.

For ticket information call Tresidder Ticket Office, (415) 497-4317.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., April 20, to cover the week of Mon., May 2, through Sun., May 8.

MONDAY, APRIL 25

Medical Microbiology Seminar: Studies of the Mechanism of Splicing in Yeast. 1:15 p.m. M114, Medical Center.

Numerical Analysis Seminar: "Charge Simulation Method and Its Application to Boundary Value Problems," by Saduyuki Murashima, Kagoshima Univ. 4:15 p.m. Room 380c, Math Corner.

EE 350, Radioscience Seminar: "NASA and the Space Science," by Erwin Scherling of NASA. 4:15 p.m. McCullough Bldg. 134.

Creative Writing Program: E.L. Doctorow reading from his works for the Jean and Bill Lane Lecture Series. 8 p.m. Kresge Aud. Free.

TUESDAY, APRIL 26

Bechtel International Center Lecture: "Germany - Where is it Heading? After the Election and before the Missile Deployment," by Wolfgang Borgman, Journalism Fellow. Noon. I-Center. $2.50 for lunch, brownbaggers free.

Men's Tennis: vs. Pepperdine. 1:30 p.m. Varsity Courts.

Stanford Art Museum Tour: Pre-Columbian Collection. 12:15 p.m. Stanford Art Museum.

Seminar in Fluid Mechanics: "Unique Design Details of Airplanes," with Mr. W.T. Hamilton, Vice President(retired) of Boeing Airplane Co. 4:15 p.m. Material Science Room 550a.

The Eighth Annual David M. Mason Lectures: "Interfacial Instabilities Caused by Air Flow over a Liquid," by Professor Thomas J. Hanratty, University of Illinois. 4:15 p.m. Carl F. Braun Lecture Hall, Seeley G. Mudd Chem. Bldg.

1983 Aaron-Roland Lecture in Jewish Studies: "Moses Mendelsson's Conception of Judaism," by Professor Alexander Altmann, Brandeis Univ. Reception in the Faculty Club follows lecture. 8 p.m. Tresidder Union Lounge. Free.

Music Dept. Concert: Faculty Voice Recital. Lila Stuart, soprano; William Ramsey, baritone; Gregory Wait, tenor, with Wendy Hillhouse, mezzo-soprano. 8 p.m. Dinkelspiel Aud. $4/$2.

WEDNESDAY, APRIL 27

Learning about Racism Lunch Series: "The Failure of Inter-Racialism in the Civil Rights Movement," by Clay Carson, Assoc. Professor of History at Stanford. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Room.

CROW Lecture: "Female Sexuality in the Nineteenth Century," by Estelle Freedman, Asst. Professor of History, Stanford. Noon. Terman Aud. Free.

Center for Latin American Studies Lecture: "Ideology and the Corporatist State in Mexico under Cardenas," with Dr. Alma Garcia-Marsh, University of Santa Clara. Noon. Bolivar House.

Stanford Art Museum Museum Tour: Pre-Columbian Collection. 12:15 p.m. Stanford Art Museum.

THURSDAY, APRIL 28

Theology & Natural Sciences Lunch Series: "What Is Life from an Evolutionary Perspective?," by Craig Heller, Assoc. Professor of Biological Sciences, Stanford. Bring a bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

Men's Tennis: vs Cal. 1:30 p.m. Varsity Courts.

Condensed Matter Physics Lecture: "Chemisorption of Oxygen and Nitrogen onto Metals such as Aluminum or Silicon," by Prof. C. Boiziau, Institute de Recherche Fondamental C.E.A. Service de Physique des atomics et des surfaces, Gif-sur-Yvette, France. 2 p.m. Applied Physics 200.

Center for Teaching and Learning Panel Discussion: "Creativity and Problem-Solving: Can Scientists, Humanists, and Engineers Teach Each Other Anything about the Process". 3:30 p.m. Tresidder Union, Room 281.

Applied Mechanics Division Seminar: "Current Issues in Impact Printing," with Dr. Ferdinand Hendriks, IBM General Products Division, San Jose. 4:15 p.m. Skilling Aud.

Industrial Engineering Symposium: "Human Reliability and Risk Assessment," with Ms. Barbara Bell, Battelle, Columbus. 4:15 p.m. Terman Aud.

Biological Science Seminar: "Cell Surface Proteins of *Drosophila*: Morphogenesis and Cellular Communication," by Dr. Cliff Poodry, UC Santa Cruz & Program Director of the National Science Foundation. 4:15 p.m. Room T-175, Herrin Hall.

Stanford Women in Science and Engineering Lecture: "Science & Engineering Research in Industry," by panel of speakers: Jane Gitscher, Postdoctoral Scientist, Genetech; Adele Goldberg, manager of Software Concepts Group, Xerox; Barbara Grant, manager, Exploratory Optics, IBM. 4:15 p.m. Building 420, Rm. 041.

Condensed Matter Physics Seminar: "Superconducting and Transport Properties of Amorphous Mo-Si Films," Alan Edelstein, Naval Research Laboratories, Washington, D.C. 4:15 p.m. Applied Physics 200.

Center For East Asian Studies: "Environmental Control—The Japanese Experience and Approach," by Prof. Koichiro Fujikura, on the law faculty at University of Tokyo and a visting professor at U.C. Berkeley Law School. 4:15 p.m. Room 238, Lou Henry Hoover Bldg.

The Eighth Annual David M. Mason Lectures in Chemical Engineering: "Mechanism of Turbulent Mass Transfer," by Professor Thomas J. Hanratty, University of Illinois. 4:15 p.m.

VISITORS FROM OTHER COUNTRIES

Apr. 25: Group of four French defense specialists.
Group of 5 Cross-Cultural Training Study Team; preorientation in the People's Republic of China.
Apr. 27: European Regional Program on American Studies. Group of 8. Seminar "American Exceptionalism—Is America Still Different?"
Group of 5 Cross-Cultural Training Study Team; preorientation in the People's Republic of China.
Apr. 28: Group of 10—Multi-Regional. Seminar on "Women and the Family."
May 2: Group of 10—Francophone Africa. Seminar on "The Formulation of United States Africa Policy."
Group of 6—French industrialists from "Union Laitiere Normande."

Novelist Doctorow to give Lane lecture

Novelist E. L. Doctorow will speak at 8 p.m. Monday, April 25, in Kresge Auditorium at Stanford University as part of the Jean and Bill Lane lecture series.

Doctorow is a highly regarded writer known for his serious philosophical probings, the subtlety and variety of his prose style, and his unusual use of historical figures in fictional works.

His novels include *Welcome to Hard Times*, *The Book of Daniel* (a nominee for a National Book Award), *Ragtime* (winner of both the National Book Critics Circle Award and Arts and Letters Award), and *Loon Lake*.

His most recent book, *American Anthem*, is a pictorial tribute to America with photographs selected by J. C. Saures. Doctorow has also written a play, *Drinks Before Dinner* which was first produced Off-Broadway in 1978.

The *Washington Post Book World* has said of Doctorow: "(He) turns history into myth and myth into history. . . . He continually teases our suspicion of literary artifice with apparently true historical description. . . ."

Doctorow has taught at Sarah Lawrence College, Yale, the University of Utah, and Princeton. He received a Guggenheim fellowship in 1972 and a Creative Artists Service fellowship in 1973.

In 1983-84 the Lane Lecture Series, sponsored by the Creative Writing Program, will host lectures by Eudora Welty, Maxine Kumin, and Toni Morrison. All lectures are free of charge. For more information call the Creative Writing Program at 497-2637.

Carl F. Braun Lecture Hall, Seeley G. Mudd Chem . Bldg.

Bechtel International Center's "Other Cultures" Film Series: "60 Millions: The Germans and Their Country Encounter: Impressions of Germany". A new documentary film depicting German lifestyles as their landscapes and towns. *Encounter* shows the diversity of cultural, economic, social and political elements that comprise the country. 7:30 p.m. I-Center. 75 cent donation requested.

La Casa Italiana Lecture: Italian architect, Roberto Pirzio-Biroli. Slide lecture about his reconstruction of several historical towns in the Friuli Region destroyed by the earthqake in the late 70's. 7:30 p.m. La Casa Italiana.

SWOPSI Film Series: "The Damned," (Gotterdamerung) directed by Lucio Visconti. 8:30 p.m. History Corner, Rm. 25.

FRIDAY, APRIL 29

Baseball: vs. University of Arizona. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

Materials Science and Engineering: "Recent Advances in Martensitic Transformations," by Morris Cohen, Professor of Material Sciences at MIT. 3:30. Room 550a, Peterson Laboratory, Bldg. 550.

The Lively Arts at Stanford: The Oberlin Dance Collective. 8 p.m. Memorial Aud. $10.50, $9.50, $8.50, $7.50; students $3 off.

Music Dept. Concert: Ikuko Fukui, piano. Bach-Toccata in E minor; Beethoven-Sonata "Das Lebewohl"; Rachmaninoff-Preludes; Chopin-Barcarolle; Debussy-L'isle joyeuse. 8 p.m. Tresidder Lounge. Free.

STARTS Great Directors Film Series: "Beyond a Reasonable Doubt," by Fritz Lang, starring Lee Martin and Glenn Ford. 8 p.m. Geology Corner, Room 320. $2.50.

Stanford Society of the Archaeological Institute of America: "Greek and Roman Jewelry," by Reynold A. Higgins of the British Museum. 8:15 p.m. Room 370.

STARTS/Coffee House: Bill Susman and Chuck Israels. 9-12 p.m. Coffee House. Free.

SATURDAY, APRIL 30

Women's Tennis: vs. USC. Noon. Varsity Courts.

Baseball: vs. University of Arizona. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

STARTS: Jorma Kaukonen, solo guitar concert. Kaukonen was formerly with the groups Jefferson Airplane and Hot Tuna. 8 p.m. Tresidder Lounge. $6.50 with Stanford I.D., $8.50 w/o.

SUNDAY, MAY 1

Baseball: vs. University of Arizona. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

Stanford Alumni Association: Young Alumni Barbecue. Members of the classes of 1976-82 are invited to a barbecue before the Stanford - University of Arizona baseball game which starts at 1 p.m.. 11 a.m. Masters Grove, behind the Sunken Diamond. $8.50.

University Public Worship: Preacher: Ernle W.D. Young, Associate Dean of the Chapel. 11 a.m. Memorial Church.

ASSU Sunday Flicks: Peter Sellers in "The Return of the Pink Panther". 7 & 9:30 p.m. Memorial Aud. $1.50.

Music Dept. Concert: Sharon Paul & Nancy Kass, sopranos. with Camilla Passarelli, piano; Solos and duets by Handel, Brahms, Nicolai, Mozart, Chausson. 8 p.m. Tresidder Lounge. Free.

EXHIBITS

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

Photographs of Africa by Sylvie Cohen. Tresidder Upper Lobby, 2nd. Floor. April 1 - April 30.

R. Raffaello Dvorak, works on rice paper. I-Center. April 1 - April 30.

Photos from the Barrio Assistance Program by Phillip Baca. Coffee House Gallery. April 1 - April 30.

Etchings by Seymour Haden. Faculty Club. April 3 May 3.

Early Lithography: 1803-1830. Museum, Miedel Room. April 12 - June 19.

Stanford Senior Class Art Show. 7 a.m. to 11 p.m. Tresidder Coffee House and Upper Lobby. May 1 - June 15.

Ely suggests ways to improve law teaching

A scholar's scholar who heads the Stanford Law School has some down to earth suggestions for improving legal teaching.

Dean John Hart Ely says "teaching by terror" may make "The Paper Chase" memorable, but it probably harms educational effectiveness.

"When I went to Yale, I was as cocky as an entering student as any in the class," he recalls.

"But I was scared to death, especially when I didn't have much respect for the teacher. No matter what you said, you'd be belittled.

"Constant fear (of being called on in class) got in the way of learning. It lead to thinking strategically instead of mastering the material.

"The anxiety was so great, you'd laugh when someone else made a mistake."

While this technique may be romanticized by its survivors, "I've heard people say that about basic military training, too," he observes.

One of the nation's leading constitutional scholars, Ely was highly regarded as a teacher at Harvard before

NAS elects Davis, Purpura

Two members of the Stanford University School of Medicine faculty have been elected to the National Academy of Sciences (NAS), the academy announced Tuesday (April 26).

They are Ronald W. Davis, professor of biochemistry, and Dominick P. Purpura, a noted neuroscientist and dean of the School of Medicine.

Davis' research has dealt with gene manipulation, and he is a widely-recognized electron microscopist. While at the California Institute of Technology, he developed the electron microscope heteroduplex method of investigating the sequence of nucleic acids, and analysis which has had significant uses in mapping sequences of DNA molecules.

He came to Stanford in 1972 where his research has been on yeast genetics and gene manipulation.

Purpura became dean in 1982, coming from the Albert Einstein College of Medicine. He is the holder of the Carol and Elizabeth Naumann endowed chair as well as professor in the departments of Neurobiology and Neurology. He is noted for research in human cortical development using basic data and techniques of neuroscience.

He has been among the first to observe that the brains of children who are mentally retarded with no known chromosomal aberrations, had structural abnormalities in their nerve cells.

Their election brings to 80 the number of Stanford faculty elected to the prestigious NAS membership. Sixteen of these are in the School of Medicine.

Change asked in teacher evaluations

Students generally give high marks to their undergraduate courses at Stanford, but many faculty would like to see the present system of evaluation improved, a new study indicates.

Recommended changes will be discussed by the Faculty Senate at its next regular meeting May 12. These point toward an extensive but independent revamping of the Associated Students *Course Guide*.

Developed by the Committee on Academic Appraisal and Achievement following extensive surveys of faculty and student opinion by its Subcommittee on the Evaluation and Improvement of Teaching, the proposed changes include:

1) Greatly simplifying the basic form used for this purpose;

2) Separating information gathered for the administration and improvement of teaching from that designed to aid students in course selection; and,

3) Eliminating comparisons to norms when reporting the distribution of student opinion about individual courses.

Asked to rate their overall course satisfaction on a seven-point scale, 30 percent of the undergraduates rated their class a "7," 33 percent a "6," and 21 percent a "5" last spring. Only six percent chose the lowest three categories combined.

Whether these generally favorable results reflect leniency on the part of students or genuinely good teaching cannot be determined, the committee report noted. But the average level of student satisfaction has remained stable for the past three years,

The student course ratings parallel results from the University's annual surveys of graduating seniors. Four out of five rate the faculty high as teachers but even more regard professors as outstanding in research.

The committee report to the Senate notes there may be some degree of student "burn out" in filling out forms. Reducing the number of questions from 32 to 7 could encourage broader participation and more individually written comments.

The right to release this data would rest solely with individual faculty, except when used for administrative review on a confidential basis.

Student evaluation of courses "must be seen as but one component in the total assessment" of teaching, the committee report said. "We strongly recommend that many sources be used in the evaluation process."

Since 1979, the Faculty Senate has mandated student evaluation in most courses taught at Stanford. But

People

Applebee, Langer named co-editors

Associate Prof. Arthur N. Applebee of the Stanford School of Education and Senior Researcher Judith A. Langer of Berkeley and Stanford have been named coeditors of *Research in the Teaching of English*, an official quarterly bulletin of the National Council of Teachers of English.

Appointed by the NCTE Executive Committee, the editors will serve a four-year term beginning with the winter 1984 issue. They succeed Roy C. O'Donnell, University of Georgia, who has edited the publication since 1978.

Applebee is director of the National Study of Secondary School Writing. Langer is a senior researcher in education at Stanford and UC and serves as research consultant to the Bay Area Writing Project.

The future coeditors "hope to stress the interdisciplinary directions that important research in our field is taking. We will be looking for more comprehensive and more theoretically grounded reports. We hope to encourage articles that discuss a body of work or that suggest major reconceptualizations of work in the field, rather than simply reporting single studies."

Applebee earned his M.A.T. in language and literature from Harvard and his Ph.D. from the University of London, where he worked in James Britton's Writing Research Unit. Among his publications are *Writing in the Secondary School: Current Practice in English and the Content Areas* (NCTE, 1981), *The Child's Concept of Story: Ages Two to Seventeen* (University of Chicago Press, 1978), and *Tradition and Reform in the Teaching of English: A History* (NCTE, 1974).

He is a coauthor of *Reading, Thinking, and Writing: Results from the 1979-80 National Assessment of Reading and Literature* (Education Commission of the States, 1981). Applebee has written numerous articles for education journals. Before joining the Stanford faculty, he was associate director of the ERIC Clearinghouse on Reading and Communication Skills.

Langer is principal investigator for two studies examining cognitive interrelationships between reading and writing strategies. She earned her M.S. from the City University of New York and her Ph.D. from Hofstra.

She has taught and served as language arts specialist, as director of reading, writing, and English programs (pre-K-12) and as acting superintendent for instruction in school districts on Long Island. Her previous college faculty appointments have been at C.W. Post College of Long Island University and at New York University.

She is coeditor of *Reader Meets Author/Bridging the Gap: A Psycholinguistic and Sociolinguistic Perspective* (IRA, 1982), coauthor of *Understanding Research in Reading, Writing, and Language* (in preparation) and author of numerous articles on reading and writing for professional journals.

Editorial offices for *Research in the Teaching of English* will be on the Berkeley campus. Address: Judith Langer, Research in the Teaching of English, School of Education, University of California, Berkeley, Calif. 94720. Phone:

Faculty join in bipartisan appeal

Stanford President Donald Kennedy and economists Michael Boskin, Walter Hoadley, and Ezra Solomon are among hundreds of individual supporters of a bipartisan appeal for a lower federal deficit and slower defense buildup.

In a joint statement published in *The New York Times*, they said "There is widespread concern that the Administration's call for a second three-year round of sweeping defense increases, which would raise the defense budget authority by another $118 billion by 1986—or nearly 30 percent in constant dollars—is not sustainable economically or politically with current federal revenues. . . .

"We strongly urge the President and the Congressional leadership to join together in supporting a bipartisan resolution that commmits the nation to a more gradual but significant and sustained increases in the defense budget for the next several years."

Other signers with Stanford ties include Richard Lyman, Rockefeller Foundation president and president emeritus of Stanford; David Packard, former Deputy Secretary of Defense and former Stanford trustee; Richard E. Guggenhime, San Francisco attorney and former Stanford trustee; and John A. Young, president of Hewlett-Packard and a Stanford trustee. A majority of those signing are corporate chief executive officers.

Boskin is a professor of economics and senior fellow (by courtesy) at the Hoover Institution; Hoadley is former chief economist for Bank of America and a senior research fellow at Hoover; and Solomon, a former member of the President's Council of Economic Advisers, is Dean Witter professor of finance in the Graduate School of Business.

Lee Shulman

Prof. Lee Shulman of the Stanford School of Education is the new president-elect of the American Education Research Association. AERA has about 14,000 members.

Profs. Lee Cronbach, Nate Gage, and Pat Suppes of Stanford have been AERA presidents in the past.

President-elect from April 1983 to April 1984, Shulman will become president from April 1984 to April 1985.

Philip Zimbardo

Fresh from his victory in Stanford's "ugly man" contest, Prof. Philip Zimbardo will deliver the president address of the Western Psychological Association on "Maling Sense of Madness" at 3 p.m. Friday, April 29, at the San Francisco Hilton.

Other Stanford speakers at the April 27-30 meeting will include John Kaplan, Amos Tversky, Ernest Hilgard, Lee Ross, Mark Lepper, Phoebe Ellsworth, Samuel Gross, Robert Calfee, and James Milojkovic, among others.

Sylvia Castillo

Sylvia Castillo, assistant dean for student affairs, has been appointed to the Alumni Board of UC-Santa Barbara.

The UCSB Alumni Board is one of the wealthiest and most highly endowed Boards of the nine UC campuses. The appointment is for four years and will involve advising the Chancellor and Regents on financial matters; fundraising; and creating a corporate liaison relationship with the Alumni Board and UC Regents.

Castillo is a 1973 UCSB alumna and has a graduate degree (1976) from the School of Social Welfare at UC-Berkeley. She has also been a member of the Commission on Postsecondary Education Advisory Committee on Student Affirmative Action since 1981.

Hispanic women plan a higher education meet

Hispanic Women in Higher Education, a state and national organization founded and chaired by Sylvia Castillo and Assistant Provost Cecilia Burciaga, will host Chancellor Ann Reynolds of the California State & University Colleges at a reception on Friday, May 6, at the Century Plaza Hotel in Los Angeles.

The welcome reception will introduce Chancellor Reynolds to California's prominent faculty, senior administrators and presidents from the Hispanic higher education faculty.

Gerry Weitz

CIT manager Gerry Weitz has been appointed as acting assistant director of AIS for financial information systems, effective April 25, according to David Ernst, CIT's director for administrative information systems.

Weitz will take responsibility for management of the programming group serving the Controller's Office, as well as actively representing AIS on the Core Accounting Project Team.

Weitz joined Stanford in 1974 as a programmer/analyst for the hospital with a first assignment to convert to the Inpatient Accounting System from the hospital's computer to the IBM 3081's predecessor. Since then he has had several technical and managerial roles for the University.

He has spent the last few years concentrating on SPIRES Database Systems, microcomputers, and administrative systems architecture. Weitz replaces Dan Jaskolski, who will leave Stanford at the end of April.

Changes for 3081 node

Users of the 3081 Node should be aware that the installation of the new operating system described in the April 6 *Campus Report* will result in an altered weekend schedule, beginning Saturday, April 30.

Presently, the system is down for routine maintenance on Saturdays and Sundays from 6 a.m. to noon. As it is necessary to use large blocks of time for installing the MVS/XA, the downtime hours have been extended on Sundays to 3 p.m. On Saturdays, however, the system will be available starting at 9 a.m. The total number of hours that the IBM 3081 will be unavailable to users will remain unchanged.

CAMPUS REPORT

Williams warns of legal time bomb in Supreme Court

Verdict could cost U.S. billions, new inflation

BY DONALD STOKES

A legal time bomb is nearing the end of its fuse in the waiting dockets of the U.S. Supreme Court.

Sometime this summer the Court will decide the case of *Ptasynski vs. United States* in which the Federal District Court in Wyoming decreed that the crude oil windfall profits tax is illegal.

If the Supreme Court upholds that decision it will mean that the U.S. government will have to repay as much as $100 billion to oil companies and royalty owners across the nation.

This enormous sum would come out of the pockets of the taxpayers. Added to the expected $200 billion shortfall in the projected U.S. budget for next year it could mean the return of double-digit inflation.

Emeritus Prof. Howard R. Williams, the leading academic authority on oil and gas law, explained the situation in a Stanford campus interview.

Williams is Lillick professor of law emeritus at Stanford, and in September will become the Paradise professor of natural resources law. He is co-author, with Charles Meyers, former dean of Stanford Law School, of the definitive seven-volume treatise *Oil and Gas Law*, with annual supplements since 1964.

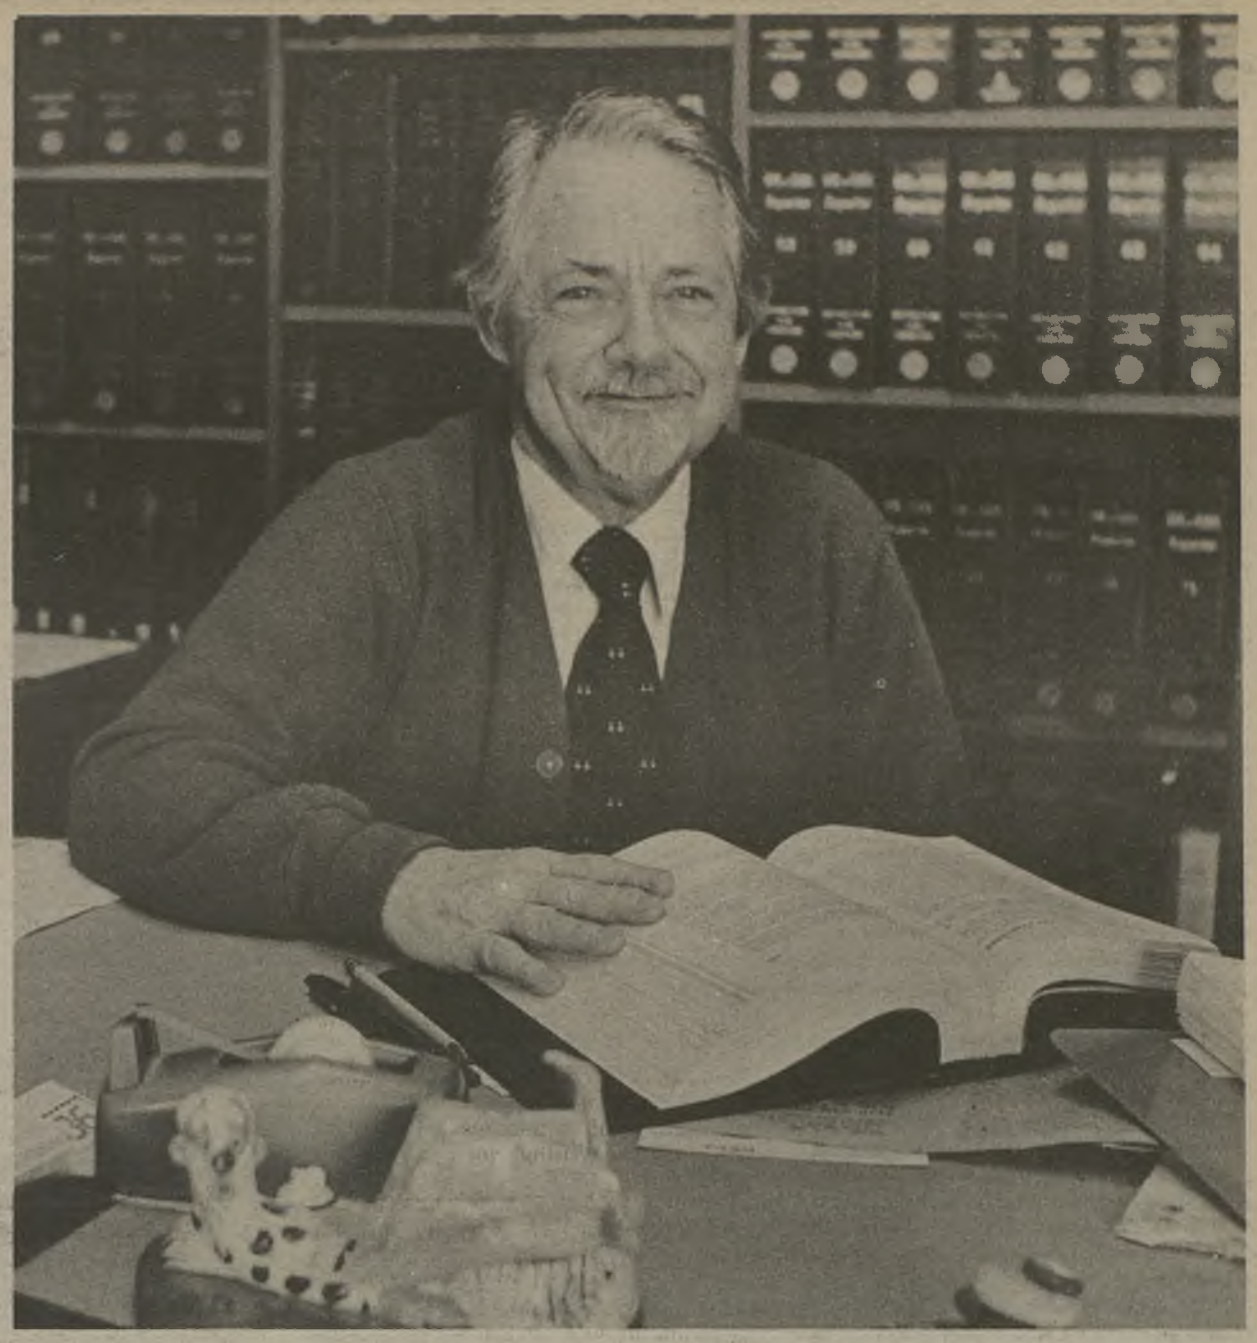
"When oil prices in this country were largely deregulated, a crude oil profits tax was instituted which came into effect in March 1980," said Williams.

"This enabled the government to realize, by an excise tax, a great deal of the difference between the regulated price and the world price. In effect, there was a hidden tax on the consumer, and Congress loves hidden taxes.

"This is still going on. Deregulation is proceeding and so are its effects.

"The windfall profits tax was held to be unconstitutional by the Federal District Court in Wyoming, because of a special provision in it relating to Alaska.

"The Supreme Court has ordered a review of that case but has not yet heard it. If the Supreme Court agrees with the District Federal Court, then the U.S. government will have to pay back a very great deal of money to the oil companies and royalty owners. Those taxes have always been paid under protest, by those in their right minds.



"If the Supreme Court holds that the tax is unconstitutional, because it treats Alaska differently from the other states, the decision will of course be retroactive, and the amount of repayment, plus interest, will run into many billions of dollars.

"I believe the windfall profits tax is scheduled to continue until $285 billion has been realized. How much has been brought in by the tax up to this moment I do not know, but I assume that the contingent liability of the federal government, should the tax be held unconstitutional, would be well in excess of $100 billion.

"I can't think where all that money would come from, except the federal printing presses. That in turn could mean huge inflation.

The Supreme Court has agreed to hear the case this term, so a decision can be expected by mid-July. Meanwhile the windfall profits tax is being collected all the time, and therefore the contingent liability is going up."

Asked whether the government was likely to win the case, Williams replied, "The famous humorous character, Mr. Dooley, once said that the Supreme Court follows the election returns. The Supreme Court is affected by the flow of public opinion and the changing mores of the people.

Howard Williams

"This will be a very hard case to decide. There is a strong constitutional argument against the windfall profits tax."

On the other hand, an interviewer noted, the public outrage could be enormous if the tax were outlawed.

"We shall see," said Williams. "I have a feeling that the tax may be upheld."

The heart of the matter is the special provision made for Alaska under the Windfall Profits Tax. Why was that provision made?

"Alaskan oil is extremely expensive to produce and refine. First, it comes all the way down the Alaska pipeline. Then it is transported thousands of miles—in expensive American tankers, under U.S. law—to Panama, through which it has to be trans-shipped in smaller tankers, then trans-shipped to the other side, and carried all the way to Houston for refining.

"All this makes it far more costly than any other oil."

Surely it would make far more sense to sell the Alaskan oil direct to nearby Japan and cut out most of the expensive journey?

"U.S. law prohibits Alaskan oil from being sold in its natural market, which is Japan. It could go to Yokohama for about 75 cents a barrel. Instead, it goes all the way to Houston and ends up costing about $3.50 a barrel for transportation."

Williams stressed that he is not an economist ("I studied my economics before Keynes published!") and could only talk authoritatively about about oil and gas law.

But he noted that "the situation does seem economically crazy. Super-tankers can bring Middle East oil to the U.S. at less cost than it takes to bring Alaskan oil to Houston.

"And of course the profits in selling Alaskan oil to Japan would be far greater than taking it all the way to Houston.

The reasons for what is happening are many. Part of it is due to successful pressures by the U.S. shipping interests and unions. Part is based on the feeling that we want to depend on our own oil instead of foreign oil. Yet in wartime the tankers bringing Alaskan oil all the way to Texas would be just as vulnerable as oil coming from the Middle East."

Williams turned to the deregulation of natural gas, which poses another set of delicate problems.

"There are serious political hurdles in this area," he said. "We have maintained a regulated price for natural gas which is far below its heating value as compared to oil.

"The heating value of gas has a ratio of roughly six to one as compared to oil. Six thousand cubic feet of gas has the British Thermal Units of one barrel of oil. On that basis gas ought to be priced at about one-sixth that of a barrel of oil.

"When the world price of oil reached $34 a barrel the price of U.S. gas was regulated, and is still being regulated, at a price far below that.

"This produced a shortage of gas, because it reduced the incentive to drill for gas. It also increased the demand for gas, because it was the more efficient fuel. So we underpriced the more

continued on next page

Williams/ continued from page 3

efficient fuel and encouraged people to change, for home heating purposes, from oil or coal to gas."

But everybody is complaining that their gas bills are going up out of sight!

"Natural gas will continue to increase in price, under deregulation, until we increase the incentive to drill for gas. Nobody knows how much gas we have in this country. It requires deep production, it is expensive to find, and so long as there is a threat of renewed regulation there is little incentive to drill.

"If gas is completely deregulated it may well go up for a while and then gradually come down as more gas is found and put on the market.

"There is partial gas deregulation now, but much of the gas remains regulated—the so-called 'old gas' from wells drilled earlier and from which gas was sold at a lower price. We are 'rolling in' this low price for old gas with the higher price for regulated gas. If we deregulate all gas, and the price of old gas thereby goes up, there will be an increase in costs for the local utilities.

"I think that could be handled by a tax modelled on the windfall profits tax which would enable the federal government to get back some of that increase. This is always supposing we can correct the deficiencies of the existing withholding tax.

"A few years ago during the gas shortage a number of utilities entered into what were called 'take or pay' contracts, in order to be assured of regular supplies of gas. These contracts stipulated in effect, 'I will take your gas at X dollars a cubic foot or pay you for it.'

"After the contracts were signed the demand for gas declined as additional supplies came on the market. While the price of gas declined many large utilities found themselves burdened with contracts to purchase gas that was above the market price.

"For example, PG&E could use cheap California gas, but it has contracted to buy dearer Canadian gas. So if it used the California gas it would still have to pay the Canadians. The California gas therefore remains in the ground.

"Many of these 'take or pay' contracts will last for another 15 or 20 years. The public is having to foot higher bills for its natural gas because business decisions by the utilities went sour."

P.G.&E. could use cheap California gas, but it has contracted to buy dearer Canadian gas. So if it used the Canadian gas it would still have to pay the Canadians.

Williams has long urged that oil and gas depletion allowances should be phased out and natural gas prices deregulated as rapidly as possible. "They have become an albatross, causing more harm by way of criticism of tax favoritism to industry than the value of the benefits derived.

"The cost of these deductions probably exceeds one billion dollars annually, but it is doubtful whether they have materially increased exploration.

"We are now basically in a worldwide position of deregulation of oil prices. Now OPEC is beginning to fall apart because of the inherent divisions within the organizations. The various OPEC countries have been cheating on each other—all of them in one form or another.

"I do not believe that the OPEC countries will be able to keep to the production cutbacks they have labored over.

"A number of other producers, in and out of the cartel, have committed themselves so heavily for various expenditures that they simply have to keep up a certain level of cash flow, and they would not be able to manage to do that on the allocated production.

"If Britain reduces the price of oil further, as it probably will, Nigeria will reduce its price and increase its production. Many other oil producers are in a similar position.

"The Soviet Union is shipping more and more oil at cut-rate prices, because it needs the hard currency. The Soviets tell OPEC that the U.S. is responsible for the weakening of OPEC, while at the same time the Soviets are selling over a million barrels of oil a day *at cut prices* to Western countries—and that does not include its satellites.

"OPEC is so divided on religious and economic grounds that I see no way in which its members can agree on production controls.

"This is a very different situation from that which prevailed for years in the U.S. when all 22 oil-producing states of the Union informally maintained prices by reducing overall production. Texas acted as the balance-wheel which controlled production in all the States. At one time Texas and Oklahoma voluntarily reduced their output to one-third of their capacity.

"That was the model OPEC tried to copy. Saudi Arabia and Kuwait were to have been the balance-wheel, and the other Arab oil-producers would produce and sell in ratio to them.

"But Nigeria and Iran refused to limit their production.

"I foresee more substantial cuts in oil prices. I would not be surprised to see the price drop down to the $15-$20 range per barrel, in other words up to 50 percent lower than the current posted prices.

"If the price of oil falls to the $15-20 range it will have an immediate effect on the international banking system, and the huge foreign loans owed to us. There will be repercussions on many of our public institutions.

"However, in the long run a fall in the price of oil to a more realistic level will benefit most of the world, especially developing nations such as India.

All the OPEC countries have been competing against each other for a long time in the black market for oil. That will almost certainly continue. There are many ways to shade prices, the most obvious one being to keep to the posted price but to accept payment over a significant period of time. That is equivalent to a cut in price.

"The history of all cartels is that sooner or later they break up. OPEC was never a true cartel, as it never did have the power to control production.

"Too many countries of the world are now outside OPEC. None of the 'outside' countries, such as the Soviet Union, the U.S., Britain, Norway, or Mexico, has any reason to allow OPEC to dictate prices.

"The countries which have suffered the worst because of OPEC are the developing nations. They have had to pay the high prices and have not had enough to sell in order to meet the payments."

What would Williams recommend as our energy policy for the future?

"To complete the deregulation of oil and gas. To buy foreign oil as needed. To encourage the further decline of OPEC as an influence on world prices. We would end up paying the economic cost of energy.

"The U.S. has a long-term energy problem. When our oil and natural gas reserves decline we shall have to find other energy sources. We do have very large deposits of oil shale, but we have not yet discovered the way to extract the oil economically.

"The cost of producing oil from shale is always higher than pumping it out of the ground. An added difficulty is that even if, after spending immense sums on research and development, a way were found to produce oil from shale economically, all that OPEC would have to do would be to open its spigots a bit and lower its prices a little and thereby make useless all the years of expense and research."

Other major countries such as the Soviet Union, Britain, and France are pushing ahead with nuclear energy and overcoming its difficulties, in fact there are 234 nuclear reactors at work in the world. Isn't that the energy way of the future, in spite of much of the current nervousness?

"We have come to a virtual halt in nuclear reactor construction in this country. Undoubtedly in the long run there will be further nuclear development, but not in the immediate future. Rightly or wrongly, we are scared of nuclear power.

"We are a frightened people. Since World War II the world has had one state of fright after another. The optimism which marked America up till World War II has disappeared completely today.

"I feel sorry for our young people. They are growing up in an atmosphere of fright and hysteria. It is bound to affect everything they do."

Depletion allowances have become an albatross, causing more harm by way of criticism of tax favoritism to industry than the value of the benefits obtained.

Williams was born in Indiana in 1915 and was brought up in east Tennessee, where his family lived until he was 12, and St. Louis. He went to Washington University, from which he graduated in 1937. He took a scholarship at Columbia and after getting his LLB in 1940 he joined a leading law firm in New York City.

He was one of the first called by the draft in April 1941. He trained at Fort Bragg with wooden machine guns and French 75s made in 1897. He landed with his field artillery battalion in Normandy and saw active service all the way into Germany.

After Germany's defeat his company was put in charge of one of the prisoner of war camps which had been formed by the Germans. Most of the prisoners were Poles and Russians, who were only too ready to break out and forage off the Germany countryside. The Americans were always having to round them up and bring them back to camp.

When Williams was demobilized he was a major, having started as a private who shovelled horse's muck. He had spent just under five years in the Army.

He accepted an associate professorship of law at the University of Texas. During his five years there A. W. Walker, Jr., who was the "father" of oil and gas law in Texas, decided to go into private practice after 25 years of teaching.

"I fought with all my might to get his course," recalled Williams, "and succeeded after about a year. I have been studying and teaching oil and gas law ever since, some 35 years."

When Williams went to Columbia in 1951 his course was taken over by his friend and associate Charles Meyers. Williams and Meyers have had a lifelong association. Together they have published not only the seven volumes of the standard *Oil and Gas Law* but also other important publications.

During the last four of his 12 years at Columbia Williams held the Dwight chair of law.

In 1963 he joined the Stanford law faculty and five years later became Lillick professor. He was named an emeritus professor on his nominal retirement in August 1982, but was immediately recalled to teach his specialty of oil and gas law. In September he will become the first holder of the Robert E. Paradise chair in natural resources law.

Williams will then have held a total of four endowed chairs at universities (the Dwight at Columbia, a visiting chair at Colorado, and the two at Stanford). "Enough for a bridge table," he smiles.

He has served in the highest councils at Stanford and Columbia universities. He has written six different course books on various aspects of the law.

He and his wife, the former Virginia Merle Thompson, were married in 1942, and have a son.

Why women's self-worries grow as they get better off

Normal sexual development makes most teen-age women unhappy with their body fatness, according to a new analysis of national data by Stanford scholars.

This dissatisfaction increases with social class. It reduces self-esteem among normal young women and increases the risk of anorexia nervosa.

The thinner the woman, the greater the impact of social class on the desire for thinness. Among those whose body fat measured in the thinnest 10 percent among higher income families, one in nine still wanted to be thinner. This was true for only one in 45 similarly skinny women from low-income families.

Results of the national study were reported Thursday night, April 21, by Prof. Sanford M. Dornbusch, at the Society for Research in Child Development meeting in Detroit. Financial support came from the Stanford Center for the Study of Youth Development and the Robert Wood Johnson Foundation.

In 1899, Thorstein Veblen's iconoclastic book, *The Theory of the Leisure Class*, hypothesized that "conspicuous leisure" would require an ideal woman to have "delicate and diminutive hands and feet and a slender waist. . .to show that the person. . .is incapable of useful effort and therefore must be supported in idleness by her owner."

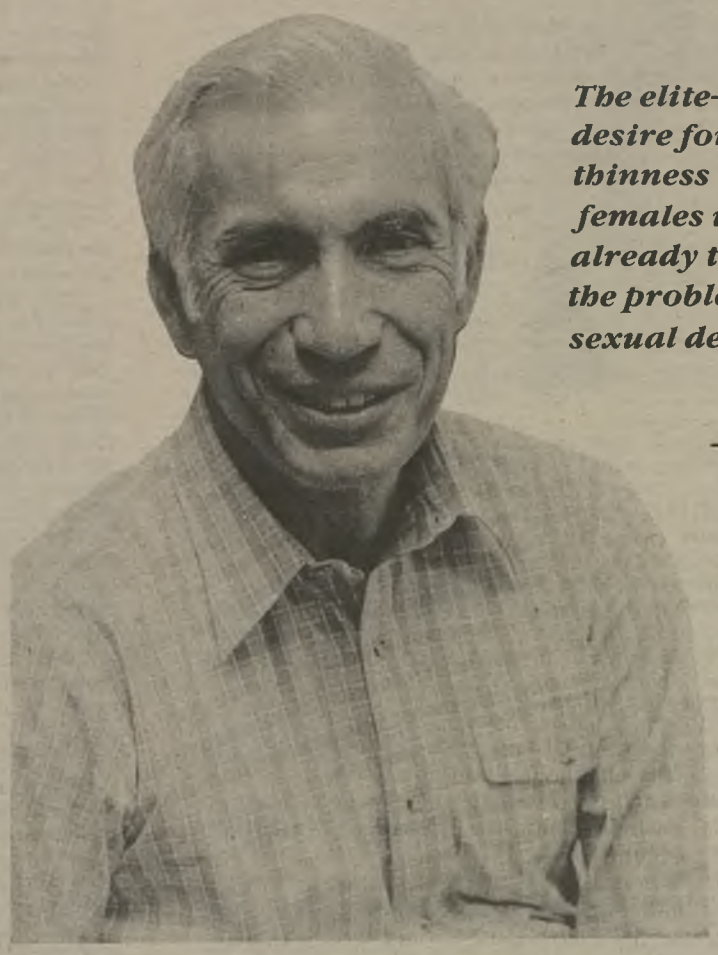
Veblen thought this ideal would diminish when industrialization made leisure so widespread that it would no longer serve as a mark of elite status.

"Our results indicate a surprising persistence of the standard that Veblen thought was doomed by industrialization," Dornbusch and his colleagues reported.

"We now have a more egalitarian ideology, with women attempting to be less dependent on men, participating more actively in the labor market, and asserting their equality. Yet implicit norms may persist well after the originating forces have disappeared.

"New meanings may be associated with the cultural categories of thinness and fatness. The original image of thin women as non-producing objects of beauty may have given way to an association of thinness with productivity and activity, while fatness may be linked to inactivity and lack of self control. . . .

Veblen's standard



"The standard of thinness that Veblen associated with the elite has come to be accepted by a majority of all fully developed adolescent females in our sample.

"Social class differences in the emphasis on feminine thinness still persist, but the lower socio-economic groups also show a negative evaluation of normal levels of fatness.

"Perhaps mass media of communication, have helped an elite-engendered standard to diffuse throughout the American female population. . . .

"Calling attention to the existence of the norms and to their origin may hasten the demise of social standards that not only reduce self-esteem, but also can be biologically dysfunctional.

"The elite—engendered desire for further thinness among females who are already thin increases the problems of sexual development and the risk of anorexia nervosa, a pathological struggle to be very thin.

The elite-engendered desire for further thinness among females who are already thin increases the problems of sexual development.

—Sandy Dornbusch and colleagues

Sandy Dornbusch

"Anorectic patients remain thin only through self-inflicted starvation, excessive exercise, vomiting, or purgation. The anorectics are female by a 19:1 ratio, are relatively affluent, and develop the syndrome during adolescence in 8 out of 10 cases. . . .

"Our study shows how inappropriate standards of thinness among young women from middle and upper income families may contribute to this risk. The incidence of the syndrome appears to be increasing."

Besides Dornbusch, who is the Reed-Hodgson professor of human biology and a professor of sociology and education, the Stanford researchers were Prof. J. Merrill Carlsmith, psychology, director of the Stanford Center for the Study of Youth Development; Assistant Prof. Paula M. Duke, pediatrics; Ruth T. Gross, the Katharine Dexter and Stanley McCormick memorial professor of pediatrics; John A. Martin, research associate in pediatrics and psychology; Philip L. Ritter, research associate at the SCSYD; and Bryna Siegel-Gorelick, research associate in child psychiatry.

Data for the study came from the third cycle of the U.S. National Health Examination Survey. In 1966-70, a nationwide probability sample was drawn of 6,710 youths age 12 to 17.

Each examining physician conducted an extensive physical examination of the participants, recording measurements of sexual maturation, heaviness, and body fatness. Social class was measured by both family income and parental education. The adolescents were asked whether they would like to be "heavier than you are, thinner than you are, or about the same?"

"Females toward the top of the class hierarchy are more likely to want to conform to the decorative body style that Veblen associated in 1899 with the consumption of leisure, with each comparison between family income groups statistically significant," the researchers said. "Among males, there were negligible differences between family income groups in the desire for thinness." This shows that class differences for women did not result from differences in health information.

Among women, the relationship between family income and the desire for thinness was more powerful for those already below the median in fatness than for those above the median.

Among those below the median in measured fatness, 30 percent of the high family income women wanted to be thinner. Among middle income, the proportion was 22 percent, and for lower-income only 12 percent.

Adolescent maturation

"As adolescent boys and girls mature physically, both sexes increase in heaviness," the researchers noted. But this sexual maturation leads to greater fatness in adolescent women and greater muscularity in adolescent men.

The physicians measured fatness by subscapular (below shoulder blade) and triceps (back of upper arm) skinfold thickness. The average of these two measures rose from 72.5 for those women who were least mature in measured sexual development to 163.5 for those who were most mature, based on pubic hair and breast development.

For young men, measured fatness declined slightly from 97.2 to 91.6. Their stages of sexual development were based on the physicians' observation of pubic hair and genital development.

"Female adolescents are dissatisfied with their heaviness because it represents fatness and most male adolescents are satisfied with their heaviness because it represents muscularity," the researchers noted. (Heaviness was expressed by Quetelet's index-weight in grams divided by the square of height in centimeters.) When boys become fat, they too desire to be thinner. But since this is not the usual development, there is no general tendency for them to want to be thinner as they mature sexually.

Among those in the top 25 percent of their age group in fatness, 70 percent of the 12-year-old boys expressed a desire to be thinner. Among 13-year-old boys, this proportion fell to 60 percent.

"Among females, within each family income group, as sexual maturity increases, the proportion of females wishing to be thinner increases," the researchers found.

Sexual maturity

"At each level of sexual maturity, females in the higher family income groups show a strong tendency to desire to be thinner.

"Analyses using parental education as the measure of social class provide further support for these two relationships.

"In each of the three social class groupings, by either measure of social status, the majority of females who have finished their physical maturation are desirous of being thinner.

"Normal sexual development produces dissatisfaction with their bodies for most adolescent females.

"While the increased muscularity associated with maturation among boys brings them satisfaction, the increased fatness necessary for the menstrual cycle and normal sexual development makes girls dissatisfied with their bodies."

In a campus interview, Dornbusch said "cultural standards of beauty are deeply imbedded and very difficult to shift." Studies by Paul Duke show that simply informing adolescents that body fat accompanies normal sexual development in young women so "they won't be so hard on themselves" has "virtually no impact," he said.

Numerous studies have shown that negative attitudes toward body fat "goes with a high standard of living" in industrialized nations, he added. In the U.S. women want to be thinner than men except at high levels of fatness even when measured fatness is the same.

Dornbusch read *The Theory of the Leisure Class* at age 21 and "knew what Veblen would say" about women's desire for thinness. "His barbaric style sticks with you," Dornbusch noted.

"Stanford was one of many universities that fired Veblen. But he must have liked this area, because he returned here to die."

When Veblen's theory was put to a scientific test more than three quarters of a century after it was published, the results "came through beautifully," even though Veblen himself had forecast that more widely shared leisure would lead to a change in social attitudes toward fatness.

"Social perceptions have direct effects on human behavior, even when the perceptions are neither rational nor functional," Dornbusch and his colleagues observed.

"Inappropriate standards used by women for judging their bodies do them and society a lot of harm."

Wessells discusses information overload, role of humanities in education

Following are comments delivered by Norman K. Wessells, dean of the Stanford School of Humanities and Sciences, at the Los Angeles conference April 24, together with excerpts from the questions and answer period which followed.

I have a very close fly fishing, drinking, and arguing companion, Colin Pittendrigh, director of Stanford's Hopkins Marine Station. Colin and I often talk and argue about biological and cultural evolution, the forces that have shaped modern man and our society. Colin proposed to me a few weeks ago an interesting analogy that I would like to share with you, since it provides a context for much of what we want to do at Stanford University.

Biologists recognize a phenomenon called genetic "load." The term refers to the sum-total of the potentially deleterious mutations that a given species carries. Sickle cell anemia, Tay Sach's disease, albinism, subtle hereditary tendencies toward cardio-vascular disease, breast cancer, or other things, are part of the genetic load of *Homo sapiens*. To the extent that more and more such mutations accumulate in the hereditary material of the species, its vigor and capacity to survive are reduced.

If we turn to cultural evolution, Pittendrigh proposes that there is an information "load." This information load today puts undue stress on personal values and our societal/political processes.

In good part, the information load stems from technology. With communication satellites, with sophisticated, mobile audio and visual equipment, and with the economic realities that drive the business of news gathering by the communications industry, so that entertainment, rather than enlightenment, becomes a prominent part of the process. The individual in Western society becomes potentially subject to an unending barrage that can fill a consciousness and distract from useful pursuits.

TV and communications can bring any spot on the globe into our living rooms in the nightly news and to our breakfast table via the morning newspaper. All of us can participate vicariously as events unfold in the Watergate White House, the Falklands, Jonestown, or the city grocery after a holdup.

We are literally exposed to the "toing" and "froing" that in other places, other times, rarely reached the citizenry at large (and, I argue, that mankind did not suffer in our relative ignorance).

And the information load brings with it challenges to the social fabric of family and local society. Violence, vulgarity, glamour, and the utterly different world of a New York City or a Chicago are brought into the living rooms of Dillon, Mont., or Modesto, Calif. And such things strike at the core of personal, familial, and societal values and mores.

Our political system was designed when communication was slow, when news of the events in Washington or the State Capitols might take days, weeks, or even months to reach the populace, and when the rest of the world was even farther away in time.

Then, it was what the political leaders said and wrote that determined their public image. Now it seems the personality of a public figure, carefully shaped by the advertising industry and presented by the communications industry, determines the results of elections.

Our American political process was protected then, I suspect, by the very slowness of communication networks. Now there is so little time, indeed no time in many instances, to let things cool off.

On occasion, I am sure many of you in management intentionally allow something to sit on your desk until an apparent crisis or grave problem simmers down or "goes away." That strategy is usually not an option for our leaders, because they are forever in the spotlight of the industry that helps generate our information load.

Feeding into this information load is the subtle perception most of us share that a newer, higher-tech world is coming, with a home computer in every pot, and with nearly every aspect of our lives a bit more automated and less controllable by each of us as individuals.

What can we do abut this information load with its stress upon both personal values and the way that we interact and govern ourselves? Do we stop deliveries of the newspaper, avoid the evening news on television, take it all in despair, or consciously acknowledge what is happening and behave accordingly.

I think, in fact, the way each of us responds to the information load depends on what we are and how we were educated. That is why I discuss this subject with you, for it is our responsibility in the University to provide our students with the personal base that will allow them to cope well with what will confront all citizens in the decades ahead.

Those students must learn to discriminate and to see the significance of events and the truth about people. They must develop a sense of when to care and become involved, when to ignore and remain apart.

Norman Wessells

They will need inner strength and value systems to sustain them as the burdens of the information load worsen. That inner strength must stem from a secure, ever-evolving personal philosophy, that can be shaped in good part by the university years. An important reason we can be so prominent in that shaping is the stage in the lives of our students. At 17 ot 18 years of age, when they first come to Palo Alto, they are imbued with the culture of parents, siblings, school, but they know it is time to become an adult.

So we have them at an ideal time—what do we do?

First, I think, we intentionally challenge them as people. The social milieu at a Stanford is something not found in any home, any public or private school. New types of people, new challenges to family, religious, political, and personal values, are the rule.

These things are not "book learning"—they are "life learning," learning that forces development of character and new perspective. So WASPS and blacks, poor and wealthy, jocks and nerds, gays and straights, are mixed with books and laboratories and professors—and what comes out the end at graduation? Maturing, thoughtful persons, we trust, ones much better able to cope with the information load and the high-tech society of the 21st century.

But the social milieu we provide is not the core of the University experience. The core, of course, is academics. So let me say a few general things on academics, and then give you some specifics.

If I had a short shopping list of skills to gain in college for one of my student advisees I might include: thinking, writing, speaking, values, and aesthetics.

By thinking, I mean the development of analytical skills. By writing and speaking, the ability to express oneself with facility, logic, and skill whether on paper or while on one's feet. By values, I mean a sense of ethics, morality, and concern for others, from family to co-workers, from community to country to world.

And finally by aesthetics, I mean an appreciation for the finest in our human culture. I do not mean, necessarily, eschewing Monday night football or the beauty of the Beatles. But I do mean intolerance of the vulgar and violent, impatience with the self-serving and unprincipled, and that private, personal appreciation of a well written book, a painting, or a play. It is attaining what the greeks termed "the consolations of philosophy."

David Starr Jordan spoke on this topic in 1892 when he toured California, urging the young to attend college. Jordan said, "To turn from the petty troubles of the day to the thoughts of the masters, is to go from the noise of the street through the door of a cathedral. If you learn to unlock these portals, no power on earth can take from you the key. The whole of your life must be spent in your own company, and only the educated man is good company for himself. The uneducated man looks out on life through narrow windows, and thinks the world is small." To turn from the petty troubles of the day—is not that itself a recipe for survival from the information load?

But there are probably 1,200 courses undergraduates can take at Stanford. How to choose among such richness? That is where our new structured curricular requirements come in.

Those courses expose students to diversity and alternate views of our roots in Western Culture, our philosophy, ethics, personality, and so on. We mix with it technology, the natural sciences, and the mathematical parts of human knowledge.

We say, for instance, that quantitation is important, that no graduate of today can hope to feel at ease in the new society if she or he does not have at least some awareness that quantitation is our servant, not our master, and why? Indeed already there is a hyper-awareness among nearly all our undergraduates, be they in English or Classics or Chemistry, that contact with computers and numbers is now a part of becoming educated.

But these words may seem out of date when we think of the real world of unemployment and the problems for our work force as we turn from an industrial economy to a service economy. What of preprofessionalism, arising more forcefully than even during Depression days, from worries about the economy, jobs, future security, and personal independence?

Well, at Stanford we do not have formal undergraduate curricula in business, in accounting, in computer science, in pre-medical or pre-law studies, in other disciplines best left, we believe, for later years. We do our best to instill in the minds of freshmen and their parents that studying what one enjoys is the best route to prepare for later life.

What "good" is a French major? A Classics major? says the financially aggrieved parent? The answers are clear and not just wishful thinking.

Over the past few years, we have invited alumni who majored in the humanities as undergraduates to return to Stanford and talk about their careers to undergraduates in their departments. As the experiences of those alumni unfold, the potential history or English major hears firsthand: of the values of having been a philosophy major to a young woman who is the field operations manager of the San Francisco Municipal Railway; of the "utility" of a religious studies major to a computer software engineer; of the importance of a history major to a dentist.

The reasons why such majors have proved valuable, these alumni say, are those I ennumerated above: method, thinking, learning to write, and exposure to ethics. All are part of every major at a great liberal arts University. It isn't important whether the classes are in French literature, or art history, or developmental psychology. It is what goes on in such courses. . . what is in the minds of the takers. . . that counts.

What deans do

Today you are listening to deans of Stanford's seven schools. Several weeks ago someone asked me "What on earth does a dean do?" In fact, I've been telling you little by little. Deans worry about what a university is in society, what it should do for its students, and how it can do it.

In a few words, a dean tries to create an environment for two things: ideas and people—the special types of ideas that are part of research and teaching; the special type of people represented by our marvelous faculty and our select, intellectually gifted students.

What is the setting of that environment? Practically, for me, it is my School. Humanities and Sciences at Stanford is an immense organism. We are talking about some 457 professors, 185 other professional teachers, 4,000 majors, 75,000 total course enrollments, 500 secretaries, laboratory technicians, business managers—and on and on.

We are responsible for a marine station, an art gallery, an art museum, three theaters, and a music program consisting of more than 100 concerts and recitals each year. The enterprise involves administering a budget this year of 35 million dollars in Stanford funds and 20 million dollars in research grants. We are labor intensive, which of course, means that our problems and opportunities are human ones.

Our Humanities and Sciences hallmark is breadth; we are artists and writers, economists and computer scientists, and chemists and classicists—we are scholars of Rome and Caeser, of leptons and steroids.

That we are this broad an amalgamation is a statement to ourselves and to our students. We value the vast diversity of human knowledge and would know that we are part of it, and much of it can be part of us. And that statement goes forcefully to our students as we require them to sample across the spectrum.

Perhaps some specifics can give you an idea of what we deans do. Part of creating an environment is building, with planning, luck, and hard work, this great faculty that makes the University's name.

This year, suddenly, unexpectedly, Stanford has become the number one place in the world for the formal study of language. That sounds esoteric, no doubt, but it really isn't.

For formal linguistics, as it is called, begins to give us a precise, logical, indeed mathematical, description of words, sentences, semantics. And the result will have a profound impact upon the new super-computers, upon Artificial Intelligence, robotics, and the world that is coming, like it or not.

But also, formal linguistics relates to psychology and the study of the mind. We think, after all, in words. Learning how we describe and perceive our world, how our speech center works, indeed how the brain functions. Stanford's group in cognitive science was already number one—now an even stronger, broader alliance has been welded.

So what did deans do? We had the task of sensing the opportunity and then helping to assure the successful wooing of three senior "stars"—one from MIT, one from Texas, one from Wisconsin. Finding three senior billets in these days of budget reductions wasn't easy.

But that was only a beginning: next came salaries,

continued on next page

Wessells/ continued from page 6

a wonderful gift of 150 Personal Computers—one computer for each new member of the humanities faculty who wants one and a machine for each humanities department office. Our project includes a training program designed specifically for our humanist "technical aborignees" and already the productivity and morale of our humanities faculty is climbing to new heights.

In addition to simply word processing, the faculty will soon have the capability of being linked to computer networks that will provide access to many of the nation's great research libraries as well as Stanford's own collections. I suspect the work habits of many of those faculty quite literally will be transformed by these new tools.

You can be assured that though our financial belt will be tight, we will be reallocating, pruning back the weak, sustaining the strong, and artfully, I hope, striking out in new directions.

Another component of an academic environment is the equipment or the tools, of doing research. The tools of scientific research change with advances in technology, and a modern lab in biology, chemistry, or physics looks vastly different from labs even just 10 years ago.

The tools of the humanist, however, until recently, have been pen, paper, and books. During the last two years several deans and administrators have been involved in winning a major grant from the Pew Foundation of Philadelphia to provide our humanities faculty with word processing equipment. IBM has expanded our project with equipment, office and laboratory space. And these days, real estate is a big question. With houses on campus listed for $295,000—$430,000, you can imagine that we, like our neighbors at Hewlett-Packard or Varian, spend much time on questions of housing allowances, equity loans, and the like.

But, it is worth it, for a new spire of excellence will mark Stanford's horizon, and other new faculty, graduate students, and undergraduates will all benefit. And by bringing together such diverse intellectual leaders, we facilitate the ferment that generates new knowledge. That indeed makes deaning worthwhile.

You will perhaps hear of other new areas being added over these next years. We are planning now, for instance, to greatly expand the undergraduate writing experience, to add enrichment to programs for juniors and seniors, and to foster other new areas of scholarship and teaching.

But how do such abstractions relate to the real nuts and bolts of an education, the course and the major fields of study? Is there a simple route to follow that leads to guaranteed Nirvana? I fear not. The best route is to concentrate upon ideas, people, history, process.

Let me give you brief descriptions of three undergraduate courses:

Classics 11, The Age of Heroes, studies the heroic epics of Greece, Mesopotamia, England, and France, their common features, style, and ethical values.

History 110, The Age of the Reformation, relates the Reformation to the urban setting and the economic and social forces of the rising national states.

Biology 130H, Biological Clocks, examines the physiology of innate daily, tidal, monthly, and annual rhythms that govern the basic activities of most organisms, including humans.

Why study the Age of Heroes, the Reformation, Biological Clocks? Not for the facts. Instead, for the experience of study. To think about those things, to be forced to organize, to analyze, to establish one's own way of looking at things—that is what it's really about. It is training in method, indeed training for an effective life.

Individual student achievements

We deans are people and some of our most pleasant times come from opportunities to do small things for individuals. One day last Autumn an undergraduate came to me to describe his desire to do research in corrosion of bronze sculptures.

He had studied a great deal of art history and chemistry. He had already made contacts at Stanford and in France to work on his project. I was impressed with his knowledge, his drive, and with the unique nature of his project; his is a perfect example of the beautiful way two disciplines sometimes fit together.

So the School used gift funds from an alumnus to give him a research grant to enable him to purchase supplies and to carry out the project this summer. I would bet that he will not be the only beneficiary of his work. Prof. Albert Elsen of Art is already worrying about potential corrosion of the spectacular Rodin sculptures that will soon grace our campus thanks to Mr. and Mrs. B. Gerald Cantor.

I could list many other seemingly small things: sending students to Washington, D.C., the Aegean Sea, or Latin America for summer projects; getting a student together with the one "right" faculty person who can make the difference in the student's education. In reality, however, these are among the most important services a dean can provide, for the impact on each individual is profound and long-lasting. And that makes it very worthwhile for us.

It has been a pleasure to talk to you today about Humanities and Sciences and how what we do relates to our students. Those wonderful young people will not live in an easy world.

The horrendous consequences of the population explosion are beginning to be seen in Central and South America—much worse is yet to come. The information load I alluded to, and even the tragedies of burgeoning populations, differ in one enormous way from the genetic load of *Homo sapiens* and all other species.

The genetic load is biological, chemical in nature—it is part of our very fabric.

But that is not the case with the information load and all that is included with it. Such things are, potentially at least, under human control—*they are not inevitable*. With education, with strength of character, with will and realization that the individual can make a difference, even on a world scale, the graduate need not merely survive but may make some real contribution to the public good.

We have an obligation at Stanford to prepare young citizens for the real world. Our buildings, our collections, our faculty, are vehicles to that end.

You, as alumni, are part of the history, and a testimony to what has been accomplished in the past. And much of what we do is only possible because of your generosity and sacrifice. For that we thank you. We appreciate your trust.

Wessells' Q&A: Humanities majors shouldn't do graduate work just for a job

Following are questions and answers following Wessells' talk:

Q. Please comment on the nature of incoming students at Stanford today.

A. I really haven't seen that much difference in students since 1962, when I began teaching. I'm speaking mainly about the students I see in class, because they're the ones I get to know the best. I get to know them fairly well.

I think the student body has changed somewhat, mainly because of our social consciousness about the kinds of students who should be allowed to go to a major research university. So we have many more Chicano students and black students than was even contemplated as even possible in the early part of the 1960s.

I think we're over a big hump there—at least, the Stanfords, the Harvards, and the Cal Techs are. That important ingredient of the community is secure. Not that enough people are coming, but I think the most qualified are getting to the major research institutions.

Q. What's the status of the Stanford Honor System?

A. It's a system that has been working reasonably well, I think. Many students take it very seriously indeed. I think there is a degree of cheating which goes on which students know is happening but are not willing to do anything about.

I suspect that's happened for many, many years. I don't know about Stanford prior to the early 1960s. But I've talked to a lot of students about it—I teach in a fairly high pressure area, with premed students in their junior and senior years and it's recognized that there are some difficulties. But I think the majority of students and the vast majority of faculty think the honor system and the whole code of conduct is so important—such a wonderful good for the university, as opposed to the alternative—that what we have to do is try and figure out if there's a way to close down those loopholes so that we can keep the basic pattern.

I would say there's a little bit of stress and we'll probably be hearing and reading a little bit about it in the student newspaper. . . .

Q. To what extent do you feel that humanities students ought to pursue graduate study to find useful ultimate work in society?

A. I don't. And I don't because of having talked and heard of these alumni who come back to Stanford from the Bay Area. Some of them went on to graduate school, but many did not.

I don't think that means they stopped their education. I suspect that. . .a classics major or a philosophy major who winds up in some quasi-technical or business area will have found other ways to continue their education.

Our kind of university produces a graduating class most of whom aspire to professional school, sooner or later. Five or eight years ago, the commonest pattern was right out of college and into graduate or professional school.

Now a most significant percentage are "stopping out." Places like Stanford and Harvard Business School tend to take in people as MBA students who've been out working for a while. I think that's sound.

Q. Do many students actually do research abroad?

A. Well, our students in anthropology, international relations, Food Research Institute—quite a few parts of Humanities and Sciences—spend significant amounts of time overseas.

Most of them are graduate students. However, we have various programs for advanced undergraduates and we'll send 'em over for three months or six months. I would not say the number was very large. . . .

Q. How many?

A. It's in the hundreds.

Q. Is there any chance Stanford will establish a separate department of archaeology in the near future?

A. I think not. What we've been doing is endeavoring to build our Classics Department. This was started by my predecessor as dean (Halsey Royden) who was a mathematician but more than an amateur classicist. He recognized our department was not as strong as it should have been. So in the reallocation of faculty billets in the past few years, several have been to the Classics Department. It has grown by about one third.

We had a search committee for archaeology, in fact, and are appointing a new person for next September, but I don't envision that we would ever have the resources that would allow us to set up a separate department.

A department really isn't viable unless it's got at least eight to 10 faculty persons. In terms of the needs of the students and the competing opportunities that we have for intellectual advancement, I don't think archaeology is quite that high on the list.

Q. How's the Philosophy Department?

A. They're breaking us. The person who's coming from Wisconsin to join the formal linguistics program is in philosophy. (The department) is just concluding a search for a senior person in ethics for an endowed chair.

Philosophy at Stanford is exceedingly strong and represents the hottest in philosophy right now, which tends to be very oriented toward logic and formal ways of arriving at conclusions, and even over into ethics, questions of morality.

In part, it becomes a little esoteric for most of us, who perhaps are not quite that ethical or moral. *(Laughter)*

But there's no danger that Philosophy or Classics or other departments in that area—religious studies—giving up the ghost. We're supporting them.

Q. Can you tell me a little more about your formal linguistics program?

A. Yes. What we're doing here is bringing a person, Joan Bresnan, from MIT, and a mathematician, Stanley Peters, from Texas, and John Barwise, formerly of Stanford, to this program.

The objective is to put together a group who are interested in the way that we really interpret words, put them together, and generate meaning by combinations of words—and describing that in theoretical terms, ultimately, mathematical terms.

I suppose, decades from now, we we're heading toward an ultimate understanding or attempt to understand the way in which neurons can interact with one another in the brain in different kinds of electrical networks, depending on their biological properties.

We're so far from there now we can't even frame the questions. That's where this kind of attack, coming from a non-biological angle, is ultimately aimed, I suspect.

Q. Is there any coordination between the Admissions Office and Humanities and Sciences?

A. I have never, ever talked with Fred Hargadon (admissions dean) about an individual applicant and he has never asked a question of our office.

What we do talk about are. . .(problems like the fact) that we don't have a computer science major (for undergraduates) for what I think are very good intellectual reasons. But Fred says now the absolute cream of the crop nationally—of people who are just off the curve in mathematical skills, individuals who a decade ago would have gone into a mathematics department or a physics department—are, in fact, going into computer science.

And Fred says, "well, they're going to MIT," because MIT has computer science as an undergraduate major. That's the kind of intercourse we have with Hargadon.

He's causing us and the faculty to rethink just how we label things and exactly what we're doing on an educational basis. Fred is just an extraordinary person to be in contact with what's happening in the secondary school world and in assessing the quality of the applicant pool to our university.

Q. Could you tell us more about the writing program?

A. Right now, of course, the entering freshman either has to have done very well on the national tests. . .or take freshman English.

Those courses are given on several different levels. They tend to concentrate on specific topics that the student would like to know about, so that they're actually getting experience writing about something that's enjoyable.

Unfortunately, there isn't any sustained and regular

Decision-time approaches on unclassified weapons-related research at SSRL

continued from page 1

the UC Nuclear Weapons Conversion Project.

Other speakers will include Prof. Charles Drekmeier, political science, and Mary James, SLAC engineering physicist, according to Jon Adelstein, rally organizer.

Adelstein said a small delegation will ask Kennedy to agree to discuss his views with the Stanford community and with SLAC faculty and staff who signed petitions against the proposal in mid-January.

In an April 1 talk to the Stanford Academic Council, Kennedy said: "Many of us here believe that the direction of our national effort is tragically wrong. Our dependence on large stockpiles of nuclear weapons, and on deployment measures and countermeasures with great destructive potential, have placed us all in collective jeopardy."

But Kennedy strongly opposed end-use limitation on unclassified research, saying that "today's benign restriction might become tomorrow's suffocation. . . .

"Once you begin making value judgments about the possible outcomes of scientific research, there is no place to stop."

He said he plans no change in present research policy "nor do I think my colleagues should wish to do so.

"I would hold that view even if the project under consideration were much more heavily involved than it is to end-uses with which I am personally uncomfortable."

Adelstein hopes to make Kennedy "more sensitive" to the need to consider end-uses in nuclear weapons research. The potential consequences are "so disastrous and devastating they would undo all the other good works of universities."

When it comes to nuclear weapons "we have to draw the line," he said. "It's essential to stand up to Lawrence Livermore before they go further.

"There are certain types of research that have to be slowed down or stopped on campus."

On April 19, the Student Senate voted 14-3 to oppose the proposed research, after Adelstein and others obtained 1,572 signatures on petitions urging this action. Another 45 faculty and 76 staff members took a similar position.

Senators Paul Tsongas and Gary Hart and anti-nuclear activist Daniel Ellsberg all have drawn large and enthusiastic audiences at Stanford in the past 10 days.

The controversial research proposal involves research on high-speed x-ray detectors used in nuclear weapons testing. Developed by Lawrence Livermore, Sandia, and Los Alamos national laboratories, it was not included in President Reagan's recent budget proposal for fiscal 1984.

Prof. Arthur Bienenstock, SSRL's director, is expected to announce his decision on the project in the near future. SSRL research depends on electron beams from the two-mile Stanford linear accelerator. In mid-January, 280 SLAC employees signed petitions to SLAC Director Wolfgang Panofsky objecting to "involuntary servitude" in providing the beam for SSRL.

Panofsky has pledged that SLAC will "cooperate fully" if SSRL approves the proposal. A nationally prominent arms control expert, he has as an individual strongly opposed President Reagan's recent proposals for developing a comprehensive defense against nuclear weapons.

Panofsky, Wood to debate defense

The Stanford Arms Control and Disarmament Forum will sponsor a public forum at 7:30 p.m. May 4, at Kresge Auditorium.

Prof. Wolfgang Panofsky, director of SLAC, and Lowell L. Wood Jr., head of the special studies group at Lawrence Livermore Laboratory, and adviser to the Reagan administration, will discuss strategic defenses and nuclear deterence. Provost Albert H. Hastorf, will moderate.

Volunteers sought for herpes research

Persons with recurrent herpes on the arms, legs, or trunk, but *not* on the lower face, around the eyes or genitals, are urgently needed to assist in medical research. Volunteers will be paid a fee. For more information please contact: Tony Cunningham, M.D., Division of Infectious Diseases, Stanford University School of Medicine, (415) 497-5908 between 9 a.m. and 5 p.m.

Health and safety report

Accidents and Injuries Occurring During Week of Apr. 18-22

Type of Accident or Injury	Number of Incidents	Days Lost
Chemical inhalation	1	4

follow through on that. Consequently, those students who go into the humanities probably get pretty good writing experience after that. But most of those who are in the social sciences or natural sciences don't. I can easily imagine they could go through those last few years and not write very many papers.

What our faculty study groups are working on right now is designing some small group writing instruction and experience for the senior year. It has to be small (classes); you just can't get very good criticism of papers unless the person has a small enough group they can really concentrate on and give the kind of feedback you need to qualitatively improve these students' performance.

So it's going to be a very expensive thing. That and the enriching of the entire junior and senior year probably will be the biggest thing we do in Humanities and Sciences over the next 15 years.

What we're talking about is buying out faculty time—getting good professors who've normally been teaching 100 students out of the classroom and into a seminar for six or eight or 10 students. And then having a replacement back there in the classroom. . . .

Q. Would you mention why you don't have a Computer Science Department?

A. Please don't misunderstand. We have the Number 1 Computer Science Department in the world. . . . It grew out of the Mathematics Department about 20 years ago. It has just an incredible faculty who, by and large, are interested in the theory which has grown into the discipline. . . .

Bill Kays, dean of electrical engineering, has a large number of electrical engineers who are also extraordinarily talented people on the hardware end of computer science.

Our Computer Science Department is a graduate department. . .with masters and Ph.D. students. To the extent that we teach computer science to undergraduates, it's been done through service courses, not in the form of a major.

The basic argument is that a good part of computer science is really almost like a trade.

So what we decided to do was to fold undergraduate teaching in computer science into something called mathematical science. The student has to take basic math, statistics, operations research, and computer science.

And I don't think there's a more successful major at Stanford. People come out of that and go to law school, business school, computer science graduate school, everything. It's a fantastic major—much better than anything they're doing at MIT. What we don't do is label it and package it well enough, and prospective super-stars aren't hearing about it.

Q. What are the major advantages and disadvantages of a major research university as compared to a liberal arts college?

A. The major reason that a person should come to Stanford is diversity. There's no other large college in the country or the world that's the foggiest imitation of a place like Stanford.

The great limiting thing, if you talk with Nan Keohane (former Stanford professor now president of Wellesly) or (other) liberal arts college presidents, is that you can go to them (as a student) for a couple of years and pretty soon you see that there's just not much (curricular) choice any more.

What we have as a research university is just unbelievable diversity. Stanford has it in spades, much more so than most other places.

There's nobody who tries to have the best engineering school at the same place with a great liberal arts college. It's like taking Harvard College and MIT and turning it into a university.

Harvard doesn't make it in engineering, MIT doesn't have much in the humanities, other than people they've hired from us *(Laughter)*.

So we just have a wonderful thing here. . .Hargadon accepts students for their undergraduate years. They can go to engineering, or humanities and sciences—wherever they want—or design their own majors.

Q. What about courses in ethics?

A. We're in an especially good place to look at ethics and morality because Stanford, like it or not, is perceived nationally as being Big Science. And Big Science creates that kind of problem, whether it's in the medical sphere, atomic energy. . . .

We're doing this already, but we should build more areas where we do examine values at the technical end of human knowledge.

Q. What about international relations?

A. Well, international relations has been an extradepartmental program going for, I guess, a decade now, in which political science, economics, history, sociology, and others have set up a program for both graduate and undergraduate students.

It's a program which we're just beginning to examine for the future. Leon Sloss (president of the Alumni Association) and several other very distinguished Americans were at Stanford last week as the first visiting committee for the international relations program.

The (Stanford) centennial is coming and what we want to talk about is what's really new, big, and important.

A number of us, and President Kennedy in particular, have the feeling that international relations has just got to be one of the areas where this university makes a big push in terms of faculty and training programs. . . . So things will be happening there, but I don't know what yet.

Q. When is the centennial year?

A. It begins in '85 and ends in '91. (Wide laughter)

Kennedy comments on SSRL, Band, ROTC, tuition, housing

At Stanford and elsewhere, "this is a spring of substantial controversy," Stanford President Donald Kennedy told an estimated 400 attending the Stanford conference in Los Angeles Sunday, April 24.

While many faculty and students have opposed an unclassified weapons-related research project proposed for the Stanford Synchrotron Radiation Laboratory, Kennedy said, it is "not desirable" to regulate research by its end use.

He noted that the controversial proposal is equally "strongly supported" by faculty members who emphasize "positive benefits of the vast majority of the proposed research program and who believe it is more important for the faculty to maintain an open stance on faculty research, as long as it is conducted in accord with the principles the university has adopted, and not to try to regulate it by some act of prediction with respect to its end use and some moral judgments made by others about that end use."

Kennedy told the Academic Council this spring he did not intend to ask the faculty to reexamine Stanford's research policy.

Questions and answers

Alumni quizzed Kennedy on a variety of topics.

Q. The band is a disgrace. It should not be called the Stanford Band. Who, if anyone has the authority to control it?

A. I emphatically deny that the band is a disgrace. *(Widespread applause)* I think the band went through a marvelously creative period, when it was unique and special. Three or four years ago it did sink into a kind of doldrums in which the same old things weren't as funny.

You know, there's nothing like having a reputation for humor, only you haven't heard any good jokes lately. . .that's the position the band got itself in.

This past fall there were signs of real improvement and then an unfortunate regression (A reference to the end of the Big Game.) *(Laughter)*

However, I had the moral fiber to invite them to perform for her Majesty. They showed up in absolutely spanking clean red coats. They labored hard and played a marvelous arrangement—which Art Barnes wrote himself—of "Rule Brittania."

You'll hear it some fall Saturday, I'm sure, because I told the band that they could get a whole lot of hauteur this fall "straight from their command performance, the Incomparable Leland Stanford. . . ." *(Laughter)* That's got a lot of class going for it. Maybe they'll become sort of British now *(More laughter)*

Anyway, the only thing the band did on that occasion you could consider the least bit bad was one of those chorus yells. And here's what it was: *(Pause)* Go Queen! *(Wide laughter)*

Q. Why is the cost of a Stanford education outpacing the general rate of inflation? Is there any evidence of recent tuition increases or the recession affecting applications for admission?

A. There isn't any immediate evidence. But you cannot simply judge on the number of applications. What you have to do is look at people who apply for financial aid but who just fall short of qualifying for it, and see whether those people who do not select you are going instead to the high quality public institutions in this state.

That's the ratio we look at. And even with that high grade of resolution we cannot detect an effect.

Does that make us complacent? It certainly does not. We're deeply troubled by what we've had to do to tuition.

But let me make clear what is really happening here. It is characteristic of labor-intensive service units in an inflationary economy not to go up with some consumer price index indicator of inflation but rather to move with the rather steeper curve of disposable income.

That is what the tuitions of all the major selective private colleges and universities have done. From 1967 until 1981, Stanford tuition was exactly the same percentage of disposable family income. It did not take a larger share of family budgets.

In 1982 and again in 1983 we did have to move tuition, as most colleges and universities did, somewhat faster than that line. We think we've got it back down and we hope to keep it back down.

But with a compound rate of rise in energy costs of between 20 and 25 percent a year, and items in our market basket inflating faster than those in the market basket in general, it's not surprising that we have to price in the way we do.

We really are not behaving differently from what classic economic predictions would say we would do. I hope that the economy will once again permit us to do something more reasonable.

Q. When will Stanford return to a full ROTC program?

A. When the services and we are able to agree on a proposal that either permits credit bearing courses required by those ROTC programs to be taught by Stanford-selected members of the Stanford faculty or, in the alternative, permit non-credit bearing military-taught courses to qualify for those requirements set by the. . .services.

The difficulty in that problem is a hang-up that's very widespread between university faculties and their insistence on some quality-control measures and the services desire to have their own people teach those courses.

Q. Can the University now guarantee undergraduate housing on campus for all four years? Is on-campus housing available on campus for graduate students?

A. On-campus housing is available on campus for about 75 percent of the graduate students who are married and have children, for 50 or 55 percent of those are married but don't have children, and less than 30 percent—say, 25 or 20 percent—of single graduate students.

That's rather better than any other institution of our kind. There's just been no tradition until lately of housing graduate students.

Our graduate students clearly want more housing. We've got to think hard about our own priorities. . .and competing land use requirements and see how much we can provide.

As to undergraduates, the new 800 spaces at Governor's Corner—the wonderful new undergraduate housing center by the golf driving range, Lagunita, and Lagunita Court—we think will remove the unguaranteed year at present levels of demand.

It won't house all our undergraduates; it will take us to 84 or 85 percent. But given the number that are on foreign campuses and the number that prefer to live off campus for their own reasons, we think it should be possible to satisfy existing demand.

But if tastes change, demand will change. So obviously we can't say "never" to the unguaranteed year—at least not now.

Q. (Paraphrased) Hope was expressed that Stanford will remain sensitive to national defense and national security needs, both with respect to student programs, research programs, and scientific exchange programs.

A. I think the institution, and students and faculty generally, may be a little more sensitive to those needs than you suppose them to be.

We've had some policy differences with the government, not only with regard to ROTC, but with respect to certain scientific exchanges and with respect to restriction that the government has sought to put on research.

But, by and large, those issues have been resolved quite successfully. We have had some differences over open access provisions put on research contracts with the Department of Defense. But our approach to that was that I agreed to serve with the Undersecretary of Defense for Research and Engineering (Richard DeLauer, a Stanford alumnus) to cochair a panel between the Department of Defense and the universities which has worked hard to try to resolve those problems. . so those programs could go forward on university campuses under conditions that are acceptable to the faculties and to the Department.

I think that what you would ask of the university is a responsible effort to be sensitive to those needs, but at the same time to represent vigorously the appropriateness of certain conditions under which we carry out the research work. I think we've done that responsibly and fairly.

We have made it possible for a number of undergraduates to enroll in ROTC programs by commutation elsewhere. We certainly have no desire to prevent them from doing so. The desire rather is that we are consistent with that principle, that we let them make that choice and we make that as convenient as we can for them.

Q. (Paraphrased) In your speech, you sounded optimistic about the outlook for support for scientific research by the federal government. What about the outlook for the humanities and social sciences?

A. The social sciences. . .are in a difficult kind of intermediate position.

They've become used to a fairly significant amount of federal support but cuts made in the last three years have been rather selective there.

So I'm a little worried about the social sciences although in certain fields, like economics, Stanford has been able to shift its base of support a little and pick up some private help, and I think maintain themselves quite nicely.

There's no question that the social science disciplines are intellectually lively and that much of Stanford's strength lies in them: our increasingly good position in sociology, a very strong position in economics, in psychology our department has for 20 years been ranked very clearly as the best in the country. I think we have a good record there and will continue that strength.

The humanities are quite clearly the chief worry. As happens sometimes in a period of economic stress, it's a little difficult to persuade undergraduates it's still worth concentrating on the timeless.

We're trying to do that. Norm Wessells, as dean of humanities and scineces, has been very active in trying to find ways of helping humanities faculty become more productive in a scholarly way, to use some foundation money to improve our opportunities to appoint young faculty members in the humanities.

Then, of course, we have funded for the first two years of its operation, a Humanities Center which we hope will attract distinguished visiting scholars, both younger and more senior.

I'm hopeful about all that, but I think it's going to be a multi-year proposition measuring the effect of those interventions.

Letters to the editor

Consumption and flat taxes: a rebuttal

Editor, *Campus Report*:

How about equal time? I ask this question as a Stanford grad (Class of '82) who has read a number of stories in the *Campus Report* that I disagree with. . . .

The stories I am referring to involve Professor Michael Boskin and Professors Alvin Rabushka and Robert Hall. You have given their arguments in favor of a consumption tax a great deal of space with little discussion of the serious problems that would result from adopting their proposals.

Simply stated, a consumption tax, which the Hall-Rabushka proposal is, would shift the tax burden from the wealthy to low- and middle-income taxpayers. Even if you don't think this is unfair, then you should at least be wary—after all President Reagan's "trickle-down" economic policies have contributed to record deficits and deepened the recession.

I have sent you the April issue of *People & Taxes*, the newspaper I am editor of. It includes an article by Bob McIntyre, which examines the question: Does the economic recovery that seems to be underway indicate that President Reagan's supply-side economic program is working? McIntyre's answer is no. He says that only after Congress raised taxes in 1982 has the economy improved.

I have also sent you the March issue of *People & Taxes*. It includes an article by George Guttman that exposes the fallacy behind the Hall-Rabushka supply-side tax program. Going back to my original question, let me suggest that you reprint the Guttman article so you readers can know the other side.

Tyler Bridges

Editor's note: We cannot reprint the article in Campus Report, *so we've included the address for those who are interested.*

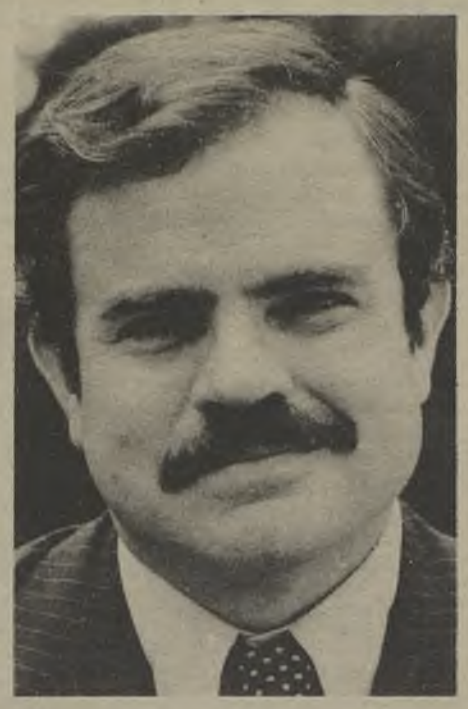
Ely/continued from page 1

coming to Stanford as dean last year. He's taken time to visit several Business School classes at Stanford, talk with fellow educators here in education and medicine, and think hard about better ways of combatting classroom boredom.

Some of his suggestions, in brief:

1) Try reintroducing Socratic dialogue.

Eliminate the ridicule. Tell a few students a day in advance that they'll be questionned in class. Pitch the ensuing dialog at a level high enough so that other students may have trouble following the discussion if they haven't read the material.



2) Consider injecting very short assignments to generate day-to-day classroom activity.

Some law teachers may think this is a "Mickey Mouse" approach, but it left business students "a lot less bored." Those enrolled in the joint MBA-J.D. program at Stanford said they liked brief but demanding activity.

3) Stage client interviews, mediation, and other legal activity in the class.

"It's a very rare case when this can't be done," says Ely. "It's work for the faculty, but we're doing more of it here."

4) Develop clinical teaching through extensive use of videotape recordings and other simulation of what practitioners actually do.

John Hart Ely

This kind of clinical teaching is exhausting and expensive, since the student-faculty ratio has to be low. But it has several advantages over conventional clinical education in law:

A) It can follow the regular class schedule and normal academic calendar;

B) It can be carefully designed to complement reading and other curricular materials;

C) It can be as simple or complex as the teacher desires; and

D) It avoids genuine ethical conflicts.

"Nobody's going to get hurt if the student makes a mistake," Ely comments.

Initiated at Stanford years ago by Prof. Anthony Amsterdam (now at New York University) and several other faculty, the use of videotapes to simulate and critique cases has proven an effective teaching tool.

Stanford now is "way ahead" of its major competitors in using these techniques, Ely believes. Northeastern University in Boston has done even more experimentation along these lines.

As resources permit, the Stanford dean hopes more professors will be able to combine clinical teaching and classroom lecturing.

He "learned an enormous amount" from watching lectures by Business School faculty.

"They know how to say a short sentence and stop," he observes. "You almost never see that in law school. . .too much can be said about too little."

In business school, "Stanford very cleverly lets the drones at Harvard write out most of their cases," he adds. Lawyers have free short cases that aren't copyrighted—in appelate court opinions.

Classroom lectures

In classroom lectures, he believes the time may be ripe for a return to a more humanized version of the Socratic method. Instead of putting down students who make mistakes, a professor can simply say "I don't think that idea's going to work—and here's why."

"Much of the old Socratic method was simply marching students through doctrine," he notes. This can be boring to teachers as well as students.

To add interest, some of the old teaching scripts included wild goose chases down blind alleys. But this reduced time available to cover other material, Ely notes.

After the changes of the late 1960s, some teachers resorted to "Socratic solitaire"—asking and then answering their own questions.

Ten or 15 years ago, "it looked as though law school might be reduced to two years," he comments. Now professionals want a renewed emphasis on teaching a wide range of doctrine and training students to function within the legal system.

Ely's primary focus is on the faculty, the classroom and the curriculum. But he supports several efforts to expose students to a range of "real world" opportunities before graduation.

These include:

1) Creation of a legal services clinic in East Palo Alto independent of the School by "quite energetic, admirable" students. Such clinics "probably help people, on balance" and provide students a chance to apply what they've learned in courses in poverty law, housing law, etc. Ely will help the students seek ear-marked funding.

2) Expansion of externship programs. These give law students a chance to work off campus for a semester with judges, government agencies, or public interest groups. They should be academically rigorous, with supervision by the sponsoring organization.

3) Greater variety in summer employment. It's "very sensible" for students to work in large firms for one summer, and many choose to repeat this experience the following year. To foster greater variety, the School now offers about 10 students market rate loans if they decide instead to work with government agencies, non-profit organizations, or charities. If they later work full-time for these organizations, the summer loans may be forgiven over several years.

"It's not really our business to mess much with what people do after graduation," Ely says. But this kind of modest incentive may encourage a few more students to follow the handful who now start their careers outside large private firms.

Yale ties some loan repayments to future earnings, while Harvard may forgive loan repayments for those who earn less than a specified figure. The Stanford incentive applies only to loans during summer employment as students.

The Stanford curriculum already is "very rich" in courses dealing with non-business law, he notes.

Ely's views were developed in an hour-long talk at the Stanford conference in Los Angeles April 24.

—Bob Beyers

GSB would like to expand faculty 10-12%, Jaedicke says

Rapid curricular changes and continued national shortages of faculty are among the major challenges facing the Stanford Graduate School of Business, Dean Robert Jaedicke told a Stanford conference in Los Angeles April 24.

Stanford currently offers 110 elective courses, compared to 50 in 1970. And at least 25 of those 50 earlier electives are no longer in the catalog, Jaedicke said.

Robert Jaedicke

Where the Business School had only three courses in organizational behavior in 1970, it now offers four or five times that many, he added.

The School would like to expand its faculty by 10 or 12 percent to permit more faculty research, the dean said. "The big problem is the national shortage of business faculty."

During 1982-83, American business schools graduated approximately 750 Ph.D.s but had 3,000 unfilled positions. Current signs are this shortage will get worse rather than better, as the number entering teaching has declined 15 percent recently.

Besides supporting Ph.D. students, faculty research in business provides a steady flow of new material for improving curricula, he said.

Jaedicke reported that 5,000 students now apply for 320 spaces in the Stanford MBA program annually. Asked if the School could expand its enrollment, Jaedicke said such a move could severely affect quality.

While several polls have ranked Stanford first nationally among business schools, Jaedicke said "they did us a disservice" by straining relations among academic institutions.

"Education is a cooperative venture," he said. "We don't all do the same thing. The variety helps students."

Regardless of the rankings, they provide no grounds for complacency in the School, he said, since nearly 45 percent of the present faculty wasn't here in 1976, when the last poll was done.

Gay, Lesbian Alliance wins approval on scholarship fund

Stanford University has accepted gifts totaling $2,040 to establish a scholarship for a Medical School student who has shown a commitment to serving the gay community.

The gifts are the result of a fundraising campaign conducted by the Gay and Lesbian Alliance at Stanford (G.L.A.S.).

In a letter accompanying the gifts, the G.L.A.S. Steering Committee noted that the needs of gay people have historically not been adequately provided by mainstream health care institutions.

They noted that in most areas of the country there is a shortage of heatlh care professionals with the skills and commitment needed to serve the gay community, and that there has also been little research specifically directed at the health care needs of gay men and lesbians.

The G.L.A.S. scholarship was designed to meet the University's objections to an earlier gift offer, from a Florida physician, of $500 to establish a scholarship for an openly gay medical student.

University President Donald Kennedy objected to that proposal arguing that the University should not be awarding scholarships based on "declarations of faith." The G.L.A.S. scholarship is completely separate from the earlier offer, and does not require the recipient to be a gay person.

In their letter, the G.L.A.S. Steering Committee suggested several possible ways the University could identify a student with a commitment to serving the gay community:

* The student could be involved in an organization serving the gay community;
* The student could be pursuing a course of study directed towad preparing him/her for service to the gay community; or
* the student could be involved in research which would improve health care for gay men or lesbians.

In a letter to the members of G.L.A.S., Kennedy stated: "Your understanding of the University's position is appreciated, and your energy and innovation in expanding upon the idea of a scholarship for someone who is performing, or has performed, service directed toward the gay community is commendable."

Thirty-five individuals contributed to the scholarship campaign. Many of these are believed to be first-time donors to the University. The students were aided in their campaign by members of the recently organized Stanford Gay and Lesbian Alumni Club in San Francisco.

C-AAA recommends changes in teacher evaluation; Senate to discuss May 12

Following is the report and recommendation of the Committee on Academic Appraisal and Achievement:

I. INTRODUCTION

Under the Senate resolutions of March 15, 1979, the Committee on Academic Appraisal and Achievement was charged to conduct an evaluation of the Stanford program of course evaluation and teaching improvement to be presented to the Senate during the spring quarter of 1982-83.

During the academic year 1980-81 C-AAA and the subcommittee on the Evaluation and Improvement of Teaching (C-AAA-EIT) discussed plans for this evaluation, resulting in a formal charge to C-AAA-EIT to evaluate the Stanford program of course evaluation and teaching improvement in two ways:

1. Through a major study of the current system of evaluation by students.

2. Through an overview of other sources of evaluation of teaching, incentives for good teaching, and resources now available to instructors.

The final draft of this report was presented by C-AAA-EIT to C-AAA on January 14, 1983. The report provides the basis for C-AAA's recommendations, and is available from the Academic Secretary's Office. A brief synopsis of the subcommittee's report is provided as an appendix.

The subcommittee's report identifies certain problems in the current system and recommends significant changes to that system. C-AAA has reviewed the subcommittee's report at length, a task which proved to be both complex and time-consuming.

The system of student evaluation of teaching at Stanford is a matter of vital concern to almost all members of the Stanford community: students, faculty, and administrators. Naturally opinions about its uses, reliability, and effectiveness vary widely. C-AAA feels that the subcommittee's report does much to dispel the misinformation and myths surrounding the present system.

Although C-AAA's final recommendations differ somewhat from the specific recommendations made by the subcommittee, (**see text below**) C-AAA's revised recommendations are entirely in accord with the empirical findings of the report and with the spirit of the subcommittee's suggestions.

The major difference is that C-AAA recommends an important, but somewhat less extensive revision of the current system. Some of the differences are detailed in the discussion below of our proposals for legislative action. Finally, a deep feeling of unanimity obtains between parent and subcommittee in their commitment to excellence in teaching. C-AAA acknowledges with gratitude the efforts of C-AAA-EIT and the exceptional value of their work.

II. THREE PURPOSES OF EVALUATION

The evaluation of teaching in colleges and universities has three purposes:

1. To help faculty members improve their teaching.

2. To help administrative bodies make decisions about the appointment, reappointment, promotion, and salary of faculty.

3. To help students choose their courses.

The advantages and disadvantages of various methods for the evaluation of teaching differ according to these three purposes. No system of evaluation serves all three equally well. Some of the most difficult problems of the current system arise from a lack of differentiation of these three purposes.

Although we are not recommending the establishment of three totally separate procedures, our recommendations evolved through a process of addressing the three functions individually. We proposed that the present system of evaluation undergo certain modifications which are designed to differentiate the three functions clearly and to perform each of them efficiently. Our specific legislative proposals are presented with amplifications below in section III. In sections IV-VI, we provide separate discussion of each of the three purposes of evaluation.

III. C-AAA PROPOSALS FOR STUDENT EVALUATION OF TEACHING

1) There shall continue to be Senate-mandated student evaluation of teaching in all courses in a pool of courses defined below.

Here our proposal is to continue in the spirit of the present system. We attempt to provide a better, more refined definition of courses to be evaluated. Where the subcommittee proposed that faculty members have only one course a year mandated for student evaluation, C-AAA has concluded it better to continue to require evaluation generally within an appropriately defined pool of courses.

II. All courses are subject to mandatory evaluation except those of the following type:

1. Courses of an individual/independent study nature (e.g., independent study courses, special research projects, thesis enrollments, etc.);

2. Courses considered practical (e.g., studio art and music practice courses);

3. Laboratory courses (i.e., those which carry separate course numbers and units of credit);

4. Physical Education activity courses;

5. Courses taught by first-year instructors;

6. Courses of an experimental nature;

7. Courses with enrollments of 7 or fewer.

Points 1-4 are C-AAA's refinements to the present pool; points 5-7 have been retained from the present system. We encourage individual faculty members to find methods of evaluation suitable for use in evaluating excluded courses.

For those courses which need not be evaluated, forms would not routinely be provided by the Registrar, but would be sent in response to a general department or school request or in response to an individual instructor's request.

III. There shall continue to be a standard form for this purpose.

IV. This standard form—the University Dual Form—shall consist of two parts:

1. The first part shall serve the purposes of administrative review and improvement of teaching. In contrast to the standard form presently in use, it will

a. be simpler;

b. have the uses to which it will be put printed clearly on the form itself;

c. have the method of administration printed clearly on the form itself.

2. The second part of the form will be designed by the ASSU, or other authorized student organization, to provide it with information to assist students in course selection.

C-AAA recommends that the present form be replaced with a greatly simplified form. The new form will be divided into two parts, either by printing on two sheets or by the use of a large perforated sheet. In this way, we make it possible through one procedure for different parts to be put to different uses. Page (or part) one will be for the use of faculty and administration alone, while the second section or page will be designed by the ASSU, or other authorized student organization, for their own exclusive use.

The revised form will include a printed explanation of the manner in which the form is to be administered and the uses to which each part of the form will be put. The subcommittee's report shows that only 27 percent of the students and 49 percent of the faculty surveyed knew that student evaluations are used for decisions about promotion, tenure, and salary. One-quarter of both groups responded that they did not know the uses to which evaluations were put (25 percent of the students and 24 percent of the faculty surveyed). C-AAA hopes that greater awareness among all concerned of the mandated procedure for filling out the forms and mandated uses of the results will serve to increase participation and assure the seriousness of responses.

As mandated in the present system as well, the forms shall be collected by a student in the class and taken directly to the Registrar's Office for statistical tabulation. At that office the second page (or part) shall be removed and passed on directly to the appropriate student organization. After tabulation part one of the forms shall be returned to the faculty.

V. The University Dual Form

The number of specific questions included is reduced from the current 32 to 7. Each of the new questions is relatively general, and space is provided after each question with a request for student comments to amplify answers. Through a restructuring of the multiple-choice responses, the new form now permits the evaluation of most team-taught courses, thus answering a need often expressed by both faculty and students. As in the present form, there is also space for the instructor to specify additional questions calling for comments in response.

The new form replaces numerical ratings with a scale of descriptive adjectives, i.e. "Excellent," "Very Good," "Good," etc.

Responses to the subcommittee questionnaires indicate some degree of student "burn-out" in filling out the forms. We have concluded that a smaller number of questions requiring scale-ranking responses will be less burdensome to answer, yet will not result in a decrease in the usefulness of the forms. It is hoped that more students will feel inclined to make comments along with their responses to scale questions on the shorter, revised form.

VI. Student answers to the multiple-response section of the first part of the standard form will be tabulated and reported only as a frequency distribution.

The results of tabulation of the answers should be presented in the form of a frequency chart, e.g. Answers to question one: 84 percent "Excellent," 12 percent "Very Good," 4 percent "Good." The present system reports both frequency distributions and norm-referenced means. The results of the survey found considerable faculty resistance to the second practice, and did not uncover significant positive argument for its retention.

VII. Where the University Dual Form is undesirable, a School, Department, or Program may devise its own substitute for purposes of satisfying the Senate mandate, provided that the part of the form to be used for administrative review in the evaluation of teaching is acceptable to the relevant Dean (in consultation with the provost and advisory board).

This is a continuation of the present policy which has not been adequately understood. Further elaboration can be found in section IV.

VIII. The first part of the standard form, or its approved substitute, is to be used in all courses in the described pool. Faculty use of the second part is strongly encouraged.

In this way, we differentiate clearly between information gathered for administration and improvement of teaching, and information gathered for aiding students in course selection. We do this in a way that avoids the necessity of multiple occasions of evaluation.

IX. The University Dual Form will be administered at the end of the quarter, usually during Dead Week. The timing of administration of substitute forms is a matter to be settled between the School, Department, or Program and the relevant Dean.

X. The data gathered from the first part of its substitute is not intended for public release, but is to be released only to the faculty member, department chairman, and other appropriate administrative officials for the purpose of confidential administrative review. The right to release this material for any other than confidential administrative purposes resides solely with the faculty member.

IV. ADMINISTRATIVE USES

In its resolution of March 15, 1979, the Senate stipulated that the SC-EIT/ASSU evaluation form be used by schools "where no adequate alternative exists." In practice, this meant that the SC-EIT/ASSU form was to be used in the Schools of Humanities and Sciences, Education, and Earth Sciences, since the Schools of Business, Engineering, Medicine, and Law already had acceptable formal systems in place.

The subcommittee's report reveals that the present system has not enjoyed "universal" use as mandated by the Senate. The report points out that in a significant number of courses evaluations did not occur where they should have occurred. For example, average participation over a three-year period was 61 percent in the School of Earth Sciences, 38 percent in the Humanities sub-section of H & S, 56 percent in the sub-section of Physical Sciences, and 63 percent in the sub-section of Social Sciences. Faculty objections and letters from some departmental chairmen indicate that there are strong feelings in some quarters that one form cannot be sensitive to all courses and instructional environments.

The subcommittee has recommended that "for purposes of administrative decision-making, evaluations of teaching by students should be obtained by methods determined by departmental option or, in the absence of any departmental preference, by responses to a general form to be made available by the dean of the school." C-AAA, however believes that this proposal, so stated as to seem to encourage total departmental autonomy, could lead to a dispersal of efforts which might be counter to effective and systematic evaluations and more costly in terms of time and resources to individual departments and the University as a whole.

Nevertheless, some may reasonably argue that the kinds of academic diversity found within the schools presently using the SC-EIT/ASSU form could still not be met by a single form, even the simplified one we have prepared. We wish to point out that the present mandated system includes a means of redress, the departmental option, although it is apparent that this fact had not been adequately understood.

To return to the original mandate, it is clear that the present form was developed to be used where no other adequate alternative existed. Although the mandate speaks only to the specific fact of schools developing their own instruments, two individual departments in H & S, Economics and Computer Science, were explicitly exempted from using the SC-EIT/ASSU form because they had acceptable systems of evaluation in place at that time.

Furthermore, in the progress report to the Senate of March 9, 1979, on which the present mandate is based, C-AAA-EIT specifically acknowledges the departmental option:

At Stanford the School is the academic unit of reference for a variety of decisions about policy, practice, and resource allocation. Further, while it is true that Stanford students have the freedom to select courses ranging across schools, it is also true that, by and large, students tend to concentrate their academic work within a school.

The Subcommittee proposes a common form throughout a School, so that the Dean has a basis for efforts toward

continued on next page

C-AAA/ continued from page 11

teaching improvement. Further, the substitution by a department or program of an alternative form may be approved by the dean. (underlining ours.)

In light of the above history, C-AAA makes the following comments.

C-AAA expects that several of the steps described above in section III will help make the revised University Dual Form and system acceptable to a larger proportion of the faculty. The simplified, more general form should be suitable for use in a wider range of courses. The revised definition of courses requiring regular evaluation should make the match between courses and questions more appropriate. The clear explanation of form uses should help allay anxieties concerning the spirit in which most students fill out the forms.

All departments and units within the University should use the standard revised evaluation form presented above unless 1) they choose to continue using an approved alternate system or form already in place or 2) they choose to exercise the option of devising an alternate system of evaluation which is acceptable to the deans as meeting the criterion of providing sufficient information to allow appropriate administrative review. This system may be merely a partial change to the system C-AAA is proposing, where a substitute form may be used for very special courses, for example, advanced graduate seminars.

All faculty members within a given department or program must use the same system of evaluation. All individual faculty members have the responsibility to participate in the system of student evaluation of teaching selected for use in their department or program.

Department chairmen have the responsibility to provide to the appropriate deans the results of student evaluations.

Finally, we would like to draw attention to the fact that information gathered through the student evaluation of teaching is but one source appropriate for use in the total assessment of an instructor for administrative purposes.

The subcommittee's querying of individual faculty and departmental chairs found considerable concern that student evaluation may reflect other qualities than effective teaching. Arguments that high evaluations may reveal only popularity, the predominance of style over substance, or pandering to student opinion are legion. The study indicates that these opinions are still widely held, and we are doubtful that this uncertainty and uneasiness can be overcome entirely by strictly formal changes in the evaluation procedure. **Student evaluation ratings must be seen as but one component in the total assessment.** We are convinced that no single form of evaluation, be it student evaluation, peer evaluation, small group evaluations, classroom visitations, retrospective evaluation, solicitation of letters from former students, or from colleagues, or any other form should be seen as the *a priori* dominant factor in assessing effectiveness. Therefore, we strongly recommend that many sources be used in the evaluation process, and that departments seek to solicit this information actively throughout an individual instructor's term of appointment.

V. IMPROVEMENT OF TEACHING

On the one hand, the system of mandated course evaluations described above has certain weaknesses. In terms of providing useful feedback for instructors the problems are:

a) evaluation toward the end of the course does not allow improvement while the course is in progress;

b) evaluation before the final exam, or before the grading and return of end-quarter term papers does not allow these aspects of the course to be taken into consideration in evaluation, yet in a substantial range of courses, these are among the most important elements;

c) there is, inevitably, a considerable time lag before results are returned to the faculty.

On the other hand, C-AAA has concluded that it is inappropriate to mandate more than a single occasion per quarter when a standard system of evaluation must be used. According to our proposal, mandated evaluations will standardly be conducted during Dead Week, before the final exam. We recognize problems inherent in this timing, but have concluded that any other timing would have further drawbacks.

C-AAA encourages faculty members to seek additional information from students at any time in the quarter to aid them in the improvement of teaching. Faculty members are probably the best judges of what specific supplementary information from students concerning their teaching and courses would be most useful to them.

C-AAA recommends that faculty take the opportunity when administering the University Dual Form to include specific questions which they would find useful for future improvement of teaching.

C-AAA recommends that Stanford University encourage faculty members to collect information from students relatively early in the quarter, at least by mid-quarter, concerning aspects of courses that could be changed if, in the faculty member's judgment, such changes would be desirable.

C-AAA calls to the academic community's attention the resources of the Center for Teaching and Learning and other university offices which already provide some assistance for faculty members seeking feedback concerning teaching.

In addition, C-AAA suggests that the Center for Teaching and Learning provide assistance to faculty members who request help in designing questionnaires or other techniques that will yield useful information from students or other sources.

While we wish to mandate the use of a standardized system of evaluation by students for purposes of acquiring feedback for the improvement of teaching, we recognize that there are several limits on the information obtainable from any form and encourage instructors to use supplemental means to aid in improvement where appropriate and as individually desired.

VI. THE ASSU COURSE GUIDE

Although the Guide for the student selection of courses is primarily the responsibility of the ASSU itself, C-AAA concluded that there should continue to be close cooperation between the ASSU and the University for the gathering of information. Our proposal provides for a "California Marriage" between the two: a friendly, intimate relationship allowing a certain autonomy to each party. The two-part form is a product of close consultation between the ASSU and C-AAA.

According to our proposal, faculty participation in the use of the second part of the form (or its approved substitute) will be optional, but encouraged. This is also true under the present system.

The subcommittee's report found that only 43 percent of the faculty members surveyed were "satisfied" or "very satisfied" with the ASSU Course Guide's use of the qualitative results, while 22 percent indicated they were "dissatisfied" or "somewhat dissatisfied."

The report concludes, "Overall, satisfaction with the ASSU Course Guide is not strong among faculty." C-AAA hopes that the revised system we propose will encourage a greater percentage of the faculty to cooperate with the ASSU's efforts to gain information helpful for students in selecting their courses. Secondly, as a consequence, we hope that the utility of the ASSU Course Guide itself will be increased.

SC-EIT survey summary and recommendations

Following are the Summary and Recommendations of the Subcommittee on Evaluation and Improvement of Teaching, submitted to the Committee on Academic Appraisal and Achievment:

The evaluation of teaching in colleges and universities has three separate purposes:

1. To help individual faculty members improve their teaching;
2. To help administrative bodies make decisions about the appointment, reappointment, tenure, and salary of faculty;
3. To help students choose their courses.

The advantages and disadvantages of various methods for the evaluation of teaching differ according to these three purposes. No system of evaluation serves all three equally well. The basic recommendation of the committee is that these three purposes be separated and that different procedures for the evaluation of teaching be established for serving each of them.

1. Evaluation of Teaching as Feedback to Instructors for Use in the Improvement of Teaching

The evaluation of teaching can serve as feedback to improve effectiveness of instruction. Efforts to improve teaching can often be aided by knowledge concerning the effectiveness of specific aspects of teaching. Information concerning that effectiveness can be obtained from various sources: student questionnaires and letters, observations by colleagues, examination of course materials by colleagues, test results, questions and reactions of students in class, and analyses of videotape records.

Evidence from students has long been regarded as particularly useful and practicable because students typically observe and experience teaching for long periods, at regular intervals, with great personal concern for its effectiveness, and in numbers sufficient to make their collective judgment highly reliable.

The vast majority (84 percent) of the Stanford faculty, among those who responded to the questionnaire distributed to determine faculty opinion, reported that they do use teaching evaluations by students to improve their teaching. This majority prevailed in all of the schools and sub-areas surveyed.

Similarly, the high level of use of student evaluations to improve teaching characterized faculty members at all academic ranks, although associate and assistant professors reported substantially higher frequencies of use of student responses as bases for change in their teaching.

Further, of the two principal parts of the student evaluation form, the written comments were regarded as more useful for the improvement of teaching. Written comments indicate student ideas concerning both desirable and undesirable aspects of a course, and these ideas can assist instructors in determining both what should be left unchanged and what should be changed.

Nevertheless, experience at Stanford suggests several ways in which changes in the nature of the information provided by students and the ways in which the information is collected could make it more useful as feedback to instructors.

First, we recommend that faculty members and departments at Stanford University be given complete autonomy in the collection of information from students to be used as feedback for the improvement of instruction. Faculty members are probably the best judges of what specific information from students concerning their teaching and courses would be most useful to them. In any event, faculty members are more likely to make use of information about matters in which they are interested, in formats they can understand, from sources they respect.

Second, we recommend that Stanford University offer help to faculty members in obtaning feedback concerning teaching. Not all faculty members have the interests and competencies needed to design questionnaires and other techniques that will yield information from students or other sources in the ways that the faculty members will find most useful.

Accordingly, the University should offer technical assistance in designing the questionnaires and facilitate as much as possible (but only at the request of the faculty member) the printing, distribution, collection, and analysis of student responses. As is noted in the body of this report, the Center for Teaching and Learning and other University offices already provide some assistance, but the University should make a more extensive and more visible commitment to providing faculty members with such assistance.

A considerable body of technical literature has emerged from the efforts of the nation's corps of professional workers in the field of instructional improvement in higher education. Stanford University ought to make fuller use of the knowledge contained in that literature and the kinds of expertise that could help faculty members use it.

Third, we recommend that Stanford University encourage faculty members to collect information from students relatively early in the quarter, at least by midquarter, concerning aspects of courses that could be changed if, in the faculty member's judgment, such changes would be desirable. Such early feedback should be collected by faculty members on a voluntary basis with no obligation to share the information with University officials. One consequence of collecting such midquarter feedback would be the encouragement of student participation in the evaluation of teaching. Student participation has been disappointingly low, and one reason given for this condition is that students feel that the effects of any evaluation from them come too late to affect the courses they have been asked to evaluate.

As was noted above, in addition to questionaires from students, other sources of feedback to improve instruction are available. These include interviews with students, letters from students, letters or questionnnaires from former students, videotaping, colleagues' reviews of course materials, colleagues' visits to classes, and in a variety of respects, assistance from the Center for Teaching and Learning.

In short, the proposed approach would place the responsibility for the improvement of teaching on the faculty member and, perhaps, his or her department. When the faculty member wants help in the improvement of teaching, the University ought to give it. This will no doubt entail increased costs—part of which may be met from reallocation of funds now used for the present evaluation system—but which in any event should be specifically budgeted for.

2. Administrative Uses of Evaluation of Teaching

Information concerning the quality of teaching has long been recognized as essential to administrative decisions concerning faculty members, but it has also been difficult to obtain. Faculty members and administrators at Stanford University indicated, in the discussions in the Senate and elsewhere leading up to the installation of the present system for the evaluation of teaching, that greater weight should be attached to teaching in administrative decision-making. They also indicated that student evaluations should be an important component of the total evaluation of teaching.

The information obtained from department chairs, deans, the advisory board, and the provost showed that increased importance was being attached to the evaluation of teaching in administrative decision-making. The provost, the advisory board and the deans reported that the present

continued on next page

C-AAA/ continued from page 12

system for collecting student evaluations of teaching is helpful. But department chairs differed among themselves as to the relative usefulness of information from the widely used SC-EIT/ASSU form for student evaluation of teaching; in the opinion of some department chairs, other sources of information concerning teaching were more valid and useful.

Four years ago the Senate mandated a "universal" system for the student evaluation of teaching. The system was to be universal in the sense that one evaluation form was to be used for all courses (with a few carefully defined exceptions) every time the course was offered. That kind of universality has not been achieved. In 41 percent of the courses for which the questionnaire should have been administered, the questionnaire has not been administered. Furthermore, 30 percent of the students have failed to fill out questionnaires in courses where the questionnaire was administered.

The failure to come close to universality requires some explanation. In responses from faculty, department chairs, and deans there is strong support for universal evaluation of teaching in the sense of evaluating the teaching of all faculty members, but there are numerous legitimate objections to the notion that one form (presently the SC-EIT/ASSU Teaching Evaluation form) can be used to evaluate courses of widely different character and size taught to diverse students in widely different disciplines. It is our opinion that universal student evaluation of teaching is more likely to be achieved by allowing greater flexibility in method than by arguing for more strict enforcement by department chairs and deans.

Accordingly, *we recommend that, for purposes of administrative decision-making, evaluations of teaching by students should be obtained by methods determined by departmental option or, in the absence of any departmental preference, by responses to a general form to be made available by the dean of the school.* Departments should have full access to technically competent assistance in considering, choosing, and analyzing the data and in determining the forms of questions to be given to students in obtaining judgments of teaching to be used for administrative decision-making.

We are aware that much greater costs are entailed in designing and using forms custom-tailored to each department than those resulting from a universal form to be administered in the same way in all departments. These greater costs, especially those involved in reading and interpreting large numbers of student responses to open-ended questions, should not necessarily be considered excessive in relation to their worth and importance. The evaluation of teaching may well be worth the much greater costs of using open-ended forms designed to be suitable for each department as against the much lower costs involved in the present system of machine-analyzable and statistically summarized ratings. No one argues in favor of exclusive reliance on closed-ended student ratings; even now, such ratings are accompanied by student responses to open-ended questions. But the rejection of the closed-ended and standard questions is a matter on which reasonable persons can differ. The Committee's position is that such differences of opinion should be respected within the University and that the departments should make their own choices after full consideration of the costs and benefits of the alternatives.

As to which faculty members should have which of their courses evaluated by students for the purposes of administrative decision-making, *the Committee recommends that every faculty member be encouraged to have all courses evaluated by students and be required to submit to his or her department chair the evaluation results on at least one course per year of academic duty.*

Additional evaluative material could of course be used if the individual faculty member so desires. This recommendation is intended to ease the burden of obtaining such evaluations for administrative purposes while at the same time obtaining information that, over the course of several years, would accumulate into evidence sufficient for administrative purposes.

To insure greater compliance with the directions for administering the forms on which student evaluations would be collected and with the directions for transmitting the forms, the Committee recommends that these directions be printed on the form itself. Then, both faculty members and students would know whether the faculty member should remain in the room while the evaluation forms were being filled out, who should take the forms where, and what explanations should be given to the students concerning the purposes of the evaluation. The many difficulties reported in these aspects of the present system could thereby be greatly reduced or eliminated.

We come now to the content of the evaluations to be made by students and used for administrative purposes. Here, *we recommend that only a small number of relatively general questions be asked.* If the department chooses to design its own form or alternative means of soliciting student opinion, it would be free to do so, provided the form or alternative method was approved by the dean of the school.

For departments that elect to use a standard form, to be made available by the dean of the school, we recommend the two questions already contained in the present SC-EIT/ASSU form: "What were the best things about this course?" and "What improvements, if any, would you suggest if this instructor were to give this course again?"

Then, for departments that elect to use rating scales—after consideration of the costs and benefits of such scales—we recommend that only general, overall evaluations be used for administrative purposes. The items should be general in the sense that they would be meaningful for all courses, whatever the subject matter, teaching method, or class size.

Such rating-scale items would provide information concerning the overall value and effectiveness of an instructor's teaching as seen by his or her students. Although, in this report, we do not recommend specific questions, we offer the following for purposes of illustration:

1. Assume you are considering taking another course in this department, one which your present instructor(s) is (are) well qualified to teach. The fact that he/she/they would be teaching it would

—Influence you very —Influence you somewhat — Make no favorably toward it. favorably toward it. Difference.

—Influence you somewhat —Influence you very Unfavorably toward it. unfavorably toward it.

2. Overall, the teaching in this course was

—Excellent. —Very good. —Good. —Fair. —Poor. — Very Poor.

Only a few, not more than five, items of this kind are recommended. Users of the results should be urged to refer to the labels—the defining words—of the scale points and not calculate means or medians for purposes of comparisons with other persons or groups.

3. Use of Evaluations of Teaching for Selection of Courses by Students

It is the ASSU Course Guide that makes available to students the results of evaluations of teaching by students—both summaries of the "qualitative" responses of students and of selected "quantitative" dimensions.

Only 44 percent of the students responding to the student questionnaire indicated that they use the Course Guide when selecting courses. And only 15 percent said that they "usually/always" use the Course Guide. These results make the Course Guide the second lowest ranking source of information concerning courses; only resident fellows are used less frequently.

Among those students who do use the Course Guide, the Course Guide's graphs are considered valuable/very valuable by only 9 percent, and the written reviews are considered valuable/very valuable by 32 percent of the students. Yet it is the written reviews that the faculty members consider most questionable. It is this faculty view of the written comments that underlies the present arrangement whereby the faculty member's active approval is required before the written comments are made available to the Course Guide's editors.

Faculty opinion of the Course Guide is unenthusiastic. Ninety-two faculty members made comments. The bulk of the suggestions were concerned with making the Course Guide more accurate, less biased, more consistent in its reporting, and less capricious in selecting courses for review.

Some favored eliminating the Course Guide. Of the faculty members responding to the questionnaire, 77 percent report that they usually or always give their quantitative results to the Course Guide and 68 percent report that they usually or always give the qualitative or written comments to the Course Guide.

About one-fifth of the faculty respondents have no opinion concerning the Course Guide's use of evaluation results; this outcome perhaps reflects the small number of courses reviewed each quarter or the ways in which the Course Guide is distributed. Half or fewer of the faculty respondents reported themselves satisfied or very satisfied with the Course Guide's use of evaluation results.

The lack of satisfaction among faculty, combined with student reports of the relative lack of use of the Course Guide, suggests reconsideration of current practice. The way in which the Course Guide presents its quantitative findings is exactly opposed to the spirit of our recommendations with respect to quantitative ratings. The quality of the comments on each course continues to be a source of concern.

The ASSU Course Guide could perform a major function for students selecting courses, but it is not adequately fulfilling that task. Perhaps it would do a better job if it were no longer a passive participant in the evaluation system run by the University. Perhaps its financial support should be reconsidered. Perhaps staff should be more rigorously selected and trained. Perhaps the basic questions of the relationship between a student-operated enterprise—serving an educational function of great potential significance to the faculty—and the University as a whole ought to be reconsidered. Perhaps experience at other universities similar to Stanford ought to be studied.

Accordingly, *the Committee recommends that the ASSU, with the assistance of the Dean of Student Affairs appoint a task force consisting of faculty, staff, and students to study and make recommendations concerning the improvement of the ASSU Course Guide.* This task force should take into consideration the broad set of issues related to the task of developing a more valid and useful guide for students in the selection of courses.

C-AAA Members

The Committee on Academic Appraisal and Achievement is headed by Prof. Susan Matisoff, Asian languages. Faculty members include Profs. Michael Bratman, philosophy; William Durham, anthropology; John G. Gurley, economics; Gilbert M. Masters, civil engineering; Thomas C. Moser, English; and Irwin Remson, applied earth sciences; students are C. Therese Ford, undeclared; Michael Resnick, human biology; and David Youmans, undeclared; and ex-officio members Carolyn C. Lougee, associate dean of humanities and sciences for undergraduate education, and Sally Mahoney, registrar. Anita Bravman is secretary.

Evaluation...

continued from page 1

the study showed average participation varied, widely. In the School of Humanities and Sciences, which handles the largest share of undergraduate courses, only 38 percent were evaluated over the past three years in the humanities. This compares with 56 percent in the physical sciences and 63 percent in the social sciences.

The committee said there should be continued close cooperation between the University and the Associated Students in gathering information students might use for course selection.

"Our proposal calls for a 'California marriage'. . .a friendly, intimate relationship allowing a certain autonomy to each party," the committee said.

Faculty participation would be "optional but encouraged" in providing information for this purpose through a second portion of the simplified form.

Faculty opinion of the present Associated Students *Course Guide* is "unenthusiastic," the subcommittee report noted, even though 77 percent said they usually or always gave their quantitative results to the *Guide*.

When asked what information they used in selecting courses, only 15 percent of the students surveyed said they "usually or always" used the *Guide*. This compared to 78 percent who usually or always consulted the official *Courses and Degrees*, 55 percent other students, 38 percent individual course abstracts, 17 percent faculty advisers, and 6 percent resident fellows.

The subcommittee report recommended that faculty members and departments "be given complete autonomy in the collection of information from students to be used as feedback for the improvement of instruction."

(The full committee instead recommended use of the simplified form at the end of each quarter, pointing out that faculty remain free to collect any additional information desired to help them improve their teaching.)

The subcommittee noted that the present questionnaire was not administered in 41 percent of the courses where it should have been used. Even when it was distributed, 30 percent of the students failed to fill out the questionnaire.

Information obtained from department heads, deans, the Advisory Board, and the Provost "showed that increased attention (is) being paid to evaluation of teaching in administrative decision making," the subcommittee said.

Associate Prof. Susan Matisoff, Asian languages, heads the full committee, while Prof. Walter Lohnes, German studies, heads the subcommittee. Both groups include student members.

The major portion of the survey findings and recommendations from the committee appears in the center section of *Campus Report*. The complete text is available at the Academic Secretary's Office.

Subcommittee survey shows most courses rated highly by undergraduates

Following are excerpts from the report of the Subcommittee on the Evaluation and Improvement of Teaching at Stanford to the Committee on Academic Appraisal and Achievement. Several sections dealing with procedure are among the portions omitted. The numbering used in tables and other parts of these excerpts conforms with the complete copy, which is available at the Academic Secretary's Office:

I. INTRODUCTION

A. History

The quality of teaching has long been of deep concern to all members of the Stanford community. During the last decade, the Senate of the Academic Council passed a number of resolutions reflecting its commitment to excellence in teaching. On November 29, 1973, the Senate resolved

> *That for considerations of long-term reappointment or promotion every department should use some formal procedure of teaching evaluation approved by the Dean of the School, and that this formal procedure should include several means of evaluation, including evaluation by students. . . .*

On May 12, 1977, in response to the Report of the ASSU Task Force on Tenure and Teaching Quality the Senate endorsed the principle of universal course evaluation by students and urged its prompt implementation. The motion passed at that Senate meeting reads as follows:

> *The Ninth Senate of the Academic Council endorses the principle of universal course evaluation by students and urges its prompt implementation. The Committee on Academic Appraisal and Achievement is requested to present a detailed proposal to the Tenth Senate by the end of autumn quarter, 1977-78.*

The Senate requested that the Committee on Academic Achievement and Appraisal (C-AAA) present a detailed proposal to the Senate in the 1977-1978 academic year. The proposal was to address two major questions:

1) Should there be universal course evaluation, and

2) How widely should such evaluation data be made public?

During the 1977-1978 academic year, C-AAA's Subcommittee on the Evaluation and Improvement of Teaching (C-AAA-EIT) developed a student rating form that would be useful to instructors, administrators, and students. The form was tested on a small scale during the winter and spring quarters. This testing led to a large-scale tryout during the 1978-1979 academic year.

On March 15, 1979, the Senate of the Academic Council adopted the following set of procedures for the universal evaluation of teaching by students.

1. The use of the University Student Evaluation Rating Form, developed by the C-AAA Subcommittee on the Evaluation and Improvement of Teaching, shall be used by Schools where no adequate alternative exists. The same form or set of forms shall be used for all courses in a School or, within the School of Humanities and Sciences, for all courses in each of the three customary groupings, namely, humanities, social sciences, and natural sciences. Any School which has developed, or develops, a form suitable for its own needs may use that form if it chooses.

2. Subject to the exceptions provided in 3 below, all information, including the original forms and a summary of the quantitative ratings, shall be provided by the Registrar to the instructor. The summary of quantitative ratings shall be provided to the department chairman or interdepartmental program head, and made available to the School Dean, the Provost, and the Advisory Board, any of whom may request the original forms from the instructor. The summaries of quantitative information shall be publicly released, e.g. to the ASSU Course Guide, unless the instructor requests that they be withheld. Qualitative information, i.e. student commentaries, shall be so released only if the instructor explicitly grants permission.

3. A course shall be exempted from the requirement of student evaluation using a standard form if fewer than eight students are enrolled: nevertheless forms shall be provided at the request of instructors in such courses. Experimental courses, courses by first-year instructors, and special courses of similar character shall be evaluated, but the information shall be released only to the instructor and the information shall be released to others only and entirely at the discretion of the instructor. Courses comprising special categories of instruction shall have methods of evaluation specifically adapted to them.

4. Summary statistics shall be made available to the instructors from appropriate groups, such as: a) the University as a whole; b) the specific School or, in Humanities and Sciences, the sub-School grouping, i.e. Humanities, Social Sciences, Natural Sciences; c) courses of similar size; and d) courses of similar type (e.g. lecture, seminar, practicum, independent study).

5. At the beginning of each autumn quarter the Registrar shall provide the Provost with a summary of the extent of participation in Schools using the standard form prepared by the C-AAA Subcommittee on the Evaluation and Improvement of Teaching. In Schools not using the form the Registrar shall send a short questionnaire to all instructors of nonexempt courses who have not used the course evaluation, asking their reasons for not participating. In Schools not using the standard form prepared by the C-AAA Subcommittee on the Evaluation and Improvement of Teaching, the Dean of the School shall prepare for the Provost in autumn quarter a report summarizing the extent of the faculty in the School's internal evaluation program.

6. Departments and Schools shall explore a variety of other methods for evaluation of teaching, to complement the information obtained from student evaluation.

7. Once every three years on a staggered schedule the Dean of each School shall present to the provost a report on a) an assessment by the dean of the quality of teaching in each department of the School and b) activities within the School designed to enhance the quality of teaching.

8. The Dean of Graduate Studies, the Dean of Undergraduate Studies, and the Dean of Humanities and Sciences are asked to encourage the Center for Teaching and Learning to extend its program to support teaching improvement by instructors at all ranks.

B. Mandate for Evaluation of the Stanford Evaluation System

Item 9 of "Procedures for the Universal Evaluation of Teaching by Students" states that:

> The Committee on Academic Appraisal and Achievement (C-AAA) shall, through its Subcommittee on the Evaluation and Improvement of Teaching, evaluate the Stanford program of course evaluation and teaching improvement over the next three years, and shall present a report thereon to the Senate during the spring quarter of the academic year 1982-83.

During the 1980-81 academic year, C-AAA-EIT and C-AAA discussed plans for such an evaluation. In January 1981, C-AAA sent a formal charge to C-AAA—EIT, excerpts from which follow. This charge called upon C-AAA-EIT to evaluate the Stanford program of course evaluation and teaching improvement in two ways:

1) through a major study of the current system of evaluation by students;

2) through an overview of other sources of evaluation of teaching, incentives for good teaching, and resources now available to instructors.

According to the charge, the study of the current system should include:

a) "an evaluation of the SC-EIT/ASSU form itself"—its validity, reliability, and usefulness.

b) "a study of actual use of student evaluations in the evaluation and improvement of teaching at the level of students, instructors, chairmen, and deans"—the usefulness of the evaluations for course selection, improvement of teaching, and decisions about promotion, tenure, and salary.

c) "recommendations for improvement of the existing evaluation instrument and procedure."

During the 1981-82 autumn quarter, the professional staff and resources for the task force were put in place. In January 1982, the project to evaluate the teaching evaluation system was formally launched.

II. STUDY DESIGN

During the 1981-82 winter quarter, a subgroup of C-AAA-EIT members, with resources and support from the Registrar's office and the advice of C-AAA-EIT, developed the details of the plan, the instruments for the evaluation, and plans for sampling, data collection, and data analysis.

The study of student evaluation of teaching at Stanford has several parts:

1) A study of student ratings over the past three years.

2) A survey of faculty in the three schools using the SC-EIT/ASSU form (Humanities and Sciences, Earth Sciences, and Education) seeking comment about the rating system. This survey was administered in May 1982.

3) A survey of a representative sample of students excluding those in schools not using the SC-EIT/ASSU form, seeking opinion about and experience with the rating system. This survey was administered in May 1982.

4) Interviews with or letters from Deans in the three Schools using the SC-EIT/ASSU form about use of the evaluation results. These interviews or letters were obtained in November 1982.

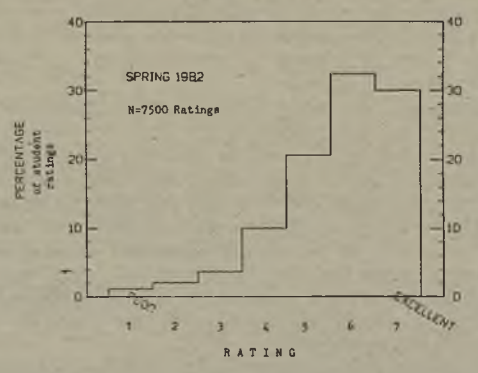
5) A letter to Deans in the Schools not using the SC-EIT/ASSU form inviting comment about use of student evaluation of teaching. This letter was sent in November 1982.

6) An interview with the current Advisory Board about the use of student evaluations in decisions about reappointment, promotion, and tenure. This interview was held in December 1982.

7) A letter to past Advisory Board members and department chairs inviting comment about their use of the SC-EIT/ASSU evaluation results. This letter was sent in November 1982.

8) Solicitations of comment from the Stanford community through the *Campus Report* and the *Stanford Daily* in May 1982.

9) A report from the Provost on how the SC-EIT/ASSU teaching evaluations are used in making decisions about reappointment, promotion, and tenure.



10) A report from the Center for Teaching and Learing (CTL) about teaching improvement efforts on campus.

11) A cost analysis of the SC-EIT/ASSU evaluation system, conducted by the Registrar's Office, which is responsible for implementing the evaluation system.

F. Trends in Student Ratings

Figure 1 presents a frequency distribution of approximately 7,500 student ratings on Overall Course Satisfaction at the end of the spring quarter 1982. The negative skew, or "pile up" of ratings at the upper end of the scale, is typical of all of the overall items and has characterized the SC-EIT ratings since the form has been used. Whether this generally favorable evaluation reflects leniency on the part of students or genuinely good teaching cannot of course, be determined from the data available.

Figure 1

To determine whether there has been any trend over the quarters and years in those classes that use the SC-EIT form regularly, a sample of 140 courses was selected—courses for which student rating data were available over several quarters and years. That is, the sample for this analysis consisted of courses that have been taught, and rated by students, repeatedly during the academic years 1979-80, 1980-81, and 1981-82. The mean rating on the Overall Course Satisfaction item for these courses has remained stable across the nine quarters.

Another sample consisted of 158 courses taught by the same instructor during two different quarters. The differences between mean overall satisfaction ratings for these courses were distributed normally with a mean of .04 (and a standard deviation of .65). Some courses showed gains as high as 2.4 while the mean ratings in other courses decreased as much as 2.4.

Evidence that the SC-EIT ratings measure relatively enduring characteristics of courses and professors was revealed by the Spearman rank-order correlation between mean ratings on Overall Course Satisfaction in the sample of 158 "matched courses" taught by the same professor. This correlation was .62, compared to a correlation of .37 for 150 "matched courses" with different professors.

This difference between .62 and .37 suggests that the SC-EIT form measures stable differences across professors and not only across courses. When the same course is taught twice by the same professor, it is evaluated much more similarly than when the same course is taught by two different professors.

Further analysis was performed on approximately 4,000 courses that used the SC-EIT form over the nine quarters during 1979-80 through 1981-82. Mean ratings on the Overall Course Satisfaction item remained stable across these nine quarters and years.

In addition, there were some consistent differences across the nine quarters in mean ratings of Overall Course Satisfaction as a function of academic area. Humanities courses were consistently associated with higher ratings (mean in 1981-82 = 5.9) than were Physical Sciences courses (mean in 1981-82 = 5.3).

Lastly, the "clustering" of the SC-EIT form's items was examined through a factor analysis of the SC-EIT ratings collected during the spring quarter of 1982. Factor analysis is a statistical technique that determines the nature of clusters of related items by considering their intercorrelations or "overlap."

The SC-EIT form was developed to reflect a four-factor conception of teaching. (The four factors correspond to the four clusters of items on the form that precedes the first four overall items.) Since factor analytic techniques were employed during the development of the SC-EIT form, it is

continued on next page

SC-EIT/continued from page 14

reasonable to ask whether the initial four-factor structure still provides a valid clustering of the ratings.

This analysis generally showed that the four factors or dimensions that emerged in the spring 1982 data corresponded closely to the original factors that guided the development of the form.

G. Summary

Possibly the best single summary statistic that can be used to describe the rate of participation with the SC-EIT form is computed by dividing the number of forms returned during the academic years 1978-79 through 1980-81 by the total number of forms printed for eligible courses. This rate was 64 percent and has remained stable over the three-year period. There are wide differences across departments, however, in participation rates.

The reliability of mean ratings generated by the SC-EIT form has been consistently high even with classes as small as eight. No trends in reliability were observed across quarters, years, or academic areas.

The most reliably rated overall item is Overall Course Satisfaction, and the least reliably rated overall item is Overall Instructor Relationship. All overall items, however, yield highly reliable mean ratings when the means are based on numbers of students larger than 15.

Analyses were made to determine how ratings varied with professor rank, class size, course level, and proportion of returned forms. The relationships that were statistically significant were so weak that their influence may be considered practically negligible.

Analyses were also made to determine possible "biasing" factors at the student level: the grade expected by the student, the student's using the course to meet the student's major requirement, the student's attendance, the class level of the student, and the amount of time spent on the course by the student. Those correlations that were statistically significant (those with expected grade and time spent) were so low that their influence may be considered negligible.

Student ratings on the overall SC-EIT items tend strongly to pile up at the positive, or favorable, end of the scale. There appears to be no overall trend toward higher or lower mean ratings over the past three years.

There are, however, some differences in mean ratings across academic areas. Other analyses showed that SC-EIT ratings of the same courses taught by the same professor remain fairly stable over time (r = .62) and that the rating items cluster into the same factors or dimensions as those on which the form was originally based.

IV. FACULTY SURVEY

A. Purpose

During the winter quarter 1981-82, a questionnaire was developed to collect faculty comment on the SC-EIT/ASSU course evaluation system. Specifically, the questionnaire was designed to collect information about 1) the extent of use of the SC-EIT/ASSU Evaluation Form, 2) the extent of variation in the procedures for administering the form, 3) the release of information to the ASSU Course guide and views about Course Guide Practice, 4) use of the SC-EIT/ASSU course evaluation results, and 5) the perceived appropriateness of the SC-EIT/ASSU Evaluation Form.

TABLE 4

Faculty Respondents by Area and Instructor Rank

Area	Number Mailed	Number Responding	Response Rate
Humanities	164	78	46%
Social Sciences	137	75	55%
Math/Natural Sci	125	49	39%
Earth Sciences	31	21	68%
Education	40	19	48%
Medicine	4	2	50%
Rank			
Professors	304	154	51%
Associate Professors	75	36	48%
Assistant Professors	96	41	43%
Lecturers and Senior Lecturers	26	11	42%

Of the faculty respondents, 80 percent were male and 17 percent female, with 3 percent giving no gender designation. The corresponding percentages in the entire faculty sampled are 91 percent male and 9 percent female.

D. Results

This section summarizes the responses of the 244 responding faculty members. Area differences are examined for these respondents in the areas of Humanities, Social Science, Math/Natural Science, Earth Sciences, and Education. (Since there were only two responses from the faculty in the Medical School, they were excluded from the analyses.) Instructor rank differences are also examined for the 232 Academic Council respondents (Professors, Associate Professors, and Assistant Professors).

C. Faculty Members Invited to Respond

The questionnaire was sent to all Academic Council members (professors, associate professors, assistant professors) in Earth Sciences, Education, and Humanities and Sciences (excluding the departments of Economics and Computer Science), to lecturers and senior lecturers in foreign languages, and to a few faculty members in departments in the School of Medicine that use the form.

Of the 501 faculty members invited, 244 or 49 percent responded. (In most surveys such a percentage of responses is regarded as fairly high.) **Table 4** describes the respondents in more detail.

1. Extent of Teacher Evaluation

Most (94 percent) of the faculty respondents reported some use of the SC-EIT/ASSU Evaluation Form: 3 percent "never" use the form, 7 percent "occasionally," 5 percent "half the time," and 81 percent "usually/always." The pattern of use is shown in **Table 5**. While extent of use varies somewhat among the five areas, use varies little among faculty of different academic rank.

Faculty members gave a variety of reasons why they do not always use the form. Some mentioned that some of their courses were exempt under the evaluation policies. Some mentioned a dislike of the system—perceived lack of usefulness of the forms, and philosophical disagreement with the premises of the evaluations. Some mentioned student attitudes—a lack of seriousness on the part of students, and poor student participation.

While these responses indicate substantial use of the system, it is important to remember that more than half the faculty did not respond to the questionnaire; thus the response sample may overrepresent actual use of the form. . . .

At the same time, responses to other questions on the questionnaire are, it would appear, based on substantial experience with the SC-EIT/ASSU form, giving a good picture of what users think.

Somewhat over half (56 percent) of the faculty respondents reported at least some ("sometimes," "usually" and "always") use of other methods of evaluation in addition to, or in place of, the SC-EIT/ASSU Evaluation Form.

Somehwat more faculty in Education (68 percent) and the Social Sciences (61 percent) reported use of other methods than in the other three areas: 53 percent in Humanities, 53 percent in Math/Natural Sciences, and 48 percent in Earth Sciences. Several faculty members sent copies of other evaluation forms used.

Of the 184 faculty who say they use other forms of evaluation, 7 percent reported using other forms of evaluation during the first 4 weeks, 30 percent at mid-quarter, 8 percent between the 6th and 9th weeks, 32 percent during the 10th week, and 28 percent at some other time.

In sum, among the respondents, there appears to be heavy use of both the SC-EIT/ASSU system and other methods of evaluation. How close such use comes to "universality" remains an issue. Several open-ended comments indicate that lack of universality is a serious shortcoming of the SC-EIT/ASSU evaluation system.

The issue of universality is important only insofar as the results are to be interpreted on a "norm-referenced" basis—that is, on the basis of how evaluations of one instructor by his or her students compare with those of other instructors by their students.

But if "criterion-referenced" interpretations are made—interpretations that refer to the designations and meanings assigned to the points on the 7-point scale for each of the items on the form, then the nonuniversity of use of the system becomes irrelevant to the interpretability of the ratings, or evaluations, made by the students.

2. Rate of Student Participation

Valid use of the evaluation results in either a norm-referenced or a criterion-referenced way requires both high student participation and uniform procedures in the administration of the forms. Ratings obtained with substantially different administration procedures are likely to be relatively uninterpretable.

The intent of the wording in the Instructor Reply Form was to encourage (not dictate) a high student response rate and uniform practices in the administration of the form (i.e., uniformity in how it is distributed, in the conditions under which the form is filled out, and in the conditions of instructor access to the unsummarized results.)

Obtaining a high rate of participation is clearly a problem for the SC-EIT/ASSU system. In the summer of 1981, the Registrar's office completed a three-year study of faculty and student participation in the system. Participation rates (% of eligible classes in each department and % of students in each class) were calculated for the years 1978-79, 1979-80, and 1980-81. Over the three years, course participation remained at about 60 percent; student participation in evaluated courses remained at about 70 percent.

3. Giving Purposes of the Evaluation

Clearly many factors influence the rate of student participation.

One important factor is the context provided by the instructor—setting aside class time for such activity and explaining the purposes of the evaluations to students, beyond saying that the evaluations are to be done to meet a Faculty senate requirement.

This study does not permit linking participation rates directly to the reported procedures used in administering the forms. Yet it seems plausible that certain practices will increase response rates. Thus, setting aside class time for this specific purpose probably connotes seriousness on the part of the instructor about student evaluations.

Of the 174 faculty who report that they "usually" or "always" have students fill out the form during scheduled class time, 74 percent say that they "usually/always" suspend other activities for the purpose of letting students fill out the evaluation forms.

There is, however, considerable variation in the amount of time allowed for this purpose. Faculty members who report suspending class activities allow from 5 to 45 minutes for the purpose of course evaluation. The mode is 15 minutes, and 74 percent allow from 10 to 20 minutes.

do faculty members explain the purposes of the SC-EIT/ASSU system to their students? Less than a third of the faculty (31 percent) reported that they did so on a regular basis ("usually" or "always"): 20 percent reported that they did so only "rarely" or "sometimes," 20 percent reported that they never did, and 32 percent did not respond to the question.

Explanation of purpose varies only slightly by instructor rank. Purpose is regularly ("usually" or "always") explained by fewer faculty members in Math/Natural Sciences (18 percent) than in the other areas (27 percent in Humanities, 35 percent in Social Sciences, 43 percent in Earth Sciences, and 45 percent in Education). And a higher percentage of the Math/Natural Science faculty than those in the other areas reported "never" providing explanation of purpose.

The purpose most often mentioned (by 77 percent of the faculty who explain the purpose) to students for the ratings is to guide the improvement of teaching. Only 10 percent of the faculty mention to their students that one of the purposes is to guide decisions about promotion, tenure, and salary; 20 percent mention student course selection and 18 percent mention the Faculty Senate requirement.

On the average, more purposes are mentioned by faculty in the Humanities, Social Sciences, and Education than by faculty in Math/Natural Science and Earth Sciences. Fewer

TABLE 5

Question 5. How often have you used the SC-EIT/ASSU Evaluation Form?

Area	N	Never	Occa-sionally	Half the Time	Usually/ Always	No Response
Humanities	78	0%	18%	6%	72%	4%
Social Sciences	75	4%	1%	3%	91%	1%
Math/Natural Sciences	49	4%	4%	4%	82%	6%
Earth Sciences	21	0%	5%	10	76%	9%
Education	19	5%	0%	5%	90%	0%
Rank						
Professors	154	2%	8%	5%	82%	
Associate Professors	36	8%	8%	3%	78%	
Assistant Professors	42	0%	2%	2%	81%	

SC-EIT/continued from page 15

assistant professors (2 percent) mentioned the evaluation purpose as that of meeting a requirement than associate professors (18 percent) or professors (18 percent). And fewer professors (4 percent) mention the evaluation purpose as that of guiding decisions about promotion, tenure, and salary than do associate professors (18 percent) and assistant professors (19 percent).

In brief, the purposes for which the evaluations are solicited are not given regularly by two-thirds of the faculty, nor are they given equal weight in instructors' communications to students.

4. Procedures for Administering the Forms

Uniform procedures are essential for valid use of the results. **Table 6** shows the pattern of how forms get distributed and filled out.

As these figures show, there is clearly no uniform procedure used to administer the forms. This study cannot empirically determine whether having students fill out the form in class is more or less effective for increasing participation than having students fill out the form outside of scheduled class time. It seems likely, however, that having the forms filed out in class is likely to produce higher response rates than letting students take the forms out of the classroom.

The evaluation procedure was designed to discourage faculty members from examining the student ratings before they are sent to the Registrar's Office for summary. The underlying purpose was to assure students of the freedom to respond frankly before examinations were graded, and to prevent selective deletion of low evaluations from the packet sent to the Registrar.

Clearly the procedure has not been followed uniformly. Only 52 percent of the faculty respondents reported that they do not look at the forms before they are sent to the Registrar; another 9 percent said they "rarely" do, and 35 percent said they "sometimes," "usually" or "always" do. Responses varied both by area and academic rank as shown in **Table 7**.

Faculty members said that they do not look at the form primarily for ethical reasons. These respondents were largely concerned with preserving student confidentiality and noted that looking at the forms before sending them to the Registrar's Office was against the rules.

Several noted that a student assumes responsibility for the forms so there is no opportunity to look at them. A few commented that they were just too busy to look at the forms.

But the instruction not to look at the forms before they are summarized by the Registrar seems to subvert other purposes of the system. For the 35 percent who do look at them, the reason most often given is to get immediate feedback when experience with the course is still fresh and when it can best help in planning for the next quarter's course. Several said they were simply "curious."

The problem is that while immediacy of feedback is important for those wanting to improve their teaching, it could influence grading in unwanted and undesirable ways. It could also jeopardize representatives of student views by providing opportunity for selective elimination of evaluations from the packet that gets sent to the Registrar. And, if the practice of looking at the forms were common, it could influence the ratings themselves by reducing student confidence in their own anonymity, and thus lower the validity of the evaluation results.

5. Use of the SC-EIT/ASSU Evaluation Results to Improve Teaching

The main justification for an extensive evaluation system such as that introduced at Stanford is that the results serve their intended purposes. Do the evaluations guide the improvement of teaching? Are they used in decisions about promotion, reappointment, tenure, and salary? Do they help students select courses?

For faculty members a key question is whether they use the evaluation results to improve teaching, and if so, what kinds of changes they make as a result of the information they receive from the evaluations. Most (84 percent) of the faculty report that they do use the evaluation results to improve their teaching. The extent of such use varies by area, ranging from 76 percent in Math/Natural Science to 100 percent in Education, 80 percent, in Humanities, 88 percent in Social Sciences, and 90 percent in Earth Sciences. Reported use is slightly higher among associate professors (91 percent) than among professors (83 percent) or assistant professors (83 percent).

The improvement of teaching referred to in these responses is still an informal affair. Half (47 percent) the faculty reported that they discuss evaluation results with colleagues, only a few (1 percent) reported discussing their evaluation results with the Center for Teaching and Learning, and one person mentioned discussing the evaluation results with the Emeriti Undergraduate Council.

How best to translate evaluation results into improvement strategies, in other words, is still a matter of individual faculty initiative. Faculty members might benefit from knowing more about available ways of making this translation.

How much change in teaching do faculty members report having made on the basis of the SC-EIT/ASSU evaluation results? Most (71 percent) of the faculty respondents reported having made minor changes in teaching on the basis of the SC-EIT/ASSU evaluation results. Another 16 percent reported having made major changes. And 7 percent reported having made no changes. **Table 8** shows the pattern of reported changes by area.

The extent of reported change did not vary appreciably for different academic ranks.

Change was reported in various aspects of the instructional process: 41 percent reported changes in teaching methods, 50 percent in course content, 31 percent in progression of topics, 38 percent in syllabus, 54 percent in reading assignments, 24 percent in other assignments, 15 percent in assessment methods, 15 percent in relationships with students, and 10 percent in other matters.

There were area and instructor rank differences in kinds of changes reported. **Table 9** shows changes by area and by instructor rank.

TABLE 9

Question 27. What types of changes have you made as a result of the SC-EIT/ASSU evaluations?

Kind of change	Hum (N = 78)	SS (N = 74)	M/NS (M = 49)	ES (N = 21)	Ed (N = 18)
Teaching methods	32%	49%	31%	57%	50%
Course Content	44	64	31	57	72
Progression of topics	28	35	18	48	50
Syllabus	37	45	18	48	67
Reading assignments	47	77	33	48	56
Other assignments	15	31	14	38	39
Assessment methods	9	24	4	14	22
Relationship with students	15	14	8	33	17
Other changes	8	10	10	5	17

	Professor (N = 154)	Associate Professor (N = 34)	Assistant Professor (N = 42)
Teaching methods	36%	38%	62%
Course content	48	65	59
Progression of topics	28	47	41
Syllabus	33	50	55
Reading assignments	46	79	74
Other assignments	23	29	26
Assessment methods	10	21	29
Relationship with students	11	15	29
Other changes	8	15	10

SC-EIT/continued from page 16

The percentages of faculty making the various kinds of changes are always lowest for professors. This result probably reflects their greater job security or greater degree of being "set in their ways" or both. Whether this greater stability among professors also reflects greater satisfaction or more favorable ratings on the part of their students is shown in Section V, which deals with analyses of student ratings over the past three years.

In sum, most faculty members reported using the evaluation results to improve teaching. That outcome could mean leaving things as they are. Nonetheless, two basic questions remain: Has teaching improved in the three schools in recent years? If so, has improvement come as a result of the introduction of the SC-EIT/ASSU system? Part of the answer to the first of these questions emerged in Section III, which reports on trends in student ratings during the past three years. And it appeared there that no such improvement is evident in the mean ratings.

Use of the form is presumably related to perceived usefulness of the form's content. **Table 10** describes faculty views about the usefulness of each of the rating categories and the written comments for the improvement of teaching.

Written comments are perceived as more useful than the rating categories. Yet only a slight majority (58 percent) of the faculty reported that they "usually" or "always" remind students to answer the open-ended questions on the back of the form. (An additional 17 percent said they "sometimes" do.) "Course Contribution" and "Course Satisfaction" are viewed as not useful by somewhat more faculty than the other rating categories.

But the form was originally developed to be flexible, and space was provided on the back so that instructors could, to a certain extent, tailor the form to their special circumstances.

Thus the form offers the NA (nonapplicable) response option for the rating items on the front, and it provides space for more appropriate questions—to be furnished by the faculty member—on the back.

Yet only 19 percent of the faculty respondents reported that they "usually" or "always" add their own questions to the back. Another 27 percent said they "sometimes" do, and almost half (47 percent) said they "never" or "rarely" do.

6. Perceived Uses of the Evaluation Results for Administrative Decisions and Students' Course Selections

When asked about how the course evaluation results are used, only half (49 percent) of the faculty indicated that the results are used for decisions about promotion, tenure, and salary.

Somehwat more than half (60 percent) indicated that results are used to guide student selection of courses.

Some (15 percent) mentioned other uses. A handful think the results are not used. And a quarter (25 percent) said they did not know how the results are used.

Faculty members can comment from first-hand knowledge on their own use of the form for guiding the improvement of teaching. They can know about student use insofar as they talk to students about such things. Nearly one third (29 percent) of the faculty indicated that they discuss evaluation results with their students, although these discussions may or may not deal with students' use of the evaluation results. They can get some indication of use of the results for personnel decisions from those with whom they have discussed the results and from knowledge about the identity of those who have asked to see their evaluation results.

Discussion of the evaluation by faculty members with school deans is clearly very limited, at least as reported by faculty. Only 5 percent of the faculty respondents reported that they have discussed their evaluation results with their school dean. Only 7 percent reported that their school dean had asked to see the qualitative information (written comments) from the forms.

Discussion of the evaluations by faculty members with department chairs occurs somewhat more often; nearly one third (31 percent) of the faculty reported that they have had such discussions, and 20 percent indicated that their department chair had asked to see the written comments on the forms.

Requests by either the Provost or Advisory Board members to see these comments have been rare. Nearly two thirds of the faculty (61 percent) reported that no one had asked to see their comments. One third (33 percent) reported that they had not discussed their evaluation results with anyone.

In sum, given the small amount of discussion about the evaluations and the rarity with which the student comments are read by others, it is not surprising that so many (51 percent) of the faculty do not think the results are used for personnel decisions.

7. Views about the Evaluation of Teaching

Use of the evaluation results to guide the improvement of teaching and support of their use in decisions about promotion, reappointment, tenure, and salary are presumably influenced by faculty views about various aspects of the evaluation of teaching.

One question is whether faculty members view students as a valid source of information (irrespective of how information is collected from the students) about an instructor's effectiveness in helping the students learn.

Another question is whether faculty members think the ratings (i.e., SC-EIT/ASSU evaluation results) provide a fair evaluation of teaching effectiveness.

And a third question is whether the form's content is perceived as appropriate.

Are students viewed by faculty as a valid source of information about an instructor's effectiveness in helping them learn? It is clear that a large majority of the faculty (76 percent) accept students as a valid source of information about a faculty member's effectiveness; only 4 percent indicated that they felt students were not a valid source. The pattern of responses varied only slightly by area and academic rank.

But the comments made by faculty members indicate an uneasiness that student evaluations reflect things other than teaching effectiveness, such as teaching style, popularity, course materials, student interest and motivation, student expectations, and student's lack of adequate perspective.

Faculty members also commented on the limitations of student evaluations in general and rating items in particular: students lack criteria for judging teaching effectiveness; instructors often do not know when or why students do not understand; and students are not serious about evaluation.

For many faculty members, students are one source but not the only source. Several faculty members thought that retrospective evaluations by former students for evaluation would be more useful. A few mentioned that a combination of student evaluations and student performance would be a better indicator of effective teaching.

Some indirect data bear on the question. Faculty members were asked whether there were other preferred methods of evaluation to substitute for the present system.

Nearly two-thirds of their suggestions about evaluation for guiding the improvement of teaching and for guiding decisions about promotion, tenure, and salary were ones involving students. Less than a third of their suggestions involved evaluation by other people or other methods.

The pattern was reversed for suggestions about ways to supplement the present system of evaluation. Students are evidently seen by most as a valid source of evaluation information even if a substitute for the current system were being considered. **Table 11** summarizes faculty members' suggestions concerning other methods to substitute for or to supplement the current system.

Do faculty members think the SC-EIT/ASSU ratings provide a fair evaluation of teaching ability? A large majority of the faculty (70 percent) responded that they felt the SC-EIT/ASSU evaluations were "fair" or "very fair."

		Course review
		Professional qualifications

SC-EIT/ continued from page 17

Perceived fairness varied by area but not by academic rank. **Table 12** summarizes area differences.

Of the comments made, nearly half expressed the belief that evaluations are biased and measure things other than teaching effectiveness (e.g., personality differences, popularity, entertainment level, course difficulty and instructor demands, student displeasure with required courses).

Several faculty members commented on problems with the form (e.g., that the form is unsuited to all but language and structured courses, that the form underemphasizes the individual course context, that it focuses on style rather than content, that questions are generally inappropriate, and that the form yields an inadequate measure of teaching effectiveness. A few stated that students and faculty do not take the form seriously and that students are not qualified to evaluate instructors.

But while 70 percent felt that the ratings provide a fair evaluation of teaching ability, there was less agreement about the uses to which the evaluation results should be put.

Most (85 percent) of the faculty feel the evaluation results as currently collected should be used to guide the improvement of teaching. Approximately one half (55 percent) indicated support for use of the SC-EIT/ASSU evaluation results in decisions about promotion, tenure, and salary. Two thirds (64 percent) supported use of the results as a guide to student course selection. A small number (five percent) suggested other uses.

In sum, saying that ratings are fair is not equivalent to supporting their use for all purposes. Indeed, a large number of comments were made about the unfairness or inappropriateness of using the results for personnel decisions.

A common criticism of student ratings is that they exert pressure on faculty members to teach in ways which they may not consider desirable, but which may produce more favorable ratings.

If, indeed, this view was pervasive among Stanford faculty, then continuation of the evaluation system would need serious reconsideration. No one would support any kind of pandering to student preferences at the expense of good teaching.

In fact, most (66 percent) of the faculty reported that they felt no such undesirable pressure; some (15 percent) felt unsure; some (14 percent) felt that ratings do produce pressure to teach in undesirable ways; and 5 percent did not respond.

In the group that did feel such pressure, most comments focused on the point that evaluations exert pressure to be less demanding. Several faculty members remarked that evaluations foster more emphasis on entertainment, and a few commented that evaluations may foster a negative environment (e.g., competition between instructors and tolerance of undesirable student behavior).

On the other hand, there were those who said that the pressure can be resisted. If all of the one-third of the faculty who failed to respond that they felt no undesirable pressure are considered together, they constitute a sizeable minority who raise a serious question about this effect of student evaluations.

Is the form appropriate for the various types of courses taught in the University? This question refers to the form itself—its content as distinct from the purposes for which it might be used. **Table 13** summarizes responses to the question of the form's appropriateness.

A large percentage of the faculty at each professorial level (92 percent each of professors and assistant professors and 84 percent of associate professors) indicated that the form was "appropriate" or "very appropriate for lectures.

The pattern of response was generally similar across areas although a smaller proportion of the Humanities faculty (79 percent) considered the form to be "appropriate" or "very appropriate" for lectures than faculty in the other areas; the percentages were 99 percent in Social Science, 83 percent, in Math/Natural Science, 88 percent in Earth Science, and 94 percent in Education.

The highest level of disagreement arose over the appropriateness of the SC—EIT/ASSU form for evaluating seminars/colloquia. While the form was considered "appropriate" or "very appropriate" by most of the faculty in Humanities (56 percent), Social Science (61 percent) and Education (71 percent), it was viewed as "appropriate" or "very appropriate" by only a minority of the faculty in Math/Natural Science (38 percent) and Earth Science (45 percent).

Such area differences seem to reflect the nature of the subject matter and the likelihood that seminars in Math/Natural Science and Earth Sciences differ greatly in form from seminars in the Humanities, Social Science, and Education. Faculty members of different academic ranks also disagree about the appropriateness of the SC-EIT/ASSU form for seminars/colloquia.

While the form was considered "appropriate" or "very appropriate" by most of the professors (60 percent) and assistant professors (74 percent), it was viewed as "appropriate" or "very appropriate" by only a minority of the associate professors (29 percent).

Only a few of the respondents gave reasons for the perceived inappropriateness of the form for different types of courses. Two faculty members commented that the form called for too many judgments, and a handful mentioned that the structure of the form precludes thoughtful responses.

In sum, the SC-EIT/ASSU form is apparently viewed as well-suited to lecture courses. There is far less acceptance of its appropriateness for seminar/colloquium and lab/studio courses. This result suggests that the appropriateness of the form needs to be reconsidered for these two types of courses.

The majority of those responding about P.E. and Basic Foreign Language courses attested to the form's appropriateness. Again the comments about the form's original designed are apt. While the form was design to be flexible and easily adapted to different circumstances, surprisingly few faculty members capitalize on this feature to improve its appropriateness for different types of courses.

8. System Refinements

Questions were asked about the Instructor Reply Form, the "Stanford Course Evaluation" Report, and the Evaluation Form so that guidance as to modifications of each of these components might be obtained.

The Instructor Reply Form. The Instructor Reply Form is to be used by the faculty member to give permission for release of information to the ASSU Course Guide. Most faculty members (81 percent) reported that the Instructor Reply Form is "easy" or "very easy" to understand. A small number (10 percent) report that it is "hard" or "very hard" to understand. Several suggestions were made for modifications of the form. Most had to do with simplifying the form and making it more aesthetically pleasing.

The "Stanford Course Evaluation" Report. The "Stanford Course Evaluation" Report contains summary statistics for the rating of the faculty member and the course. Most faculty members (80 percent) reported that the evaluation report is "easy" or "very easy" to understand. A small number (9 percent) reported that it is "hard" or "very hard" to understand.

Questions were raised about the meaning of the words "statistical range" and the "xx's" in the Graphic comparisons on side one and of the words "administrative assumption" on side two of the summary report. Concern was voiced about the desirability of reporting means: medians or "trimmed" means were suggested as more appropriate (less dependent on extreme values).

For the graphic comparisons with other courses suggestions were made to include the "average for instructors of this level" (lecturers, assistant professors, associate professors, and full professors), the department (rather than the School or subschool) average, and to delete the comparison with courses of different levels (lower, upper-division, etc.) since it was felt that the distinction does not apply at Stanford.

The SC-EIT/ASSU Evaluation Form. Faculty were asked for suggestions for changing the SC-EIT/ASSU Evaluation Form so that it would be more appropriate for 1) guiding the improvement of teaching, or 2) guiding decisions about promotion, tenure, and salary. Not surprisingly, there was no clear mandate for any particular change in the form for either purpose: only a few mentions of any particular change were made.

The five form changes for guiding the improvement of teaching suggested most often called for a) more free-response questions, b) clarification of the scale, c) reduction of the number of questions, d) placing the overall questions first, and e) more questions pertaining to content. A few suggestions mentioned the need for new forms for seminars, language courses, and team-taught courses.

The six suggestions made most often in regard to guiding decisions about promotion, tenure, and salary called for a) discontinuing such administrative uses, b) standardizing and universalizing use of the forms, c) excluding comparisons with other courses, d) encouraging more written comments, e) eliminating anonymity, and f) clarifying the scales.

9. The ASSU Course Guide

Most (77 percent) faculty members reported that they "usually" or "always" release their quantitative results to the ASSU Course Guide. A few (10 percent) "sometimes" or "rarely" do so, and still fewer (5 percent) reported that they "never" do so.

Most, but somewhat fewer (67 percent), faculty members reported that they "usually" or "always" release the qualitative results to the ASSU Course Guide. Some (13 percent) reported that they "sometimes" or "rarely" do so, and a few (6 percent) reported that they "never" do so.

Half (50 percent) of the faculty respondents indicated that they were "satisfied" or "very satisfied" with the ASSU Course Guide's use of the quantitative results. Some (14 percent) indicated that they were "dissatisfied" or "very dissatisfied," the remainder (36 percent) having "no opinion" or giving "no response." Somewhat fewer (43 percent) indicated that they were "satisfied" or "very satisfied" with the ASSU Course Guide's use of qualitative results. Some (22 percent) indicated that they were "dissatisfied" or "very dissatisfied" with the ASSU Course Guide's use of qualitative results, the remainder (35 percent) having "no opinion" or giving no response.

Most of the suggestions for improving the ASSU Course Guide had to do with making the Guide more accurate—less biased in its reporting, more consistent in its reporting, and less selective as to courses reviewed and comments made.

Suggestions for achieving more accurate and representative reporting included a) having students who took the course write the summaries, b) having summaries reviewed by the instructor before they are published, c) including team-taught courses in the Course Guide, and d) publishing results only if the same teacher is teaching the course. Some spoke of the undesirability of publishing results in courses that had low participation rates.

A few faculty members favored elimination of the ASSU Course Guide on the grounds that student feelings should not be the basis for other students' course selection and that-comparisons between departments were not advisable.

Faculty members were asked for their opinions about whether the quantitative results should be published even if not accompanied by written reviews. Half (51 percent) said "probably"/"definitely" yes, some (18 percent) said "probably/definitely" no, and some (18 percent) were "not sure."

Overall, satisfaction with the ASSU Course Guide is not strong among faculty. These results, when combined with student reports of the relative lack of usefulness of the Course Guide ought to inspire reconsideration of Course Guide practices and policies.

Question 29. How appropriate do you feel the SC-EIT/ASSU Evaluation Form is for the types of courses you teach (excluding team-taught courses)?

Course Type	N	Very Inappropriate/ Inappropriate	Very Appropriate/ Appropriate
Lectures	204	9%	91%
Seminars/Colloquium	157	43	57
Lab/Studio	42	60	40
P.E.	11	36	64
Basic Foreign Language	26	35	65

SC-EIT/ continued from page 18

10. Recommendations

What recommendations do faculty members think should be made to the Faculty Senate regarding the evaluation and improvement of teaching? (Question 35) Only a small number of responses called for, or implied, discontinuing the present system of course evaluation. Most comments called for, or implied, continuing the system in some form.

Faculty recommendations fell roughly into the following categories:

1) The need for supplemental evaluation (e.g., peer review, retrospective evaluation, letters from students, discussion with students, review of students' work, and more individualized evaluation).

2) The need to standardize and universalize the evaluation system (i.e., announcing the purpose of evaluation, alloting adequate time).

3) The need to change the form (i.e., shortening the form, using more written comments, developing a different form, for seminars, labs, and team-taught courses, improving the scales, and eliminating anonymity).

4) The need to facilitate improvement of teaching (i.e., instituting teacher training procedures such as workshops and discussion groups, providing incentives for developing innovative courses or improving teaching.

5) Review of the ASSU Course Guide reporting policies and practices (e.g., allowing instructors to edit course reviews, not reporting when student response rate is too low).

6) Discontinuation of use of the results for decisions about promotion and tenure.

7) Reducing the frequency of evaluation.

8) Moving the time of evaluation to mid-quarter.

V. STUDENT SURVEY

A. Purpose

During the 1981-82 winter quarter, C-AAA-EIT developed a questionnaire to obtain student reaction to the SC-EIT/ASSU course evaluation system. The questionnaire contained some questions which paralleled those in the Faculty Questionnaire so that the responses of these two groups could be compared. Specifically, the Student Questionnaire was designed to collect information about a) student experience with the SC-EIT/ASSU Evaluation Form, b) the amount of variation experienced in the procedural aspects of the form's administration, c) the usefulness of the ASSU Course Guide, and d) students' views about the SC-EIT/ASSU evaluation system.

B. Procedures

On May 5, 1982, the Student Questionnaire was sent to a sample of students in the three schools using the SC-EIT/ASSU Evaluation Form.

Of the 1,524 students surveyed, 556 (36 percent) responded. . .the response rates within the various categories of students varied widely—from 70 percent for sophomores in Math/Natural Sciences to 20 percent, 13 percent, and 10 percent for seniors in humanities, seniors in earth sciences, and undeclared sophomores, respectively.

D. Results

For our analyses appropriate weights have been used so that estimates representing the total population or subpopulations of interest could be obtained. The following discussion summarizes the weighted student responses.

1. Experience with the SC-EIT/ASSU Evaluation Form

The respondents varied in the extent of experience with the SC-EIT/ASSU Evaluation Form: 7 percent reported no use, 37 percent reported having filled out from 1-10 forms, 31 percent reported having filled out 11-20 forms, and 24 percent reported having filled out over 20 forms while at Stanford.

Experience with the form is, not surprisingly, related to class level. Because of this relationship, differences in responses between classes may reflect differences in amounts of experience with the form—a confounding of class and rating experience.

2. Obtaining Valid Responses

As was noted above, valid use of the evaluation results, for comparing one faculty member or course with another requires a high student participation rate and uniform procedures in the administration of the form.

The variation in participation rates is evident from the participation study described above. Practices that probably affect participation rates are suspending other class activities, allowing sufficient time, and explaining the purpose of the student ratings. All of these connote seriousness on the part of the instructor about student evaluation and are likely to enhance student participation rates and thoughtfulness of student response.

Most (71 percent) of the students reported that their instructors "usually"/"always" suspend other activities for the purpose of evaluation. Some (20 percent) said that this "rarely" or "sometimes" occurs, and a few (1 percent) claimed that this "never" happens.

While the reported time allowed (2 to 60 minutes) varies considerably for the evaluations, most (70 percent) students said that they are given between 10 to 20 minutes. The modal time reported is 10 minutes, or 5 minutes less than the modal time reported by the faculty.

Slightly over half (54 percent) said that they are "usually"/"always" given sufficient time to fill out the form thoughtfully: 21 percent said that this happens only "sometimes," and 19 percent said that this happens "rarely"/"never." Most (75 percent) said they need 10 to 20 minutes to fill out the form in a thoughtful manner, and most of these students reported needing upward of 13 minutes to fill out the form thoughtfully. . . .

Only half (52 percent) of the students reported having a #2 pencil "usually"/"always" available for filling out the form, and half (53 percent) said they "usually/always" fill out the form even when they do not have a #2 pencil available. It could be, then, that response rates suffer for want of #2 pencils. Students should be encouraged to fill out forms even if they have no #2 pencils.

There is little disagreement between students and faculty about the fact that purpose is not regularly communicated to students. Only 22 percent of the students reported that faculty "usually"/"always" explain the purposes of the SC-EIT/ASSU evaluations; one fourth (25 percent) said purpose is "sometimes" explained, and one half (50 percent) said it is "rarely" or "never" explained.

While valid use depends on obtaining a high student response rate, other factors are essential as well. Variation in rating conditions is one factor that can jeopardize the valid use of evaluation results. **Table 17** shows the pattern of student responses about how forms are distributed and filled out.

As can be seen, there is no clear pattern in the timing of the forms' distribution or the conditions under which the form is filled out.

More important, valid use of student ratings depends on the thoughtfulness of student responses. One criticism of student ratings at Stanford and elsewhere is that students give little thought to their ratings and comments because they have little idea of the serious uses to which their evaluations may be put.

Undoubtedly, thoughtfulness is in large part in the eye of the beholder. In this response group, most students said they give thoughtful answers to the rating items (75 percent) and the open-ended questions (60 percent). But respondents to the questionnaire may have been the most thoughtful ones themselves, so the answer about thoughtfulness remains elusive.

The reasons given by the approximately 20 percent who said they did not provide very thoughtful responses to the rating items or the open-ended questions, or both, were lack of sufficient time (the major theme), other pressures during dead week, lack of incentives to be thoughtful (a feeling that instructors do not take the ratings seriously).

Some students stated that the written comments section was the most meaningful, though the questions are hard to answer. They felt that instructors need suggestions, not ratings. One student observed that when the instructor shows he or she really cares about the evaluations, students are more thoughtful in their responses and comments.

While most students reported being thoughtful, care in judgements and comments is variously affected as students fill out increasingly more evaluations: 42 percent said they become less careful, the more evaluations they fill out, while another 42 percent reported that they did not become less careful. Some (11 percent) were not sure.

Another frequently made criticism of student ratings is that ratings are nothing more than a reflection of the grades students receive or expect to receive in a course and hence are not a valid indication of the quality of teaching.

The issue is complex and has been extensively debated in the literature. An empirical answer can be formulated from the rating data by examining the relationship between expected grades and ratings. As was noted in Section III, the average correlation was close to zero ($r = .11$) within classes for about 4,000 classes on the four overall items, the range of these coefficients being .08 to .16. When students were asked directly, 43 percent said their expected grade "never"/"rarely" influences their evaluations of a course or instructor, 33 percent said it sometimes does, and 17 percent said it "usually"/"always" does. A major theme of the student comments is that they try to be sincere and objective without conscious consideration of grades.

When there is a relationship between grades and ratings, it is explained by students as a valid one. For many students it is natural that a well-taught course stimulates interest and effort which result in high grades and hence high ratings.

3. Perceptions of Uses of the Evaluation Results

How do students think evaluation results are used? **Table 18** shows how students (compared to faculty) think evaluation results are used.

In addition to the fourth of the students who do not know how evaluation results are used, large numbers of students do not think the results are being used for each of the purposes the system was originally designed to serve.

4. Views about the SC-EIT/ASSU Evaluation System

It is important to note some general feelings of students about the SC-EIT/ASSU evaluation system and other methods of evaluating Stanford courses and instructors.

To guide the improvement of teaching	50%	84%
For decisions about promotion, tenure and salary	27	49
To guide student selection	60	60
Don't know	24	25
Other uses	10	15

SC-EIT/ continued from page 19

Do students feel that the SC-EIT/ASSU evaluations affect teaching? A small number (11 percent) felt the evaluations have no effect, 53 percent felt they have "some" effect, 2 percent felt they have "a lot" of effect, and 30 percent were "not sure" about the effects.

While students commented that evaluations have had an effect in some cases, these results indicate a widespread sense that evaluations go unheeded. Many students pointed out that they had little way of knowing whether or not there is an effect on teaching since they do not take the same course twice and may never have the same instructor again.

Some students mentioned that many instructors seemed indifferent to the evaluations, that evaluations come too late in the course, that there are not enough incentives to teach well, that only the good teachers really care about their teaching, that the rating items do not tell teachers how to improve, and that instructors rarely, if ever, say that evaluations help.

Do students feel that it is worth their time and effort to evaluate courses as often as they do? The response again is mixed: 18 percent felt it is "probably"/"definitely" not worthwhile, 20 percent were "not sure," and 58 percent felt it is "probably"/"definitely" worthwhile.

So, while a majority of the students indicated that evaluations are worth the time and effort as often as they occur, the feeling was far from unanimous.

Many students commented that the course evaluation system is worthwhile if the results are taken seriously and used to improve teaching. Many expressed the view that a student evaluation system is necessary, even if only a few faculty members use the results and improve as a consequence.

But students from all class levels expressed considerable skepticism that the results were being taken seriously. Again the theme that faculty need feedback, not ratings, was expressed. Some students felt that there had been definite changes in some faculty members, but that these seem to happen most among the good and conscientious instructors and not among those who really need to improve.

What do students like about the SC-EIT/ASSU system or form? Most students remarked that they like the open-ended questions on the back of the form. A majority of the students like the rating items for their simplicity, conciseness, organization, variety, and comprehensiveness.

Questions were raised, nonetheless, about the meaningfulness of the numbers. Some expressed a preference for a battery of simpler questions that yield short answers rather than the quantitative scales.

What students dislike about the SC-EIT/ASSU system or form relates most to the front of the form. The most frequently stated criticisms were that there were too many questions and that there was not enough time to complete the forms.

Some find the rating scale arbitrary, calling for too much subjectivity. Others noted the problem about having a #2 pencil, the lack of universality, the difficulty in quantifying teaching, the flaw in anonymous ratings, the lack of knowledge about how evaluations are used, the uneven (at times poor) administration of the forms, and the nuisance of filling out forms so often.

What other methods do students feel would be desirable for evaluating Stanford courses and instructors? Most of the suggestions called for more personal student evaluations either through individualized or group interviews/discussions or the student small-group evaluation procedures administered by the Center for Teaching and Learning.

Visits by faculty members to classes, student panels at the department level to discuss course improvement, and installation of opinion or suggestion boxes were other alternatives mentioned. Mid-quarter evaluation was recommended. One suggestion called for a process of random selection such that each student would have to fill out fewer forms.

5. Selection of Courses and Views about the ASSU Course Guide

Three-fifths (60 percent) of the respondents said that they believe the results of the SC-EIT/ASSU evaluations are used to guide students' course selection. Yet, when asked about the actual information sources they themselves use when selecting courses, they drew a slightly different picture. (See Table 19.)

The ASSU Course Guide does not appear to be used regularly by most of the student respondents. *Courses and Degrees* and other students are apparently the information sources most regularly used by most of the students, followed by Course Abstracts. Least used by students are Resident Fellows, the ASSU Course Guide, and Advisers.

What, if anything, do students value about the ASSU Course Guide?

For those who use the Course Guide at all, the written reviews are seen as "valuable"/"very valuable" by more of the students (32 percent) than the graphs (9 percent). Indeed, perceived usefulness of the statistical scores, even if not accompanied by written reviews (Question 22), was relatively low: 26 percent felt they would not be useful, 27 percent felt they would be moderately useful, 17 percent felt they would be "useful"/"very useful," and 12 percent had no opinion.

For the most part, students reported that the ASSU Course Guide information tends to agree with other sources of information and their own experience.

	Agreement with Other sources	Agreement with Own Experimence
Never/rarely	7%	7%
Sometimes	24	34
Usually	38	27
Always	1	1
No response	30	31

In sum, there is no strong indication that the ASSU Course Guide is very useful. More students who use the Course guide often prefer the written reviews to graphs of statistical scores—a preference which coincides with faculty preference for written comments **(see Table 8)**.

6. Recommendations

What recommendations do students think should be made to the Faculty Senate regarding the evaluation and improvement of teaching? (Question 31) There was almost unanimous agreement that an evaluation system which permits student contributions should be continued.

Suggested improvements in the present system included: a) allowing more time for filling out the form, b) giving students a better explanation of the use and the importance of the evaluation information to enhance student awareness of the system and to encourage more well thought-out responses, c) evaluating all courses so that the system is universal, and d) standardizing the administration of the system. As an alternative to the current system, many students mentioned a desire for a more personal system—individual or group interviews or discussions conducted by someone involved in the improvement of teaching.

Students want to feel that faculty members take the evaluation results seriously, though there is widespread skepticism among students concerning whether faculty members do so. Students see evaluations as a valuable source of information for the improvement of teaching and hope that the results will be used to improve teaching. But they perceive a lack of incentives for good teaching in a predominantly research-oriented institution. Many expressed the hope that this situation could change and that there could be some way to hold faculty accountable for their teaching.

Students also expressed the hope that the administration recognizes the system as an important source of information for the evaluation of courses and faculty when used in conjunction with other sources, such as peer evaluation.

They hope the administration recognizes the system's value as a mechanism for improving the flow of information between undergraduates and faculty in a large university like Stanford. And they hope the administration sees the system's potential value as a source of information for the improvement of teaching.

TABLE 19

Question 17. Do you use the following sources of information when selecting courses?

	Frequency of Use		
Source of Information	Rarely Never	Sometimes	Usually/ Always
ASSU Course Guide	50%	29%	15%
Other students	7	32	55
Resident Fellows	76	11	6
Advisers	46	30	17
Course Abstracts	36	16	38
Courses and Degrees	6	11	78
Other	3	3	6

TABLE 20

Question 18: In the ASSU Course Guide, how valuable do you find the graphs of statistical scores? Question 19. In the ASSU Course Guide how valuable do you find the written reviews?

	Value the Graphs	Value the Written Reviews
Don't use Course Guide	31%	30%
Not valuable	18	4
Moderately valuable	34	25
Valuable	8	28
Very valuable	1	4
No Response	8	9

VII. RESPONSES OF DEPARTMENT CHAIRS

In early November 1982, letters were sent to department chairs (4 in Earth Sciences and 27 in Humanities and Sciences) in schools using the SC-EIT/ASSU Evaluation Forms to invite their comment on the following topics:

1) Sources of information used to evaluate teaching;

2) Ways in which the SC-EIT/ASSU evaluation results are used;

3) The importance, usefulness, and appropriateness of student evaluations, in general, and the SC-EIT/ASSU evaluations, in particular;

4) The extent of resistance to student evaluation of teaching, in general, and the SC-EIT/ASSU evaluation system, in particular;

5) Recommendations to the Faculty Senate regarding the evaluation of teaching and the SC-EIT/ASSU system.

The following summarizes the comments made by the 18 department chairs who responded to this inquiry.

A. Sources of Information Used to Evaluate Teaching

All but one of the department chairs reported that they use the SC-EIT/ASSU evaluation results as one source of information in evaluating teaching. One department chair spoke of the SC-EIT/ASSU system as a necessary evil, and one uses the results only when instructed to do so by the Dean.

But the SC-EIT/ASSU evaluation results are not used alone; all of the department chairs reported that they gather other information about teaching. Almost all of the department chairs reported that they solicit letters from current students, former students, advisees, graduates, or all of these, to complement the SC-EIT/ASSU evaluations.

Five departments mentioned using some kind of peer evaluation—classroom visits (mentioned most), solicited letters, evaluation by co-teachers, faculty review of course materials—to supplement the SC-EIT/ASSU results. Other sources mentioned were "the grapevine," trends in course enrollments, use of special department forms, and outside advice.

In sum, student evaluation of teaching (whether in the form of the SC-EIT/ASSU results or in the form of letters) appears to be a major source of information about teaching. Only five departments mentioned engaging in any form of peer evaluation.

B. How the SC-EIT/ASSU Evaluation Results Are Used

Use of the SC-EIT/ASSU evaluation results varies. Results are monitored to guide the improvement of teaching, to inform decisions about reappointment, promotion, tenure, salary, and teaching awards, to guide curriculum planning and staffing decisions, and to "keep track of the pulse" of the department.

Most of the chairs reported that they regularly (quarterly and yearly) review the evaluation results. Most again indicated that the SC-EIT/ASSU evaluation results are among several pieces of evidence used to evaluate teaching.

C. Importance, Usefulness, and Appropriateness of Student Evaluation

A majority of the department chairs indicated that they felt the SC-EIT/ASSU evaluations were one important source of evidence on teaching when used in conjunction

continued on next page

SC-EIT/ continued from page 20

with other evidence. But opinion varied widely on the importance of the results. Views on importance even varied among individual faculty members. Several department chairs mentioned that more qualitative evaluations (letters to students soliciting detailed and searching comments, anecdotal remarks) were more important and useful than the SC-EIT/ASSU ratings.

The chairs perceived benefits of the SC-EIT/ASSU evaluations to include a) the written comments, b) good indication of student satisfaction, c) usefulness as a quick check, and d) value for sensing major successes and failures.

The chairs perceived the drawbacks of the SC-EIT/ASSU evaluations to include:

a) their excessive focus on teaching and insufficient focus on learning;
b) their lack of validity as indicators of the quality of teaching;
c) the lack of usefulness or meaningfulness of the statistical summaries:
d) the inappropriateness for workshop-type courses;
e) their inappropriateness for evaluation of TAs;
f) their inappropriateness for evaluating team-taught courses;
g) their inappropriateness for evaluating field courses;
h) their failure to indicate lasting impact;
i) the limitedness of what they measure;
j) their lack of discrimination at the high end (ceiling effect);
k) they are not universally used;
l) general lack of student awareness of the purposes of the evaluations and the uses to which they will be put;
m) the inappropriateness of reporting means;
n) the lack of clarity of the bases of comparison (norms);
o) the inopportune time (before exams and final assignments) of the evaluations and their consequent neglect of important parts of the instructional strategy;
p) the patent assumption that student knowledge is superior to that of the instructor;
q) the low student participation rate;
r) the low faculty participation rate;
s) the failure of the statistical evidence to indicate the academic quality or depth of conviction of the respondent or the reasons for the response;
t) the distortion of the original intention of the evaluation—to help the teacher;
u) the fact that forms are filled out at a time that does not encourage the most profound reflection by students;
y) the fact that thoughtless responses carry the same weight as thoughtful responses;
w) the disregard of the principle that quality of teaching is not quantifiable, and
x) the fact that the results do not reflect whether a course is required or optional, although required courses are invariably rated lower than optional courses.

In the department most opposed to the SC-EIT/ASSU system, the perception is that for students the evaluation process has become a trivial exercise, performed perfunctorily. For faculty members it is felt in this department that the process is more of a nuisance than a help, an end rather than a means and a process that can have pernicious consequences. For the administration, it is felt in this department that the SC-EIT/ASSU form is no more than a crude tool for measuring teaching effectiveness, one vastly inferior to informed gossip.

D. Resistance to the Use of the SC-EIT/ASSU Form and to Student Evaluation

Most department chairs reported no known resistance to the SC-EIT/ASSU evaluation system. (One department chair indicated that there was no strong support either.)

Two of the chairs commented that their faculty's opinion was mixed, varying from vehement rejection through interested skepticism to interested acceptance. It was noted by these chairs that those faculty members who received favorable evaluations accept the system, and that those who do not receive favorable evaluations dislike the system.

Two chairs mentioned the "p.r. value" of the ratings, especially if they are published in the ASSU Course Guide. In one department there is compliance only because the system is required.

E. Recommendations

Almost all of the department chair respondents favored some kind of student evaluation of teaching. Recommendations about the SC-EIT/ASSU system in particular ran the gamut from calling for its abolition to calling for its mandatory universal implementation. The variation in responses precludes a succinct summary. The following recommendations were made by more than one respondent:

a) Simplify the form;
b) Enforce full compliance of the faculty;
c) Develop special forms for different kinds of courses (workshops, labs, studios, fieldwork, etc.);
d) Encourage faculty members to obtain feedback (formal or informal) on teaching throughout the course, not just at the end;
e) Mandate evaluation of teaching in some form;
f) Encourage obtaining supplemental information from students and colleagues;
g) Develop a more flexible system which provides local option in obtaining evaluation information.

Other suggestions called upon the Faculty Senate to:

a) Engage in a serious examination of what is meant by teaching, of whether the SC-EIT/ASSU form is a good instrument for measuring the effectiveness of what is meant by teaching, and of the relationship between teaching and learning;
b) Move more toward an essay form;
c) Ask each department to appoint a teaching officer with responsibility for consulting and advising to make the evaluation system more personalized and flexible;
d) Arrange for evaluations to be done during the quarter following a course;
e) Encourage students to take evaluations more seriously;
f) Make students better aware of the uses to which the SC-EIT/ASSU evaluation results are put;
g) Discontinue tabulation of results where the student response rate is less than 60 percent;
h) Reduce the number of questions dealing with course organization and increase the number of questions dealing with independent or changed thinking;
i) Encourage students to make positive suggestions to help instructors improve (the current forms do not provide information on how to improve);
j) Discontinue use of the forms as a basis for reappointment, promotion, and tenure decisions;
k) Eliminate statistical means and figures (they are indefensible and not meaningful);
l) Gather more information on the students who are the evaluators (otherwise evaluations are useless).

Earth Sciences: Form provide early warning

Following is a letter to Walter F. W. Lohnes from Dean Allan Cox of the School of Earth Sciences, on Student Evaluation of Teaching.

The evaluation of teaching is done on several levels. Informally, all of our faculty learn from their own advisees about the style and effectiveness of the teaching of their colleagues. This is a very important source of information.

In some cases, departments and programs within departments conduct surveys of courses and curricula in addition to the SC-EIT/ASSU evaluation. Many of us give guest lectures in our colleagues' classes, which gives us a window on the classes. All of these sources of information provide a basis for peer evaluation of teaching.

In preparing papers for reappointment or promotion, we use evaluation by faculty peers, solicited letters from students, and the SC-EIT/ASSU evaluations. The latter is only one component of the basis for evaluation.

The setting of salaries is based on assessments by department chairmen and the dean of research, teaching effectiveness, and other contributions to the university. Again, the SC-EIT evaluations play a significant but subordinate role in this process.

For our more effective teachers, the SC-EIT evaluations have little to offer. Since these teachers wouldn't be as good as they are if their empathy with students didn't provide them with constant feedback from their classes, the evaluations are largely redundant.

However, in the case of ineffective teachers, the evaluations are extremely useful in two ways. First, they let the teacher know that *something* is wrong, and they give him some notion about possible corrective action.

Second and most important, the evaluations serve to keep the issue of teaching quality on everyone's agenda. When evaluations are consistently bad, we discuss the reasons for this in our departments. This in turn, stimulates the instructor to give greater priority to teaching.

SC-EIT evaluations have been extremely useful in providing both an early warning of ineffective teaching and a stimulus for its improvement.

Several of our faculty of 30 are probably not strongly in favor of student evaluations. However, this is not a burning issue for our faculty. As an aside, on the rare occasions when faculty have expressed negative views, I have challenged them to identify one course with consistently bad ratings that they themselves regard as being well taught. So far, we haven't found one.

I recommend strongly: a) that the SC-EIT evaluations be retained essentially in their present form, b) that the evaluations be used as one of several measures of teaching effectiveness in matters of promotion, and c) that a somewhat more specific procedure be used in conducting the evaluations.

We would have more complete returns if all instructors would, during dead week, flag the importance of the evaluations, allow 20 minutes or so of class time for completing the forms, appoint a student to collect the completed forms and turn them in, and then leave the classroom.

Engineering: Evaluation helps improve teaching

Following is a letter from Dean William M. Kays, School of Engineering, on student evaluation of teaching at Stanford.

The School of Engineering specifically requires that all papers recommending reappointment and/or promotion contain actual scores on student teaching evaluations for a number of courses. I believe we do take these fairly seriously and have had reason to question the papers when the scores were weak. Occasionally, other pieces of information such as letters from students and other people are used in support of promotion recommendations, but I think that we have increasingly tended to rely upon the student evaluations.

We have long since become very suspicious of letters extolling the virtues of a particular teacher when the student evaluations are negative, and most of the department chairmen in the School no longer seriously attempt to do this. To answer specifically one of your questions, we simply have not been able to find any other sources of information about teaching effectiveness which has any credibility.

The faculty resistance to our particular procedures is not very great and is confined primarily to some of the older profesors who have always had sort of a take-it or leave-it attitude about their classroom performance. We don't take them very seriously.

Despite the fact that we do use student evaluations of teaching extensively in the appointment, reappointment, and promotion process, you would still probably find that there is not a close correlation between our salary scale and the student evaluation of teaching.

It is perfectly possible to be a very mediocre classroom teacher and have a high salary because of research and national stature. And in fact, it is probably possible to have a salary in the top decile on the basis of teaching alone without eminence in research.

In that sense we are undoubtedly skewed a bit in the direction of research eminence and it is probably not fair to say that we reward teaching with the same way that we reward research. But I do believe that we take teaching into consideration, based primarily on student evaluation of teaching.

The big change in the School of Engineering in this regard has taken place in the last five or six years when we started allowing the results of student evaluations of teaching to be more generally known.

In fact, our Student Honor Society, Tau Beta Pi, publishes each quarter a book containing student quotes concerning the Professor the last time he taught a particular course. All of the scores on the evaluations are made available to Department Chairmen.

The result of all of this is that we have managed to focus much more attention upon good classroom teaching and I do believe that we are now seeing a considerable improvement on the average. I don't believe that our best teachers are doing any better, but I do believe that a lot of the people at the lower end on the teaching effectiveness scale are putting a lot more attention into teaching simply because they are exposed publicly if they do not.

Education: Ratings high

Following is a letter from Dean J. Myron Atkin, School of Education, on student evaluation of teaching.

Faculty are required in the School of Education to use the student evaluation forms. This source provides our primary information about the quality of teaching in the School, though we rely as well on information acquired informally, such as the remarks that students volunteer about the quality of their instruction. Once in a while, we learn about teaching quality because a student complains.

The student evaluation results are reviewed carefully when faculty are considered for reappointment. I also use them as an element in decisions about salary raises. Ratings of teaching tend to be quite high in the School of Education, but in those instances where there seems to be a problem with the quality of instruction, I try to arrange for assistance to the professor.

To my knowledge, there is very little resistance on the part of our faculty to the use of the evaluation forms. We do, however, continue the practice of giving the instructor the option of not making the evaluations public for an ex-

continued on next page

SC-EIT/ continued from page 21

perimental course or for one being taught for the first time.

A quicker turn-around time in returning the summary analyses of the evaluations to the individual instructors and to the School would be helpful. It often takes several months before we get copies of the results.

GSB: Local option?

Following is a letter from Charles A. Holloway, associate dean of GSB, on student evaluation of teaching at Stanford.

The information we use on teaching for faculty reviews includes the student course evaluations (ranked against others in the quarter in which they were collected); statements by the faculty on course development activities; an evaluation of the course materials by other faculty in the field (mainly internal to the GSB but in some cases also external reviews); statements from the Director of the Doctoral Program about participation in the Doctoral Program; statements from the Director of the Executive Education Program about participation in Executive Education activities; and statements from the Directors of our Master Degree Programs (the MBA and Sloan Master of Science degrees); information requested from former doctoral students, and statements from others in the School about any new programs that have been developed by the faculty member.

Student evaluations are one of the inputs that we use in making recommendations on our faculty. They are important, and since they are quantitative evaluations they receive significant attention by our faculty. The benefits of using these evaluations has been an increase in faculty attention to their duties as teachers.

Although we do not have any comparative data, it's my belief that the amount of effort put into teaching by our faculty has increased since we have instituted the teaching evaluations. Many of our faculty supplement the regular teaching evaluations with requests for feedback on their own. The totality of these evaluations helps our faculty in redesigning their courses so that they can present the material more effectively.

There are drawbacks to using this system. In the first place, there is a question about the amount of resources that are devoted to teaching by our faculty. It is argued by some that because of the institution of the teaching evaluations more resources than are desirable in the long run are being put into the teaching program.

My own view is that there are in fact instances of excessive concentration on teaching by our faculty. There are also instances in which these evaluations have spurred on our faculty to needed improvements in their courses. I think that we devote somewhat more resources to teaching than would be optimal for our school. I think that part of this has been driven by the teaching evaluations. Our teaching evaluations in the elective courses become a matter of public record. Obviously, if a faculty member receives poor evaluations it can affect his or her attitude toward the School and the students, and ultimately can affect the faculty member's productivity.

In some cases students have been rather vicious in their personal criticisms on the student evaluation forms. These cases obviously can be very disfunctional for the faculty member involved. One is always tempted to list as a drawback that student evaluations provide pressure to improve the form rather than the substance of the classroom activities. No doubt this is true in some cases. However, the casual evidence that we have suggests that our students are sensitive to the tradeoff between form and substance. Both high and low ratings have been given to professors with very different classroom styles, ranging from "entertaining" to "militaristic."

As you would expect, the faculty attitude toward these student evaluations varies. Most of us are uncomfortable being measured in this manner. Some faculty feel that the evaluations have had a detrimental effect on the school. Others feel that they are demeaning. Some feel they are unnecessary. Others feel that they are of very little value to them. Although this sounds like the faculty is against the formal evaluations, my guess is that as a group they are not. I believe that they would feel that the institutional benefits outweigh the personal costs associated with student evaluations. From an operational standpoint, there is no resistance to the evaluations. We have virtually 100 percent compliance by our faculty who are requested to pass out the evaluation forms.

I believe the recommendation of the Faculty Senate should provide for local option. I would personally be reluctant to force student evaluations on other schools and departments in which the teaching setting might be very different from that here in the Graduate School of Business. Similarly, I would not like to have other schools or departments force on the GSB a particular policy toward evaluation.

As I indicated above, there are both costs and benefits associated with these kinds of evaluations. At this point in the Graduate School of Business, I am convinced that the benefits outweigh the costs. At some point in the future we may change this belief. If we do, I believe we should be free to modify, revise, or even eliminate the student evaluations.

Good teaching requires a commitment on the part of the school and department involved. In the absence of such a commitment, I'm not sure that student evaluations would make much difference. If such a commitment exists, it is entirely possible that student evaluations are unnecessary or perhaps they might even be dysfunctional.

Medicine: Try pluralism

Following is a letter from Dominick P. Purpura, dean and associate vice-president for medical affairs, on student evaluation of teaching.

For your information, I am enclosing a copy of the statement entitled "Evaluation of Faculty Teaching Performance in the School of Medicine" taken from the Medical School Faculty Handbook.

You will note that we do expect department chairmen to provide, wherever possible, summary information evaluating teaching performance at the time of making recommendations for faculty reappointments and promotions. This information is also used in counseling faculty regarding improvement of their teaching skills.

In the pre-clinical years (usually in the first two years of Medical School training) the students attend lectures, primarily in the areas of basic science, and participate in group discussions.

In the later, or clinical years, and in the advanced training programs which follow, they are taught in very small groups or even on a one-to-one basis.

I have enclosed several samples of the questionnaire forms used in student evaluations of teaching in the pre-clinical years and samples of forms used in student evaluation of teaching in the clinical and housestaff programs.

In addition, in preparing documentation for reappointment or promotion, the Department Chairmen normally contact a number of students, trainees, or former trainees, asking for an objective evaluation (by letter) of the candidate's teaching abilities.

In my view and in that of many of my colleagues, the importance of student evaluations is limited by the sporadic manner in which the students tend to respond to questionnaires regarding evaluation of teaching, and, more importantly, by their general lack of experience.

Clearly the benefits of these evaluations are to reward excellent teaching and to provide the basis for counseling faculty in cases where this is needed. On the other hand, such evaluations often tend, it seems to me, to value entertainment and charisma on the part of the teacher over substance.

While we do note a considerable resistance on the part of the Medical School Department Chairmen to give major weight to student evaluations of teaching, I believe that most of our faculty members are willing to accept the evaluations as one of a number of contributing factors in making judgments about reappointment and promotion.

In conclusion, it would be my recommendation that your Subcommittee recognize the need for a pluralistic system of teaching evaluation, weighing carefully the maturity of the students and the nature of the teaching experience(s) which they are being asked to evaluate.

(A letter from Humanities and Sciences describing how evaluations are used will be published next week-*Editor*)

Advisory Board likes both student, faculty comments

Following is a report on a Dec. 12, 1982, meeting of the Advisory Board of Stanford University with Prof. Lohnes, Prof. Gage, and Dr. Porteus concerning the ASSU/SC-EIT Teaching Evaluation System, written by Gage:

Prof. Adams said that there is no consensus within the Advisory Board on the question of the ASSU/SC-EIT Teaching Evaluation System. The Board always uses the ratings in looking at teaching when it is making decisions about appointments unless the appointment involves no teaching duties at all.

If an evaluation system exists in a school, the Board uses it and wants the forms. The Board likes to have both student and faculty comments concerning teaching.

There is no formal opinion concerning the weighing of teaching and research, according to Provost Hastorf. There are probably more cases in which brilliant research wins than those in which brilliant teaching wins. In some cases, bad teaching has been outweighed by brilliant research. If the Board did not have the rating forms, it would definitely miss them. The use of the forms should be mandatory. The poor returns of the forms is annoying.

Prof. Knuth said that, if an outsider comes up for appointment, the Board may want just casual comment, but the department chairman is then required to get evidence and data concerning teaching.

Prof. Chase said that Engineering, Law, and Medicine have had universal systems for evaluation of teaching in all courses for a long time.

Prof. Arrow said that the forms are not clear, but they do have the right information.

Prof. Adams said that, as a Board, we want all the data we can get, including data on the norms—the averages and spreads—of the ratings. The Board likes the average and wants to know what it is based on. The form is a catalyst that calls forth comment in detail on teaching, especially if someone is way down in the ratings of teaching. That function in itself is valuable.

Prof. Lohnes said that the deans do not like the quantitative data.

Prof. Webb said that an asymmetry between research and teaching definitely does exist and that research does carry more weight. So the Board gets many excuses when research is good or great and teaching is poor. Departments often say things like "He does well with this kind of student or that kind of student, such as graduate students or beginners, and so on."

Prof. Arrow asked what the ratings mean when they are very positive and reported his knowledge of two studies in which the correlations between average ratings and student achievement in multisection courses were negative. Prof. Gage corrected his information on this by referring to the meta-analysis of approximately 40 such studies done by Peter Cohen in a paper that has been distributed to SC-EIT.

Provost: Forms remind others of concern for teaching

Following is a letter to Walter Lohnes, chairman of Subcommittee on Evaluation and Improvement of Teaching from Provost Albert H. Hastorf concerning teaching evaluation forms.

I understand that you and your subcommittee are interested in having some specific data on the role that the SC-EIT forms play in the faculty reappointment process. To gather "scientifically" the information you requested would require rereading many faculty personnel files, some of which have already been sent to the University Archives because the individuals were either terminated or have resigned.

Although I understand that Noel Kolak indicated a willingness to take on this task if the information was really crucial to the work of your committee, I'm afraid that we are somewhat short-staffed this summer so we cannot really afford anyone's time to be spent in that way. Jerry Lieberman and I have discussed your questions in some detail, however, so I would like to try to respond on the basis of our experience and our collective memory.

I realize that the use of the SC-EIT form is confined to the Schools of Earth Science, Humanities and Sciences, and Education, but the general comments I'm about to make really are applicable University-wide. Where SC-EIT forms are not used, some other standardized form is employed in its place.

I think it is fair to say that in the past three years, there has hardly been a single case in which there wasn't some information garnered from the SC-EIT forms in the Schools and Departments that don't use an alternative form of their own.

On the relatively few occasions that we receive reappointment or promotion papers that lack SC-EIT forms or summary sheets, we go back to the deans' offices and ask that they be forwarded to us. I estimate that we have to make a special effort to get the information between six and 10 times per year.

In most cases, the forms will be immediately forthcoming, often having been omitted due to oversight more than anything else. Occasionally we run into a situation in which a department believes strongly that the forms should not be used for purposes of evaluation by a third party.

Individuals in those departments believe that the sole purpose of the SC-EIT forms should be to provide feedback to the faculty member about how his or her teaching might be improved. Nevertheless, the forms are ultimately forwarded to us. Occasionally, just the summaries are provided, but usually the forms themselves are included. These are normally returned to the department at the conclusion of the review process.

Jerry and I believe that the SC-EIT forms are important beyond the data that they provide. The fact that deans and department chairmen are aware that the Provost's Office and the Advisory Board are concerned with evidence of teaching effectiveness permeates down.

It is very important to understand, however, that neither the Provost's Office nor the Advisory Board begin their respective review processes with assigned "weights" in mind about the value of teaching vs. research. It's a judgmental process in which an opinion is formed during the reading of an individual's file.

continued on next page

SC-EIT/ continued from page 22

Decisions on reappointment or promotion are really never made on the basis of either good teaching or good research; it's always some combination of the two. We apply the standard that the individual must be outstanding in either teaching or research and at least very good in the other. Those measures are not readily quantifiable, of course, but the use of standardized teaching evaluation forms helps us a great deal in coming to grips with the teaching side of the equation.

I know you would like to know how many favorable decisions were based primarily on teaching (i.e., "outstanding in teaching and at least very good in research"). Jerry's and my impression is that more positive decisions are based on outstanding research than on outstanding teaching, but that the ratio is not as great as people believe.

In other words, there are many favorable decisions based on outstanding teaching. Similarly, in the case of negative decisions, more are based on poor scholarship than on poor teaching, but there have been cases where an individual's research was judged to meet the necessary requirements, but the teaching performance was considered so marginal that the research alone could not swing the case.

The course evaluation forms really do play an important role in assessing the teaching part of the equation; there is really no question about that in my mind. Letters from students and peer evaluations are an important supplement to the forms.

If you want my opinion on how the use of the forms could be improved, I'd make the following suggestions. I'd like to see a shorter, simpler form. There should be a greater emphasis on getting a higher return rate from the students; this is statistically important. Class time should definitely be allocated to permit the students to fill them out. There should be more encouragement given to students to write a paragraph or two of comments.

I hope you find this information helpful. I also encourage you to talk to the deans and/or department chairmen to obtain their opinions as well.

Here's a roundup of programs designed to help evaluate, improve teaching

A Report on Teaching Evaluation and Improvement Efforts on Campus

(Drafted by Michelle Fisher)

In the 1981 charge to its Subcommittee on the Evaluation and Improvement of Teaching "to evaluate the Stanford program of course evaluation and teaching improvement," C-AAA specified that the principal focus should be on "a study of the current system of evaluation by students." C-AAA also requested, however, an overview of "additional resources for the evaluation and improvement of teaching." The following report, therefore, aims to give a sense of the variety and scope of evaluation and teaching improvement activities at Stanford in recent years. Inevitably it has left out some efforts that should have been mentioned, but this is unavoidable when many are done in the quiet, small-scale, or short-term manner that does not gain the attention of outsiders.

Center for Teaching and Learning (CTL)

Established in 1975 through a grant from the Danforth Foundation, the Center for Teaching and Learning three years later became a University office offering training, evaluation, and improvement programs to Stanford teaching assistants and teaching fellows.

The following year, as a result of a Senate recommendation that the courses of faculty be evaluated at the end of every quarter by students, CTL was requested by its cognizant deans to offer its services to faculty as well.

If faculty members were to be routinely evaluated, it was felt that they should also have an office to assist in interpreting the evaluations, supplementing student end-of-course ratings with other types of evaluation, and developing appropriate changes or innovations in their teaching. CTL therefore opened to faculty its already established programs including a fall teaching orientation, a teaching handbook, public lectures and workshops on teaching, videotaping and consultation, and a library of materials on teaching improvement.

It also introduced features aimed specifically at the needs of faculty, such as mid-term student small group evaluation, a guide to audiovisual and instructional resources on campus, and a workshop on grantsmanship in the humanities. Several of these are described in greater detail below:

- **Videotaping or classroom observation and consultation:**
  Faculty who would like to watch and evaluate their teaching for themselves can request that CTL make a videotape of their class in their usual room; there is no fee for the service. The director of the Center is available to review the tape with the faculty member and help analyze what, if any, changes are indicated. Subsequent tapings can be arranged so that faculty can check on their progress.

If faculty members prefer for one reason or another not to be taped but would still like their teaching observed, the Center director will make a classroom visit and discuss her observations with the faculty member afterward. In 1981-82, 15 faculty and 57 TAs chose videotaping and consultation, nine faculty and six TAs classroom observation and consultation.

- **Student small group evaluation:**
  This technique is meant to supplement the written end-quarter student evaluation since it is done mid-quarter—while there is still time to change a course—and there is an emphasis on obtaining very specific comments from the students. At the faculty member's request, a consultant enters a class and, once the professor leaves, divides the students into groups of six or less. In their groups, the students are given 10 minutes to choose a spokesperson and to decide on what they like about the class, what needs improvement, and what changes they would suggest. When the time is up, the consultant asks the groups for their responses, clarifies any contradictions, helps to make vague responses more specific, and checks out a summary of their remarks with the class. This all takes 20 minutes or less. The consultant gives the results to the faculty member later in a private session when the two of them also discuss how to put the information gathered to use in improving the course. Twenty-two faculty and 36 TAs requested such evaluations in 1981-82.

- **Guide to audiovisual and instructional resources:**
  The guide has been initiated to make it easier for faculty to become acquainted with and use a wide variety of resources from computer programs to instructional videotapes that can enhance or supplement their usual course materials. The result of collaboration among three offices besides the CTL, the first edition of the guide will be distributed to all faculty and departments in October, 1982.

The aim of this variety of activities, it should be emphasized, is to enable faculty and TAs to work on their teaching in the manner most comfortable and effective for their individual situation, be it the low stress and convenient approach of attending a public lecture on a certain teaching technique or the more anxiety arousing but more powerful strategy of videotaping and consultation. Faculty seem to have appreciated the variety of approaches since their use of the Center has increased each year since 1979.

Dr. Kelly Skeff and the Improvement of Clinical Teaching

Dr. Kelly Skeff of the Stanford Medical School, who also has a Ph.D. from the Stanford School of Education, conducts research on the theoretical and practical aspects of evaluating and improving clinical teaching.

He has done several experiments on different types of instructor feedback which indicate that clinical teachers who receive intensive feedback (a combination of a one-on-one conference with a consultant in which the teacher reviews a videotape of their teaching and discusses the results of student and house staff written evaluation questionnaires) valued the experience and exhibited a positive change in teaching behavior that could be detected by outside raters.

Because intensive feedback is so time-consuming, however, Dr. Skeff is now developing a seminar approach to improvements. Groups of clinical teachers will together view and then talk about videotapes which re-enact real clinical teaching problems. If this is successful, Dr. Skeff plans to produce a library of videotapes for such seminars and a book that explores the educational issues and principles illustrated by the tapes.

Emeriti Undergraduate Council

Through the efforts of the then Dean of Undergraduate Studies, Herant Katchadourian, several of Stanford's most distinguished emeriti teachers were invited in 1979 to form a council of advisors on undergraduate education. In particular, they were made available (and remain available) as consultants to departments and individual faculty members of TAs as well as administrators in matters regarding the improvement of undergraduate teaching.

At present, 10 emeriti are serving:
Antony Raubitschek, classics, coordinator
Harold Bacon, mathematics
Gordon Craig, history
John Goheen, philosophy
Konrad Krauskopf, applied earth sciences
John Mothershead, philosophy
Philip Rhinelander, philosophy
George Spindler, anthropology
David Tuttle, electrical engineering
Wayne Vucinich, history
Other members may be added in the future.

Graduate School of Business

In addition to an intensive study of its curriculum, in 1981-82 the GSB gave concentrated attention to the support of teaching in the School, particularly at the MBA level. Morris Eson, a psychologist from SUNY Albany, was hired to advise.

After several weeks in residence, Eson produced a document "Teaching in the MBA Program: A Brief Analysis and Some Recommendations" outlining several steps to help new faculty orient themselves successfully to the School and to encourage MBA students to take a more active role as classroom participants and constructive critics of their teachers.

Specifically, Eson recommended the production of a library of videotape vignettes of classes in the GSB, tapes that would be viewed and discussed by new faculty and students alike. The tapes would not be models but would allow both students and faculty to sample beforehand the situations they would be in and talk over how the teaching/learning process could be maximized.

New professors would also have the opportunity of discussing the vignettes with faculty who had been in the tapes or had long experience as effective teachers. Eson further recommended that other opportunities for senior-junior faculty interaction be increased and that the Center for Teaching and Learning be more fully utilized.

Over the summer of 1982, Tracy Berka, a new Ph.D. student in the GSB, is working on the implementation of Eson's ideas.

Instructional media

Instructional media is a self-supporting provisioner of AV and other graphic and media services to the Stanford Hospital and Medical Center and, to a lesser extent, the rest of the campus.

For two reasons, it also has a role in teaching improvement at Stanford. First, it runs the Fleischmann Learning Resource Center, a highly rated media library for medical students of course-related and supplementary materials, and second, it advises faculty on the proper utilization of such media. While such advice does not guarantee greater teaching effectiveness, it can have that result when effective design and usage requires care and thoroughness in pedagogical approach. As Dr. Maffly, who developed the highly popular StanMed program at Fleischmann has put it, "The computers have caused me to become more specific, to think more about what I want to teach and how I want to teach it." Similarly, Dr. Kelly Skeff, whose work has been described earlier in this report, emphasizes the role of Instructional Media in helping him to design "trigger" videotapes on improving the quality of instruction in clinical settings.

Instructional Media also offers videotaping and a booklet to guide self-evaluation of the tape to all faculty. Because this is a self-supporting service, however, the charge is considerable and has discouraged all but a handful of faculty from using it.

Mathematics Department Teaching Improvement Project

In both 1980-81 and 1981-82, the Mathematics Department funded Nira Hativa, a Ph.D. graduate of the Stanford School of Education, to develop training programs for those of its teaching assistants desiring help. The format of the training differed somewhat in the two years, but it basically consisted of several meetings to discuss teaching practices that make lessons organized and clear, show a videotape illustrating effective techniques, and distribute and explain hand-outs (ultimately a handbook) to facilitate lesson preparation and the introduction of new material.

Although the number of TAs participating each year was relatively small (seven in 1981), those taking part rated most of the training as useful and helpful. More importantly, pre/post tests on the trained TAs showed that they did indeed gain more in mean ratings from the students over the quarter than did a control group that did not receive any training. On the basis of such findings, Dr. Hativa has concluded that the program can serve as a model for the components of a successful TA training effort.

Western Culture Workshops

A major goal of the Western Culture requirement since its reinception has been the provision of high quality small group teaching to students just beginning their undergraduate education at Stanford.

To this end, for the past two years a one-week symposium has been held for Western Culture instructors directly before the beginning of school. Presentations are

continued on next page

SC-EIT/ continued from page 23

made at the symposium on the major works or genres that will be covered over the course of the year; expert speakers present not only their own insights and the latest research on the topics but suggest how to handle expectable problems in teaching the material. Western culture instructors emerge with a considerable head start in how to plan for and lead discussions on the enormous amount of material that must be covered.

Another symposium, of three days this time, was held September 20-22, 1982; approximately 40 instructors attended.

Workshops on the Teaching of Ethics

During September 1981, the Philosophy Department conducted a two-week workshop aimed at improving the quality of its two main introductory courses in value theory and its TAs' contribution to these courses.

Three faculty and six graduate students met daily for approximately three hours. By going through all the materials to be used in the courses and by examining the philosophical literature for anything else that should be included, they were able to significantly strengthen the courses being examined. The TAs also benefited from opportunities to talk with each other, a former student from the classes, and the director of the Center for Teaching and Learning about how to lead effective discussions in section. Finally, Michael Bratman and Arnold Davidson, organizers of the workshop and teachers of the value theory courses, felt they had gained considerably from the chance to talk over curriculum with "a friendly, but critical and informed audience."

Writing Workshops

The writing workshops, being sponsored by the Freshman English program for the third time in the fall of 1982, aim to improve undergraduate teaching at Stanford in a very specific aspect: the ability of TAs in departments other than English to criticize their students' writing in a helpful and effective way. Approximately 50 TAs are invited and paid to attend these two-hour sessions in which they practice identifying the elements of good prose, spotting problems in ineffective writing, and making comments that will help students improve.

As mentioned in the beginning, no doubt other significant efforts to improve teaching have been or are being conducted on the campus. Now that a *Guide to Audiovisual and Instructional Resources at Stanford* exists, perhaps such activities will be uncovered and publicized on a more systematic basis. In closing, however, we would like to briefly record certain improvement efforts which are known to us but did not seem to require lengthy description:

The Humanities and Sciences annual dean's awards for teaching excellence

Departmental teaching or TA awards in such departments as Computer Science, Mathematics, and Electrical Engineering

Departmental teaching methods courses such as Physics 299 and English 397A

Faculty interdisciplinary seminars on such topics as "American Studies," "Interpretation," and "Feminist Studies."

SC-EIT Members

The Sub-Committee on the Evaluation and Improvement of Teaching is headed by Prof. Walter Lohnes, German studies. Faculty members include Profs. Helen Blood, physical therapy; Richard Cottle, operations research; Sandy Dornbusch, sociology; Nate Gage, education; Edward Haertel, education; Thomas Moser, English; and Alan Schwettman, physics; students are Rick Naimark, public policy, and Jeannette Martello, biological sciences and psychology (who did not participate in this study); coopted members are Michele Fisher, director of the Center for Teaching and Learning, and Carolyn Walker, director of the Learning Assistance Center; ex-officio members include Carolyn Lougee, associate dean of humanities and sciences for undergraduate education, and Sally Mahoney, registrar. Staff included Anita Bravman, Ann Porteus, Ellen Stevens, and Newton Suter.

Mosher files appeal with H&S following dismissal as graduate student

Steven Westley Mosher, former Stanford graduate student whose field work in China generated international controversy, has filed an internal appeal against his dismissal from the University.

Mosher, 34, was dismissed by an 11-0 vote of the anthropology faculty Feb. 24. One of the first American anthropologists permitted to do extended field work on a rural Chinese commune, he blamed his expulsion on a popular Taiwan press article he wrote as "Steven Westley" documenting forced abortions late in pregnancy and on "slanderous" allegations by his former wife.

On March 7, the anthropology faculty responded that Mosher was dismissed for "illegal and seriously unethical conduct" in China that "endangered his research subjects."

The faculty concurred with an investigating committee report, given Mosher last fall, which said in part: "'We feel that although the Chinese are clearly linking Mosher's article to the restrictions they are imposing on foreign scholars, we cannot hold Mosher responsible for the actions the Chinese are taking.

"Although we believe that Mosher was unwise to publish his article in a popular Taiwan weekly, where it would be read as a political attack on the PRC, we cannot judge this act to be misconduct, both because we are not convinced that Mosher fully understood the implications of his choice of publishing medium and because we believe that Mosher's right to publish what he chooses is protected to the right of freedom of speech."

The faculty said its finding that Mosher committed "illegal and seriously unethical acts" is based on "persuasive evidence that cannot be revealed without endangering innocent persons."

"The innocent persons in question are not Chinese officials or Mr. Mosher's former wife.

"Mr. Mosher is on record as stating that the crucial evidence against him would physically endanger innocent persons and appropriately he has not released that critical information."

"Mr. Mosher has in his possession all of the evidence against him and the 47-page page report drawn up by the (investigating) committee. He has had every opportunity to refute it.

"No findings were based on uncorroborated statements of interested parties, or on statements of persons unrevealed to Mr. Mosher. At the outset of the investigation, the committee agreed to consider only evidence whose source could be made known to Mr. Mosher and the full anthropology faculty.

"Mr. Mosher asked that any other allegations about his conduct, coming from sources whose identity could not be disclosed to him, be destroyed—and this was done. The information was never released to the faculty."

At a news conference immediately after the Feb. 24 decision, Mosher showed a copy of the report to journalists, but refused to make it public, saying this would "undermine" future legal action against the University. He said "the only innocent person harmed was myself."

In subsequent news interviews, Barnett pointed out that Mosher had confirmed his authorship of the Taiwan article and had apologized for it in writing to the department before the investigating committee was formed. Had this been the basis for dismissal, no investigation was needed, because the facts were clearly establihsed, Barnett said.

Mosher filed his appeal with Dean Norman K. Wessells of the School of Humanities and Sciences. Investigations of appeals normally are completed witnin 30 days. Further appeal is possible to the vice-provost and dean of graduate studies and research, Gerald Lieberman. After that, students may request President Kennedy to review the case.

Steven Mosher

New members elected to 16th Senate

Twenty-six representatives have been elected to the 16th Senate of the Academic Council, according to Academic Secretary Clara Bush.

Total participation in the election was nearly 39 percent of those eligible. A total of 1,283 ballots were mailed, 495 returned and counted, and six ruled invalid, according to the Committee of Tellers, headed by H. D. Winbigler, Stanford's first academic secretary, now emeritus.

The new Senate will have an organizational meeting at 3:15 p.m. Thursday, May 5, in Room 180 of the Law School.

Those elected, alternates (in order), and the ballots mailed, ballots returned and counted, and those ruled invalid by electoral unit were as follows:

Business: E. J. Webb and H. J. Leavitt, elected; J. Pfeffer, J. C. Van Hirne, D. P. Baron, and D. B. Montgomery, alternates; 59 mailed, 25 counted.

Earth Sciences: S. A. Graham, elected; G. A. Mahood, T. H. van Andel, and A. G. Journel, alternates; 32 mailed, 16 counted.

Education (including Physical Education): D. C. Phillips, elected; L. S. Shulman, H. N. Weiler, and E. G. Cohen, alternates; 39 mailed, 26 counted, 1 invalid.

Engineering: R. W. Cottle, J. L. Adams, R. H. Eustis, and P. L. McCarty, elected; W. C. Reynolds, C. H. Kruger, Jr., J. D. Meindl, D. M. Mason, H. E. Riggs, and M. D. Van Dyke, alternates; 189 mailed, 63 counted, 3 invalid.

Humanities and Sciences, Section A: P. P. Jones, J. D. Walecka, J. McCarthy, and R. N. Zare, elected; J. I. Brauman, A. L. Fetter, E. A. Feigenbaum, P. R. Ehrlich, P. A. Sturrock, and T. H. Geballe, alternates; 153 mailed, 51 counted.

Humanities and Sciences, Section B: G. H. Bower, S. M. Dornbusch, J. L. Gibbs, Jr., and S. M. Lipset, elected; A. Tversky, W. P. Falcon, J. J. Sheehan, D. B. Abernethy, B. G. Hickman, and J. G. Gurley, alternates; 167 mailed, 57 counted.

Humanities and Sciences, Section C: V. A. Harvey, J. B. Bender, W. M. Chace, and T. M. Andersson, elected; J. M. Evans, R. M. Polhemus, M. H. McCall, Jr., H. S. Lindenberger, M. W. Edwards, and A. Cohen, alternates, 161 mailed, 62 counted.

Law: J. H. Merryman, elected; A. M. Polinsky, R. J. Gilson, and J. Kaplan, alternates; 37 mailed, 9 counted, 1 invalid.

Special Group: R. F. Bacchetti, elected; W. F. Massy, S. Mahoney, and F. A. Hargadon, alternates; 19 mailed, 11 counted, 1 invalid.

Medicine, Section A: D. A. Clayton, elected; E. M. Shooter, A. Kornberg, and M. E. Billingham, alternates; 79 mailed, 35 counted.

Medicine, Section B: F. Murad, R. A. Chase, and R. L. Jamison, elected; K. B. Taylor, S. A. Rosenberg, R. W. P. Cutler, L. M. Zatz, and F. K. Conley, alternates; 316 mailed, 123 counted.

Carpools

Need ride: San Jose (No. Capitol) to Stanford (ERL) and back, 8:30 and 5, M-F. Call Maria at (408) 280-2568 (day) or (408) 926-5328 (night).

Carpoolers wanted for existing carpool. Marin County to Stanford University. M-F, 8-5. Contact Kyle at 7-5602.

Carpoolers wanted. Dublin/San Ramon/Pleasanton to Med Ctr. Hours 9-5:30, M-F. Call Ed at 7-5569.

Ongoing carpool needs another partner. Leaves Oakland at 8:30 a.m. Leaves Stanford at 6 p.m. M-F. Call John Bundor at 7-4480.

Ongoing carpool needs another partner. Leaves Oakland at 8 a.m., leaves Stanford at 6 p.m., M-F. Call Dan Crump, ext. 7-4433.

Medical Center MEMO

Grossman receives award

Dr. Maurice Grossman, clinical professor emeritus of psychiatry and behavioral sciences, has received the Outstanding Achievement Award for 1983 of the Northern California Psychiatric Society (NCPS).

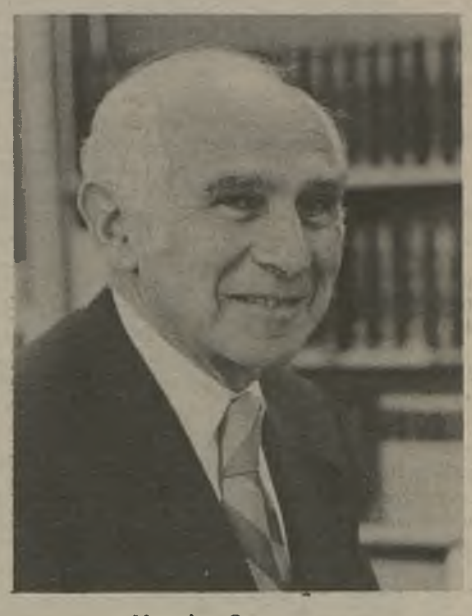
The award honors members of NCPS, a branch of the American Psychiatric Association (APA), in recognition of exceptional contributions to psychiatry and the greater community.

The presentation was made at an Asilomar ceremony earlier this month by Dr. Thomas Gonda, professor and chairman of Stanford's department of psychiatry.

An internationally recognized authority on problems of confidentiality, Grossman played an increasingly important role throughout the 1960s in legislation related to psychiatry, beginning with his presidency of NCPS in 1960. He has continued this activity in various capacities in organized medicine.

Specifically, Grossman has worked with insurance industries, the California Medical Association, and the American Medical Association on issues of protection for patient confidentiality.

Earlier, he developed innovative occupational, hospital-wide treatment programs for the chronic psychiatric patients of Veterans Administration hospitals.



An offshoot of this work was Grossman's recognition of the psychodynamics of chronicity, and the application of this knowledge in rehabilitation to problems of chronic illness in general. Grossman's activity on the federal and European scene began with this field of medicine.

Grossman received his M.D. in Philadelphia, the city of his birth, from the Jefferson School of Medicine in 1931.

Already trained in surgical pathology and experienced in general practice, he took psychiatric training at the VA Hospital in Palo Alto.

During the 1950s Grossman held simultaneous appointments on the clinical faculties of two medical schools: at the University of California, San Francisco, in psychiatry; and at Stanford in physical therapy. At that time he taught psychological medicine to physical therapy students.

When Stanford Medical School moved to the Palo Alto campus, Grossman, who was in private practice there, joined the school's department of psychiatry. He has been recognized for exceptional teaching

Maurice Grossman

by his students and former psychiatric residents.

Listed in *Who's Who in the West*, Grossman is the author of numerous articles and is currently preparing a summation of trends in American psychiatry, at the request of his colleagues in France, that encompasses developments in the 1900s which explain the situation today.

Patient needs bone marrow transplant

An effort to help identify potential bone marrow transplant donors was announced yesterday by the Stanford Medical School Blood Bank in the wake of an appeal by two Long Island businessmen.

Dr. F. Carl Grumet, associate medical director of the blood center, said informational letters would be sent, probably within the next several weeks, to a select group of donors who have undergone extensive blood typing.

Grumet spoke at a news conference with David Kolatch and David Welner, who came from New York to Stanford in search of a blood donor for a friend, whose only chance of survival from leukemia is a bone marrow transplant.

Dr. Edgar Frenkel, 34, a psychiatrist, has chronic mylogenous leukemia. His doctors estimate that he probably has only a few months to live without the transplant, Kolatch said.

A precise match of blood type is required to ensure a successful marrow transplant, and only about one person in a million would qualify, said Grumet.

Stanford is not unique but is one of only a few centers nationally where precise blood typing of characteristics called HLA antigens have been done on about 1,000 blood donors.

Grumet said a cursory check has not disclosed any donors where each of six potential factors match, but he would send letters informing all of his donors who have been typed of the need for Frenkel, and the potential to donate marrow for other leukemia sufferers.

Grumet said he ruled out attempting to identify and contact a specific donor for Frenkel from among his lists, "because it is unfair to ask people who have agreed to donate blood for purpose A to have their name added to a list for purpose B."

Stanford runs HLA tests on a group of volunteers who agree to donate blood platelets on a frequent basis for patients who need a tailor-made match of blood types.

"These donors are really special people who are already giving quite a bit. We do not want to put them under undo pressure," Grumet said.

Ironically, Grumet said that the closest match he has found from a cursory screening is himself, with four out of six of the HLA factors matching. Two matches with five out of six factors matching have been found in other searches around the country, Kolatch said, but most transplant centers insist on a six out of six match before they will operate.

Until very recently, Grumet said bone marrow transplants would not be performed on matches of donors from outside the patient's family. While only a few cases currently come to the attention of blood banks annually, Grumet said medical progress will increase the need for unrelated bone marrow donors in the future.

Grumet, as well as Kolatch and Welner, are hopeful the current effort will initiate, in collaboration with other blood and transplantations centers, a national registry of potential volunteer bone marrow donors.

Obtaining marrow from the donor causes temporary discomfort but involves essentially no risk for the donor, he added.

"We're hopeful that as we pursue this, we will be able to find a donor (for Frenkel). But even if we can't, we hope that what we do will be of lasting use to society," said Kolatch.

Finding a suitable donor for a bone marrow transplant outside a patient's immediate family is always difficult, because of the complicated tissue matching that must be done.

But Frenkel has several rare factors that decrease the chance for finding a perfect match among people who have been HLA tested to about one in several hundred thousand, Grumet said. (Although the odds in the world population are one in a million, a larger number of persons of European ancestry increase the odds somewhat, Grumet said.)

Frenkel's problem is compounded further by the fact that, while many people know whether they have A or B type blood, few have been tested for HLA type. The sophisticated typing procedure costs several hundred dollars per person, and is performed by only a few dozen laboratories around the country.

Because of the expense of the extended HLA typing procedure, the "Emergency Support Fund, " set up by Frenkel's friends, has asked that only persons who have been previously HLA tissue typed contact them. Inquiries from potential donors can be addressed to Bone Marrow Transplant Search Center, P.O. Box 600, Cedarhurst, New York, 11516.

Kolatch said an offer of $25,000 made in New York earlier was still in effect for the donor.

HLA stands for "Human Leukocyte Antigens"—proteins that appear on the membrane of white blood cells. While every human being can be divided into the four familiar A, B, AB, and O blood groups according to their red cell type, the number of distinct HLA blood types possible runs into the thousands.

In addition to its use in research, HLA typing is most often performed to identify uniquely compatible donors who can provide custom-tailored blood products, such as platelets, for patients whose blood disease prevents them from being helped by blood transfusions from random donors.

—Deborah Franklin

Symposium on molecular genetics

The promise of "new genetics" now shaking the very foundations of modern medicine will be the topic of a day-long symposium Friday, May 13 at Stanford University School of Medicine.

The symposium, which will begin at 8:15 a.m. in Sherman Fairchild Auditorium, is part of a series of meetings at Stanford on the subject of molecular and genetic medicine.

According to Dean Dominick Purpura, Stanford is now formalizing a broadly based program in molecular and genetic medicine involving faculty from both the basic and clinical sciences.

"The purpose of the academic program," Purpura said, "is to provide the scientific and intellectual framework necessary to speed the pace of anticipated research advances and their translation into revolutionary methods of diagnosis and therapy of human disease."

Collectively, the techniques of molecular genetics are known as genetic engineering—a term that captures the skill and precision with which human DNA can be inserted into the genetic machinery of bacterial and yeast cells and made to function.

Bacteria with human gene transplants can churn out vast quantities of man's own body chemicals expected to be used to treat disease. By peering into human genes, scientists can now predict with uncanny accuracy which individuals are likely to be afflicted with *what* diseases over the entire course of their lives. And attempts to cure patients of hereditary defects are contemplated in the not far-distant future.

"The excitement and promise of the 'new genetics' both as a research tool and as applied to the study and treatment of diseases, have deep roots at Stanford," Purpura noted.

Among the speakers will be leaders in molecular genetics from the Carnegie Institution in Washington, Columbia, Harvard, Stanford, University of California in San Francisco, and University of Texas.

Topics will include "Viruses, genes and cancer," "Oncogenes among antibody genes and implications for human cancer," "Transposable elements and their use as genetic tools," "Lipoprotein receptors: genetic defense against heart attacks," and "Steps toward a molecular grammar of learning."

The symposium is open to invited guests and faculty, students, fellows, interns, residents, and staff.

Copies of the program can be obtained from the Office of Public Events, Stanford University School of Medicine, 800 Welch Road, Suite 221, 497-6389.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6011.

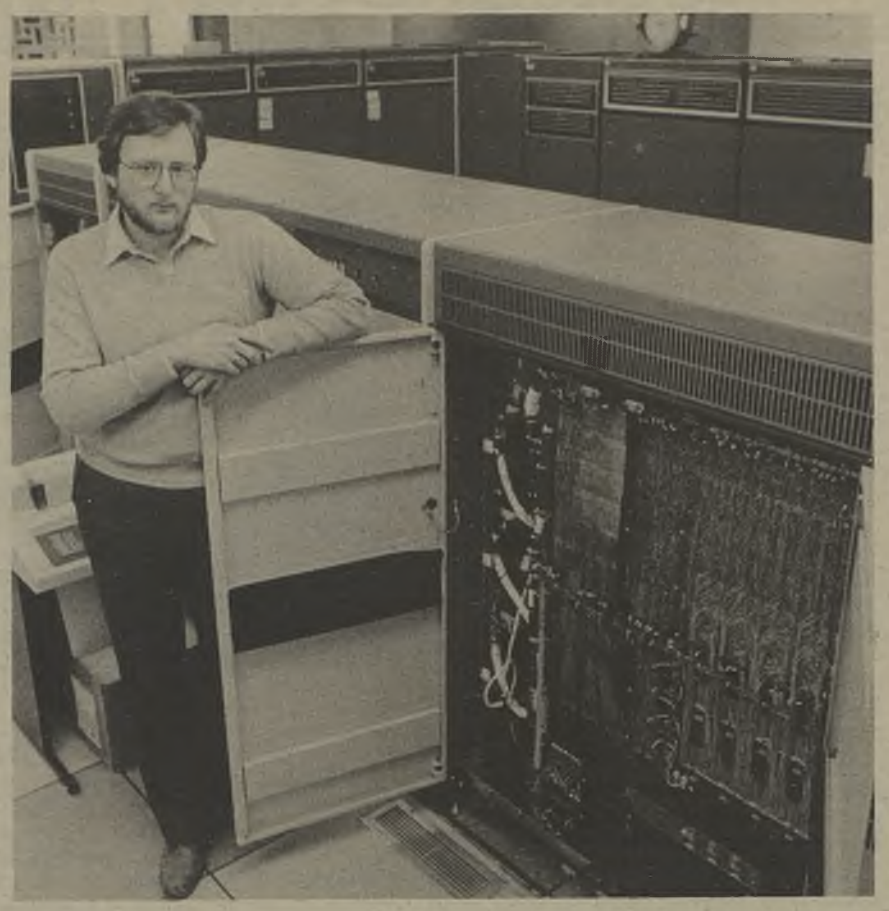
SUMEX-AIM: exploring computer possibilities in medicine

The man at the other end of the telephone was irate.

His illness had thwarted all attempts by his physician at diagnosis, and he wanted to go one step "higher": he wanted to talk to "INTERNIST," a computer program designed to simulate medical judgments.

The program is just one project being developed by researchers using SUMEX-AIM—a Stanford-based national computer network devoted to researching the uses of artificial intelligence in biology and medicine.

"He really didn't understand when I told him that it wouldn't be possible (for him to consult the computer)," said Dr. Roy Maffly, the Stanford professor of medicine who serves as liaison between potential users and the computer network. "He figured that he paid taxes, and it is a federally-funded program, so he should have access to any program on SUMEX."



Though the question was unusual, confusion about what SUMEX can and cannot do is widespread, even in the medical center where it makes its home.

"Most people think that this is a data bank of every disease that anyone's ever come down with," said Edward Pattermann, SUMEX director. "They may be looking for information on a certain disease or a specific chemical compound, and they don't realize that we're a research center—not a data bank."

SUMEX-AIM stands for "Stanford University Medical Experimental Computer for Artificial Intelligence in Medicine." Like the Heuristic Programming Project (HPP), a 50-person laboratory in Stanford's computer science department, SUMEX is a workshop for testing new techniques in artificial intelligence, rather than a showcase of market-ready products.

Unlike the HPP, which is strictly a Stanford program, SUMEX provides computer support to researchers internationally.

Born in 1973 with a grant from the National Institutes of Health, SUMEX is the only network of its kind in the world—designed to serve as a computing resource for a new breed of scientists eager to apply artificial intelligence to problems in biology and medicine. Fifty percent of the computer's time and energy is devoted to Stanford projects, while the remaining time is divided among scientists throughout the United States and in several foreign countries.

SUMEX-AIM director Pattermann proudly displays the project's new computer system. In operation a couple of months now, the system is considered better and more efficient than the former SUMEX computer.

"Part of the appeal of SUMEX originally was that it would act as a link between researchers all over the country," explained Dr. Edward Shortliffe. He is assistant professor of medicine and a co-principal investigator for medicine of the $1.5 million SUMEX project with Dr. Edward Feigenbaum, professor of computer science. The network makes possible research requiring expensive facilities that are bigger than any single institution could support alone, Shortliffe said.

The 15 projects currently using the system range from a program designed to coordinate and interpret 30 separate measurements of body function that summarize a patient's status in the intensive care unit, to a computer consultation service for the detection and diagnosis of rheumatic diseases.

One collaboration between scientists at Stanford and the University of New Mexico is being developed to advise geneticists in the design of their experiments to manipulate DNA, while a model developed at Carnegie-Mellon University is designed to help psychologists understand how humans make decisions.

Though the community of projects tied to the SUMEX facility is far-flung, both geographically and in application, common threads bind the projects together. Each project seeks to codify the information and rules that human experts use to make decisions. Each is in the developmental stage—once a project is ready to be useful clinically or in industry, it is moved off the SUMEX system, to make way for new experimental projects. And each project is tied by phone to computers and programs unique to the SUMEX system.

A DEC-2060, a large mainframe computer tucked into a 2,000 square-feet glass room in the medical center, and a similar machine at Rutgers University in New Jersey, provide most of the "brainpower" for all SUMEX-AIM projects. Though useful for experimental purposes, the system whereby users share computing time on a large centralized computer would be impractical for a physician's office. The fifteen programmers, administrators and support staff at SUMEX are already working on the problem.

"The trend (of artificial intelligence in medicine) in the 1980s will be to move from the model of the large scale, $800,000 computer to small, powerful workstations," said Shortliffe. "Within a few years you'll be able to buy a computer like that for $10-15,000—perhaps even for less. Ultimately the same computer could handle a physician's billing and offer patient advice.

"SUMEX is trying to lead the research in this area," he said. Though none of the medical diagnostic systems at SUMEX is ready yet for widespread distribution, several are being tested in hospitals around the country.

"ONCOCIN," a system that weighs the good and bad side effects of complex chemotherapy and radiation treatments in cancer patients, has been used on a limited basis in Stanford's oncology clinic for two years. Research in the next three years will be geared towards moving the system onto independent workstations in the clinic and beyond, said Shortliffe.

Psychiatrists study narcolepsy in dogs under NIH grant

A major study into the mechanisms and causes of narcolepsy has been launched by Stanford University psychiatrists under a grant from the National Institutes of Health.

Narcolepsy is a neurological condition that causes irresistible sleep attacks in its victims. Originally, the disease was thought to be rare, but research has shown it to be more widespread, now afflicting about 250,000 Americans.

The disorder is characterized by excessive daytime sleepiness, cataplexy (abrupt attacks of muscular weakness), and sudden attacks of or desire for sleep. REM (rapid eye movement) sleep, at uncontrollable intervals, results.

Under a $100,000 a year grant for the next three years, researchers headed by Dr. William Dement will study narcoleptic dogs that manifest the same symptoms as in the human condition. The research is expected to provide important clues to causes and treatments.

Dement, professor of psychiatry and behavioral sciences, is director of Stanford's Sleep Disorders Center and a recognized leader in the field.

"People have suffered from narcolepsy for hundreds, probably thousands of years," he said. "Only in the last few years has it become widely recognized as a distinct medical disorder, and the object of major research."

The study will include new technical advances such as development of a system which can take long-term neurophysiological recordings in unrestrained dogs.

With the only population of narcoleptic dogs in the world, investigators contend, Stanford is in a unique position to conduct comprehensive research on neurochemical, anatomical, and physiological aspects of the disorder.

"Studies in humans are difficult, expensive, and necessarily limited in scope," said Dr. Theodore Baker, the research associate directing the new project.

According to Dement, none of the drugs thus far used to treat the symptoms of narcolepsy have offered a cure. They are often habit-forming, provide only temporary relief, and can be accompanied by detrimental side effects.

A severe, debilitating, chronic condition, narcolepsy often leads to visual and memory problems, poor driving, home and work problems, headaches, nightmares, and the risk of drowning or other fatal accidents.

"Constant suffering is the companion to those with narcolepsy," said Dement.

In previous studies with dogs, Dement and his colleagues found a strong genetic basis for narcolepsy, and uncovered a variety of scientific facts relating to the neurochemical imbalance which causes it. The present study aims to expand research already begun in Stanford laboratories.

"We hope that this canine research will lead to an understanding of the basic defect underlying narcolepsy. This could lead in turn to more effective treatments aimed at correcting the defect," Baker said.

Investigators, besides Dement and Baker, include Drs. Jack Barchas, professor of psychiatry and director of the Laboratory of Behavioral Neurochemistry; Roland Ciaranello, associate professor of psychiatry and director of the Laboratory of Developmental Neurochemistry; Craig Heller, associate professor of biological sciences; and James Meindl, professor of electrical engineering, and director of both Stanford Electronics Laboratories and the Center for Integrated Systems. —Lisa Ames

William Dement

Health care not immune to effects of cultural diversity

A young Vietnamese woman gives birth to a healthy baby. Her physician gives her post-delivery instructions, to which she smiles and nods in agreement. But the nurses note on her records that she resists all medication and baths.

The physician is concerned about her apparent noncompliance. But in reality, the mother, in accordance with her cultural beliefs, is simply trying to gain back the heat she lost during childbirth. She cannot understand why the nurses want her to take showers, which may chill her, and give her cold water with which to take her medication.

Cultural differences in health beliefs and practices such as these often interfere with the effectiveness of treatments, said Dr. Elois Ann Berlin, a medical anthropologist. This is especially important in areas in which large numbers of immigrants settle.

For example, she said, a federally-funded study of California's population growth during the past decade reports a total increase of 10 percent. While the white population increased only .7 percent, according to the *West Bay Area Health Systems Agency* report, the Hispanic population increased 33.3 percent and the Asian population increased 41.1 percent.

Berlin, who is working through the South Bay Area Health Education Center at Stanford University School of Medicine, has developed a multi-cultural clinical teaching program for health care providers. With her guidelines, which she teaches to residents at the Family Practice Residency Program, Stanford medical students as a guest lecturer in internal medicine, pediatrics, and family medicine, and community physicians at special workshops, they can more effectively treat members of the various cultures that have settled in the Bay Area.

"The fundamental concept to teach physicians is attitude," Berlin said. "They have to be receptive to their patients, and must realize the patients do have an explanation of the illness they're experiencing and that it may not fit in the biomedical model."

The key to more effective treatment, she said, is to incorporate the patient's treatment according to cultural beliefs with biomedical treatments.

Dr. Francis Curry (left), who graduated from Stanford Medical School in 1946, employs methods in his daily practice which are similar to those advocated by medical anthropologist Berlin. Curry treats new Asian immigrants who have settled in San Francisco's Tenderloin District.

Many cultures, including Hispanic and Asian that are the Bay Area's most prevalent minorities, derive their health beliefs from humoral pathology, an ancient theory that good health is the result of a balance of the body's four humors: blood, phlegm, yellow bile, and black bile.

There must also be a balance between hot and cold substances in the body, the theory prescribes. Chinese traditional medicine, Yin/yang, which specifically influences Asian health beliefs, prescribes the same concept. So in the case of the new mother, she was not resisting her physician's treatment, but merely trying to restore the balance that had been disrupted by childbirth.

Physicians should let patients say what they are experiencing, rather than ask them if they have specific symptoms, Berlin said. In many cultures it is considered impolite to disagree, she explained, so they would agree with every symptom their physician mentioned.

After listening to patients' perceptions of their ailment, physicians should try to explain the biomedical reasons for the ailment. This can be especially difficult, Berlin added, because many cultures have differing perceptions of anatomy or pathology.

After acknowledging the similarities and differences of the perceptions, physicians should recommend and negotiate treatment. The mother's physician, for example, might have agreed to allow her to take sponge baths, or perhaps have told the nurses to give the mother warm water with which to take her medication.

Berlin has also accumulated information about the various cultures for physicians, which includes many idiosyncrasies that may indirectly affect treatments. For example, in Asian cultures the soul resides in the head. The common practice of patting a child on the head could startle the soul and cause it to run away, Berlin explained. In order to avoid this, she said, physicians should always ask permission to touch patients' heads during a clinical examination.

Among Hispanics, on the other hand, blood is considered to be in limited supply, and is equated with strength and virility. Patients may resist blood tests for this reason, Berlin explained, and physicians must quell their concerns.

Berlin is making videotapes of role play between physicians and patients to supplement the written material. She hopes to disseminate both as a package to medical schools throughout the country.

"The combination of medicine and anthropology in making treatment of culturally-diverse populations more effective is rare," she said.

"Our goal is to give physicians an awareness of the types of differences they may encounter, how to elicit those differences, and alternative ways to deal with them without antagonizing the patients or hampering the effectiveness of the treatment."

—Shirley Kraus

Medical Center Calendar

PUBLIC EVENTS

WEDNESDAY, APRIL 27

Registration deadline for Dept. of Clinical Social Work course: "I Can Cope," on living with cancer, intended for cancer patients and their families. For further information or to register, call 497-5091.

Basic Science Research Colloquium: "Anchoring of Cells to Their Matrix by an Integral Membrane Proteoglycan"—Dr. Merton Bernfield. 5 p.m., Fairchild Auditorium.

Dept. of Clinical Social Work: "Genetic Counseling and Prenatal Diagnosis"—Rose Grobstein, C.S.W. 2:30 till 3:30 p.m., Faber Auditorium, Children's Hospital at Stanford. For further information on this and other upcoming social services programs offered as part of the department's 70th anniversary celebration, call 497-5091.

Div. of Orthopedic Surgery Grand Rounds: "Nerve Entrapment Syndromes"—Dr. Jeffrey Saal. 8:30 a.m., M114.

THURSDAY, APRIL 28

Dept. of Medicine Grand Rounds: "Temporal Arteritis and PMR"—Dr. Jeffrey Fessel. 8:30 a.m., Fairchild Auditorium.

Dept. of Pharmacology Seminar: "Glucocorticoid Regulation of Protein Processing and Compartmentalization"—Dr. Gary Firestone (UC-Berkeley). 4:15 p.m., Pharmacology Library R358.

FRIDAY, APRIL 29

Dept. of Clinical Social Work lecture: "Oncology Social Work and Clinical Research"—with Isabel Walker, Patricia Fobair, Sherry Feld, Jill Lehman and Susan Weisberg, all licensed clinical social workers. 9 a.m. till 4 p.m., Fairchild Auditorium. For further information, call 497-5091.

Stanford Medical Alumni Association presents: "The Hypocritic Oaf," a musical featuring the Medical School class of '83 and faculty. 8:30 p.m., Dinkelspiel Auditorium.

Div. of Family Medicine Friday noon lecture series on Women and Health: "Women and Women's Health Care—Legal and Professional Barriers"—Rosemary Mann, C.N.M. (teacher of women's health care and law student). Noon, M114.

Div. of Child Psychiatry Grand Rounds: "Problems in the Psychotherapy of Children Who are Incest Victims"—Dr. Penelope Garrison (UC-Davis). 11 a.m. till 12:15 p.m., Faber Auditorium, Children's Hospital at Stanford.

Dept. of Dermatology Lecture: "Systemic Steroids: Taming the Monster"—Dr. Werner Ju. 8 a.m., Dermatology Library R136.

Dept. of Pathology Surgical Pathology Conference: "Gene Rearrangement in Lymphoma"—Dr. Michael Cleary. 8 a.m., L201.

Dept. of Pediatrics Grand Rounds: "Management of Chronic Active Hepatitis"—Dr. Peter Gregory. Case presentation by Dr. Cynthia Thornton. 8 a.m., M106.

MONDAY, MAY 2

Dept. of Medical Microbiology Seminar: "Regulation of *E. coli* Envelope Protein Composition by Local Anesthetics"—Dr. Merna Villarejo (UC-Davis). 1:15 p.m., M114.

Friends of Nursing and Nursing Educational Services: "Ethical Issues in Clinical Practice." An all-day program at Rickey's Hyatt House, Palo Alto. For further information call Carole Kidder at 497-6366.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

...News Notes...

The Dietary Safety Committee and the department of dietetics celebrated last week the accomplishment of 100 accident-free days in dietetics, said Ruben Perez, assistant director of safety/security services.

The committee has worked diligently with the department to make dietetics a safer working environment, and specifically to minimize "lost-time injuries." Perez said he hopes that other departments will follow suit.

The accomplishment in dietetics is no minor feat, Perez said, when one remembers the many hazards in a food production area, including hot and sharp items, and heavy objects.

The safety committee is chaired by Randy Wilson, senior dietary worker, and includes representatives of the seven dietetics divisions, as well as management representative Lori Riewerts. It was formed in 1980 to develop safety strategies.

The celebration included committee and department members, and cake and punch were served.

The 1983 Stanford Album Quilt, hand-stitched by members of the Stanford Medical Faculty Women's Association, is now on display in the front lobby of the hospital, across from the cafeteria.

Chances to win the quilt at a May 13 drawing are on sale this week, and will again be available the week of May 9. Proceeds of the annual fund raising event benefit the Medical Student Scholarship Fund.

Chances sell for $1 apiece, or $5 for six, or $10 for 12. They will also be available from Ann Chase, 494-7821, the week of May 1.

Medical faculty, housestaff and their guests may call Sylvia Witcher, 321-0146, to make reservations for attendance at the drawing, a wine-tasting party to be hosted at Hoover House, the home of President and Jeanne Kennedy. Ticket holders do not have to be present at the drawing, however. The winner of the quilt will be notified later.

Two long-time staff members in the Hospital, Mary Pickthorn and Ella Rush, have recently retired.

Pickthorn, supervisor of transcription in radiation therapy, leaves after 10 years at SUH and will stay in touch by becoming an Auxiliary member in the north intensive care unit. She will also act as a relief transcriptionist in her department when staff shortages occur.

Rush, formerly in the cashier's office, plans to move to Half Moon Bay and may pursue part-time employment there in the fall.

* * * *

As mentioned in a recent "news note," the Palo Alto Medical Research Foundation is sponsoring a Tuesday lunch seminar series which includes several SUMC speakers.

Upcoming lectures include:

- *May 3, Dr. Vernon Oi, research associate in the department of genetics, speaking on "Immunoglobulin Gene Expression in Transformed Lymphoid Cells;"*
- *May 10, Dr. James Whitlock, Jr., associate professor of pharmacology, speaking on "Molecular Mechanisms of Microsomal Enzyme Induction;" and*
- *May 24, Dr. Eckard Weber, research associate in the department of psychiatry, speaking on "Brain Distribution of Opioid Peptides and Their Precursors."*

All lectures take place 12:45, preceded by a 12:15 p.m. lunch, and will be held at the Palo Alto Research Institute, 860 Bryant Street.

For further information, call the office of Dr. Marcus Krupp at 326-8120.

* * * *

Robert Demers, R.R.T., has been appointed chief respiratory therapist in the Department of Respiratory Therapy, announced Antonius Van Kessel, technical director in the department.

Demers was formerly a special pulmonary staff associate and instructor in the department of medicine at the University of Massachusetts Medical Center in Worcester, Mass.

He serves on the board of directors of the American Association for Respiratory Therapy and is a member of the editorial board of the **Respiratory Care Journal**.

* * * *

Linda Gifford-Saenz has been appointed a senior employee/labor relations specialist in Hospital Personnel, said Dan Robinson, acting director of personnel management.

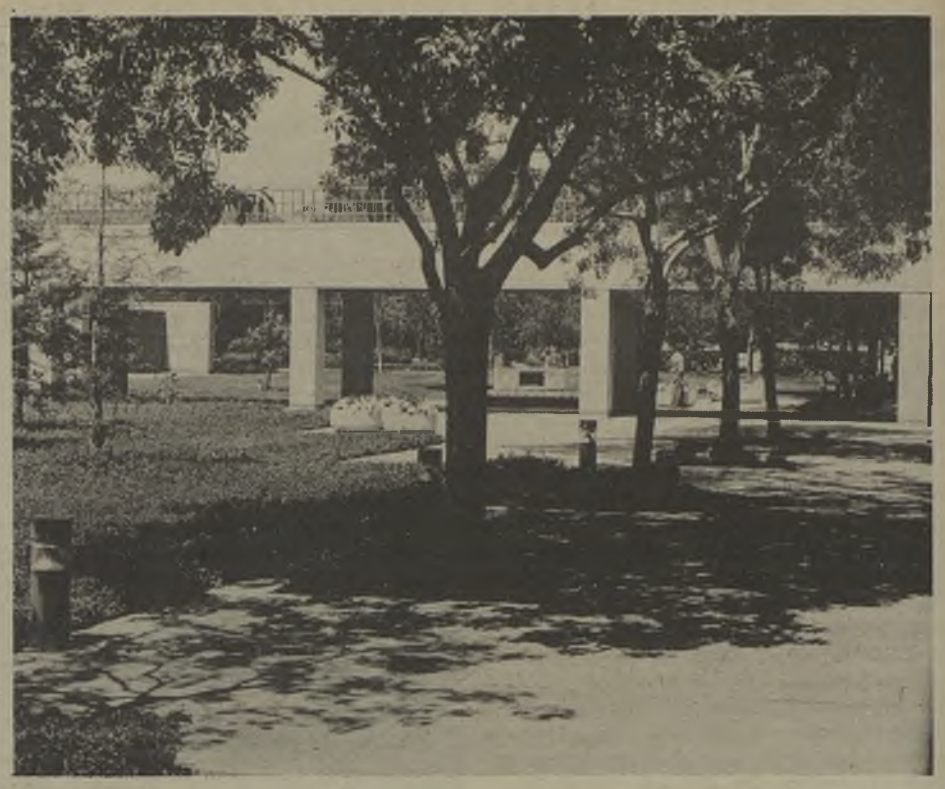
Gifford-Saenz has over nine years of experience in personnel management and was most recently a senior employee relations representative at National Semiconductor Corporation.

She will be located in room E009 of the hospital, and can be reached at 497-6251.

* * * *

Dr. James French, associate professor of pediatrics, spoke yesterday at the monthly meeting of **Parents for Heart**, *a support group for parents of children with heart disorders. His topic was "Activity Restriction and Exercise Tolerance in Patients with Congenital Heart Disease."*

The group is sponsored by the Santa Clara County Chapter of the American Heart Association. Those interested in joining or finding out more about the organization may call the AHA at (408) 247-8555.



* * * *

As of Monday, April 25, construction to connect utilities in the cardiovascular research building has necessitated changes in nearby traffic, said Hilary Ryniewicz, director of Safety/Security Services.

Excavations extending from outside the East 1A wing, past the emergency entrance, and around to the loading dock area are taking place to connect utilities for the CV research building.

For approximately three weeks, no access will be possible on foot from the emergency entrance sidewalk to the loading dock. Pedestrian traffic from the Quarry Road area will be directed down through the loading dock into the hospital.

One-way street traffic will be necessary in this area, and during this time, the Hoover Shuttle bus will operate from the doctors' parking lot near the cafeteria entrance.

Its springtime popularity belies this tranquil peek through the pillars at Alumni Green, especially on nice days when groups of students gather there at lunchtime to bask in the sun.

Noted virologist gives Schultz talk

The sixth Edwin W. Schultz Memorial Lecture, given this year by Dr. Jesse Summers of the Philadelphia Institute for Cancer Research, will take place Monday, May 9, at Stanford Medical Center.

Summers, a senior member of the Institute, will discuss "Molecular Studies on the Replication and Pathogenesis of Hepatitis B-Like Viruses Using Animal Models" at 5:15 p.m., in Fairchild Auditorium. The public is invited, and there is no admission charge.

The noted virologist is researching viral replication and pathogenesis of hepatitis B and related animal viruses. His research offers a chance to study diseases in animals resembling those caused by the hepatitis B virus in humans, including liver infections and liver cancers.

Summers received his graduate training in microbiology at the University of Texas at Austin and later studied at the Salk Institute in San Diego, before joing the Institute for Cancer Research.

The Schultz lectureship honors Dr. Edwin W. Schultz, who served as chairman of medical microbiology at Stanford for 33 years. The memorial lectureship was established at his death in 1971 by his family and friends. The lecture is hosted by the department's graduate students.

For further information, call Shayne Frankel at 497-9202.

Wanted: Research Volunteers

Men and women suffering from herpes are needed to participate in a study being conducted by the division of infectious diseases at Stanford University Medical Center.

Persons with either type of herpes (HSV-I or HSV-II) are eligible to participate, but volunteers must experience outbreaks on the arms, legs or trunk, and *not* around the eyes, lower face or genitals, said Dr. Tony Cunningham, an investigator in the study being conducted by Dr. Thomas Merigan, head of the division.

When the volunteer has a recurrence, researchers will take two tiny, painless tissue samples from the affected area to test for the presence of certain types of cells which fight off the virus. Cunningham said they hope the results of the study will help lead to the development of a treatment to prevent recurrences once the virus has been contracted.

Volunteers will be paid a fee for their participation.

For further information or to volunteer for the study, call Cunningham at 497-5908 between 9 a.m. and 5 p.m.

* * * * * * * *

The Sleep Disorders Research Center at Stanford University Medical Center is once again seeking volunteers to test the daytime alertness of persons taking sleep medication.

Sue Cohen, a research assistant, said about 25 volunteers are needed, and should be men or women aged 21 to 60 who are suffering from insomnia. They must be willing to take sleep medication during a 21-day period and spend 11 nights and six weekend days at the Sleep Center's lab in Palo Alto.

Three separate starting dates will be available through June, Cohen said.

Some volunteers will receive medication while others will get a placebo.

Participants will be electronically monitored in the lab at night and perform skill tests during the day to test alertness.

Volunteers will be paid for their participation. They will also receive two free medical exams and lab workups. Meals will be provided free during the live-in phase. Private rooms and amenities—including free movies—will be furnished.

For further information, contact Cohen at 325-4697.

Hot water: solar system could meet 60% of Eating Club need

A solar water heating system could meet over 60 percent of the Stanford Eating Clubs' hot water demand, according to a study recently completed by two mechanical engineering undergraduates. Such a system could save the Club $600 annually in natural gas costs.

The students, David Luth and Ken Wilke, started work on the project last spring for the ME 275-Solar Energy course taught by Prof. Harry Whitehouse. After examining several design variations, they tailored a system to fit the needs of the Clubs.

Luth and Wilke also prepared economic analyses of the system and of various arrangements through which it might be financed. The study was completed in December and presented to the Eating Clubs for consideration.

"From a technical standpoint, this is a very solid project," noted Whitehouse. "It also makes good sense at a place like an eating club, where there is lots of regular water use."

Luth and Wilke chose an active system—that is, one that uses pumps to move water through the heat-collecting panels on the roof. The system would drain itself at night to minimize the danger of damage from freezing. Two 120-gallon tanks would store the solar-heated water and supply it to sinks and dishwashers through the five existing gas-fired water heaters.

Because the Eating Clubs are closed during the summer when there is the greatest potential for heat collection, Luth and Wilke adjusted the design by placing the solar panels at a slightly steeper angle to accommodate the lower winter sun.

Luth is confident that the system could be built by students. "We'd really like to turn this into a SWOPSI workshop next year, so that 15 or 20 students could actually do some hands-on work on an active solar system. That would also save about $8,000 in labor."

The drawback to the project is its initial cost. A student-built system would cost about $11,500, while one installed by a local solar contractor would cost $19,500. The feasibility study indicates that payback periods would vary from 10 years for a student-built system purchased with existing funds to 17 years for one that is contractor-installed and financed by a 15 percent loan.

The project may be able to receive some financial help from the Student Project Fund at the Housing Energy Conservation Center. According to HECC's Rich Hefter, any conservation undertaking designed and built by students is eligible for assistance. However, the initial cost of the project is so large that most of the outlay would have to come from the Eating Clubs.

"A solar system would be a substantial investment," says Randy Hazelton, the business manager of the Eating Clubs, "but it's a socially desirable thing and we want to look very closely at it. Because of the rather long payback period, we need to be sure that maintenance isn't going to be a problem six or eight years down the road."

Whitehouse commented that Stanford and the Eating Clubs would have more incentive to turn to solar if state and federal solar tax credits were more accessible to nonprofit institutions.

"It's regrettable since the tax credit is really a very minor subsidy compared to the tremendous federal subsidies given to fossil fuels and nuclear power," he said.

"There's a lot more involved here than just money," Luth concluded. "If solar energy is going to get going again, Stanford is a good place to start. Getting exposure and getting students involved are a big part of the process."

—Lyle Zimmerman

Alice Wells named Truman scholar

Alice Wells, 19-year-old sophomore, has helped Stanford maintain its leading position in winning a $20,000 Harry S. Truman Memorial Scholarship awarded annually.

Stanford students have won two of these scholarships in each of the last two years.

The 98 "Trumans" awarded annually go to the students who demonstrate outstanding leadership potential and a commitment to pursue a career in public service. The award consists of an annual stipend of $5,000 over the next four years.

Wells, a resident of Zapata house on campus, and one of the editors of *Approaching Stanford*, works 15 to 20 hours a week at DeGuerre Pool, and also does work at Stern Hall. She is a member of the Program Board and is chair of the ASSU Nominations Commission.

Wells, who comes from Bainbridge Island, Wash., expects to attend law school or graduate school in international relations.

"I'm very surprised I won," Wells said. "The interviews were tough, and I never thought I'd make it."

Political Science Prof. Hubert Marshall, chairman of the committee that selects Stanford's nominees for the competition said, "I am delighted Wells has won. She was an outstanding candidate."

Asked why Stanford wins so many "Trumans" Marshall said, "Probably because we take the scholarships seriously, try hard to get many candidates, and have superior candidates."

Computer teaching scholarships

The Packard Foundation has contributed $15,000 to as general fund offering scholarships for teachers and administrators attending the Institute on Microcomputers in Education at Stanford.

The fund, administered by Interactive Sciences Inc. (ISI), is targeted for those from school districts serving low-income and minority students.

Recipients, along with other educators from around the country, will attend the intensive five-week Institute cosponsored by the Stanford School of Education and ISI.

"There is a desperate need for teachers who can use computers effectively in the schools," says Joan Targ of ISI. "Low-income schools are especially hard-pressed to find teachers qualified to use computers and train others."

The Institute equips educators to act as resource teachers who can design and carry out solid programs in the schools to which they return. No special computer or math background is required.

In addition to hands-on computer experience, Institute participants will receive a broad background in computer education through presentations, field trips, and exposure to the most advanced computer equipment and applications available today.

Scholarship grants will be awarded as requests are received, so early application is advised. Further information on the scholarships and the Institute, which starts June 27, may be obtained from the Stanford School of Education at (415) 497-2102.

Ph.D. oral exams

THURSDAY, APRIL 28

Darryl W. Whiten, physics, "A Relativistic Quantum Field Theory Model, the Optical Potential, and Topics in Weak-Electromagnetic Gauge Theories," 3 p.m., Varian Conference Room.

MONDAY, MAY 2

Edna Christine Hardeman, biological sciences, "Regulation of HMG-CoA Reductase in Compactin Resistant Cell Lines," 2:15 p.m., Herrin Room T175. **Howard A. Zehker,** electrical engineering, "Modeling the Rings of Saturn: Particle Size, Number Density, and Vertical Dispersion," 4:15 p.m., McCullough 134.

TUESDAY, MAY 3

Rona Greenberg Giffard, structural biology, "Severin, Actin, and the Cell Cytoskeleton," 2:15 p.m., D 102 Fairchild Bldg. **Alan D. Lamont,** engineering-economic systems, "Strategies for Running Predictive Models," 2:30 p.m., Terman 332. **Toshimitsu G. Tanaka,** materials science and engineering, "A Unified Numerical Method for Integrating Stiff Time-Dependent Constitutive Equations for Elastic/Visco-Plastic Deformation of Metals and Alloys," 2:30 p.m., 450 Durand. **Paul F. Titchener,** electrical engineering, "Adaptive Spectral Analysis and Signal Modeling with Applications to Music and Speech," 3 p.m., AEL 109.

WEDNESDAY, MAY 4

Jen-Kou Chou, mechanical engineering, "Miniature Electro-Hydraulic Control System," 4:15 p.m., Skilling Auditorium. **Peter C. Cramton,** business, "Bargaining with Incomplete Information," 9:30 p.m., GSB 243.

THURSDAY, MAY 5

Jonathan W. Greene, electrical engineering, "Configuration of ULSI Arrays in the Presence of Defects," 4 p.m., Skilling 193. **Man Sung Co,** chemistry, "X-Ray Absorption of Hemocyanin and Hemerythrin," 2:15 p.m., Chemistry Gazebo. **Jose Alejandro Ramirez,** education, "The Potential of Elementary Schooling to Equalize Income from Labor Between the Rural and the Urban Populations in Mexico," 2:15 p.m., e114 Education Bldg. (Cubberley).

FRIDAY, MAY 6

Zephaniah T. Davis, education and linguistics, "Input in ESL: Instruction and Peer Discourse in the Acquisition of ESL by Elementary School Children," 2:15 p.m., e114 Education Bldg. (Cubberley). **John De Sollar,** English, 2:15 p.m., 41-F. **Kathryn L. C. Dimiduk,** applied physics, "Hg Loss, Annealing, and Ion Implantation in Mercury Cadmium Telluride," 2:15 p.m., Applied Physics 200. **Kathie Lee Krumm,** economics, "Investment During an Attempted Liberalization: Argentina 1976-1981," 2:15 p.m., Encina Hall 414.

Blood Bank at Human Biology Friday

The Stanford University Blood Bank will hold a blood drive from 11 a.m. to 3 p.m. Friday, April 29, in the Human Biology Seminar Room (Building 80, Inner Quad).

Another blood drive has been scheduled for 10 a.m. to 4 p.m. Tuesday, May 3, in the Law School student lounge.

Faculty and staff are urged to donate blood at one of these times and, whenever possible, to announce the drive to students and colleagues.

Stanford University Hospital and the Children's Hospital use more than 100 units of blood each day, and the Blood Bank appreciates blood donations to support this need.

ARCS scholarships won by 10 here

Ten Stanford students have recently been awarded scholarships of $2,000 to $5,000 from the Achievement Awards for College Scientists Foundation, Inc., a private corporation that seeks to "restore in this country the kind of dynamic that was here in the Sputnik era."

The Stanford recipients are: John S. Foster III and Joakim F. Lindblom, applied physics; Robert W. Bauman, Jr. and Diana C. Beebe, biology; Jonathan Raab and Gregory Mummy, civil engineering; Dean A. Mulla, electrical engineering; Alexander E. Koonce, mathematics; Martin E. Kernberg, medicine; and Mark T. Mueller, physics.

Stanford's winners are among the latest of 396 students who have been given ARCS grants since the local chapter was founded in 1972. Nationally, the foundation's 11 chapters have awarded more than $4 million in grants to 3,000 people since 1958.

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

44335-PM (JCC:2504) OFFICE ASST II-SPEC: 50%; 8-12 or 9-1; heavy phone & reception; respon for keeping records of Cytolog cases & sending out final reports; typing stores & purchase requisitions & following up on problems; tissue correlation; fill requests for slides, etc; QUALIFICATIONS: typ 60; excel telephone skills & manner; organizational skills; accuracy; contact: Leslie Culligan, Med Ctr P-2020, 497-7211.; B10; $595-623.

41747-PM (JCC:2596) SECY II-SPEC: Respon in 3 areas: 1) 50% bkup for Admin Asst to Dean of Law Sch'l (incl substitution during absences); answer & screen phone calls; receive & screen visitors; typing & transcription support; asst in travel arranging & mtg scheduling; 2) 15% devoted in providing basic sec'l support for Asst Dean; 3) 35% devoted to sec'l support for Appts Committee; typing & distributing Committee memos, as well as scheduling candidate interviews w/ faculty members, collecting, analyzing & correlating candidate evaluation forms, etc; QUALIFICATIONS: typ 75+; excel typing & transcription skills; ability to use most offc eqpt; ability to commu w/ people at all levels; knowl of or willingness to learn word processing eqpt; send appl/resume to E. Chatfield, Room 113, Crown Quad.; B12; $1310-1373.

4711-PM (JCC:2058) ADMIN ASST I (N): Supv expenditures on Dept. operating, fellowship & gift accts; liaison for faculty & staff to Sch'l & Univ regarding interpretation & application of Univ policies & procedures; compile & organize data for reports, & budget control; maintain grad & undergrad records & progress reports; prep budgets; submission of proposals to granting agencies w/ sponsored projs offc; assist in interviewing & hiring of clerical staff, train staff; maintain records; supv 2 full-time employees; send appl/resume to Kim Ciardullo, AES, 305 Mitchell.; B16; $1593-1671.

23968-PM (JCC:2078) ADMIN ASST I (N): Assists Dir in managing active clinical, research & edu'l unit; interacts w/ faculty, students, patients, visitors, office, technical & research personnel; supv offc staff; respon for hiring, training, performance evaluations, monitoring work respon, establishing prior, discipline & dismissals; assists in prep of Univ & Hospital budgets, monitoring research grants & special funds; purchasing of supplies, eqpt & contracts; respon for Dir's corresp, appts calendar, travel arrangements, slide & course preparations; QUALIFICATIONS: must have admin & managerial exp; elementary acctg knowl essential; knowl of Hospital & Univ policies & procedures, personnel & finances, highly desirable; must be personable, skilled in commu, flexible & tactful; knowl of word processor, or desire to learn, highly desirable; contact: Carolyn Emmerson, Admin Asst, Med Ctr, C022, 497-6883.; B16; $1593-1671.

31157-PM (JCC:1747) LIBRARY SPEC I: Tues-Thurs, 9-6pm; Fri & Sat, 8-5, schedule changes during Intersession: M-F, 8-5; performs duties in Art Lib; staffs circulation desk; enforces Art Lib stack-access & circulation regulations; answers infor'l/dir'l questions; pages books; checks book mat'ls at lib exit point; files in card catalog, shelf list & circulation file; prep mat'l for binding; handles course reserves; check in new books & periodicals; searches book catalogs; respon for operation of Art Lib on Sat, & Tues-Thurs, 5-6pm; supv 1 student assistant; QUALIFICATIONS: typ 35; prev public serv exp; punctuality & dependability; reading knowl of 1 non-English Western European lang desirable; contact: Bob Johnson, Green Lib, Room 223 (497-3152).; B10; $1189-1246.

31159-PM (JCC:1755) LIBRARY SPEC II: 75%; Mon-Thurs, 4-11pm; Fri, 10am-5pm; during Summer Session & Intersession, M-F, 10am-5pm; performs duties in Swain Lib of Chemistry & Chemical Engrg; respon for the evening operations of the Lib; performs complex info'l & reference assistance using manual & automated sys (RLIN & SPIRES); respon for hiring/-dismissal, training, evaluating & scheduling of student assistants; respon for card catalog maintenance; respon for collection maintenance; maintains trade catalogs & journals files; QUALIFICATIONS: typ 40; requires prev lib exp; prev supvry exp; good clerical & organizational skills; prev public serv exp, preferably in a science lib; desirable: sci bkground; knowl of and/or exp w/ automated sys, preferably RLIN, SPIRES; contact: Bob Johnson, Green Lib, Room 223 (497-3152).; B12; $983-1030.

31158-PM (JCC:1755) LIBRARY SPEC II: Performs duties in Catalog Dept; processes monographs online w/ LC printed & online & RLIN member copy; searches a variety of printed & online files, as well a card catalogs, to verify name headings & series treatment; types authority cards for personal, conference & corporate headings; creats & types series cards using AACR II format; files in SUL catalogs, incl the Main Catalog; inputs prepared copy into RLIN database; QUALIFICATIONS: typ 40; required: ability to work w/ good judgment based on good understanding of processing policies; exercise care in handling rare, valuable and/or fragile mat'ls; high degree of accuracy in typing; prev lib exp, preferably in tech processing; reading knowl of 1 non-English Western European lang, preferably German or Latin; ability to lift heavy catalog trays (15 lbs); desirable: add'l skills in Slavic lang or other major non-English, Western European langs; prev exp w/ RLIN or other automated sys; contact Bob Johnson, Green Lib, Room 223 (497-3152).; B12; $1310-1373.

SLAC

94262-JM (JCC:2554) SECRETARY II: Asst in providing sec'l serv for group of 15; typ letters, memos & genl admin forms; maintain records; arrange mtgs & appts; process internal forms; distribute mail; answer phones; perform related tasks as assigned; QUALIFICATIONS: high sch'l or equiv; sec'l exp & knowl of offc procedures; accurate typing of 60 wpm; good English syntax, grammar & spelling; knowl of offc machines; ability to work independently & under pressure.; B11; $1246-1310. APPLY AT SLAC

94260-JM (JCC:8880) Electronic Engineer: Participate in design, construction, installation & checkout of instrumentation & control sys for linear collider proj, which incl develop't of instrumentation & control sub-sys used for control & monitoring of complex accel. apparatus; design of digital, analog & micro-processor circuitry for application to various instrumentation & control projs; develop't of control & monitoring software for various instruments performed on a VAX computer or on micro-processors, etc; QUALIFICATIONS: MSEE or equiv; several yrs of practical exp relevant to computer control of particle accelerators; exp in detailed design of analog, digital & micro-processor circuitry; ability to work w/ diverse group; ability to supv others; ability to commu tech info both orally & in writing; C99; $3000-3800. APPLY AT SLAC

91525-JM (JCC:8880) Electronic Engineer: Design high speed digital electronics circuits, modules & sub-sys related to accelerator nanosecond precision timing sys; experimental physics modular electronics sys; configure & test completed sys; assume respon for all phases of electronics sybsys fr conceptual design to completed, etc; QUALIFICATIONS: MSEE or equiv; several yrs exp in high speed circuit tech, particularly involving ECL, Schottky TTL, programmable logic, gate arrays, & hybrid tech; knowl/exp in basic computer-aided testing tech, data acquisition sys (e.g. CAMAC & FASTBUS); demonstrated commu skills both orally & in writing.; C99; $2800-3600. APPLY AT SLAC

946840JM (JCC:8880) Electronic Engineer: Hardware & software sys design of computer control & monitoring sys for a linear accelerator; sys integration & fieid test of installed components; design, develop & test of analog & digital circuits for computer control & instrumentation sys; design, plan, document above sys & train field personnel in maintenance & troubleshooting; QUALIFICATIONS: BSEE (MSEE preferred) in electronics or computer sci; extensive exp in computer control sys; exp in analo & digital design, particle accelerator control sys desirable; knowl of FORTRAN essential; assembly lang, camac & multibus exp desirable; good oral & written commu skills; ability to effectively supv efforts of others.; C99; $3000-3800. APPLY AT SLAC

95094-JM (JCC:6680) S&E TECH MECH: TMS Unit; prov genl mechanical, vacuum & plumbing support for klystron test & operations; perform mechanical & electrical tests on high power klystrons; prepare & install klystrons for test or operation; fabricate, repair, maintain cooling sys; serv & repair liquid nitrogen storage tanks & sys; operate overhead bridge cranes & other eqpt; QUALIFICIATIONS: high sch'l, tech, or vocational training or equiv; proficient in use of hand tools & familiar w standard shop practices; ability to follow instructions; ability to move heavy objs; able to qualify for gov't driver's license; couple yrs exp in use of machine tools, soldering, brazing, welding; vacuum sys & equip utilizing mech forepumps, cryogenic pumps, ion pumps, etc.; A28; $1647. APPLY AT SLAC

95098-JM (JCC:6680) S&E TECH MECH: TMS Unit; Klystron processing to incl installing on bake station leak check, operate the bake station, pinch off after bake & prepare tube for test; bake station & vacuum eqpt maintenance; assemble & leak check klystron components; operate hydrogen furnaces; prep klystrons & subassemblies for brazing; heliarc welding of klystron sub-assemblies & related components; QUALIFICATIONS: high sch'l, specialized schooling in vacuum tech & microwave tube construction or equiv; some exp in microwave tube construction and/or construction of vacuum devices or sys; proficiency in use of hand & power tools; able to qualify for gov't driver's license; ability to do specialized heliarc welding on mat'ls such as stainless steel, copper, cupronickel & molydenum; able to understand & follow written & verbal instructions incl interpretation of blueprints.; A28; $1647. APPLY AT SLAC

Rental housing

HOUSING AVAILABLE

□ **June thru Aug.:** 1BR apt in Boston/Cambridge area. Fully furn. in sec. complex. Walk to Harvard Sq. & pub. transp. Will sublet or trade for your attrac. apt. or hse for summer. Nonsmokers. Call COLLECT (617) 876-1232.

Profs perform at talent show

Student Arts at Stanford (STARTS) will present the fourth annual "Professors in Performance" at 8 p.m. Saturday, May 7, in the second floor lounge of Tresidder Union.

A showcase of faculty and staff talent, "Professors in Performance" includes a variety of acts. William Chace will be the master of ceremonies for this year's show which features the following: Gwendolyn Watson, cellist; Juan Valenzuela, dancer; Denis Phillips, magician; Richard Sogg, pianist, Jong Rho, juggler/mime; and Keith Archuleta, singer.

Following the performance, an informal reception will be held. The public is invited to attend.

Admission will be $3 general and $2 students/senior citizens.

Holland featured in travel series

"Holland and the Amazing Dutch," a travel documentary narrated in person by its producer, John Roberts, will be presented twice by Stanford University Events and Services on Monday, May 2.

The film will be shown at 2:30 p.m. in Kresge Auditorium, and 7:45 p.m. in Memorial Auditorium.

In his film, Roberts explores the culture and geography of a country in which half the population lives below sea level. By building huge dikes, they have created farmland and homesites on land reclaimed from the sea.

The film also includes the familiar sights of windmills, tulips, and cheese-making, as well as life on and along the canals, and the varied attractions in the cities of Amsterdam, The Hague, Rotterdam, Delft, and many more.

Tickets are $3 for the matinee and $4 for the evening showing, and are available at Tresidder Ticket Office (415) 497-4317, or at the door.

Ballet Folklorico de Stanford is directed by Susan Cashion

3 folkloric groups in May 1 concert

The Ballet Folklorico of Stanford, the Khadra International Folk Ballet, and the Balkan women's choir, Kitka, will perform at 1 p.m. Sunday, May 1, in Memorial Auditorium.

The folk concert, part of the annual day of workshops and parties in celebration of May Day at Stanford, is sponsored by the Athletics Department and the Dance Division. Tickets will be available at the door for $5 ($4 for students).

Khadra, under the direction of Lisa Codman, will present suites from Hungary, the Ukraine, and the Caucasus Mountains of the Soviet Union. The company is well known for its Caucasian dances in which the women glide ethereally across the stage and the men dance "en pointe" wearing soft leather boots.

The Ballet Folklorico de Stanford, under the direction of Susan Cashion, will present dances from the Mexican State of Nayarit, including the famous knife dance, "Los Machetes." In their Yucatan Suite, they will be joined by San Jose dance company Los Ninos de Aztlan, under the direction of Rudy Figueroa. This suite includes a beautiful Yucateco-Mayan wedding ceremony and a Vaqueria dance party.

Rounding out the program, Kitka will sing from its Balkan repertoire.

For information, please contact Lisa Codman at 497-1234.

Famous film pairs featured Mondays

Student Arts (STARTS) at Stanford will present "Fabulous Film Couples," on the first four Mondays in May at 7 p.m. and 9 p.m. in Tresidder Room 270. The couples include Bogart and Bacall; Stewart and Arthur; Astaire and Rogers; and Tracy and Hepburn. The film schedule follows:

May 2—The Big Sleep (1946-Howard Hawks) stars Humphrey Bogart and Lauren Bacall. He plays Philip Marlowe, a private eye hired to investigate the gambling debts of a wealthy man's younger daughter. She plays the older daughter who helps him.

May 9—You Can't Take it With You (1938-Frank Capra) features James Stewart and Jean Arthur as a young couple who come from two very different backgrounds. His family is a wealthy, uptight, Wall Street-executive type; hers is a zany group of nonconformists who spend their time pursuing their favorite hobbies. This comedy is based on the play by George S. Kaufman and Moss Hart.

May 16—The Gay Divorcee (1934-Mark Sandrich) a breezy musical comedy. A married woman tries to get a divorce, but falls in love with a dancer she mistakenly thinks is the gigolo she hired to help break up her marriage. Cole Porter tunes include "Night and Day" and "The Continental."

May 23—Adam's Rib (1949-George Cukor), stars in Spencer Tracy and Katharine Hepburn. They play a married pair of lawyers who work on the same case—but on opposing sides.

Admission is $2 for students and faculty and staff with ID and $3 for the general public. For more information call 497-9671.

Undergrad Special Program sponsors jazz saxophone concert Friday, May 6

The Undergraduate Special Program at Stanford University will present the ROVA Saxophone Quartet in concert at 8 p.m. Friday, May 6, in Stanford's Terman Auditorium.

The concert will be one of ROVA's last appearances before departing on a seven-city tour of the Soviet Union.

The San Francisco-based avant-garde jazz quartet will tour the Soviet Union, Rumania, and Yugoslavia this June, accompanied by writers and photographers to document the trip.

BBC broadcasts to Eastern Europe, and a successful concert last year in Hungary have created a sizable demand for ROVA's music in Eastern Europe. The readers of *Jazz Forum*, a jazz magazine published in Warsaw and read throughout Europe, recently voted ROVA, the Art Ensemble of Chicago, and Weather Report its top three groups.

A year ago, ROVA received an enthusiastic invitation from the Contemporary Music Club of Leningrad to perform in the USSR. Seeing it as "an opportunity to contribute to an exchange of art, feelings, ideas, and goodwill with the people of Russia," ROVA accepted despite the difficulty and expense. Through negotiations with the American and Soviet governments, ROVA has received permission—but, of course, no funding—to tour the USSR. Proceeds from this concert will help support the tour.

Tickets at $5.50 ($4.50 for students) are available at the Tresidder Ticket Office and all BASS outlets.

Cinderella: Gov. Corner

An adaptation of the original TV production of Rodgers and Hammerstein's *Cinderella* will be the first production of the Governor's Corner Company, a troupe of players from Stanford's newest living group.

The lighthearted fantasy will begin at 8:30 p.m. Thursday through Saturday, April 28-30, in the outdoor theater at the Orrin Elliott Program Center, Governor's Corner. It is free and open to the public.

This *Cinderella* will be a college version of the timeless classic, presented in a 1920s motif.

Those who need directions to Governor's Corner may call Bill Martin, 328-6664, between 1 and 4 p.m.

Trombonist to play with Jazz Band

Stanford's Jazz Band brings famous trombone player Bill Watrous to town Friday, May 6. Presented by the Music Department, Watrous will give a free trombone clinic at 2 p.m. in Dinkelspiel Rehearsal Hall and appear with the Band in concert at 8 p.m. in Dinkelspiel Auditorium.

Student director Jose Bowen will lead the Band for the first half of the show in modern arrangements of Big Band tunes, including *Nica's Dream*, *I Want a Little Girl*, and a special version of *Spain* by Chick Corea.

Watrous will take over after intermission, mainly playing tunes by Tom Kubis. Watrous is a mainstream-modern soloist of extraordinary skill. He has played with Quincy Jones, Woody Herman, Count Basie, and many other jazz stars. He was a member of Ten Wheel Drive in 1971, when he left to form his own band—Manhattan Wildlife Refuge.

Bowen is a junior at Stanford majoring in ancient history and chemistry. He has received two music awards from the Bell T. Richie Scholarship fund in Fresno: one for $1,000 to write a flute concerto, which he completed last summer, and another for $600 to write an orchestral work, which he will compose this summer.

Tickets for the Jazz Band concert May 6 are $4 general, $2 students and senior citizens, available at Tresidder ticket office, 497-4317 and the door. The Band will give a preview of their concert at noon Wednesday, May 4, in front of Tresidder Union.

Israeli folk song, dance

An evening of Israeli Folk Song and Dance, benefiting ARMDI (the Israeli Red Cross), will be sponsored by the Stanford Israeli Student Organization starting at 7:30 p.m., Sunday, May 1, at the Cubberley High School Pavilion. The evening will feature live music by Eshkoliot, exhibition dancing, folk dance instruction, and refreshments. Admission is $5. The Pavilion is located at 4000 Middlefield Road in Palo Alto.

Music Department

Follow the pied piper to children's event

Crumhorns, sackbuts, curtals, shawms, and present day instruments will be the order of the day at the Pied Piper Concert at 2 p.m. Saturday, May 7, at 1701 Bryant Street in Palo Alto. This outdoor musical program for elementary school age children will feature Stanford's Renaissance Wind Band under the direction of Herb Myers. Myers is a lecturer in Early Winds and a former member of the New York Pro Musica.

The band will demonstrate the instruments and play early and modern music to contrast the music and the instruments. Admission is $5 per adult and $1 per child. All proceeds benefit The Music Guild at Stanford, which provides scholarships for Stanford music students. Call The Music Guild office at 497-1780 to make reservations or for further information. Tickets will be available at the gate.

Organist Decker in May 2 concert

Organist Pamela Decker will present a free recital of German, English, and French organ music at 8 p.m. Monday, May 2, in Memorial Church at Stanford.

Presented by the Department of Music, her program will include J.S. Bach's *Toccata and Fugue in D minor* (Dorian) and works by Walther, De Grigny, Howells, Alain, Dupre, and Distler. Anthony Antolini will join Decker for Distler's *Two Sacred Concertos*, op. 17, for tenor and organ.

Decker is organist at St. Bede's Episcopal Church in Menlo Park. She recently completed her doctorate in organ at Stanford, where she studied organ with Prof. Herbert Nanney and composition with Prof. Leland Smith.

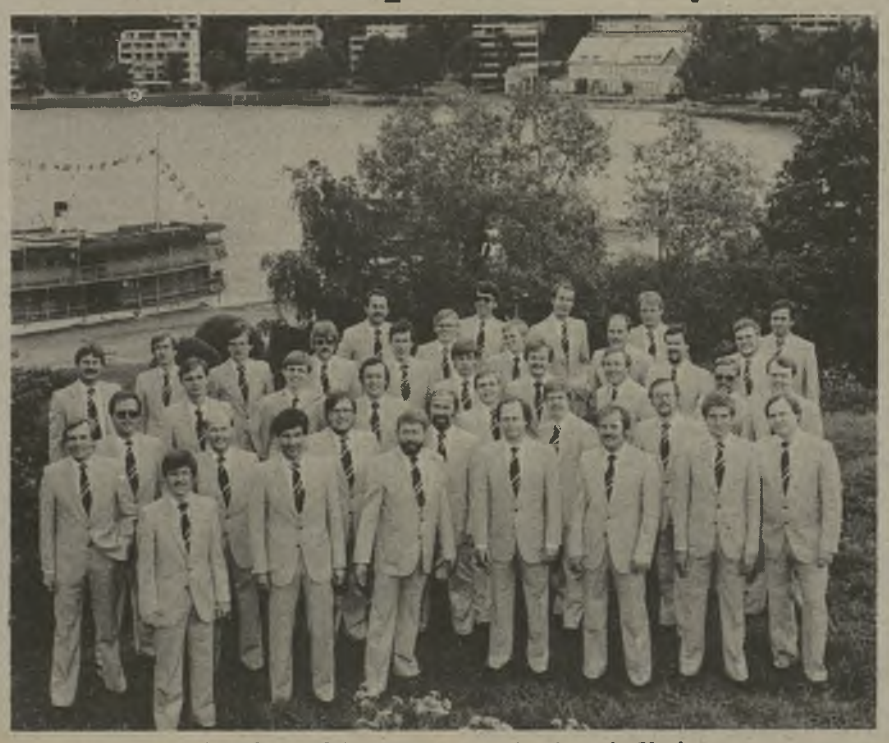
In 1980-81 Decker studied organ and composition as a Fulbright Scholar in Germany. She has performed extensively, both in the U.S. and Europe, and while in Germany was invited to perform her *Passacaglia* for the North German Radio Network. Several of Decker's compositions have been accepted for publication.

Pamela Decker

Anthony Antolini, tenor, is on the music faculty of Cabrillo College in Aptos and is music director of St. Bede's Church. He holds graduate degrees in both music and Slavic Languages from Stanford, and has studied abroad at Moscow State University and the Sommerakademie J.S. Bach in Stuttgart, Germany.

This summer Antolini will conduct singers from the Cabrillo College Chorus and the St. Bede's Choral Society in a concert tour of Holland and Germany.

Paul, Kass recital May 1



Sopranos Sharon Paul and Nancy Kass, accompanied by pianist Camilla Passarelli, will give a free recital at 8 p.m. Sunday, May 1, in Tresidder Lounge

Presented by the Department of Music, the two will perform solos and duets by Rossini, Faure, Handel, Brahms, Schumann, and Mozart. Graduate student in choral conducting Rob Campbell will conduct *Drei Geistliche Lieder* by Mendelssohn for solo mezzo-soprano and quartet.

Both Paul and Kass are students of voice teacher Lila Stuart. Kass is a senior human biology major and director of Counterpoint, a women's singing ensemble.

Paul is a D.M.A. candidate in choral conducting and T.A. for both the Memorial Church Choir and the Stanford Chorale.

West Coast premiere May 8 for top Finnish choir

Members of the Helsinki Academic Male Choir

The Helsinki Academic Male Choir will perform at 2:30 p.m. Sunday, May 8, in Dinkelspiel Auditorium, under the direction of Heikki Saari. Presented by the Music Department, this will be a rare opportunity to hear Finland's top male choir.

Their program will include romantic Finnish music from the turn of the century by Sibelius, Kuula, Palmgren, and others; contemporary Finnish choir music, including jazz works by Finnish composer Heikki Sarmanto; spirituals and folk songs.

In 1981 the Helsinki Male Choir won the Montreux choir contest in Switzerland, and last year placed first in the male choir division of the BBC's "Let the People Sing" contest in England.

The 50-voice choir was founded over 30 years ago at the Helsinki School of Economics. It has toured all over Europe and the Easter U.S.; this will be its first West Coast appearance.

Tickets for the May 8 concert are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

TMU flute concert May 3 with Ochoa

The Department of Music presents flutist Ellen Ochoa in a free concert at 8 p.m. Tuesday, May 3, in Tresidder Lounge. She will be accompanied by pianist Camilla Passarelli.

Ochoa, a Ph.D. candidate in electrical engineering at Stanford, studies flute with Music Department lecturer Alexandra Hawley. Her May 3 recital will include C.P.E. Bach's *Hamburger Sonata*, *Sonatine* by Dutilleux, Enesco's *Cantabile et Presto*, Bartok's *Suite Paysanne Hongroise*, and Schubert's *Introduction and Variations*.

Recital of flute, piano set May 8

The Music Department will present flutist Yuri Ito with pianist Dorian Ho in a free concert at 8 p.m. Sunday, May 8, in Dinkelspiel Auditorium.

Ito is a senior at Stanford majoring in Asian languages who plans to pursue a career in music. She studies flute at Stanford with Frances Blaisdell. In February she soloed with the Stanford Chamber Orchestra, and the *Peninsula Times-Tribune* commented: "Her flexibility is at the service of genuine musical feeling."

Ho received an M.M. from Juilliard and studied at the Vienna Academy of Music. She has soloed with the New Orleans and Atlanta Symphony Orchestra and the Texas Chamber Symphony.

Their program May 8 will include J. S. Bach's *Sonata No. 5 in e minor*, Schubert's *Introduktion and Variationen*, Chopin's *Ballade No. 1 in g minor*, Ibert's *Concerto pour Flute et Orchestre*, and *Three Preludes, op. 18* by Muczynski.

Bach Festival trip

The Music Guild at Stanford announces its second annual trip to the Carmel Bach Festival July 14-18, 1983. The tour includes transportation, accommodations, meals, admissions to concerts on the itinerary, cocktail parties at private residences, plus a special tour of the Monterey Bay Aquarium.

Major works at the Festival include Mozart's opera "Cosi fan tutte" and Bach's "The Passion According to St. John" with Greg Wait of the Stanford Music Department as soloist. For further information call The Guild office at 497-1780.

The Oberlin Dance Collective, shown here in "Diminishing Returns," will perform at 8 p.m. Friday, April 29, in Memorial Auditorium. The Collective originated at Oberlin College and Conservatory but has since made San Francisco its permanent headquarters. Tickets for the performance range from $10.50 to $7.50 ($3 off for students). The group also will give a free lecture-demonstration at 8 p.m. tonight (April 27) in Memorial Auditorium.

Watercolors on display at Fac Club

Watercolor landscapes by San Carlos artist Lorraine Schreiber will be on view at Stanford's International Center from May 4-30, with a reception for the artist from 5-7 p.m. Friday, May 6, at the Center.

Schreiber experiences painting as a one-to-one relationship between herself and nature and works directly from her subject matter. The forms in her strong compositions are derived from rocks, trees, mountains, and the sea. On many mornings the artst sets up her easel on the San Mateo County beaches or amongst the coastal rocks. Her watercolor paintings range from the representational work to abstract compositions.

Raised in New York, Schreiber has been active as an artist and art educator during most of her adult life. Undergraduate work was done at the Cooper Union Art School, and she received a master's degree in art education from Queens College in New York.

Schreiber studied with Barse Miller and Morris Kantor in the East before settling in San Carlos in 1970. Here she has worked with Millard Sheets, Morris Shubin, Rusty Walker, and Richard Heidsiek and has, herself, taught extensively.

She was one of the artists in residence at Yosemite National Park during the summer of 1982, and spent a weekend this April teaching advanced watercolor painting on location at the Mendocino Art Center. Her work has been widely exhibited in New York, New England, and in California.

"El Capitan" by Lorraine Schreiber

O&M conducting survey of faculty and staff

Operations and Maintenance, part of the Facilities and Services Organization, is interested in customers' opinions about how well the Operations and Maintenance staff is performing its job.

1,050 survey questionnaires were distributed in the campus mail last week to randomly selected members of the faculty and staff (463 faculty and 407 staff) and to 180 managers of academic buildings and student housing units on the central campus.

Operations and Maintenance will appreciate each recipient taking a few moments to fill out and return the form to Jack Albrecht, assistant director of facilities and services, 128 Encina Commons, before May 15.

Contemporary American Indian art to be featured

Two exhibits of contemporary art by American Plains Indians are coming to Stanford during the month of May.

One will be in the lobby of the Meyer Library for the whole month, the other will be in the Faculty Club for a shorter period.

Both are offered as part of Stanford's annual American Indian Festival.

The exhibits will include examples of porcupine quill weaving, bead work, sculptures, ceremonial dressed figures, leather crafts, paintings, and Morning Star quilts.

They are a small sampling from the collections of Florence Pulford of Los Altos Hills, probably the largest and most important private collection of contemporary Plains Indian art in the United States. She is the wife of Clinical Professor of Pediatrics Gurdon Pulford.

For years Mrs. Pulford has been traveling to the reservations in Montana, Saskatchewan, and the Dakotas to find and encourage latent talents among contemporary artists to recapture the arts and crafts of their ancestors, adding their own creative ideas to the traditional designs and styles of their tribes.

More than that, she has been helping these Indians to a growing public recognition of their work. The beauty, quality, and variety of the art in her own collection is proof enough of this indefatigable woman's success.

"People have no idea that among the Plains Indians there are such remarkable artists," Pulford enthuses. "We are accustomed to associating Indians and art with the Southwest, with the tribes of the Navajo, Hopi, Zuni, and Apache. . . ."

But as the first extensive U.S. tour of items from her collection moved from gallery to gallery, she noted that "There was a sense of discovery, after the viewers' first delight in the blazing colors and designs (in the quilts), that these creations were by Plains Indians—Assiniboin, Gros Ventres, Mandan-Hidatsa, Cree, and Sioux.

That sense of discovery seems to follow wherever some of her collection is shown, whether here or in Europe.

Staff ski weekend at Stanford Sierra camp

If you are ready for a final weekend of cross-country skiing in the Sierras, or just for a getaway there is space available this coming weekend (April 29-May 1) for the Stanford Sierra Camp's spring weekend for members of the Stanford faculty and staff.

The program arranged by the Stanford Alumni Association includes ski touring, hiking to Desolation Wilderness, a snow picnic, and guided nature tours. From arrival anytime after 3 p.m. Friday until departure after lunch on Sunday, participants will enjoy the camp's noted cuisine.

Cost of the weekend is $100 per adult, $50 per child 8-14, $40 per child 3-7, and $20 per child under three.

Late reservations may be made by calling Sue Cahn at the camp, (916) 514-1244.

Disabled athletes will gather May 21 for second annual Special Olympics

The second annual Stanford Special Olympics swim meet will be held from 8:30 a.m. to 4 p.m. Saturday, May 21, at DeGuerre pool.

Developmentally disabled athletes from all over the Bay Area will gather to compete in such swim events as freestyle, butterfly, inner tube races and inner tube water polo. Last year's meet was a huge success with more than 250 participants.

A group of about 40 Stanford students headed by Carol Jennings and Steve Elig is organizing and hosting the swim meet. The students are raising $3,000, recruiting volunteers and providing lunch, medals, and T-shirts for the athletes.

Besides high-spirited competition, jugglers, musicians, and games will provide entertainment throughout the day. The Stanford Band and Dollies will perform at 2 p.m. for the participants.

The organizing committee needs over 400 volunteers to help run the event smoothly. The many ways to become involved include chaperoning individual athletes for the day, helping at the entertainment area, lane swimming with the swimmers during races, helping with scores and many other jobs.

Prospective participants should contact Marie Alberry, Santa Clara County Special Olympics at (408) 578-2336.

Individuals interested in volunteering may contact Jennings at (415) 324-1808, Elig at 323-6412 or Beverly Bermudez at 327-4504 or send a note to Stanford Special Olympics Committee, P.O. Box 7801, Stanford, Calif. 94305.

Film on Germany set for April 28

Germany is the destination of the Other Cultures Film Series this week as "60 Millions: The Germans and their Country" and "Encounter: Impressions of Germany" are screened at the International Center. The films will be shown at 7:30 p.m., Thursday, April 28.

The Federal Republic of Germany—a land of contrasts, lying between the North Sea and the Alps—has about 60 million inhabitants. Who are these Germans and what are they like?

These films explore the German people and their lifestyles and customs that are as varied as the landscapes and towns that they live in. "60 Millions. . ." tries to answer some questions about how the Germans treat minorities, their politics, religions, work, and leisure. The focus is on the people.

"Encounter. . ." examines a variety of cultural, economic, social, and political elements of life in Germany. The diversity of the economy and culture within the nation needs to be understood before one can develop an accurate perspective on it.

Both films are free and open to the public. A donation of 75 cents will be requested, however, to help defray cost of the series. After the films, enjoy coffee and homemade pastries at Cafe, in the dining room of the I-Center.

Motion picture marker planned

Governor Leland Stanford's role in the development of motion pictures will be acknowledged by a State Historical Marker on Campus Drive West which is to be dedicated at 11 a.m. Saturday, April 30.

The marker commemorates the research in photography by Eadweard Muybridge on the Palo Alto Stock Farm in 1878-79 which resulted in his famous "horses in motion" series. It was the first

internationally recognized scientific research Stanford funded.

The base for the marker, constructed of pieces of sandstone retrieved from the 1906 earthquake rubble, has been built by volunteers from the Mountain Charlie Chapter No. 1850 of E Clampus Vitus. Delayed in their work by soggy ground and rainy weekends, the volunteers say the monument will be complete and the bronze plaque in place by Saturday morning.

The marker is located on a gravel turnout across from the driving range not far from Stanford's Red Barn.

The Stanford Historical Society, which shared the expense of the marker with E Clampus Vitus, will also share in the brief program. The public is invited to attend.

Lectures

Presidential candidate Stassen on tap April 28

Harold E. Stassen, America's most frequent Presidential aspirant, will speak at 4 p.m. Thursday, April 28, in the Branner Hall Lounge at Stanford.

He previously had been scheduled to speak April 14 as part of a Stanford Law Forum series featuring Presidential candidates.

Senator Eugene McCarthy will speak in Bishop Auditorium at the Graduate School of Business at 7 p.m. Monday, May 16. Congressman Morris Udall will speak in Kresge Auditorium at the Law School at 4 p.m., May 20.

Stassen's strongest bid for the Presidency was in 1948 when he lost the Republican nomination to New York Governor Thomas Dewey. Stassen also sought the Presidency in 1952, 1956, 1960, 1964, 1968, 1976, and 1980.

Palestinian lawyer

Dr. Jonathan Kuttab, a Palestinian lawyer from the West Bank, will discuss the legal problems arising from Israeli military administration of the occupied West Bank and Gaza territories at 12 noon Monday, May 2, at Bechtel International Center.

His talk is sponsored by the Stanford Committee for Justice in the Middle East and the Resource Center for Nonviolence of Santa Cruz.

Guatemalan religious, ethnic factions: May 3

"Ethnic and Religious Factions in Guatemala: Implications for Political Struggle" will be addressed by Tom Bogenschild during the lunch hour on Tuesday, May 3, at Bechtel International Center.

Bogenschild is program coordinator for the Stanford-Berkeley Joint Center for Latin American Studies at Stanford. He is a graduate student in anthropology at the University of Chicago, where he was involved in the administration of the Center for Latin American Studies. He lived in Guatemala in 1976.

Bogenschild's current research focuses on 400 years of history of the highland Guatemala indigenous population.

This year's Tuesday Luncheon/Lecture series at the I-Center concentrates on major world problems, including arms control and academic responsibility toward global conflict and poverty.

Luncheon tickets are available at a cost of $2.50 one week before each event and at the door as they last. Brown baggers are also welcome at no cost. For more information about this or other programs call 497-1831 or stop by the I-Center for international hospitality.

Women's literature

Ingeborg Drewitz, well-known Berlin novelist and literary and social critic who currently is writer-in-residence at the University of Texas, will speak at 4:15 p.m. Tuesday, May 3, in Room 203 of History Corner.

Her subject is "Literature of Women Writers Since 1945: To leave them like Nora—that's not the only way to be emancipated."

A reception will follow at the German Studies Department library.

Philosopher Gauthier presents Tanner lectures

David Gauthier, University of Pittsburg professor of philosophy, will give the Tanner lectures in human values at Stanford May 4 and 10.

He will discuss "The Incompleat Egoist: From Rational Choice to Moral Theory" in a series of two free public talks at 8 p.m. Wednesday, May 4, in Terman Auditorium and at 8 p.m. Tuesday, May 10, in Skilling Auditorium.

Former chairman of the Department of Philosophy at the University of Toronto, Gauthier is a distinguished moral and political philosopher. He has written many historical and systematic papers on value theory, as well as on the theory of rational choice.

He is the author of two books, *Practical Reasoning* and *The Logic of Leviathan*, one of the classic treatments of Thomas Hobbes' moral and political theory.

A forthcoming book, *Morals by Agreement*, defends a contractarian theory of morality as part of the theory of rational choice. Gauthier received a D.Phil. from Oxford University and is a fellow of the Royal Society of Canada.

Three discussants will respond to the lectures at seminars in the Philosophy Department during the weeks of the lectures. The discussants are Kenneth Arrow, Stanford economist; Allan Gibbard, Department of Philosophy, University of Michigan, now at the Center for Advanced Study in the Behavioral Sciences; and Gregory Kavka, of the Philosophy Department, at University of California, Irvine.

The lectures are supported by the Tanner Foundation, established by Obert Clark Tanner, a former doctoral student and dean of the Chapel at Stanford, as a contribution to "the intellectual and moral life of mankind."

For further information contact the Philosophy Department at 497-2547.

Breitrose on advent of sound in films May 5

Prof. Henry Breitrose, chairman of the Department of Communications, will give the Stanford Drama Forum lecture "The Coming of the Sound Film" at 4:30 p.m. Thursday, May 5, in the Forum Room of Meyer Library.

Breitrose is an authority on film and the history of the industry. In his popular course, Film Aesthetics, he examines the nature of the film medium with emphasis on the problems of aesthetics and communication from the viewpoint of the practitioner, the critic, and the audience. He has travelled extensively, lecturing at film schools throughout the world.

The Drama Forum lecture is sponsored by the Department of Drama and is presented in connection with the production of Kaufman and Hart's *Once in a Lifetime* opening on May 11 in Little Theater. The plot of this classic American comedy deals with the beginnings of sound movies in 1927 and its effect on everyone connected with the industry.

Admission to the lecture is free.

Gay, lesbian awareness week starts Monday

The Gay and Lesbian Alliance has designated May 2 to May 8 as Gay and Lesbian Awareness week (GALA Week) for 1983.

The annual event will offer more than a dozen speakers and events representing different facets of the lesbian and gay community.

Monday, May 2

GALA Week will begin with a public rally in support of lesbian and gay rights at noon in White Plaza. Featured speakers include lesbian-activist Del Martin; Stanford Assistant Dean of the Chapel Reverend Donald Caughey; and for satirical entertainment, the hilarious group from Berkeley known as "Ladies Against Women."

A panel discussion entitled "Gays and Lesbians in the Professions" will be held at 7 p.m. in History Corner, Room 2.

Tuesday, May 3

A panel discussion entitled "Christianity and Homosexuality" will be held at 3 p.m. in Meyer Library Forum Room. Speakers include Jack Pantaleo, Kevin Gordon, Mary Gaddis, and Caughey.

The Women's Collective of the Gay and Lesbian Alliance at Stanford will meet at 7:30 p.m. in the Old Firehouse for its weekly social. A surprise special guest will highlight the evening.

Wednesday, May 4

Arthur Lazere, president of the National Association of Business Councils will speak about "Lesbians and Gays in Business: The Tyranny of the Closet" at 7:30 p.m. in History Corner, Room 2.

Later that evening the Men's Social will begin at 9 p.m. in the Old Firehouse with refreshments available for a small cost.

Thursday, May 5

Margaret Cruikshank will lead a discussion about lesbian literature at 4 p.m. in the Women's Center.

An evening with Armistead Maupin, columnist and author of *Tales of the City*, is scheduled for 8 p.m. in Branner Hall Lounge. Refreshments will be provided.

Friday, May 6

A discussion of "Lesbian, Bisexual, and Heterosexual Women" will be held at noon in the Women's Center.

That evening the Coffee House will be alive with gay entertainment starting at 8:30 p.m. Performers include The Choral Majority, a blaspheming quartet of satirical performers; the musical duet of Romanovsky and Phillips; and comedian Tom Ammiano.

Saturday, May 7

Starting at noon, "Gay Family Day" entertainers will perform at Wilbur Field. Guests include The Gay Freedom Day Marching Band, the Barbary Coast Cloggers, the F.L.A.G. Corps, the San Francisco Pageantry Ensemble, the Hayward Raw Rahs, the Foggy City Squares, and others.

Admission is free, although donations are greatly appreciated. Gay people are encouraged to bring their friends and families, and a picnic lunch.

An exciting evening of dancing will begin at 8:30 p.m. with the opening of the Governor's Ball at the elegant Elliott Program Center Common Room in the Governor's Corner dormitory complex. The dance area looks out on the shores of Lake Lagunita, and refreshments will be served on a wooden deck by the lake. A $2.50 donation is requested to help cover expenses and to benefit Gay and Lesbian Awareness Week.

Sunday, May 8

Stanford Women in Music Collective will present The Alberta Jackson Band, Castleberry and Dupree, and other performers. The musical festivities will begin at 11 p.m. on Florence Moore Field, and will run until 6 p.m.

Gay and Lesbian Awareness Week activities are subject to change, so call the Campus Gay Events Tape, 497-1488 for up-to-date information. All events will be open to the public regardless of age, gender, race, sexual orientation, or Stanford affiliation. A map showing the location of all GALA Week events is available by calling the Gay and Lesbian Alliance and leaving your name and address.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., April 27, to cover the week of Mon., May 9, through Sun., May 15. Calendar items are entered into a SPIRES file called PUBLIC EVENTS in CIT's IBM computer. The file is accessible to anyone with a WYLBUR account.

LATE ANNOUNCEMENTS

Thursday, May 5. La Casa Italiana lecture: Italian architect Roberto Pirzio Biroli will present a slide-lecture on his reconstruction of several historic towns in the Friuli region destroyed by the earthquake in the late 1970s. (The event has been moved from its original date, April 28.)

MONDAY, MAY 2

Discovery Film Series: "Holland," with John Roberts. 2:30 p.m. Kresge Aud. $3.

EE 350, Radioscience Seminar: "Modeling of the Rings of Saturn: Particle Size, Number Density and Vertical Dispersion," by Howard Zebker, Stanford. 4:15 p.m. McCullough Bldg. 134.

Biological Sciences Seminar: "Cellular Processing of Damaged DNA," by Dr. Philip Hanawalt, Professor, Dept. of Biological Sciences. 4:15 p.m. Room T-175 Herrin Hall.

STARTS Fabulous Film Couples Film Series: "The Big Sleep," by Howard Hawks, starring Humphrey Bogart and Lauren Bacall. 7 p.m. Tresidder Union, Room 270. $2 students, faculty, staff; $3 general.

Discovery Film Series: "Holland," with John Roberts. 7:45 p.m. Memorial Aud. $4.

Music Dept. Concert: Pamela Decker, organ. 8 p.m. Memorial Church. Free.

TUESDAY, MAY 3

Learning About Racism Lunch Series: "Institutional Racism," by Mineo Katagiri, Conference Minister for Northern California Conference of United Church of Christ. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Hall.

Center For East Asian Studies Film: "Shinto: Nature, Gods, and Man in Japan" (1977). This film of extraordinary beauty features sacred ritual sites in Japan, some of which have never before been photographed. Noon. Room 241, Lou Henry Hoover Bldg.

Bechtel International Tuesday Luncheon Series: "Ethical & Religious Factors in Guatemala: Implications for National Struggle," by Tom Bogenschild, Program Coordinator for the Berkeley-Stanford Joint Center for Latin American Studies. Noon. I-Center. $2.50 for lunch; brown-baggers welcome.

Stanford Art Museum: Arts of Africa Lunch Hour Tour. 12:15 p.m. Stanford Arts Museum. Free.

German Studies Lecture: "Literature of Women Writers Since 1945," by Ingeborg Drewitz, the well-known Berlin novelist, literary & social critic from the University of Texas. 4:15 p.m. History Corner, Room 203.

Applied Mechanics Seminar: "A Study of Capillarity through Numerical Solution of the Navier-Stokes Equation," with Dr. Jacob E. Fromm, IBM Res. Lab., San Jose. 4:15 p.m. Material Science Room 550a.

Biological Sciences Seminar: "The Multiple Genetic Effects of a Mutant of Ustilago maydis Deficient in a recA-Type Protein," by Robin Holliday, National Institute for Medical Research, London, England. 4:15 p.m. Room T-175, Herrin Hall.

Music Dept. Concert: Ellen Ochoa, flute. C.P.E. BachHamburger Sonata; Dutilleux - Sonatine; Enesco - Cantabile et Presto; Bartok - Suite Paysanne Hongroise; Schubert - Introduction and Variations. 8 p.m. Tresidder Lounge. Free.

WEDNESDAY, MAY 4

Theology & Natural Sciences Lunch Series: "Evolution & Creation," by Michael Guinan, Professor of Old Testament at Franciscan School of Theology, Berkeley. Bring a bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

CROW Lecture: "Sexuality and Gender in Children's Daily Worlds," by Zella Luria, Prof. of Psychology, Tufts University, and Barrie Thorne, Associate Professor of Sociology, Michigan State. Noon. Terman Aud. Free.

Gifts and Exchange Division, Stanford Univ. Libraries: Book Sale. Books and Periodicals in many fields. Hardbounds $1.50 and up, paperbacks 25 cents and up, periodicals 10 cents. 11 a.m. to 1:30 p.m. Green Library, West Wing, First Floor, Room 101.

Stanford Art Museum: Arts of Africa Lunch Hour Tour. 12:15 p.m. Stanford Art Museum. Free.

Chemical Engineering Colloqium: "Plasma Etching of Metal Films for Microelectronic Devices," by Professor Dennis W. Hess, Univ. of California, Berkeley. 4:15 p.m. Chemical Engineering Conference Room.

Humanities Special Programs Lecture: "Apocalyptic Landscape and the Sublime in the English Romantic Art," by Professor Morton Paley, U.C. Berkeley. 4:15 p.m. Cummings Art Bldg., Rm. 2. Free.

Stanford Arms Control and Disarmanent Committee: Forum on Ballistic Missiles. A discussion of the direction of defense policy over the next decade. Moderated by Stanford Provost, Albert Hastorf. 7:30 p.m. Kresge Aud.

THURSDAY, MAY 5

"Perspectives on Twentieth Century Japan" Colloquim Series: "Japan's Wartime Labor Policy: The Search for Method," by Dr. Ernest Notar, Postdoctorate Fellow, Center for Japanese Studies, U.C. Berkeley. 4:15 p.m. Room 238, Lou Henry Hoover Bldg.

Applied Mechanics Division: "Constitutive Equations for Materials with Memory," with Prof. R.S. Rivlin, Center for the Appl. of Mechanics, Lehigh University. 4:15 p.m. Skilling Aud.

Nuclear Film Program Series: "George Kennan: A Crtical Voice"(1982). 7:30 & 9:30 p.m. Meyer Forum Room. Free.

"Other Cultures" Film Series: "Sons of Haji Omar" (Afghanistan). A small group of Afghanistan's Pashtoon nomads as they follow their annual traditional migration into the high mountain pastures of the Hindu Kush. Watching them during the spring lambing camp, the Narin bazaar and a climb to the Khawak Pass gives us an insight into their economy, family life, social customs and religion. 7:30 p.m. Bechtel International Center. 75 cent donation requested.

Center for East Asian Studies Film Series: "Twilight in Tokyo". Two women living with their father find out that their mother, whom they thought was dead, is alive and living with another man. This results in tragedy and dissolution of the family. 7:30 p.m. Room 40, Building 420 (Jordan Hall).

FRIDAY, MAY 6

Mathematics Dept. Lecture: "The Works of Pour-El and Richards on Non-Comutability in Analysis and Physics," by Prof. Solomon Feferman, Dept. of Math. 3:15 p.m. Math 380-c.

Materials Science and Engineering Colloquium: "Application of Synchrotron Radiation to Study Amorphous and Crystalline Solids," by Gordon Brown, Stanford. 3:30 p.m. Room 550a, Peterson Laboratory Bldg. 550.

Student Activities Office: "Leaders Training Leaders: A Workshop & Reception". Workshop on student organizational continuity and transition. Reception with President Kennedy follows. 4 p.m. Tresidder Union, Rm. 270-271.

Undergraduate Special Program: ROVA Saxophone Quartet. San Francisco based avant-garde sax quartet will perform an evening of composed as well as improvised music. 8 p.m. Terman Aud. $5.50 & $4.50.

Music Dept. Concert: Stanford Jazz Band. 8 p.m. Dinkelspiel Aud. $4/$2.

STARTS/Coffee House & The Gay People's Union: The Choral Majority. Political songs and satire co-sponsored by the Gay People's Union. 9-12 p.m. Coffee House. Free.

SATURDAY, MAY 7

Music Dept. Concert: Pied Piper Concert. Concert is for children 5-12 and their parents, featuring the Renaissance Wind Band. 2 p.m. Palo Alto. $5/$1.

Lively Arts Community Outreach Program: Brahms' Requiem Lecture by Leonard Ratner, Professor of Music. A lecture on Brahms' Requiem, which will be performed on the occasion of the composer's 150th birthday in Memorial Church at 8 p.m. by the California Bach Society. 4 p.m. Dinkelspiel Aud.

STARTS - Student Arts at Stanford: Professors in Performance. See the other side of your favorite professors as they perform in their own way. 8 p.m. Tresidder Upper Lounge. $3 general, $2 students.

SUNDAY, MAY 8

Stanford Hillel's "Books & Bagels" Discussion Group: Rabbi Ari Cartun will lead the discussion of *When Bad Things Happen to Good People* by Rabbi Harold S. Kushner. 10 a.m.. Hillel Library, ground floor Old Union Bldg.

University Public Worship: Preacher: R.G. Hamerton-Kelly, Dean of the Chapel. 11 a.m. Memorial Church.

Stanford Women in Music Collective: "In the Field of Music," a spring festival celebrating women in music. Featuring Mary Watkins, The Albert Jackson Band, Castleberry and Dupree, Swingshift, Z-axis, Counterpoint, & Stanford students. 11 a.m. to 6 p.m. Florence Moore Field. Free.

Music Dept. Concert: Helsinki Academic Male Choir KYL. Works by Finnish masters; traditional European and American choral music. 2:30 p.m. Dinkelspiel Aud. $4/$2.

ASSU Sunday Flicks: "Quest For Fire". 7 & 9:30 p.m. Memorial Aud. $1.50.

Music Dept. Concert: Yuri Ito, flute. C.P.E. Bach Sonata in A minor; Schubert - Introduction and Variations; Maczynski Sonata; Dutilleux - Sonata; Franck - Sonata; Telemann - Fantasies; Ibert - Concerto. 8 p.m. Dinkelspiel Aud. Free.

EXHIBITS

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

The Art of William Gropper. Art Gallery. March 8 May 8.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

The Prints of William Nicholson. Tues.- Friday 10 a.m.- 5 p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

"China's Elders," PRC senior citizens photographed by members of the Stanford Community. Faculty Club. April 3 -May 3.

Etchings by Seymour Haden. Faculty Club. April 3 May 3.

Early Lithography: 1803-1830. Museum, Miedel Room. April 12 - June 19.

Stanford Senior Class Art Show. 7 a.m. to 11 p.m. Tresidder Coffee House and Upper Lobby. May 1 - June 15.

VISITORS FROM OTHER COUNTRIES

May 2: Dr. Antal Gyenes, Inst. of Sociology, Academy of Sciences, Eisenhower Fellow from Hungary.
Group of six executives from the "Union 'Laitiere Normande," France.
Group of 10—Francophone Africa. Seminar on the "Formulation of U.S. Africa Policy."
May 3: Mr. H. Cilliers, assist. dir., Council for Education Evaluation of South Africa.
May 6: Group of eight—Higher Education Delegation from Thailand.

For further information please call Maria Bun, International Visitors, 497-1984.

Buck estate tour

Stanford Staffers will hold a house and garden tour of the Buck estate along with their annual business meeting during the noon hour on Tuesday, May 10.

The house and lands were given to the University by the Bucks to serve as a place to gather, contemplate, and rejuvenate.

There will be a brief wrap-up of the year's activities and the presentation of the 1983-84 officers. Plenty of time will be given to touring the estate.

All Stanford staff members are welcome to come (bring your own lunch). Call Betty Hummer, ext. 7-3421, for transportation arrangements, as parking is limited.

On-line calendar improved

The computerized events calendar which was created last fall has been streamlined in order to facilitate searching and provide more timely information.

Date searches have been simplified. The command FIND DATE 5/10/83 will find not only all films, lectures, etc. being given on that day but also all exhibits that are current on that day.

In addition, the calendar uses a new SPIRES feature called immediate indexing to make new data instantly available to searchers.

The calendar may be used by anyone with an account and access to CIT's IBM timesharing system. Logon to your terminal and type ADMIN, then choose the INFO option and select the PUBLIC EVENTS database (or simply type ADMIN INFO PUBLIC EVENTS). ADMIN is the WYLBUR command developed by CIT's Departmental Information Systems (DIS) to provide administrative computing tools to the University community.

Contact DIS at 497-1415 for further information.

Protest march opposes SSRL weapons work

About 120 members of the Stanford community met at White Plaza in the rain Thursday, April 28, to protest against the possibility of weapons-related research at the Stanford Synchrotron Radiation Laboratory (SSRL).

The demonstrators then marched to deliver two written protests to the office of Stanford President Donald Kennedy. A delegation was to meet with Kennedy later in the day to express their concern.

"We should be free to say, 'no', we don't want to do that kind of work," said John Harris, deputy director of operations at the Stanford Linear Accelerator Center, whose beam line provides the Synchrotron light source at SSRL.

The protest centers around proposals that SSRL do research that could lead to development of high-speed, x-ray detectors used in nuclear weapons tests. The research would be unclassified, but it would be the first directly weapons-related work involving SLAC.

SSRL Director Arthur Bienenstock is expected to make a decision in the near future on whether to accept the proposal made to the lab by the Lawrence Livermore Laboratory, Sandia Labs, and Los Alamos National Laboratory.

Synchrotron radiation is the by-product of linear accelerators like the one at SLAC, and the x-ray radiation has many scientific and technological uses.

"It is a proposal to SSRL to do a large body of work, of which 70 or 80 percent could be described as basic science that's not particularly mission oriented," Harris said. "I think we have no objection to that.

"On the other hand there is a body of that work that is specifically related to nuclear weapons work, and specifically related to a particular kind of nuclear weapons work which is a nuclear weapons x-ray laser which is part of this whole 'Star Wars' initiative."

Harris said that the routine procedures for approving experiments have been completed and he expects Bienenstock to agree to the research.

"We think that some of those procedures are not appropriate to this particular situation," he said. For one thing, no Stanford scientist is involved; the proposal came from the University of California and the three national laboratories.

Second, "to do this kind of work involves the active collaboration and the creative contributions of hundreds of people at SLAC and SSRL. All of us who work up there work collectively in order to make the facility available."

"The university and most of the senior

It's rained more than enough, but without puddles there'd be no reflections.

Faculty Senate discussion likely on Hoover petition

About 1,500 persons, including more than 70 faculty members, have signed petitions seeking a Board of Trustee inquiry into relationships between the Hoover Institution and Stanford University.

The faculty petitions, initiated by Profs. John Manley, political science, and Ronald Rebholz, English, probably will be discussed at the Faculty Senate meeting Thursday, March 12.

Manley and Rebholz are scheduled to meet with University President Donald Kennedy Wednesday morning, March 11.

Their petitions state that "the existence of a partisan research and policy organization, whether liberal or conservative, within the University, raises serious questions concerning the academic independence, integrity and reputation of the University."

Rebholz seeks a Faculty Senate resolution urging an inquiry by the trustees, while Manley's is addressed directly to the board. The student petition uses the same language as Manley's.

"The Hoover Institution is not partisan and does not take positions on public policy issues," according to George Marotta, Hoover public affairs coordinator.

"There are about 70 scholars on the staff of the Institution and each is free to

Official hits proposed regs on information

Proposed Department of Energy rules on unclassified controlled nuclear information (UCNI) could "seriously impair" Stanford's ability to perform basic research funded by this agency, University Vice Provost Gerald Lieberman warns.

As drafted, the proposal has "unlimited potential to chill research, teaching, and the general interchange of information," contrary to the intent of Congress, he adds.

"The regulation as proposed could chill or threaten the free interchange and propagation of information required for the success of fundamental research activities which are essential to our national and economic security."

The proposal "is so fatally flawed as to require its withdrawal or at least its complete redrafting," Lieberman declares on behalf of the University in an April 29 letter to Trisha Dedik Chico, assistant secretary for defense programs in the Department of Energy.

As a federal contractor, Stanford would be required "at a minimum" to see that unclassified controlled nuclear information is "protected and controlled in a manner similar to that customarily accorded proprietary business information," the proposal states.

"This directive is not reasonable, nor even meaningful, in a university context," Liberman declares. "Taken literally, it would even apply. . .to books published by commercial publishers, containing the results of research done at other institutions without indication that the work had previously been classified, and that are available on our library shelves."

Restrictions on previously classified material are "so inclusive as to permit application to all those basic and advanced courses in the fields of physics, electrical engineering, materials science and the like that teach the basic information discovered and classified before the early 1950s and since declassified," he adds.

The proposed rule is "completely contrary to the needs and practices of Stanford and similar institutions," he

Task force on student computing set

Vice-Provost Gerald Lieberman, dean of graduate studies and research, has been named head of a new task force on student computing by Stanford President Donald Kennedy.

Other faculty on the committee include Profs. Pat Suppes, philosophy; Jeff Ullman, computer science; John Hennessy, electrical engineering and computer science; Ralph Gorin, computer science, director of the Low Overhead Timesharing System (LOTS); Jeff Moore, Graduate School of Business; and William Kays, dean of the School of Engineering. Pat Devaney provides staff support.

The task force held its initial meeting April 8 and plans semi-weekly meetings throughout spring quarter.

According to Lieberman, its purpose is to develop a comprehensive institutional approach to student computing needs and directions over the next three to 10 years.

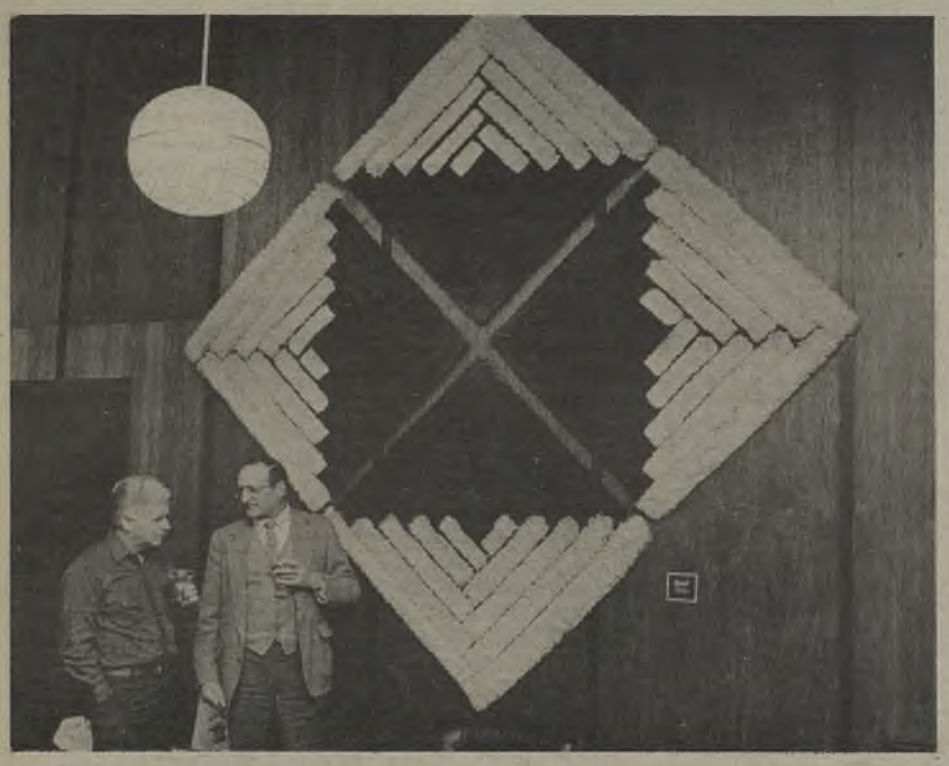
It will review needs currently met by LOTS, the Center for Information Technology, and computing centers within the various schools and departments.

"We will look at both the configurations and amounts of resources needed for classroom computing, unsponsored graduate student research activities, and student word-processing needs," he notes.

"Underlying this review will be an attempt to determine desirable levels of computer literacy for our students and means to achieve that goal—technically, financially and administratively.

"In addition, we will discuss directions for a long-range strategy to acquire the resources needed, including possible combinations of gifts from computer vendors, University purchases of hardware and software, sponsored research and development projects involving various network configurations, and resources which might be appropriately charged directly to student users."

Because this is "an ambitious undertaking," he concedes, "the outcome could be considerably more modest that its goal."



Carnegie Mellon and other universities already have announced plans to greatly expand computer availability to students.

Faculty seminar proposals sought

The Committee on Faculty Seminars, formed in 1978, has funds available to administer faculty seminars at Stanford for 1983-84. The Committee receives proposals for seminars intended to enrich the intellectual life of the academic community. Topics previously covered include American studies, interpretation, and feminist theory and research.

Each seminar is led, or co-led, by a member of the faculty. The seminar leader, who is normally responsible for recruiting and selecting the participants in his or her seminar, is given a modest budget to offset the cost of books, photocopying, and subsistence.

Deadline for proposals is Tuesday, May 31. Interested faculty members should contact Albert Gelpi, chairman of the Committee, at 497-2496 or Callie Elliston, program coordinator, at 497-0761.

"Quad" is the title of the large tapestry designed by Art Prof. Matt Kahn, recently hung in the Stanford Alumni Association on long-term loan from the artist. Above, Kahn chats with Leon Sloss, president of the Alumni Association, at the celebration party in Bowman House. The tapestry, made in Italy, is off-white and reds shading from deep to very dark.

Humanities and Sciences Dean Norman K. Wessells (left) presented a plaque to Prof. Robert Carlson, industrial engineering, as the outstanding faculty contributor to ARLO April 27. Francis Thomas Koch was honored for outstanding community service to the Action Research Liaison Office

Sibley Writing Prizes

Stanford's Creative Writing Program has announced the winners of the Dorit Sibley Writing Prizes. Curtis Horton and Robert Silva tied for first prize in poetry; Alan Liu and Dan Purtell tied for first prize in fiction. Each will receive an award of $250.

The Sibley Writing Prizes, made possible by a gift from John Merrit in memory of the late Dorit Sibley, are offered only to undergraduates and are awarded for the best poem and the best story written during autumn and winter quarters in any of the classes taught by the Creative Writing Program.

Judges for the contest are the current Stegner Fellows in the Graduate Writing Program. The Sibley Prizes will be awarded annually.

Jim Bouquin

The appointment of Jim Bouquin as coordinator of services to physically limited students has been announced by Acting Dean of Student Affairs Norman Robinson.

Bouquin has been involved with accessibility services for several Bay Area organizations, his most recent activity being the design and implementation of accessible recreation programs for Redwood City.

The Office of Services to Physically Limited Students offers campus accessibility information, and makes arrangements to meet the special needs of any student with a disability, handicap, or physical limitation.

In the past, SPLS has assisted students with campus housing, building access, readers, tutors, interpreters, Braille and recorded materials, mobility training, transportation, and special equipment and resources.

For information regarding services for physically limited students, contact Bouquin at 7-1039 or 7-2733. His office is located in Room 307 of the Old Union; hours are 11 a.m. to 5 p.m. Monday Wednesday, and Thursday.

Albert Bandura

Prof. Albert Bandura, psychology, will receive an honorary doctor of letters degree from the University of Lethbridge (Alberta, Canada) on May 21.

The degree recognizes Bandura for his contributions to social learning theory.

Bruno Bettelheim

Bruno Bettelheim, famed child psychologist and visiting professor emeritus in the Stanford School of Education, has received an honorary doctorate degree from Albion College in Michigan.

Byer, Ginzton team develop revolutionary 'slab laser'

High peak power called key to major advance

BY DONALD STOKES

A revolutionary type of laser just perfected at Stanford is expected to be a pacemaker for new advances in industry and research.

Called the "Slab Laser" it is the result of three years of intensive work by a Stanford team.

Robert Byer, chairman of the Applied Physics Department in the famed Ginzton Laboratory, headed the team. Kelin Kuhn, a young woman graduate student, made basic discoveries that led to the breakthrough. Tom Kane, another graduate student, is a third member of the team.

The laser development involves international cooperation with a research group in Switzerland. "The motivation for studying and designing the slab laser came from a need to measure properties of a special form of hydrogen atom called muonic-hydrogen which is created for a very short time by an accelerator in Switzerland. However, the slab laser will find many other applications in addition to the scientific one," said Byer.

The slab laser works on an entirely new principle which makes it far more effective than present types.

Byer's team has just completed writing the scientific paper which gives full details of the research involved. The discovery has stirred great interest in the international world of the laser, and the breakthrough is being eagerly studied.

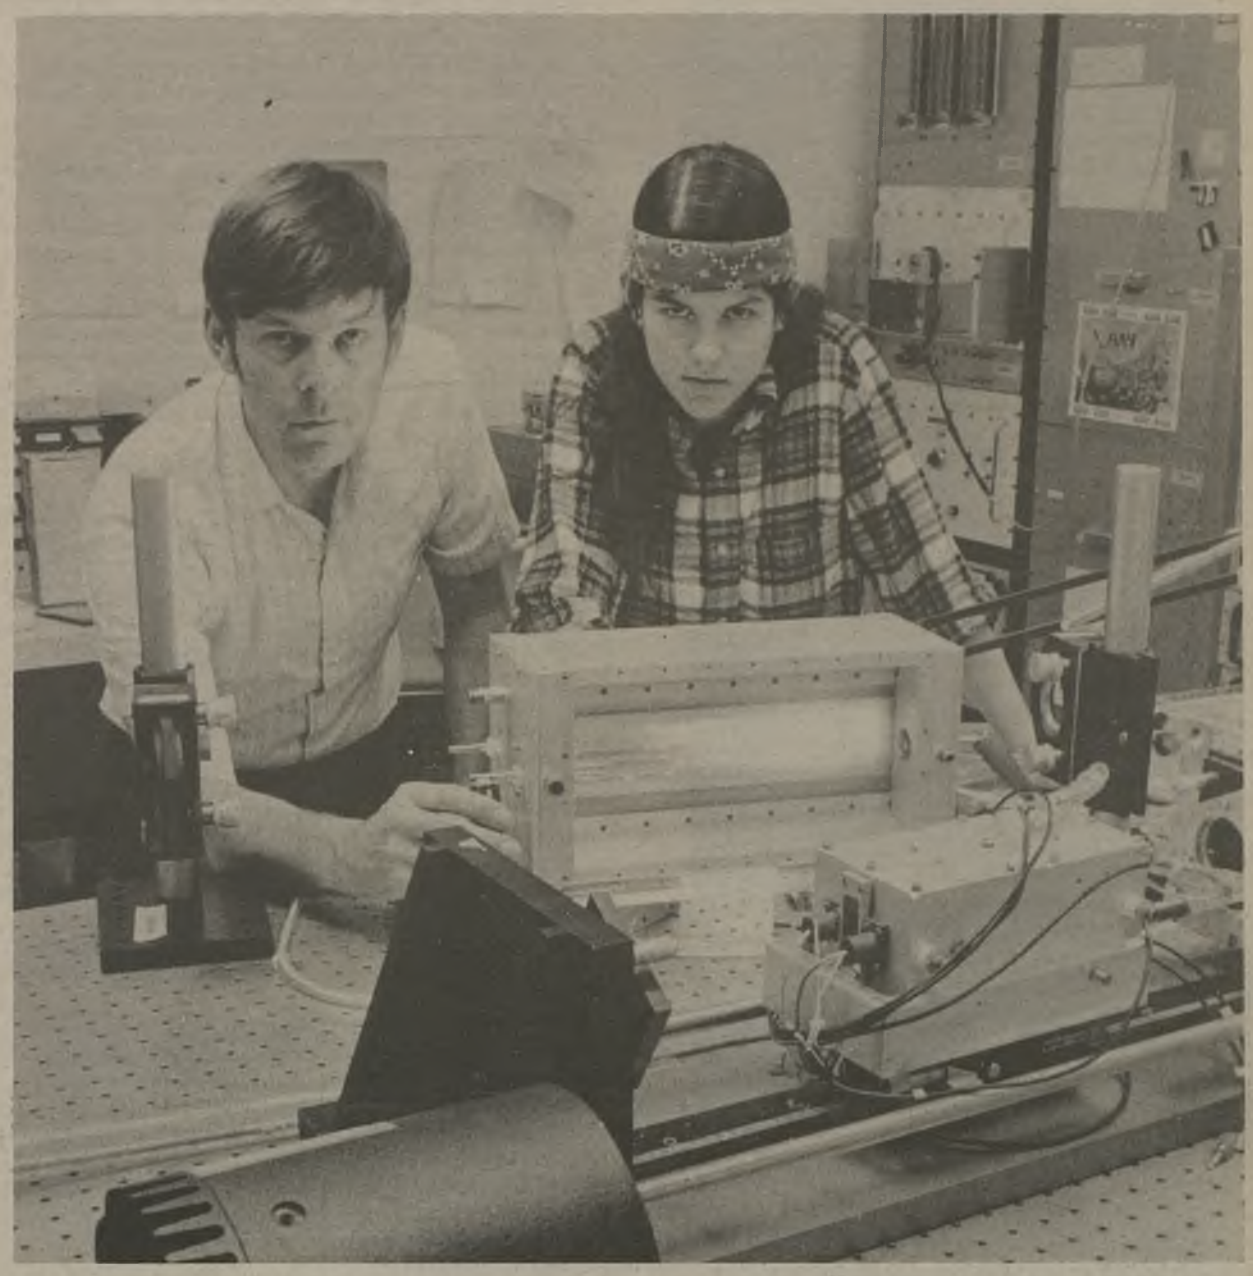
Byer was interviewed on the day that he finished the paper, which will be published at the end of the year. "We believe our work will mean a leap forward to the next generation of lasers," he said.

"Our new techniques allow us to build a laser with larger average powers and much better beam quality than in the past. This means we can use it in significantly better ways. This will open up new research avenues for us.

"The emphasis will not be on the tunability of the laser along the lines we pioneered at Stanford, but on the very high peak power that the slab laser can achieve.

"When we look down the line we see that we shall be working more in the area of generating laser plasmas, very hot sources of optical radiation that can be used as soft X-ray radiators.

"One of the projects we have just initiated is to use this slab laser as the driver of a soft X-ray plasma; that soft X-ray source becomes the input to an X-ray microscope. With my graduate student, John Trail, who came to Stanford from New Zealand, we plan to build a very high resolution X-ray microscope for biological applications.



"Another area of great importance is to use this same point source of X-rays in lithography for the next generation in silicon circuits. Instead of using visible light or ultra-violet light, we should like to move all the way into the X-ray region so that we can make extremely fine lines on silicon surfaces. This area is of interest to Kelin Kuhn who is engineering the slab laser source.

"This would make possible higher density chips with greater memory. Our new laser has that potential."

As a result of other pioneer work by the Stanford team, tunable lasers, which can monitor air pollution, are now being widely used.

Byer and his graduate students have extensively studied tunable lasers. These have applications in fields such as laser spectroscopy, laser chemistry, and remote air pollution measurements. His tunable lasers can be used to detect pollutants such as carbon monoxide in the atmosphere.

Studies were carried out on campus using a telescope that stands above Byer's laboratory on a 30 ft. high aluminum pipe. Having a 750 lb. telescope mounted high above the laboratory was not the optimum solution, but it was the only choice and it did allow Byer to proceed with remote air pollution measurements.

Prof. Robert Byer, head of the team, with graduate student Kelin Kuhn.

So far three students have received their Ph.D. degrees through studying laser remote sensing, using that telescope. Byer has a constant worry about a large earthquake which would result in one heavy telescope falling through the roof into his laboratory.

Forty-year-old Byer has won a national reputation in nonlinear optics, tunable laser sources, and spectroscopy.

In a campus interview he explained in everyday terms the new techniques that make the tunable laser a device of enormous importance in weather forecasting, controlling pollution, industrial applications on an accelerating scale, and perhaps, of use in the military defense of the United States.

"In order to use lasers to monitor air pollution at very long distances we had to find a way to tune the laser wave length to the precise frequency to which a molecule or an atom responds," he said.

"The molecules have characteristic vibration and rotation frequencies, and we studied how to use the tunable lasers to probe molecules in the atmosphere.

"We found ways to achieve this with such accuracy that we could pinpoint not only the exact location of the molecules, but their chemical nature. We can even detect minute concentrations far up in the stratosphere.

For the first five years of this program we were supported by the National Science Foundation and we carried out joint work with S.R.I. International. It was common for us to be told that our sort of remote sensing would never become practical and that it would always be too costly. Today, all that has changed.

"It is generally recognized that although the laser source is expensive, and the apparatus needed to make the most accurate measurements of air pollution may cost from $100,000 to $500,000, it is a unique way to make measurements, and in the end it saves money.

"This is because only a few people are needed to run the laser apparatus, and they can make measurements over a very wide area. Using suitably equipped planes the entire surface of the United States can be monitored.

"Planes carrying tunable lasers have already monitored the eastern seaboard of the United States. They can look down on the inversion layers, or the ozone concentrations and identify their nature and course. They can also be pointed upward and measure gases in the stratosphere, and other atmospheric phenomena. All this is being done in a very practical way.

"Some of our team have recently come back from a conference of the Optical Society of America held at Lake Tahoe. People were no longer talking about the difficulty of making measurements, or the problems their lasers caused. All the talk was of exciting new ways of using lasers.

"The next step will be to have the tunable lasers aboard satellites, constantly monitoring the air we are breathing."

When the El Cajun volcano erupted in Mexico it spewed an enormous amount of dust into the stratosphere. Byer's laser has been the only instrument able to track adequately the huge cloud which drifted round the earth since then.

The laser instruments showed that the dust cloud

continued on next page

Byer/ continued from page 3

which started in the Mexican latitude was slowly diffusing across the northern hemisphere. The lasers disclosed that the dust was a barrier to sunlight, so that we should, therefore, prepare for cooler weather last summer and this winter.

Byer's group includes three students who have received their Ph.D.'s for research in remote sensing areas. Tom Kane, a graduate who is working with Byer, is very interested in achieving the laser technology needed in order to push through to new frontiers. The group aims at demonstrating the capability of measuring wind in the upper atmosphere.

The Stanford team has measured methane, carbon monoxide, and other chemicals in the stratosphere. It has also demonstrated that it is possible to measure accurately the temperature and humidity in the upper atmosphere.

There came a point when Byer asked himself. "What is the most important measurement we we can make, from a satellite, of an entire global phenomenon?" He and his team decided that the most vital factor which should be measured was the wind.

"The wind drives everything," says Byer. "If we can learn what the windfield is, then we have a tremendous advantage in predicting the weather.

"It is tremendously useful, for example, for us to be able to measure exactly how sulphur dioxide is emitted in particular areas of the U.S. and transmitted across Canada; how it is emitted in Great Britain and carried across to Scandinavia, thus causing 'acid lakes.'

"We need to do this on a global basis. So now we are working on the laser technology that will allow us to fly lasers in satellites, to make accurate soundings all the way from the stratosphere right down to the ground."

Are the beams of these super lasers harmless to those who come in contact with them—plane passengers, for example?

"In the remote sensing that we do, we have always been sensitive to what we call 'eye safety.' This is the only hazard that exists. So we are careful to design the laser transmitter systems so that there is no danger to the eyes of any observer who happens to be in the line of the beam.

"We in America are much more careful about the safety of the general public than any other country in the world, in regard to laser light transmission."

"Our early work in tunable laser sources was in part driven by our interest in studying the structure of molecules. We used our laser capability to make molecular measurements using a new technique called CARS spectroscopy.

"This acronym stands for Coherent Anti-Stokes Raman Spectroscopy. This branch of science has grown exponentially until it is a form of spectroscopy commonly used by physicists, biologists, and chemists all over the world.

"Our own effort has concentrated on achieving very high resolution or very precise measurements of molecular vibrations. To do this we have developed better tunable lasers and have found ways to cool molecules to very low temperatures to freeze out their motion. One way to cool molecules is to expand them in a jet-like nozzle. Using this approach we have recently made the higher resolution Raman measurements ever achieved.

"Where do we go from here? There are still new areas to be explored in the understanding of molecules that can only be probed at even higher resolution. We are working on better lasers and more advanced methods to measure the vibrations of molecules. Even though our work has been scientific in nature nad has led to Ph.D. theses for Mark Henesian, Mike Duncan, Jim McDaniel, and now, Eric Gustafson, the CARS spectroscopy has also evolved into a practical tool for measuring combustion processes.

"The practical application of our studies was an unforseen benefit. However, before applications could evolve such as temperature measurements in the jet aircraft engines, tunable laser sources had to be developed into reliable systems.

"We were fortunate to see our earlier tunable laser research lead to laser sources that are now widely used. This could only have happened at Stanford, where there is a strong cooperative atmosphere between research on campus and industrial and commercial companies in the area."

Are any military applications possible?

"One of the professors who played a key part in my education has said that it would be pointless to try to build an anti-missile weapon based on the laser. He said it was scientific fiction that it would be possible to build lasers with sufficient power to drill holes in missiles.

"I do not believe that. Since we have been working in the laser field we have gone from lasers whose power you could not feel with your hand to multiple-megawatt lasers that can quite readily drill holes in metal, do welding at high speed on production lines."

So it is probable that lasers will be used in defense against attacking missiles?

"Such defense is not here today, but it may be 20 years from now. There is no fundamental physics reason to prevent lasers from being made powerful enough to put out of commission such things as satellites, hundreds of miles away. There are rumors that the Soviets have used lasers as anti-satellite weapons, but this has never been verified."

Byer's interest is concentrated on the peaceful potential of lasers. "They are changing the way in which we do materials processing. It is now possible, for example, to weld steel at high speed. The laser also allows special surface treatment to stop rust or to harden the edge of a turbine blade.

"In the industrial nations a big drive is now underway to introduce lasers on the production line. I think these applications of high power lasers to welding will be much more widespread and have more economic impact than any potential military applications."

Byer agrees that although his work is concerned with remote sensing and combustion diagnostics, alternative applications could include radar-like adaptations, so that the laser would be used to measure the distance to an object with extreme accuracy.

"Our research is directed toward peaceful uses, such as measuring the gases in the atmosphere over the Los Angeles basin."

Byer grew up in an atmosphere of astronomy. His grandfather was chief machinist at the Astronomical Observatory of Mount Wilson. "He often took me there and also to Mount Palomar. He had been brought out of retirement to help design the mechanical drive system for the telescope at Palomar.

"I was interested in telescopes and astronomy as far back as I can remember. I built my first telescope when I was about 10. Soon after that I built a 12-inch reflector and other instruments. One of my most interesting projects was to try to determine the orbital periods of Jupiter's moons."

He pays warm tribute to his supportive parents, who always helped him with his equipment needs. He decided not to be become an astronomer, on the advice of a friend's father, who was an astronomer.

"He advised me to study physics and then consider astronomy as a graduate student." Byer took his advice and in 1964 gained his B.A. in physics at UC-Berkeley.

"As an undergraduate at Berkeley I wanted to work in the laboratory with optics. I asked around and found that I might be able to work for a rather strict spectroscopist, Prof. Sumner Davis.

"I made my request to Davis. His reply was to give me a book and tell me to come back when I had learned everything in the book on practical spectroscopy. I studied that book all spring and was finally able to gain enough courage to go back for what I knew was to be a very tough question session.

"Fortunately, I was allowed to work in the laboratory of Prof. Loeb, doing measurements on lightning sparks. Later I worked with Davis doing erbium atomic spectroscopy. The work was so exciting and I spent almost all of my time in the laboratory, to the dismay of my academic adviser, who thought optics was a dead field of physics. He advised me to go into cosmic ray physics and forget about optics."

"Fortunately, a chance to continue to work in optics after I graduated came about. Davis suggested that I visit a small company in Mountain View, Calif., to see if I might be interested in a very new invention called a laser.

"The day I visited Spectra Physics everybody in the small laboratory was excited and shouting, 'It's green! It's green!' Their researchers, Earl Bell and Arnold Bloom, had just made a major breakthrough in laser technology with the invention of the ion laser. At Spectra Physics I learned a tremendous amount about research and innovation and about the developing field of lasers."

His wife, Evi, whom he married in 1964, graduated from UC-Berkeley. The couple saved their money during the year spent at Spectra Physics and went on a three month camping tour of Europe, living in a tent the entire time.

Byer came to Stanford to study for his masters (1967) and doctorate (1969). His dissertation adviser was Prof. Stephen Harris. It turns out that Harris' adviser was Prof. Anthony Siegman, who is today director of the Ginzton Laboratories. "I had the good fortune to work with Prof. Harris, whose work has been widely honored," Byer said.

"That was an interesting time in the laser field. New inventions and devices were rapidly coming along. Our group worked on a new type of tunable laser called a parametric oscillator. After years of intensive work we were successful and found a way to change the color of laser radiation continuously.

"The competition in research was intense and we were able to make our device operate, on the weekend before an international conference. Harris and I, along with others in the group, including Dr. J. Young and Dr. K. Oshman, celebrated with a bottle of champagne.

"After working on the device for many nights and weekends Harris decided to invite our wives one early Sunday morning to see the new tunable laser before we left for the conference. Our elation and experimental success was put back into proper perspective when my wife, looking at the weak red beam asked, 'Is that all there is to see?' "

Tunable lasers have come far since that morning in May 1968. They will continue to find applications in a wide variety of fields in the future.

Byer loves to teach. Most of his students are graduates, but he also has taught undergraduates in a course called "Modern Technology and its Impact." Over the last 10 years he has evolved an advanced laser laboratory course in which the class does a series of experiments using laser devices.

"The laboratory course is continuously being updated as new advances are made. We get very bright students here and we try to keep them challenged."

Over the years Byer has had close and fruitful contacts with industry in solving problems with lasers.

As chairman of applied physics his duties will in the near future include the addition of a new wing to the Ginzton Laboratory.

Among his memories of amusing activities is the time he was faculty adviser for the Stanford Clean Air car race team in 1970 that won the MIT to Cal-Tech race with a car powered by alcohol.

Byer, an athletic man, is fond of body surfing, a legacy from his Southern California childhood. He and his family spend summer vacation time at the beach body surfing. Both Byer and his wife are players of soccer. "Evi is better than I," he says.

They have four children, three boys and a girl. Scott, 16, is keen on computers; Douglas, 13, is a "train nut" and swimmer; Mark, 9, is a fine swimmer; and Evi Lynn, 7, is learning to outdo her brothers.

In 1972 Byer received the Adolf Lomb Medal of the Optical Society of America, awarded biennially to a person who has made a noteworthy contribution to optics before the age of 30.

Byer is still only 40. Perhaps his most productive years are still ahead.

Getting a computer to play checkers was no easy feat, Arthur Samuel recalls

BY JOEL SHURKIN

Arthur Samuel can look a computer straight in the eye—or perhaps the tube—and know he was there at the beginning.

Samuel, now 81, who holds the rare title of adjunct professor emeritus in computer sciences, can remember the days when rooms full of "girls" and clanky machines were all the world had for computers, and he was one of those who did something about it.

Besides helping build one of the world's first computers, and helping IBM build its first computer, Samuel developed one of the earliest known programs to use artificial intelligence, a famous program that plays checkers and could actually learn by experience. Almost 40 years after he developed that program, he still has a copy working in a Stanford computer, and thinks he knows a way to improve it.

In the early 1960s, Samuel became the first person to predict home computers, projecting that they would be common by 1984.

"I first got interested in analog computers at MIT," he said. "I graduated from a college in the Midwest, a small school called College of Emporia (Kansas). It's no longer in existence." After a stint at General Electric, he entered MIT in 1923, and started working with Vannevar Bush and the differential analyzer.

Bush was pushing the state of mechanical computation as far as it would ever go. The differential analyzer was a cantankerous contraption of rotors, springs, gears, wheels, and straps. It was called an analog computer because it computed by measuring the relative physical relationship between parts. A slide rule is an analog computer.

Bush, a rising star in the science establishment (he would be responsible for the founding of of the National Science Foundation) gave Samuel the problem of figuring how to do problems of exterior ballistics on the analyzer.

Few more complex problems exist than ballistics, describing the flight of an artillery shell through the air. It can have a score of variables all of which affect the flight, including air pressure, wind speed, temperature, altitude, the spin of the earth.

"The problem was that you needed about a half of one percent of accuracy or better for exterior ballistics; the differential analyzer was only good for five percent," Samuel said.

He created a complex series of equations the machine could solve which broke the ballistics problem down to small parts. In modern computer jargon, Samuel "kludged" the problem.

(His method was used during the war, but the analyzer was still inadequate to the task, and when war broke out the Army, desperate for help, contracted with the University of Pennsylvania for the world's first electronic digital computer. The latter, ENIAC, was not finished in time to aid in the war effort.)

Samuel got his science degree from MIT and his attention shifted to vacuum tubes. He went to work for Bell Labs.

Computing, however, couldn't be far from his mind; he needed to solve problems in order to do his research. Most large laboratories had rooms full of young women with math training, who did computations mechanically, a frustrating arrangement.

At Bell, Samuel worked on the development of microwave tubes for radar.

"The usual assumption is that the British sprung (radar) on us unawares, but we had a radar system working in 1939. I made the vacuum tubes used for them down at Fort Monmouth (N.J.).

"When the war was over, I got an offer of a job at the University of Illinois, which I just couldn't turn down. . .to set up a vacuum tube laboratory."

The new lab immediately ran into the old problem: computing equations. Illinois did not have a room full of human computers.

The Army and Penn had recently announced ENIAC, which used 18,000 vacuum tubes and computed with what was then considered awesome speed. The Penn inventors, J. Presper Eckert and John Mauchly, were already working on an even faster model with a stored, programmable memory called EDVAC.

"I started agitating that we get a computer," Samuel said.

His work with the differential analyzer, and associations with Bell Labs made him the resident expert at Illinois. He was asked to form a committee and report back.

But the committee report got lost on the desk of the dean of graduate studies ("a typical bureaucrat") and nothing happened.

A new dean was named in the early fall of 1946, and he called the committee back into session and asked why they had not bought a computer. Money, Samuel responded. How much do you need? $90,000, Samuel thought.

The dean got $110,000 from the Board of Trustees. Samuel went shopping for a computer, visiting Penn and the Institute for Advanced Study, and became convinced Illinois had to build one. By and large, except for Penn no one had ever done that before.

"I got some people working on components. I had this tube laboratory which was an ideal place with the kind of facilities you needed to work on components."

He centered his work on what is called a Williams tube. It consisted of a cathode ray tube which held the computer's memory.

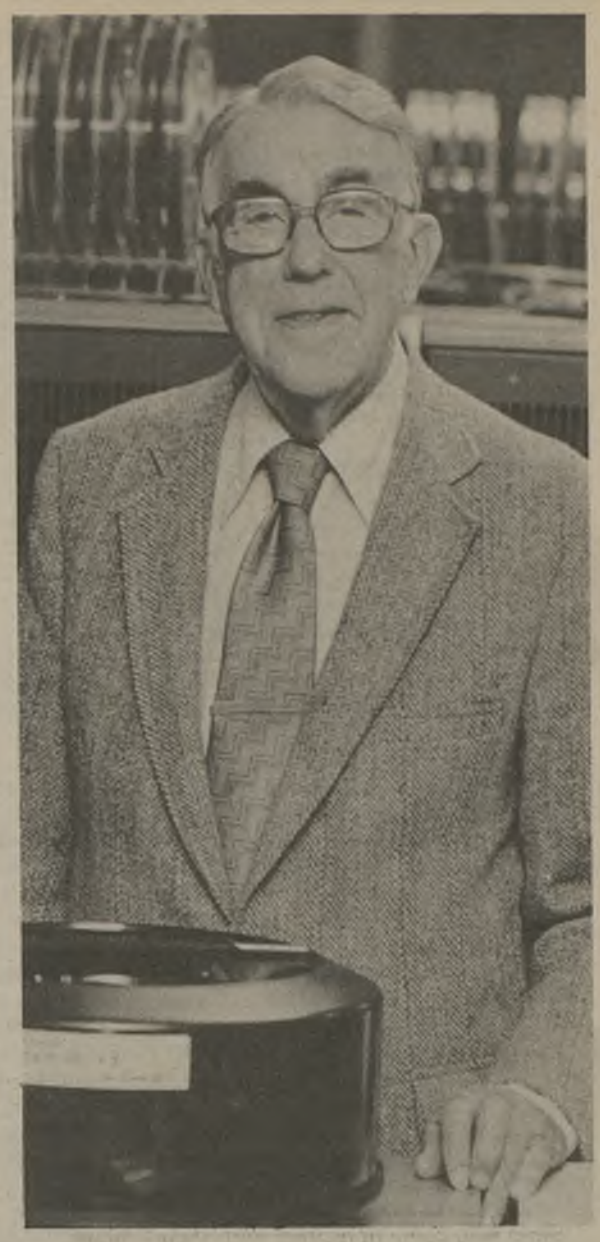
Samuel wanted the Illinois machine to be more reliable than ENIAC. All this research was expensive.

"It was perfectly evident that we weren't going to be able to build a computer for $110,000, because the money started going away like mad."

In order to get attention for the machine, and perhaps raise funds, the Illinois engineers decided they needed a publicity stunt. Samuel, who had been advocating non-scientific uses for computers, was nominated to think of something.

"I first thought of writing a program to play chess. Charles Babbage had suggested this in 1834 or '35, so it was an old idea. But Claude Shannon (developer of Information Theory) had been writing and giving talks around the country about having a computer play chess, and I thought maybe he had done the whole job."

It turned out Shannon had not; he was only suggesting it as a useful exercise in what would later be called artificial intelligence. Clearly the problem was too complicated for anyone to attempt at that stage.



Samuel decided on checkers, yet even checkers is a gigantic problem.

"I once figured out that it would take 10^{21} centuries to make the first move if you tried to look at the end of the game with the fastest possible computer you could possibly build, subject to the speed of light," he said.

The solution—and the solution for most chess programs—is heuristics, the ability of a computer program to make judgments, and to weigh alternatives. It would take years to develop the capacity to insert heuristics in computer programs.

Samuel did not know that at the time.

"This shows how naive we were in those days: there was going to be a world checkers match in the neighboring town of Kankakee the next spring. We thought we could get the computer built, starting in the fall, and I could get the program written and we could challenge the world checker champion and beat him by the spring."

Arthur Samuel

Almost 40 years after developing a program to play checkers, he still has a copy on a Stanford computer—and thinks there's a way to improve it.

Hardly.

"Of course by the next spring we hadn't even settled on the order structure, the instruction set for this computer, and we were busy trying to develop components and trying to develop all the things you needed to build a computer."

No one had yet written an assembler language, the language in which a computer can be addressed using something resembling English. Samuel had to write his program in machine language, generally the 1s and 0s computers ultimately use.

(The Illinois computer became ILLIAC, one of the very early electronic computers in the world.)

All this gave him the idea that computers would be big business, and that universities would not be where the action was.

"I work best in an industrial environment, so I had to leave Illinois and go to work for some industrial concern," he said.

He went to IBM, which was considering getting into the computer business, and offered his services. They struck a deal.

IBM had found the tubes they were getting from their vendors were unreliable, and had quietly decided to convert a former pickle factory on the waterfront in Poughkeepsie, N.Y., to a vacuum tube

Want a Fulbright? I-Center hosts discussion of foreign fellowships

The annual competition for Fulbright and related fellowships for study and research overseas opens on May 1, according to Catherine Gamon of Stanford's Overseas Resource Center.

This year the program has expanded opportunities for non-Western countries of Southwest Asia, South Asia, and the Middle East. 653 awards have been announced in 73 different countries, in addition to the program of Fulbright Doctoral Dissertation fellowships administered through the U.S. Department of Education.

"This represents 127 more fellowships than were available last year," said Gamon.

An information meeting on Fulbright and related awards will be held at 7:30 p.m. Tuesday, May 10, at the International Center. All interested are encouraged to attend.

In addition to academic year study and research opportunities, there are new internships available in India in fields such as child care, hospital administration, marketing management and public health, as well as teaching assistantships in English available in France and Germany. New teaching opportunities in English are also announced for Sri Lanka and Sudan.

Pacific Island Fulbrights are now open in Fiji and Papua New Guinea. Awards for African countries have more than doubled in number—26 for this year's competition compared with 11 last year.

Applicants must be U.S. citizens at the time of application, who will generally hold a bachelor's degree or its equivalent before the beginning date of the grant and, in most cases, will be proficient in the language of the host country. Except for certain specific awards, candidates may not hold the Ph.D. at the time of application. Candidates for 1984-85 are ineligible for a grant to a country if they have been doing graduate work or conducting research in that country for six months or more during the academic year 1983-84.

Selection is based on the academic and/or professional record of the applicant, the validity and feasibility of the proposed study plan, the applicant's language preparation, and personal qualifications. Preference is given to candidates who have not had prior opportunity for extneded study or residence abroad.

Information and application material may be obtained from Catherine Gamon or Barbara Starr, Fulbright program advisers at the Overseas Resource Center, located on the second floor of the Bechtel International Center. Office hours are 8 to 12, and 1 to 5, Monday through Friday. The deadline for submission of applications to the advisers is October 10, 1983.

Letters to the editor

Keep twice a day campus mail service

Editor, *Campus Report*:

Is there a Parkinson's Law or Peter Principle that explains why, when budget cuts are mandated, they affect the lowest levels of administration and especially the constituents of the enterprise? It seems to me that everyone agrees at the planning phase that a good deal of fat could be cut from upper administrative levels. We all saw that happen when Prop. 13 effects were felt in closed fire stations and public libraries and curtailment of public school art and sports activities.

Now at Stanford we are budget-cutting. So we get one mail delivery a day because someone is sick. The memo I write after 8:15 in the morning gets delivered two days later. What do we do? We start delivering our own mail because we won't let this affect our constituents (faculty and students).

Then we find that because a relamper is sick, it will be two weeks before we can have burned out lights in a classroom replaced.

In looking around the campus at what seems to be serious inefficiency in some areas and exceptionally high standards of living in contrasting areas, there certainly must be more suitable areas for cutting back.

Barbara Wawrzynski
History Department

Forget prestige, save those ducklings

Editor, *Campus Report*:

The picture in the April 20th issue with caption, "A mother duck shows off her clan. . ." should have read: "Help, can anybody save these ducklings?"

The Humane Society had been called by the time I was attracted to the commotion of the rescue of the approximately two-hour-old ducklings, which were swimming for their lives, not being able to get back up on the high-walled planter boxes from which they'd jumped.

The security men had half of them in a box, shivering and scared, when I wrapped them in my jacket, and after being warned by them of the chemical content of the water being too dangerous to wade in and told that no one would cooperate from gardening with a plank or hip boots, I waded out to rescue the remainder of the brood.

One had drowned, and while the Humane Society rescue unit discussed why they were late with one of the security men who held the net he'd found, I reached the last one which was trapped under the foam from one of the fountains.

The only one which was "about to leave the premises" unaided was the mother, which I hope has the better instinct to hatch her next brood anywhere but at such a prestigious center which can't pull ducklings out of their own front yard!

Samuel. . .

continued from page 5

factory and set up a development laboratory in private house on the property. Samuel was put in charge, allegedly to make components for IBM's first computer. He was also let in on the secret that he was to run the vacuum tube operation in the pickle factory.

Samuel was in a quandry because the transistor had already been announced, and while he thought it was much too early for IBM to think of putting transistors in their computers, it was much too late for them to invest in a vacuum tube factory.

But the vacuum tube idea originated with Thomas Watson Sr., who had approved of Samuel's hiring. Samuel had never been told this. Naturally, Watson hit the ceiling when informed that Samuel thought it was a bad idea.

"So I was called down to New York to talk to Mr. Watson Sr., which I did, and I couldn't convince him. But he decided I had enough of a point that he told young Tom (Watson) that his priority for the next week was to get me and others to discuss this matter and decide what should be done."

The decision was to keep the equipment for the vacuum tube factory where people could see it, but to set up a solid-state research laboratory on the floor above the factory. When word of IBM's vacuum tube plant got back to RCA and the other tube vendors, they put in considerable effort improving their products, which suited IBM's purposes. Meanwhile, IBM was working on transistors.

Now another battle arose. Engineers at IBM, so taken with the transistor, pushed to have the new devices in the newer computers IBM was building. Samuel, who had backed the transistor technology, disagreed; he thought the technology was not reliable enough yet.

"We had to stall," he remembered. "In fact, the 701, 702, and 704—we made several computers, all vacuum tubes, and when a new design came up this battle came up all over again."

Meanwhile, Samuel decided to keep working on the checker program. He thought it would be useful to try to run the program on the 701 both as a test of the computer and of his program. He had to work on his own time; the program was considered frivolous and IBM is not a frivolous place.

His other problem was that the program had been written for ILLIAC and had to be completely rewritten for the 701. The technique he developed enabled IBM to rewrite all its existing programs for the new machine.

At this point Samuel did something dramatic to the program—he made it learn. The program learned from experience. The more checkers it played the better a player it became.

The Samuel Checker Program became possibly the first artificial intelligence program ever written. He has dabbled with it ever since. The program is quite capable of beating any amateur player and can give better players a good contest.

Samuel's little group at IBM grew to about 30 people and represented IBM's research department, although it was not called that. "I was responsible for the magnetic tape and magnetic core and the vacuum tubes," he said, "all the components.

"We decided we had to build a new research lab. I obviously was not a good manager. At the Bell Labs I had gotten kicked out of a managerial position and put back to work. . .so we decide we would have to hire somebody as a new director of research.

"For a year I was made resident manager of the Poughkeepsie laboratory; that's the biggest administrative job I ever had. I had about 300 people in the lab. But I did a terrible job managing; I'm sure I did.

"So finally they wanted to get me out of that job, and so they gave me a job of travelling in Europe to keep track of what was going on in research and development in all of Europe."

IBM had a rule that its executives had to travel first class. Watson Sr., who had lost some executives in a plane crash, ordered oceanliner travel for executives going overseas, so for several years Samuel and his wife crossed the ocean several times a year on the best and most luxurious liners of the time.

"It was a very nice job."

He taught for a while at MIT part-time, and was the editor of the MIT Journal of Research and Engineering.

While at MIT a graduate student made some suggestions for improving the checkers program and Samuel went back to work on it. When he reached retirement age he was encouraged by John McCarthy to come to Stanford, and rewrote the checker program for a DEC 20 on campus.

Samuel got involved with the artificial intelligence program here, working on SAIL (Stanford Artificial Intelligence Language) developed here for AI work.

But he still worked on the checkers program, bringing in an expert checkers player to help, but the expert didn't know enough about the mental processes involved in playing the game and Samuel got nowhere.

The program has beaten one champion, but he turned around and in six mail games, defeated the program.

Samuel says he is tempted to go back to work on the program but fears he may be reaching a point of diminishing return. He has written one commercial version of his program, and another program for the game Othello.

He is also working with Don Knuth's TEX 82.

Samuel technically works quarter time on campus but usually ends up working most of the day, sometimes more. He says whenever he thinks of easing off, someone comes up with something else they need him to do.

He doesn't seem to mind at all.

Toyota, 64K-RAM chip the moral equivalent of sputnik for schools—Kennedy

Toyota and the 64K-RAM chip may prove the moral equivalents of sputnik for America's schools, Stanford President Donald Kennedy told Stanford alumni Sunday, April 24, in Los Angeles.

The climate for education and research now is "the most encouraging. . .that we have seen since the late 1950s," he said.

While the traditional college-age cohort will decline in the coming decade, "the demographic signs are favorable" for institutions like Stanford, he said.

"Students entering college will be from significantly smaller families, a circumstance that favors intellectual development.

"At the peak of the baby boom, just before 1960, the proportion of white Americans who were first-born bropped from over 40 percent to around 27 percent. Now it is back up above 40.

"The proportion of children who were fourth-born or higher increased from 17 to 28 percent, and has now dropped back well below 17 percent.

"Parallel changes have occurred in minority families.

"Thus the cohort that will enter college now and in the next decade or so has experienced less crowding and less confusion in almost every dimension of its institutional life, including that in the schools.

"Although there may be something to worry about in terms of the quality of teachers and the level of public confidence in the schools, these may be less important than the fact that it is no longer rush hour in the classroom."

Public interest grows

There also has been a reawakening of public interest in children and the schools, he said. "That concern will intensify as more and more of that large baby-boom cohort become parents.

"Their own early experiences, with large families and crowded schools, are quite likely to make them more concerned and more troubled about the education of their children. And more of them will have had more school experience than that of any parent group in history."

Growing conviction that future gains in productivity will depend on human intellectual capital are reflected in concern for science education in the school and research support in the universities.

The National Science Foundation budget has increased 18 percent this year and other agencies' support has risen significantly.

But federal support for research not related to defense has fallen more than 40 percent since the late 1960s, he noted. Moreover, federal funding of scientific research facilities has plummeted and between $1 and $2 billion would be needed to bring university research equipment up to standard.

"It strikes me as ironic that although many academic scientists and scholars contribute heavily to science policy work in this country, not one of our academic institutions has been able to organize itself to contribute significantly as an institution to the formulation of natinal scientific policy," he observed.

Universities help

"A related opportunity for the distinguished universities—and I really do think it is an opportunity—is to lead a national movement that will restore confidence and interest in public service, including public education."

One of Kennedy's first moves after becoming president of Stanford was to initiate a cooperative study with local schools. He and Harvard President Derek Bok plan a small conference late this summer to discuss how selective research universities can further contribute to improvements in public education. But "the real test is whether we can change public attitudes enough to make some of our most able graduates once again interested in becoming teachers," Kennedy said.

While universities may look forward to improved science budgets in the near future, these may be less likely to include support for the indirect costs of research or related activities, such as graduate training.

The "oscillatory, unsteady character of

Donald Kennedy

public support for important social institutions" will make private support even more vital for universities.

Independence concern

"Independence will be one of the great issues during the last 15 years of this century," he predicted. "University science is now so capital intensive. . .that the public sector is the only fully adequate scource on which to depend in the future.

"But should we not *begin* to assert more decisive private responsibility for financing operations, student financial aid, and even some of the kinds of research that are not apt to be the subject of large public programs? I rather think that we should, and that will require a new level of support from our patrons."

"Particle physics and astronomy are not the only 'big sciences;' the list now includes organic chemistry, molecular biology, many parts of electrical engineering and computer science."

Next month, the university will formally break ground for its new Center for Integrated Systems, funded by 19 major firms providing $750,000 each toward its cost.

"When fat years are followed by lean (in federal support) the effects of compression are especially serious," he noted.

Where only 50 percent of Stanford's faculty was tenured during the height of the university's expansion in the late 1950s, now about 75 percent are tenured. Overall faculty growth has slowed from four percent to about one percent annually.

"That makes an enormous difference in our capacity to refresh and revitalize ourselves," he commented.

Deans would like to see more faculty interaction with students—L.A. panel

Stanford deans want faculty members to increase direct interaction with students, whether to instill in the students an appreciation for the intellectual life, to stimulate their minds, or to shake them from "laid back" attitudes.

These wishes were expressed when deans from Stanford's seven schools met in a panel session moderated by President Donald Kennedy at the Los Angeles alumni conference Sunday, April 24.

The deans were asked by an alumnus what changes they would like to see made in their schools, assuming necessary financial support would be met.

Rather than itemize concrete needs for equipment or facilities, the deans mainly addressed needs for quality improvement in teaching and faculty-student relationships.

"There's an extreme faculty shortage in business schools today," said Robert K. Jaedicke, dean of the Graduate School of Business. "We need to find more quality teachers." Jaedicke expressed a wish for smaller classes, resulting in closer student-professor ties.

Norman K. Wessells, dean of the School of Humanities and Sciences, wants "to create an atmosphere that will instill a greater appreciation for the intellectual life."

He noted that 78 percent of his faculty is tenured, with average age on the increase. "Remember," he said, "a teacher's main contact people are 17, 18 years old. We need younger faculty to provide a bridge to the older members."

John Hart Ely, dean of the Law School, said, "I'm concerned with the lack of intellectual engagement. Students are too laid back. We need to wake them up in various ways. One way would be with more individual instruction—teaching by simulation, role playing with video taping. We do some of this, but we should do more."

However, Allan V. Cox, dean of the School of Earth Sciences, finds that his students are not complacent. "They know they need jobs," he said.

Cox sees the need to develop strong programs in offshore and global teaching and research. "Technology is needed as we go offshore, and that means computers. We're at the forefront of this, but we need to build much better computer resources."

Robert W. P. Cutler, M.D., sitting in for Dominick P. Purpura, dean of the School of Medicine, commented, "Since I'm not the dean, but rather the associate dean, I can fantasize more freely.

"I'd like to have the ability to allow students and faculty to interact more freely, with not so many large lectures. We need to expand the Medical Scholars Program, to allow students to have close interactions with faculty that will mold their minds."

William M. Kays, dean of the School of Engineering, expressed a need to lower what he called "the excessive student-faculty ratio." In an aside to Kennedy, which he shared with the audience, he also wished for the abolishment of full indirect cost recovery to make research more competitive.

J. Myron Atkin, dean of the School of Education, said he would like to give financial support to students entering the field of public education in order to attract high quality applicants. He also seeks improved collaboration between Stanford, high schools and local school boards.

In summary, Kennedy said, "We are engaged in 'hand work' at Stanford. We need enough hands and enough programs to bring faculty and students together. I think we are only playing part of that keyboard."

—Mary Kroesche

Stassen backs bigger government role

Expanded government at all levels is needed for a full employment, free economy, long-time Presidential aspirant Harold Stassen said Thursday, April 28, at Stanford.

"The basic consequence of automation is that a very small percentage of the total population of a developed nation can produce and manufacture all of the food, goods, and materials for the entire population," he said. "This means that. . . the service side of the economy. . . must expand enormously."

Cities across the country need more teachers, police and firefighters, he said. "The highway to full employment cannot be found along the path of shrinking government."

To support a balanced budget, full employment, and no inflation, he advocated

1) "A minimum absolute tax which all corporations and individuals must pay on each year of above-minimum income";

2) A combined local, state, and national sales tax of 10 percent; and

3) A "world defense fund American import tax" to share the burden of global defense.

He also proposed an annual summit meeting between the U.S. and the Soviet Union and praised "those millions who advocate a mutual verifiable nuclear freeze. . . for assisting in lifting the world out of the deep rut of the arms race."

Stassen's remarks were prepared for a talk in the Branner lounge sponsored by the Stanford Law Forum. He noted that his daughter, Kathleen, author of a popular text on "The Developing Person," had been a Stanford undergraduate.

The Hoover petitions and their responses—debate background

Rebholz: Criticism stems from annual reports

Following is an April 12 statement by Prof. Ronald Rebholz, English, to his faculty colleagues:

I have just read the 1982 report of the Hoover Institution. As a result, I have signed the attached petition, initiated by Prof. John Manley of political science. I have also drawn up a comparable petition to secure the 50 signatures of members of the Academic Council necessary to get the issue debated in the Academic Senate. After I describe what I found in the Hoover report, I hope you, too, will sign both petitions.

The Hoover Institution is a part of Stanford University, it advocates a partisan political position, and it uses its relationship with the University and many of its faculty to enhance its prestige and respectability and thereby make its advocacy more effective.

These facts, which I will demonstrate from the report, render the Hoover Institution's relationship with Stanford University profoundly inappropriate. They also give the Trustees' consideration of the relationship between Hoover and Stanford an importance which many of us have long recognized but which is even more crucial now that Hoover's associates and policies are figuring so largely in the Reagan Administration.

The Hoover Institution's estimated budget for 1982-83 is $8.4 million. Of that sum 32 percent, or approximately $2.7 million, is coming from University funds (final page of the report). Glenn Campbell, the director of Hoover, describes Hoover's "many interrelationships with Stanford University."

They "include library cooperation, joint appointments, cosponsorship of seminars and lectures, and courses offered by Hoover Institution scholars," whom he then goes on to list (p. 20). He describes himself as the first chairman of the UC Board of Regents "to come from a private university," (p. 21) so he obviously thinks of himself and the Hoover Institution as integral parts of Stanford.

Hoover's partisan mission on behalf of conservative politics and politicians reveals itself proudly throughout the report. On January 11, 1982, at a White House reception "in honor of the Institution's Board of Overseers and their spouses," President Reagan thanked Glenn Campbell and the Hoover Institution for building "the knowledge base that made the changes now taking place in Washington possible" (pp. 25, 29).

He went on to say that "Dr. Campbell attracted some of the world's best scholars to the Hoover Institution. I'm glad he did, because we've borrowed some of them to serve in top spots in this administration. Glenn. . .to you a personal thanks" (p. 29). I count 25 Hoover people, listed in the back of the report (pp. 79-88), who claim some kind of connection with President Reagan and his administration.

There are no fewer than nine mentions and six pictures of President Reagan in the report; an elegantly printed transcript of remarks made by the President at that White House reception in January of 1982; and photographs of several members of the administration who are connected with Hoover, including Edwin Meese III, counselor to the President, Secretary of Defense Caspar W. Weinberger, Secretary of the Treasury Donald T. Regan, Attorney General William French Smith, Special Envoy to the Middle East Philip C. Habib, Deputy Secretary of Transportation Darrell M. Trent, and former Assistant to the President for Policy Development Martin Anderson, now returned to the Hoover Institution as a senior fellow. Indeed, the report looks like it might have been published by the Republican National Committee.

Much of the research and many of the publications listed in the report make it clear that the Hoover Institution is in fact a powerfully influential conservative think tank. Let me just list a few:

Anderson, Martin, *Welfare: The Political Economy of Welfare Reform in the U.S.*

Bunzel, John H. *New Force on the Left: Tom Hayden and the Campaign Against Corporate America.*

Duignan, Peter J. *The World Wide Threat of Soviet Communism. Journal of East asian Affairs, spring 1982.*

Duignan Peter J. *Arms Buildup Crucial to USA. Cleveland* (Tenn.) *Banner,* June 16, 1982.

Freeman, Rogert A. *The Wayward Welfare State.*

Nishiyama, Chiaki. *Human Capitalism.*

Rabushka, Alvin and Pauline Ryan. *The Tax Revolt.*

Starr, Richard F. *Communist Regimes in Eastern Europe.*

Starr, Richard F. *Terrorism by Soviet Design, Military Science and Technology, November/December 1981.*

Wesson, Robert (ed.). *Communism in Central America and the Caribbean.*

To ensure the dissemination of its views the Hoover Institution maintains a massive program of reprints, conferences, symposia, and appeals through the media. The Public Affairs Program, for example, "disseminates research results through magazine and newspaper articles; lectures and seminars; newspaper, radio, and television interviews; and press releases and journal reports. The appropriate mass medium is used to make public the products of research, in addition to traditional academic media" (p. 64). Six pages of the report (62-67) catalogue the parts of the Hoover progapanda machine.

Little wonder, then, that Glenn Campbell can make the following boast in the report:

Comments in the media include the July 20, 1981, issue of U.S. News & World Report, which described the Hoover Institution as the "dowager" of research institutions of its kind. In an Associated Press feature story, expansion of the Institution's research programs was described as prompting "some of the academic world's heaviest thinkers to move to California."

The **Reader's Digest** *commented that such gifted academicians as Nobel economist Milton Friedman, physicist Edward Teller, and philosopher Sidney Hook were turning out "trail-blazing papers and books." Most recently Newhouse News Service described the Institution as "the oldest and. . .one of the most influential of a dozen or so major U.S. research institutes known as think tanks" (p. 19).*

There surely can be no doubt that the Hoover Institution is a partisan organization bent on influencing national and international policy.

Likewise there can be no doubt that Hoover uses its connection with Stanford University to further its mission. Campbell's description of the interrelationships between Hoover and Stanford University and his list of eminent Stanford scholars associated with Hoover (pp.20-21) serve the Institution's purposes in two ways. They confer on Hoover the prestige of Stanford University, and, because the scholars have various political persuasions, they give Hoover and its list of publications a veneer of nonpartisanship.

On the second point we must not be fooled. Hoover is a two-tiered institution whose regular staff is now and always has been openly and proudly conservative. About the first point we must ask the question: Do we want the University's prestige to be used to further the mission of the Hoover Institution? I personally have no hesitation responding with a strong NO.

If Hoover's political bias were liberal, libertarian, or communist, the issue would remain the same. The existence of such a partisan organization within the University violates the University's traditional position that, while it takes stands on political questions bearing on its mission, it is and must always remain nonpartisan.

Indeed, any other position calls into question the University's tax-exempt status. But more important, the alliance between Stanford University and the Hoover Institution undermines the integrity and the reputation of the University, at least in the eyes of those who do not want a *Hoover* implicitly emblazoned on our masthead.

Ronald A. Rebholz

Rebholz petition text

Following is the petition initiated by Prof. Ronald Rebholz to request the Steering Committee of the Academic Senate the following resolution concerning the relationship of the Hoover Institution and Stanford University:

Whereas, the existence of a partisan organization, whether liberal or conservative, within the University raises grave questions concerning the academic independence, integrity, and national reputation of the University; and

Whereas, the legitimacy and influence of the Hoover Institution and the causes for which it stands are immeasurably enhanced by sharing in the prestige of a great University; and

Whereas, Stanford University provides approximately one-third (32 percent) of the Hoover Institution's annual budget, and this 2.7 million dollar support comes at a time of severe cuts in the University's budget;

Therefore, the undersigned members of the Academic Council request the Steering Committee of the Academic Senate to place on the agenda of the Senate the following resolution:

The Academic Senate urges the Board of Trustees to initiate an immediate and independent inquiry including a public report, on the relationship between the Hoover Institution and Stanford University.

Manley, student petition

Following is the text of a petition for the Board of Trustees' inquiry into the relationship between Hoover Institution and Stanford University originated by Prof. John Manley, political science:

The existence of a partisan research and policy organization, whether liberal or conservative, within the University raises serious questions concerning the academic independence, integrity, and national reputation of the University; and

The legitimacy and influence of the Hoover Institution and the causes for which it stands are immeasurably enhanced by sharing in the prestige of a great University; and

Stanford University provides approximately one-third (32 percent) of the Hoover Institution's annual budget, and this 2.7 million dollar support comes at a time of severe University funding cutbacks;

Therefore, we, the undersigned members of the Stanford Community urge the Board of Trustees to initiate an immediate inquiry, including a public report, on the relationship between the Hoover Institution and Stanford.

Manley compiles Report, news excerpts

The following data from the 1981 and 1982 Annual Reports *of the Hoover Institution are part of a compendium of materials on alleged partisan political activities by the Hoover Institution compiled by John F. Manley, professor of political science.*

Ronald Reagan, speaking at the January 6, 1981, winter meeting of the Institution's Board of Overseers:

"Indeed, in 1978, the *New York Times Magazine* called the Institution 'the brightest star in a small constellation of conservative think tanks. . . operating from a base of honorable conservatism, first-rate scholarship, sharp wits, acute perceptions, and clear reasoning.'

" . . . I've experienced this conservatism and scholarship, these wits and perceptions, and their reasoning personally through my association with the Institution as an honorary fellow.

"Moreover, during the recent campaign, I called on more people from the institution to help with my campaign than from any other institution. Some, such as Glenn and Rita Ricardo Campbell, served on my policy task forces. Others, such as Martin Anderson, Darrell Trent, and former Senior Fellow Dick Allen, work on my campaign staff. All are now assisting me in the transition to a new administration."

1981 *Annual Report,* pp. 24-25.

Hoover Director Glenn Campbell:

"A major strength of the Institution is its location at Stanford University. Its scholars can thereby conduct their analyses of major policy issues and provide their views to members of the legislative and executive branches of government from their perspective of residence at the Institution."

1981 *Annual Report,* p. 15.

Reports...

Ronald Reagan, speaking at a January 11, 1982, White House reception for the Hoover Board of Overseers and their spouses:

"Under the leadership of your able director Glenn Campbell, and with hard work and diligence, you built the knowledge base that made the changes now taking place in Washington possible. Dr. Campbell attracted some of the world's best scholars to the Hoover Institution. I'm glad he did, because we've borrowed some of them to serve in top spots in this administration."

1982 *Annual Report*, p. 29.

Hoover Director Glenn Campbell:

"The many interrelationships with Stanford University include library cooperation, joint appointments, cosponsorship of seminars and lecturers, and courses offered by Hoover Institution scholars."

1982 *Annual Report*, p. 20.

Hoover Director Glenn Gampbell:

"The highlight of the past year was the election of honorary fellow Ronald W. Reagan as President of the United States. This development, together with the Institution's national and international reputation as a unique center for advanced study has continued to focus attention on the work of the Institution's scholars and on its library and archival collections."

1981 *Annual Report*, p. 11.

and continuing:

"Since President Reagan took office on January 20, 1981, more than 30 scholars and former fellows of the Hoover Institution have been requested to participate in public service and have been appointed to positions in the executive branch of the federal government or as members of boards and commissions."

1981 *Annual Report*, pp. 11-12.

The following quotations testify to the close connections between Stanford and Hoover and are presented in the 1981 *Annual Report* (pp. 57-58) as "representative samples of such comments":

Washington Star, November 16, 1980, Gavin Scott, Time-Life News Service:

"Some of the most forceful ideas advanced by the Reagan administration will come from a group of intellectuals ensconced at the Hoover Institution on War, Revolution, and Peace located on the Stanford University campus. . . . Quite clearly it will have an influence on post-Carter Washington policies far greater than its endowment of $35 million and present annual budget of $6.6 million would suggest."

Dun's Review, April 1981, T.J.M.:

"By his own admission, President Reagan has probably learned more about public policy issues from Stanford University's citadel for scholars, the Hoover Institution on War, Revolution, and Peace, than from any other source."

As to Hoover's policy connections with the Reagan Administration:

Los Angeles Times, November 18, 1980, William Endicott:

"Throughout this campaign year, Reagan turned to Hoover to provide intellectual substance for his conservative views on a broad range of domestic and international issues. Now, as he starts to shape a new administration, he is expected to lean heavily on the institution for both personnel and policy advice."

Boston Globe, November 23, 1980, Robert Levey:

"Now Reagan, the heavy thinkers from the Hoover Institution, and other like-minded experts have headed to Washington with full authority to test out their mandate in the field."

U.S. News and World Report, November 24, 1980, Stanley N. Willborn:

"In recent years, under the leadership of Director W. Glenn Campbell, another longtime Reagan adviser, Hoover has broadened its scope. Its research now carries substantial weight in Congress and in the executive branch of the U.S. government."

Newsweek, December 1, 1980:

". . . some of the best minds at Hoover will soon be helping to run the Reagan administration. . . . Ten of Hoover's 50 resident fellows are currently acting as advisers to Ronald Reagan, and a dozen of the President-elect's transition task forces include Hoover representatives. . . . Publishing up to 30 major works a year, Hoover has already begun to have an impact on national policy."

CBS/TV Network, "CBS Evening News," December 10, 1980, Walter Cronkite:

(Speaking about the Hoover Institution)"Many of the positions enunciated by Ronald Reagan during the campaign were developed by a West Coast think tank. . . ."

New York Times, December 22, 1980, Bernard Weinraub:

". . . The Hoover Institution. . . serve(s) as one of the dominant sources of personnel and policy advice in the new administration of Ronald Reagan."

Bacchetti clarifies Hoover budget status

Editor, *Campus Report*:

Recent stories in the campus press about the Hoover Institution drew a conclusion about its budget sources that might be misleading. The question concerns restricted funds.

Restricted funds, like unrestricted ones, are all the funds of Stanford University. The restrictions say where within the range of the University's purposes those funds are to be used.

The possible confusion attaches to the expression that $4 million of the $8.4 million total Hoover budget is "received from the University." It is more accurate to say that allocations of unrestricted funds ($2.6 million in 1982-83) are made in relation to program priorities and restricted fund availability. The unrestricted funds support the library division of Hoover Institution, which is also supported by $1.3 million in restricted funds.

Moreover, it's important to note that the securing of restricted funds is a complex task involving many people over long periods of time. In the case of the Hoover, none are involved more than the leadership of the Institution itself.

Raymond F. Bacchetti
Vice-Provost for Management and
Director of University Budgets

Marotta responds to *Stanford Daily*, describes Hoover appointment process

Following is a letter submitted to The Stanford Daily by George Marotta, public affairs coordinator of the Hoover Institution:

There are so many misleading statements, innuendoes, quotes by unidentified persons, character assassinations, and attempts at intimidation in the recent four-part story in the *Stanford Daily* (April 19-22) that I hardly know where to begin. I will only deal with a few for the record.

The first point that needs making is that the Hoover Institution is not partisan and does not take positions on public policy issues. There are about 70 scholars on the staff of the Institution and each is free to express his or her own conclusions based on their research and to present their views on issues.

Hoover fellows have commented previously in letters to the *Daily* on the charge that the Institution is partisan. For example, senior research fellow William Schneider wrote in the *Stanford Daily* on October 27, 1981: "I have not found the Hoover Institution to be monolithically conservative or Republican, and I have never been made to feel out of place here. There are, in fact, quite a few of us Democrats here at Hoover."

Also, Alexander Dallin, then a senior research fellow for over four years, wrote in the *Daily* on October 10, 1975: ". . .in my experience there has never been any attempt to influence or control the research or the findings of any scholar associated with the Institution."

Various actions of the Stanford University Board of Trustees, principally a May 21, 1959, Resolution, define the relationship between the Institution and the University. This document, which includes a several page statement on the status, purposes, management, and policies of the Institution, contains the often-quoted paragraph by Mr. Hoover on the "evils of the doctrines of Karl Marx." This resolution was adopted by the Board of Trustees "with the recommendation of the President of the University, the endorsement of the President of the Board and the Trustee Chairman of the Committee on the Hoover Institution, and the approval of Mr. Hoover."

In a later section, the Resolution notes that "The members of the staff must be free to publish statements or books of the results of their research work in which they give their 'interpretation' or opinion. If the writer of this type of publication wishes to state that he is a member of the Hoover Institution, the publication must carry a declaration that the Institution does not assume responsibility for statements in the publication."

Immediately following Mr. Hoover's much-quoted comment, the Resolution states that "The over-all mission of this Institution is, from its records, to recall the voice of experience against the making of war, and by the study of these records and their publication to recall man's endeavors to make and preserve peace and to sustain for America the safeguards of the American way of life."

The 1959 agreement was reaffirmed by the Trustees in May 1962 as a condition of Mr. Hoover's donating his archives to the Hoover Institution and again in the late 1970s when the Volker Fund was donated to the Hoover Institution.

The terms of a bequest by Mr. William Robertson Coe to Stanford University contains the following language: ". . .to establish and maintain a Program of American Studies designed as a positive and affirmative method of meeting the threat of Communist, Socialism, Collectivism, Totalitarianism and other Ideologies opposed to the preservation of our System of Free Enterprise." Three endowed Coe professorships exist at Stanford (in economics, history, and English). It is interesting to note that, to my knowledge, there has never been any similar objection expressed to the statement of purpose required by the Coe bequest.

Regarding the selection of the current Director, Dr. W. Glenn Campbell was invited to become director in November 1959 by Stanford University President J. E. Wallace Sterling. In a letter to Campbell, Sterling said, ". . .the Stanford Trustees have authorized me to finalize arrangements concerning your appointment as Director of the Hoover Institution, and I have discussed these arrangements with Mr. Hoover, who approved of them. With this letter, then, I formalize the offer to you of said directorship. . . ."

"Paragraph 3 of the 1959 resolution describes the relationships between the Institution and the University as follows: 'That the Hoover Institution on War, Revolution, and Peace is an independent Institution with the frame of Stanford University. Its relation to the University is that the President of the University will propose all appointments, promotions, and the budget of the Institution directly to the Board of Trustees. There will be no reference to any faculty committees between the President and the Trustees.' "

The *Daily* articles contain so many misstatements and half-truths about the appointment process for scholars at the Hoover Institution that instead of trying to comment on them, I will outline the various procedures briefly.

For Senior fellows who receive continuing appointments but not academic tenure, the President creates an *ad hoc* committee to review the nomination by the director (which is made after a nationwide search) before submitting it to the Trustees.

In the case of Senior Research Fellows who receive term appointments of five years or less, the director gives the president advance notice of his intention to recommend a particular person and provides background information.

In the case of certain senior Library Personnel, such as the Associate Director for Library Operations, Curators, and the Archivist, search committees composed of Institution staff as well as representatives of University faculty and administration are used. The latter representatives are selected by the Director in consultation with and with the concurrence of the President.

"The Director recommends one candidate to the President who reviews the candidate before submitting the recommendation to the Board of Trustees."

Junior members of the scholarly staff as well as other staff members are selected in accordance with procedures similar to those used by the rest of the University.

George Marotta
Public Affairs Coordinator

Marotta describes appointment process for Hoover Institution scholars

continued from page 1

express his or her own conclusions based on their research."

A May 21, 1959, resolution of the Board of Trustees states that "the Hoover Institution is an independent institution within the frame of Stanford University. . . .

"The members of the staff must be free to publish statements or books of the results of their research work in which they give their 'interpretation' or opinion. If the writer. . .wishes to state that he is a member of the Hoover Institution, the publication must carry a declaration that the Institution does not assume responsibility for statements in the publication."

Law students James Steyer and Daniel Cohen, who initiated the student petition, said "this effort is intended to spark much needed debate within the Stanford community regarding the proper role of the Hoover Institution in an academic setting. The purpose is not to engage in political debate in the national press."

Among the "complaints" listed by them and Prof. Martin Carnoy, education, in a release from Faculty and Academic Community for Truth in Scholarship (FACTS) are that:

"Hoover enjoys a hazy, quasi-independent status. Its research fellows are not subject to the University academic hiring process or to approval by the University's President, Donald Kennedy.

"Hoover is a two-tiered organization, comprising a 'conservative inner core' of policy advocates made respectable by an 'outer ring' of academics, most of whom are Stanford professors.

"Hoover is creating a 'two-class professoriat in the University social science departments—those who receive research funds and other benefits from Hoover, and those who do not.

"Hoover injects political criteria into the decisions to hire research fellows. It is the only part of the University not bound by the Academic Council's statement on academic freedom, which prohibits political discrimination in hiring.

"Hoover's widely recognized promotion of the Reagan candidacy and the Republican Party generally threatens its own tax-exempt status and that of the University."

In 1981, William Schneider, a Hoover senior research fellow, told *The Stanford Daily* "I have not found the Hoover Institution to be monolithically conservative or Republican, and I have never been made to feel out of place here. There are, in fact, quite a few of us Democrats here at Hoover."

In 1975, according to Marotta, Stanford Prof. Alexander Dallin wrote "in my experience, there has never been any attempt to influence or control the research or the findings of any scholar associated with the institution." At the time, Dallin had been a senior research fellow at Hoover for four years; he has since been one of the few faculty to criticize the Institution publicly.

So far as appointments are concerned, Marotta outlines the following procedures:

"For senior fellows, who receive continuing appointments, but not academic tenure, the (University) president creates an ad hoc committee to review the nomination by the director—which is made after a nationwide search—before submitting it to the (University Board of) Trustees.

"In the case of senior research fellows, who receive term appointments of five years or less, the (Institution) director gives the president advance notice of his intention to recommend a particular person and provides background information.

"In the case of certain senior library personnel, such as the associate director for library operations, curators and the archivist, search committees composed of institution staff as well as representatives of University faculty and administration are used. The latter representatives are selected by the director in consultation with and with the concurrence of the president. The director recommends one candidate, who reviews the candidate before submitting the recommendation to the Board of Trustees.

"Junior members of the scholarly staff as well as other staff members are selected in accordance with procedures similar to those used by the rest of the University."

In a recent letter to *The Stanford Daily*, Prof. Joseph Berger, chairman of sociology, said "as far as I know, there has been no 'political litmus test' applied" in appointing four of his colleagues to the Hoover Institution: Seymour Martin Lipset, Alex Inkeles, W.J. Goode, and James March.

"Is it conceivable that one political grouping actually contains so much academic talent?" Berger asked. "Furthermore, the acquisition of these scholars—and others in other social science departments—and the University's ability to keep them in the face of competing alternatives is dependent, to an important degree, on the resources for scholarship that have been made possible by their Hoover Institution appointments."

Campbell announces appointment of 12 new national, peace fellows

Twelve National and Peace Fellowships have been awarded for 1983-84 by the Hoover Institution, according to Institution Director Glenn Campbell.

The fellowships are awarded to outstanding younger scholars in political science, economics, history, law, sociology, literature, and philosophy from throughout the U.S. and Canada.

They provide scholars an opportunity to spend one year at the Institution doing independent research on current and historical issues of domestic and foreign policy.

During the year all fellows participate in regular afternoon discussions, weekly seminars and monthly dinners which are led and attended by the fellows themselves, the Institution's staff, Stanford faculty, visitors, and U.S. government officials.

According to Dr. Dennis L. Bark, Program Executive Secretary, the National Fellows Program "is designed to provide the fellows both a stimulating atmosphere for research and discussion and to afford scholars a unique opportunity to advance their professional careers by completing an original and significant research project in the form of a publishable manuscript."

Fellows, their topics and academic backgrounds are as follows:

NATIONAL FELLOWS

Bruce D. Berkowitz, "U.S. Nuclear Strategy in the Age of High Technology"; assistant professor, political science, University of Minnesota; Ph.D., political science, University of Rochester.

Jack Bielasiak, "Crises and Crisis—Management in the Socialist Bloc"; associate professor, political science, Indiana University; Ph.D., political science, Cornell University.

Malcolm R. Burns, "The Effects of Predatory Price Cutting and Mergers on the Acquisition Costs of Competitors"; assistant professor, economics, University of Kansas; Ph.D., economics, University of Minnesota, and J.D., law, University of Kansas.

Lorne H. Carmichael, "On the Role of Reputation and Public Policy in Competitive Labor Markets"; assistant professor, economics, Queen's University; Ph.D., economics, Stanford University.

John E. Chubb, "The Political Economy of Federalism"; assistant professor, political science, Stanford University; Ph.D., political science, University of Minnesota.

Lowell Dittmer, "Chinese Political Reform: A Comparative Analysis"; associate professor, political science, and chairman, Center for Chinese Studies, UC-Berkeley; Ph.D., political science, University of Chicago.

Don Fullerton, "Incentive Effects of Capital Income Taxation"; assistant professor, Woodrow Wilson School of Public and International Affairs, Princeton University; Ph.D., economics, UC-Berkeley.

Masanori Hashimoto, "A Comparative Study of U.S. and Japanese Labor Markets"; associate professor, economics, University of Washington; Ph.D., economics, Columbia University.

John McAdams, "The Rise of the New Class in Post-Industrial Society"; assistant professor, political science, Marquette University; Ph.D., political science, Harvard University.

Gale A. Norton, "Protecting the Environment Without the Bureaucracy: Legal Mechanisms for Encouraging Private Initiative, Decentralized Decision-Making, and Technological Innovation"; senior attorney, Mountain States Legal Foundation, Denver, Colo.; J.D., law, University of Denver.

Joel B. Slemrod, "Simplification and the Compliance Cost of the Individual Income Tax System"; assistant professor, economics, University of Minnesota; Ph.D., economics, Harvard University.

PEACE FELLOW

David Collier, "Opposition and Incorporation: Unions, Parties, and Regimes in Latin America"; associate professor, political science, and chairman, Center for Latin American Studies, UC-Berkeley; Ph.D., political science, University of Chicago.

Four freshman get Booth prize

Four winners of the Boothe prize for excellence in writing at Stanford have been chosen for winter quarter.

The prizes were established by a gift from Mr. and Mrs. D. Power Boothe, Jr. They are awarded for the best freshman essay, each quarter in Western culture and in freshman English. Each program uses a faculty selection committee.

The winners are: in Western culture, Greta Anderson, "Medieval Attitudes toward Literature"; in freshman English, Donna Anderson, "Gigi"; Bruce Bogle, "Amateurism—is the IOC Being Reasonable"; and Neil Kennedy, "Communism, Italian Style."

In addition, 10 finalists were selected from the two programs. Winners received a cash award of $250, and finalists receive a $25 gift certificate at the Stanford Bookstore. Recipients were honored at a reception in the Office of the Dean of Humanities and Sciences Tuesday, May 3.

CTL open house at new quarters

The Stanford Community is invited to an open house from 3 to 5:30 p.m. Wednesday, May 11, at 126 Encina Commons, to celebrate the new facilities of the Center for Teaching and Learning and the Program for Faculty Renewal.

The Center supports the teaching improvement efforts of Stanford faculty and TAs through workshops, orientations, evaluation, videotaping/consultation, reading materials, a handbook and handouts, and a variety of other resources.

Funded by the Mellon Foundation, the Program for Faculty Renewal organizes weekend and summer conferences for off-campus faculty from throughout the Pacific Coast region.

Stanford third in gift support

Among private universities, Stanford ranked third nationally in private gift support for 1981-82, a new national study shows.

Harvard was first, with $181 million, Yale second, $82 million, and Stanford third, $77 million.

The data come from the Council for Financial Aid to Education, which reported that total voluntary support for higher education rose almost 15 percent last year.

Other institutions in the top 10 nationally, in order, were UCLA, Washington University, USC, Minnesota, Cornell, Columbia, and Princeton.

The University of California state-wide system received $131 million and the University of Texas statewide system $91 million.

Despite record rainfall, Lagunita's drying up fast

Despite record-setting winter rains, Stanford's recreational lake, Lagunita, is drying up.

Lagunita probably will be empty by Commmencement, June 12, because breaks in its flume are preventing the University from filling the reservoir—as it does annually—with water from nearby San Francisquito Creek.

Landslides at the Stanford Golf Course in February damaged the flume—a pipeline used for the past 100 years to carry part of the creek runoff to the man-made lake. The section of flume between the creek and 15th fairway is broken, as is pipe near the 14th hole, according to Cheryl Jensen, manager of civil engineering, water/technical services, in the Utilities Department of Facilities and Services.

Heavy rains in January 1982 caused a serious slide near the 14th hole, which damaged the imbedded flume. The same hillside slid again this year, breaking the repaired pipe.

"We've had more rain this year than any other year we've been recording it at Stanford," Jensen says. The "extraordinary" rains caused the slides, she added.

Total rainfall measured 32.82 inches as of May 2. The previous high was 29.08 inches in 1957-58. The annual average is 15 to 16 inches, according to Jensen. University rainfall records date back to 1930.

Slightly more than 30 inches of rain was recorded in San Jose in 1889-90, and Jense speculates The Farm experienced similar high rainfall that year as construction on the soon-to-open University was underway.

Lagunita is an "infiltration pond," a reservoir that recharges the ground water. State regulations require the University to empty it every summer because it might otherwise become a stagnant breeding ground for mosquitos. The lake's source of water, San Francisquito Creek, is too low to provide water for summer filling.

Runoff from the hills across Junipero Serra Boulevard filled Lagunita ("little lake") after the flume broke this past winter, allowing students several weeks for windsurfing and other water sports. But the water now is evaporating rapidly from the top and leaking through the lake's bottom, which is not sealed.

Some water is being added through an irrigation line from Felt Lake, but Jensen says "we can't put in enough to make a difference in the lake level and still meet Golf Course irrigation demands.

Jensen is investigating other methods of getting water out of the creek and into the lake. Alternatively, two old University wells could be pressed into service, but it would cost a "prohibitive" 18 cents per minute in well-head tax and pumping costs to get the water, she says. Jensen believes the wells could produce only enough water to compensate for evaporation, not enough to compensate for the loss through the bottom.

A study of early maps indicates the 115-million-gallon reservoir was built in 1878 or 1879. It originally held irrigation water for crops grown on Leland Stanford's Palo Alto Stock Farm.

Police emergency alarms installed at 10 locations

Ten police emergency alarms have been installed at Stanford as part of the Department of Public Safety's continuing efforts in the area of personal safety.

The alarms were designed specifically for Stanford to tie in with the existing communication system of fire alarms. The police emergency alarms are located on the posts of existing fire alarm boxes. A blue light flashes continuously.

The alarms operate similarly to a fire alarm. When the blue lever is pulled, a signal is transmitted to a central dispatch communicator who initiates a police response. At the same time, a horn is activated at the site to attract attention.

The location for the first 10 boxes in this pilot program were determined based on the amount of use the area gets, lighting, nearness to suggested travel routes, and accessibility to 24-hour buildings, phones, and other alarm boxes.

The first 10 locations are:

1. At North East Corner of the Quad;
2. Stadium;
3. Santa Teresa/Duena Street;
4. Law School;
5. Food Service/Pampas Lane;
6. Stauffer Chemistry Gazebo—North West side;
7. Medical Center—South East side;
8. Physics Tank;
9. Maples Pavilion; and
10. Cowell Center.

Go roll up your sleeves at Roble

The Stanford University Blood Bank will hold a blood drive from 2 to 6 p.m. Friday, May 6, at Roble Gym.

Faculty and staff are urged to donate blood and, whenever possible, to announce the drive to students and colleagues.

The donated blood will help fill the needs of patients at Stanford Hospital and Children's Hospital.

SSRL/ continued from page 1

scientists here, have taken the position historically and today that any science research is good, and should be done. Any weapons system that can be developed, (from that research) should be developed, essentially.

"The problem we have is that we perceive. . .if the existing weapons policies, military policies of this country to say the least, and other countries as well, if those policies are extrapolated out to the future there in fact is no future."

Drekmeier, Miller speak

Political Science Prof. Charles Drekmeier said the research would permit the "deployment of orbiting platforms, perhaps dozens, perhaps as many as 50 of these nuclear powered lasers. These won't work in the atmosphere so what we're preparing for here is war in space."

He said a university cannot survive research that shuns responsibility "without becoming a kind of vocational school."

Roger Miller, a SLAC professor, said the proposal "is in conflict with the rules on research at Stanford," because SSRL cannot operate without the SLAC beam workers at SLAC would be forced to participate, even though indirectly.

"There's a few hundred workers at SLAC whose work directly contributes to the work that goes on at SSRL. It is impossible, as (President) Kennedy suggested in his talk to the faculty, to move people to places where their work would not contribute."

He said that by saying there was "good basic science" involved in the proposal, proponents are attempting to get research performed that would not normally be done at Stanford.

Implied threat

"There is the implied threat that other funding will be withdrawn if that work is not done," he said. "It's clear to me that Prof. Bienenstock feels that his laboratory's future will be threatened if he says 'no.'

"I think in that situation he has only one way of saving his laboratory, and that is to say 'no' to this research. Unless he does that he has already lost the freedom of inquiry that he prizes so highly at his laboratory." (The Department of Energy funds SLAC entirely and is the major funding source for SSRL. The national laboratories proposal seeks funding from DoE's Office of Military Applications.)

Mary James, a Stanford graduate student and engineering physicist at SLAC, said Bienenstock, "who is very concerned, by the way, about how the staff at SLAC and SSRL feel about this proposal," asked her how she feels.

"I said I feel that you are selling my work to the weapons establishment. You are selling it without my permission and without my approval, and I am upset that you are selling my work, and I don't want you to do it."

The demonstrators delivered two letters to Kennedy's office, one a petition signed by 2,000 students, 50 faculty members, and 200 staff, and another from over 300 people at SLAC, according to Jon Adelstein, student leader of the protest movement.

The letter from SLAC and SSRL said that the central issue in the dispute was that "as Stanford scientists and workers we have not only the right, but the responsibility to participate only in research programs that are consistent with our own judgment and conscience."

Adelstein said he felt the issue of "involuntary servitude" would be the most persuasive to Kennedy. He said people outside of Stanford are making decisions which are binding in effect on the people at SLAC and at Stanford. —Joel Shurkin

Demonstrators delivered written protests to Donald Kennedy's office last Thursday in an effort to keep weapons-related research out of SSRL.

Cinco de Mayo protest march to Shultz home

Latin America policy protesters will mark Cinco de Mayo with a noon rally in White Plaza at Stanford Thursday, May 5, followed by a march to the campus home of George Shultz.

The U.S. Secretary of State currently is in the Middle East. He remains on leave as a professor in the Stanford Graduate School of Business.

The protest has been organized by the Stanford Central American Action Network, a voluntary organization, and Stanford MECHA.

It will include an 11:45 a.m. appearance by Balet Folklorico de Estanford and a talk by Olga Talamente, a former political prisoner.

How H&S uses student evaluations

Following is a February letter to Chairman Walter Lohnes of the C-AAA Sub-Committee on the Evaluation and Improvement of Teaching from Norman K. Wessells, Dean of Humanities and Sciences, on Student Evaluation of Teaching in Humanities and Sciences.

Permit me to reiterate some of the points I made in talking to representatives of your subcommittee.

First, we believe that student evaluations of teaching are important data for use in reappointment and promotion proceedings. We, of course, supplement the data on the SCEIT-ASSU forms with various other sources of information about a professor's teaching, notably with assessments by professional peers and with letters from individual students.

However, these forms give us important information that is available through no other means. In particular, the statistical feature of the current forms has proven very useful to our Office and our Advisory Committee on Appointments and Promotions as a means for making across-the-board comparisons in a School with an exceptionally diverse faculty. We were therefore distressed to learn that low faculty and student participation in the current system call these statistics into question.

Faculty response to student evaluation of teaching varies widely in our many disciplines. I believe it's accurate to say that a strong majority of our 470 faculty take seriously the feedback they get from students. Though some worry that the popular or charismatic professor receives plaudits while the more retiring but substantive professor is down-graded, I think that is the minority view among those who have taken time to investigate the situation in more than a cursory manner.

Perhaps what is missing most from across-the-board student evaluation procedures is sampling of opinion of a course or a professor several years later, when time and further exposure to both general and major education, as well as to many more professors, give the student better objectivity.

In that regard, certain aspects of the Senior Survey provide feedback that can be very useful in distinguishing those few professors who are very, very good or very, very bad.

Our office would be distressed if some form of across-the-board student evaluation were not maintained. Undoubtedly the School would be forced to design one or more evaluation forms, and to set up and run the machinery for their use.

We are not convinced that completely separate departmental teaching evaluation procedures would be sufficient. Consequently, the costs and benefits to the full University community should be considered prior to discontinuing the current system.

Perhaps one thing that has discouraged student and faculty participation in the current forms is the Senate rule requiring that every course be evaluated every time it is taught. That is counterproductive in our opinion.

We would prefer a system in which major, large enrollment courses that are taught each year by a professor are reviewed using a School-wide form at least once every three years. Smaller courses and seminars should also be evaluated periodically.

We intend to lend some degree of "enforcement" to such procedures by *requiring* each winter that chairpersons bring at least one set of recent student teaching evaluation forms for each professor to the conferences where salaries are set. That procedure is being instituted during this academic quarter and will help to provide impetus for faculty use of some formal procedure in student evaluation of teaching.

In summary, high quality teaching characterizes many of our faculty. More must be helped to attain that ranking. Student evaluations are one means of providing direct feedback for that purpose. Equally important, those student evaluations provide a critical form of data for administrative purposes in reappointment and promotion.

We should not do anything that sends messages to students or faculty that student evaluation of teaching is unimportant or does not receive attention and weight in administrative decision-making.

Staff colleagues remember Meloni's energy, enthusiastic help at HEPL

Julio (Mel) Meloni

Julio (Mel) Meloni, 59, who spent more than 30 years working on tubes and accelerators at Stanford, died April 20 of a heart attack.

A man of great energy and enthusiasm, he was widely known for his great concern for fellow workers, especially struggling Ph.D. students.

"He was always there when you needed help—volunteering even before he was asked," said Ed Dillard, a close friend and co-worker in the Department of Physics.

"He helped others without interfering with his own work, of which he always seemed to have plenty.

"I always felt behind in returning favors, but that never bothered Mel. His comment when I would say something was, 'Who's counting?' "

His colleagues knew Meloni's strong desire to understand how things worked, how they were built and how to repair them.

"I was very fortunate to have been able to work with him," said Werner Wadensweiler of the High Energy Physics Laboratory, his co-worker for three years "He had so much experience in vacuum technology, and I gained a lot of knowledge."

A secretary in the Solid State Lab said: "Just ask him for a screwdriver and the next thing you knew he was repairing or putting together whatever needed to be done."

Another working associate said Meloni's accomplishments were those of someone who had lived for 160 years—he had started and finished so many projects at Stanford.

Born in San Francisco, he served in the South Pacific during World War II, then worked in local tube industry until 1949, when he came to the Hansen Labs at Stanford.

He helped construct the MKII and MKIII accelerators and later medical accelerators at the Stanford Medical School, then located in San Francisco, the University of Chicago, and Michael Reese Hospital in Chicago.

He also worked on early accelerator klystrons and guns, and with traveling wave tubes built at the Microwave Laboratory.

After a two-year stint in local industry, he returned to Stanford in 1958 to work in the klystron group at the Stanford Linear Accelerator Center.

He returned to the Hansen Labs in 1968. He worked part-time with students and faculty in the Solid State Electronics Laboratory, resuming full-time work last January. Several accelerators were obtained and refurbished for use in studies of implantation.

"Mel was eager to tackle any problem and usually found a solution," a colleague said. "Several generations of accelerators reflect his work. He was a wonderful, warm human being and a gentle man."

Mary Cloutier

Ph.D. oral exams

THURSDAY, MAY 5

Jonathan W. Greene, electrical engineering, "Configuration of VLSI Arrays in the Presence of Defects," 4 p.m., Skilling 191.

FRIDAY, MAY 6

Louis Bloomfield, physics, "High Resolution Ultraviolet Laser Spectroscopy of Mercury and Helium," 2:15 p.m., Physics Conference Room, Varian Bldg.

MONDAY, MAY 9

Gonzalo Edwards, engineering-economic systems, "An Analysis of Chilean Wheat Imports," 2:15 p.m., Terman 329. **Hung-chun Chang,** electrical engineering, "Scattering of Radiation Belt Electrons onto the Ionosphere by Whistler Mode Electromagnetic Waves Propagating in the Magnetosphere," 4:15 p.m., McCullough 134. **Lisa R. Kanter,** geology, "Paleomagnetic Constraints on the Movement History of Salinia," 9 a.m., 326 Geology Corner.

TUESDAY, MAY 10

Maria Teresa Garza, education and psychology, "A Study of Relationship of Mexican Teachers' Attitudes to the Mathematics Achievement of Their Pupils," 3:15 p.m., e114 Education Bldg. (Cubberley) **Robin O. Roundy,** operations research, "Effective Heuristics for Multi-Facility Economic-Lot-Size Problems," 1:30 p.m., Terman 217. **Ngai Chuen Wong,** applied physics, "Coherent Effects in Laser Spectroscopy," 2:15 p.m., Applied Physics 200.

WEDNESDAY, MAY 11

Malcolm B. Brown, German studies, "Knowledge as Fiction: An Investigation of Friedrich Nietzsche, Hans Vaihinger, and Carl Einstein," 2 p.m., Library, German Studies Department (240). **Ira David Hale,** geophysics, "Dip-Moveout by Fourier Transform," 2:15 p.m., Mitchell 372. **Yael Ilan,** industrial engineering, "Evaluation Model in a Dynamic Environment," 3:15 p.m., Terman 363. **Yoko Kawashima,** education, "Wage Differentials Between Women and Men in Japan," 2:15 p.m., e114 Education Bldg. (Cubberley). **Timothy John Stultz,** materials science and engineering, "Shaped Beam Laser and Arc Lamp Recrystallization of Silicon," 2:15 p.m., McCullough 240.

THURSDAY, MAY 12

David Goodman, geology, "Morphology, Taxonomy, and Paleoeconology of Cretaceous and Tertiary Organic-Walled Dinoflagellate Cysts," 2:15 p.m., Bldg. 320, Room 326 (Conference Room). **Katherine R. Jones,** education, "Determination of the Additional Costs Incurred by Patients in a Teaching Hospital Due to the Presence of Graduate Medical Education Programs," 2:15 p.m., e114 Education Bldg. (Cubberley). **Mee-Joo J. Kim,** civil engineering, "A Disaggregate Freight Demand Model for U.S. Freight Transportation: A Theory of the Firm Approach," 2:30 p.m., Room 259 Terman. **Patricia Ann Porter,** education, "Variations in the Conversations of Adult Learners of English as a Function of the Proficiency Level of the Interlocutor," 9 a.m., e114 Education Bldg. (Cubberley).

FRIDAY, MAY 13

Sevig Ayter, electrical engineering, "Scattering of Rayleigh Waves from Surface Breaking Cracks in the High Frequency Regime," 2:30 p.m., Applied Physics 202. **Robert Falster,** electrical engineering, "A Study of Extrinsic Gettering in Silicon: Laser Damage, Polysilicon Films, and Low Current Corona Discharges," 2:15 p.m., Applied Physics 200. **Jane Alison Hale,** French and Italian, "Perspective in the Theater of Samuel Beckett," 2:15 p.m., Room 274, Bldg. 260. **Ali Akbar Iranmanesh,** electrical engineering, 3:15 p.m., McCullough 240. **Hilary M. Schor,** English, "The Victorian Literary Imagination, 1835-1930," 2:15 p.m., Room 41-F, Bldg. 40.

Graham Stuart, 97, dies after surgery

Graham H. Stuart, emeritus professor of political science and authority on diplomacy and international relations, died Friday, April 29, at Stanford Hospital following surgery. He was 97 years old.

He was the second oldest faculty member prior to his death. Stuart joined the political science department in 1923 as its first international relations expert, retiring in 1952.

His name is spoken daily by faculty, staff, and students who use the departmental lounge named for him. Former students donated money to furnish a room in his honor when he retired.

An expert on the history and functions of the U.S. State Department, Stuart trained many students for work in the diplomatic service. He once counted seven ambassadors as former students.

The Stanford Board of Trustees honored Stuart in 1978 by establishing an endowed professorship in his name. Alexander George, named recipient of the chair, said Monday, May 2, that Stuart "was indeed a pioneer in the development of the study of international relations and certainly one of the most successful professors in training people to take important positions in the foreign service. His contribution was as much in training people, such as Ambassador Walter Stoessel, as in the very fine scholarly books he also produced."

Stuart is credited with launching the annual Stanford alumni conference, which grew from a casual conversation in 1933 with a group of former students.

Born in Cleveland in 1886, Stuart earned his bachelor's degree from Western Reserve University in 1908. He studied at Ecole Libre des Sciences Politiques in Paris in 1913-14, then returned to the U.S. to earn his doctorate in political science in 1919 at University of Wisconsin. He was awarded an honorary degree from Western Reserve in 1948.

Stuart wrote five books, including *French Foreign Policy*, *Latin America and the U.S.*, *American Diplomatic and Consular Practice*, *The Department of State*, and *The International City of Tangier*. In addition, he wrote more than 50 professional articles and edited the Stanford Books in World Politics.

Stuart served as chief economic analyst

Graham Stuart

of the Board of Economic Warfare and later head of the State Department's War History unit during World War II.

Stuart's interest in his field continued after his retirement. He opposed moves by the U.S. to return the Panama Canal to the Panamanians in 1975.

In 1960 he said, "We must face the fact that democracies are handicapped in the conduct of foreign relations; in fact, the peril is enhanced by our democratic procedures.

"A democracy like the U.S. is humane; therefore, it cannot undertake a preventative war—it must await attack, which in an atomic age is a serious liability.

"In today's world the USSR has substituted the balance of terror for the balance of power. Under these circumstances, where formerly our armed forces were our first line of defense, today diplomacy is our only safe line of defense."

Stuart is survived by his wife of 65 years, Agnes, and a daughter, Dr. Ann Orloff of La Jolla. Eight grandchildren and one great-grandchild also survive.

Services were held Sunday, May 1. The family prefers contributions to the Graham Stuart Fund, c/o 301 Encina Hall, Stanford 94305.

Medical advances slowed by lack of modern instruments

Technological advances to improve the practice of medicine are significantly slowed by a lack of modern instrumentation facilities, to the detriment of the public that could benefit, a Stanford University scientist told a Congressional subcommittee Friday.

In testimony prepared for delivery before the Labor-HHS-Education appropriations subcommittee in Washington, D.C., Dr. Oleg Jardetzky urged Congress to increase funding by a recommended $20 million per year in the budget of the National Institutes of Health for instrumentation programs.

Presently, the principal programs for instrumentation funding are in the Division of Research Resources of the NIH, with budgets of $27.7 million for fiscal 1983.

Jardetzky, a professor of pharmacology, directs the Stanford Nuclear Magnetic Resonance Laboratory. He testified before the subcommittee as president of the Association for Advanced Technology, a group composed of directors of publicly-supported laboratories that are national or regional centers of research.

The recommendation was part of a 1982 NIH report which acknowledged that the quality, quantity and development of scientific instruments available for research in the United States had rapidly declined. This threatened to diminish the leading position of the United States in research, the report concluded.

The report called for increased funding of research equipment and instrumentation "to replenish and maintain the adequacy of the biomedical research community's needs" for the next five years.

Because sophisticated instrumentation such as million-volt electron microscopes, nuclear magnetic resonance, synchrotrons, and computers programmed for graphics and artificial intelligence, for example, are costly—often running in the six figures—the report urged that advanced instruments be used through shared facilities.

However, the Congress had increased the budget for this purpose only by $12.5 million for fiscal 1983.

"This sum is far below the estimated need," Jardetzky told the subcommittee. "It is not adequate to meet the new needs generated by recent technological developments."

Among examples, Jardetzky cited his own field, nuclear magnetic resonance (NMR). This is a technique that can provide a glimpse inside the human body without scalpel, needle or hazardous X-rays, and more complete than anything obtained with CT scans.

Today 14 instrument manufacturers are developing NMR imaging equipment, Jardetzky noted, but funding sources for such instruments in universities and hospitals remain ill-defined.

"The hope that the costs of instrumentation—on the order of $2 million per unit—will be defrayed by income from patient care does not take into account that for the immediate future at least the technique must be used on an experimental basis and applications must be closely tied in with further development," he said.

The combination of NMR techniques has enormous potential as a tool for diagnosis and for evaluating the results of therapy in a number of diseases, Jardetzky said. Yet manufacturers are concentrating on simpler, more immediately marketable NMR imaging equipment while needed funding for more sophisticated developments cannot be identified.

Jardetzky argued that funding of shared facilities by the NIH since 1962 has demonstrated the validity of this concept.

"Ultrasophisticated instruments, the latest state-of-the-art methods, and expert support personnel in installations open to many users help life scientists in their efforts to decipher fundamental biological processes or combat human illness," he said.

Oleg Jardetzky

Stanford has five national facilities: the Stanford Nuclear Magnetic Resonance Laboratory, Stanford University Medical Experimental Computer for Artificial Intelligence in Medicine (SUMEX-AIM), Stanford Synchrotron Research Laboratory, Mass Spectroscopy Laboratory, and Stanford Electronics Laboratory (SEL).

—Spyros Andreopoulos

"Good evening, and welcome to Masseter-piece Theatre. I am your host, Deanopolis Purpuroides: physician, philosopher, and connoisseur of young sheep."
So began the presentation of The Hypocritic Oaf *to a sellout crowd in Dinkelspiel Auditorium last Friday. Staged by Medical School faculty and graduating students, the musical play followed a medical student's odyssey through Stanford. For those who missed it live, a video tape of the play will be shown on June 1, at 7:30 p.m., and on June 10, at 3:30 p.m., in Fairchild Auditorium. Commemorative T-shirts can still be ordered. Contact the Medical Alumni Association Office by May 27, at 497-5064.*

Lecture established

International society honors emeritus pathology professor

The establishment of the David Glick Lecture, to be given at the Congresses of the International Federation of Societies for Histochemistry and Cytochemistry, has been announced by Dr. Sidney Goldfischer, president of The Histochemical Society.

Glick is a Stanford professor of pathology emeritus, now active in the department of radiology's Cancer Biology Research Laboratory. He was one of the founders of The Histochemical Society and served twice as its president. He was president from 1972-76 of the International Committee for Histochemistry and Cytochemistry, now the International Federation named above.

Among his distinctions Glick has an honorary LL.D. degree from the University of Glasgow, Scotland. He is an honorary member of The Histochemical Society (U.S.), Finnish Histochemical Society, and the Royal Danish Academy of Sciences.

He was given the Van Slyke Medal and Award (1977) and the Ames Award (1980) by the American Association of Clinical Chemistry, for his basic research applicable to this field.

Glick earned his B.S. in chemistry at the University of Pittsburgh in 1929, and his Ph.D. in biochemistry there in 1932. After an already extensive and varied professional career, he joined the Stanford Medical School faculty in 1961.

He has served on several scientific journal editorial boards, and has published widely.

The David Glick Lecture is to be given every four years by an outstanding histochemist or cytochemist selected by the officers of the International Federation. Glick has been invited to give the first Lecture at the next Congress in Helsinki, August 5-11, 1984.

Medical Center MEMO

Prepared as a section of the *Campus Report*, by members of the Medical Center News Bureau staff. Editor is Lisa Ames, who can be reached at 497-6911.

MDs to undergrads: there is more to learn than science

A common belief among aspiring physicians is that in order to be accepted to medical school they have to spend their entire premedical education taking science classes, doing research, and working in hospitals and laboratories.

That's not so, say many accomplished physicians. And that's the message they plan to relay to undergraduate students during an upcoming panel discussion, "Reflections on Medicine: Education, Lifestyle, and Diversity."

The panel, scheduled for 7 to 9 p.m., May 9, in the Sherman Fairchild Auditorium, will discuss the pros and cons of choosing medicine as a career.

Panel members are Dr. Harvey Weinstien, clinical assistant professor of psychiatry; Dr. Elizabeth Short, associate dean of student affairs; Dr. Sarah Donaldson, associate professor of radiology; Dr. Bruce Parker, associate professor of clinical radiology; and Drs. Roger Peeks and Tom Fiene, both in private practice. Medical School Dean Dominick Purpura will chair the panel.

Medical students and housestaff will attend a reception following the panel. Together with the panel members, they will be available to talk with students about the various routes they took before entering medical school.

"Students should choose a major that interests them," said Audrey Bernfield, coordinator of departmental student services for humanities and sciences. "They should worry about medical school when they get to it. They shouldn't gear their whole life around it."

The School of Humanties and Sciences, the Academic Information Center, and the Medical School are co-sponsoring the panel. It is a kick-off for the Majors Event, May 10 in the Inner Quad, during which undergraduate students will have the opportunity to learn about all majors from faculty, graduate students, and alumni.

Nurses plan ethics conference

"Ethical Issues in Clinical Practice" is the focus of a day-long conference Thursday, May 5, sponsored by the Friends of Nursing and Nursing Educational Services.

Leah Curtin, R.N., M.S., M.A., is the featured speaker. Curtin recently coauthored a book, *Nursing Ethics, Theories and Pragmatics*, which was selected as a 1983 *American Journal of Nursing* Book of the Year. Curtin is also editor of *Nursing Management*.

The conference addresses ethical issues encountered in the acute care setting. The structure of an ethical problem will be outlined and strategies will be presented that can be used in the clinical setting. Afternoon sessions will examine case studies in small groups, with participants divided by clinical interests.

The meeting is scheduled from 8:15 a.m. to 4:30 p.m. at Rickey's Hyatt House in Palo Alto. A wine and cheese reception will follow, and the Friends of Nursing will meet for a brief business meeting.

Continuing education credit is available, and a registration fee will be charged. For more information, call Carole Kidder at 497-6366.

Regina Kriss

Post-mastectomy lecture, film

The film "No Less a Woman," on self-image and sexuality after mastectomy, will be the focus of the next public lecture in a series sponsored by the Friends of Psychiatry and Behavioral Sciences at Stanford.

Before the film, speaker Regina Kriss, Ph.D., family therapist and project director of post-mastectomy group therapy in the department of psychiatry, will describe her research on the effects of group therapy on breast loss and sexual adjustment of post-mastectomy women.

The lecture will take place 8 p.m., Thursday, May 12 in the Sherman Fairchild Auditorium, and will include a panel of women who have participated in post-mastectomy group therapy. They will discuss and answer questions about their experiences.

In 23 minutes, the dramatized documentary "No Less a Woman" will reveal how group therapy helps women deal with the emotional problems so common after mastectomy.

The outgrowth of a collaboration between Kriss and Marvin Silverman, professor of filmmaking at San Francisco State University, the film is based on the experiences of the women in Kriss' study.

"The film has tremendous power," said Kriss. "It leads viewers to experience for themselves what is happening in these women's lives. Because it communicates problems that are hard to describe, it has turned out to be a valuable teaching tool."

The film treats the reactions of both married and unmarried post-mastectomy women, both groups of whom experience profound changes in their sexual interactions, said Kriss, who has herself had two mastectomies.

Admission to the evening presentation is free, and there are no reserved seats. Dr. Thomas Gonda, professor and chairman of psychiatry and behavioral sciences, will serve as moderator.

For further information or to get on the Friends of Psychiatry and Behavioral Sciences mailing list, contact Karen Sortino at 497-6376.

Nurses to hand out attitude survey

Every M.D., R.N., and hospital administrator at SUH will soon be receiving a questionnaire regarding the perceptions these three groups have of one another.

The questionnaire is part of a Stanford study, developed and carried out by the department of nursing. "The interdependencies of decision making of health care professionals demands sharing of information and mutual respect," explained principal investigator Duane Walker, R.N., M.S., director of nursing.

Much has been written about conflict between nurses and physicians. Is this conflict real? What causes it? How can the relationship be improved? How do relationships with administrators fit in? These are some of the issues the study will explore.

Walker's coinvestigators include Dr. Lois Welches, R.N., associate director of nursing; Dr. Ann Baldwin, R.N., nurse consultant; and Dr. Michael Eliastam, associate chief of staff.

The questionnaire, to which respondents will remain anonymous, will be mailed the week of May 9.

According to Eliastam, "This study is part of an overall effort to improve communication among health care professionals, another example of which are the nurse-physician committees established in several hospital units. It is an early step in trying to identify aspects of these professional relatjonships which may require further scrutiny or action.

"Some questions on the survey may appear unusual at first," he said, "but we would appreciate it very much if people would make the effort to complete it and return it to us." The questionnaire is expected to take about 15 minutes to complete.

"What we do with the results," Eliastam said, "will depend on what we find out about how these groups feel towards one another. If we find it's necessary, we'll then look at what we might do to improve communication."

The data gathered by this study, Walker said, will allow correlation between the three groups of respondents with numerous other variables so that relevant related issues can also be explored: Is this a male-female issue? Is there better collaboration in some clinical areas than in others? How are economic pressures affecting these professional relationships, if at all?

"It is my hope," said Walker, "that the information elicited from this study will provide some hard data from which we can begin to plan a better collaborative effort. For I believe only through open communications and collaborative efforts can we plan for systems and decision making which achieve high quality patient care—our mutual goal."

Helping the dying to have a good death is the key behind hospice care. Here, Nurse Joan Armer talks with a terminal cancer patient in the hospice unit at the Veterans Administration Medical Center. "Hospice is why I'm in nursing," she said in an article in a recent issue of The Healing Arts *magazine. Hospice care provides medical and emotional support to cancer patients facing life-threatening illness, and to their families.*

News Notes

Appearing on the CBS Evening News with Dan Rather tonight (May 4) will be **Dr. Ronald Levy**, *associate professor of medicine (oncology) at Stanford University School of Medicine.*

The segment, in which Levy discusses his research on monoclonal antibodies, is being broadcast as part of a series this week on the topic of cancer. Tune in to channel 5 at 7 p.m. this evening.

• • • •

The Medical Center community is invited to **The Sock Hop**, *Friday evening, May 6 at the Palo Alto Elks Lodge, an event sponsored by the SUH department of respiratory therapy.*

The dance, with a '50s and '60s theme, will take place from 7:30 p.m. to midnight, and live entertainment will feature "Yakity Yak," said Mercy Moss of the department's festivities committee, **Jestingstock**.

Dance and dress contests will award those most in tune with the sock hop theme, but Moss emphasized that costumes are optional. No-host cocktails will be served.

Tickets are $5.50 per person and can be purchased in W014. For further information, call Moss or Sally Gibbs at 497-6941 or 497-5703.

• • • •

Stephanie Brown, Ph.D., *director of Stanford's Alcohol Clinic and acting assistant professor in the department of psychiatry, has been honored for her pioneering studies of the adult children of alcoholics.*

Brown, also a founding member of the National Association for Children of Alcoholics, was honored with the Bronze Key Award by the National Council on Alcoholism—Bay Area.

Brown's work includes such papers and presentations as "Alcoholism in the Family: A Family-Based Treatment Plan," "Group Psychotherapy With the Adult Children of Alcoholics," and "The Children of Alcoholics."

• • • •

Medical Center employees are encouraged to donate magazines, newspapers or books written in Spanish which could be distributed to waiting areas throughout the hospital, said Auxiliary member Gerry Cole.

While many periodicals in English are regularly given to the Auxiliary for the waiting areas, a real shortage of Spanish-language material exists. Donations can be dropped off at the Auxiliary office in W157, and will be greatly appreciated.

• • • •

The **SUH Translator Bank** *has extended its service to Children's Hospital at Stanford, said Misara Chan of the department of community relations, which originally organized the service in 1981.*

The bank, a group of about 70 hospital, university and community volunteers speaking 24 languages, provides translation services when patients cannot speak English. Volunteers speak languages ranging from Spanish, Chinese and French to Farsi (Persian), Haitian Creole, and Ukranian, to name a few.

Those interested in volunteering as translators may call Chan at 497-7167. She noted that presently, the bank especially needs a speaker of Arabic.

Carla Shatz

Neurobiologist to give SMASH lecture

This Friday's S*M*A*S*H lecture, "Order from chaos: Prenatal development of the mammalian visual system," will be given by Dr. Carla Shatz, assistant professor of neurobiology.

Open to all interested members of the Medical Center community, the presentation will take place 4:30 p.m., May 6, in the Fairchild Auditorium. A TGIF gathering in the lobby will follow.

HRP Open House

Medical School faculty, staff and students are invited to the Health Research and Policy Building Open House, to be held from 4 to 6 p.m. today, May 4.

Medical School departments now housed in the HRP building include Family, Community and Preventive Medicine, Biostatistics, Epidemiology, Family Medicine and Primary Care Associates, International Health, the Stanford Arthritis Center, the Clinical Scholars Program, the Heart Disease Prevention Program, and others.

The move took place primarily in January of this year. The building was formerly headquarters for the medical microbiology department, which has moved to the Fairchild Building.

Employee banquet

The Hospital's 1983 employee service awards banquet will be held 6:30 p.m., May 10, at Rickey's Hyatt House.

The event will honor employees receiving awards for five, 10, 15, 20, 25, and 30 years of service, and all other employees and retirees who have served more than 20 years. The winner of this year's Thomas A. Gonda Award will be announced.

Hospital employees who have received invitations to the event are asked to respond, if they have not already done so, to Susan Cabral in Personnel, at 497-6251.

Medical Center Calendar

To schedule Fairchild Auditorium and Lobby, Alumni Green, Grant Courtyard, and Dean's Courtyard, call 497-6389.

MEDICAL CENTER TOUR: Every Thursday, 1:30-2:30 p.m. Reservations required. Call 497-6389.

WEDNESDAY, MAY 4

Dept. of Biochemistry Seminar: "DNA Components and Chromatin Organization of the SV40 Early Promoter Region"—Dr. Pierre Chambon (Inst. of Chemical Biology, Strasbourg, France). Noon, M316.

Health Research and Policy Building Open House: All medical school faculty, staff and students are invited to help celebrate the new headquarters, former home of the medical microbiology department. 4 to 6 p.m.

THURSDAY, MAY 5

Dept. of Medicine Grand Rounds: "Drug Interactions with Warfarin"—Dr. Robert O'Reilly. 8:30 a.m., Fairchild Auditorium.

Dept. of Pharmacology Seminar: "Light Energy and Signal Transduction in *Halobacterium Halobium*"—Dr. Walther Stoeckenius (UCSF).

Div. of Otolaryngology/Head and Neck Surgery Grand Rounds: "Serous Otitis Media: Fact and Fiction"—Drs. Paul Levine, Judith Green, Pauline Lau, and Michael Glenn. 6 p.m., Wang Library R117.

Friends of Nursing and Nursing Educational Services presents: "Ethical Issues in Clinical Practice," a day-long conference with speaker Leah Curtin, R.N., M.S., M.A. 8:15 a.m. till 4:30 p.m., Rickey's Hyatt House, Palo Alto. Reception and business meeting to follow. Continuing education credit available; a fee will be charged. For more information call Carole Kidder at 497-6366.

FRIDAY, MAY 6

SMASH Lecture: "Order from Chaos: Prenatal Development of the Mammalian Visual System"—Dr. Carla Shatz. 4:30 p.m., Fairchild Auditorium.

Div. of Child Psychiatry Grand Rounds: "Cellular Pathobiology of Neurobehavioral Failure"—Dr. Dominick Purpura. 11 a.m. till 12:15 p.m., Faber Auditorium, Children's Hospital at Stanford.

Div. of Family Medicine Friday noon lecture series on Women and Health: "Maternal Alcoholism and Family Life"—Genevieve Ames, Ph.D. (UC-Berkeley). Noon, M114.

SATURDAY, MAY 7

Hospital Auxiliary Volunteer Orientation: 9:45 a.m., W001. For further information, call the Auxiliary office at 497-6636.

MONDAY, MAY 9

Dept. of Medical Microbiology Seminar: "Antibodies of Predetermined Specificity in Biology of Medicine"—Dr. Richard Lerner (Research Institute of Scripps Clinic). 1:15 p.m., M114.

Dept. of Medical Microbiology Schultz Memorial Lecture: "Molecular Studies on the Replication and Pathogenesis of Hepatitis B-Like Virus Using Animal Models"—Jesse Summers, Ph.D. (Philadelphia Institute for Cancer Research). 5:15 p.m., Fairchild Auditorium.

TUESDAY, MAY 10

SUH Employee Service Awards Banquet: by invitation—RSVP. 6:30 p.m., Rickey's Hyatt House. For further information, call Susan Cabral in hospital personnel at 497-6251.

Dept. of Dermatology Special Lecture: "Chemical Peels"—Dr. Samuel Stegman. 10 a.m., A153.

Dept. of Biochemistry Colloquium: "General and Specific RNA polymerase II Transcription Factors from *Drosophila*"—Dr. Carl Parker (California Institute of Technology). Noon, M316.

Dept. of Psychiatry lecture: "What We Know About the Causes of Schizophrenia"—Dr. E. Fuller Torrey. 8 p.m., M106.

WEDNESDAY, MAY 11

Registration deadline: for Nursing Educational Services Basic EKG Interpretation Workshop to be held May 25, June 1, 8 and 15, from 7 till 9 p.m., 900 Welch Road, room 15. Intended for nurses with little or no experience in dysrhythmia interpretation. Basic instruction in cardiac anatomy, physiology and electrophysiology, and "hands-on" practice of interpretation with instructor guidance. A fee is charged, and continuing education credit is available. For further information, call Carole Kidder at 497-6366.

Div. of Hematology noon conference: "Drug cross resistance in cancer chemotherapy"—Dr. Branimir Sikic. Noon, L201.

Dept. of Neurology Grand Rounds: "Neuronal Substrates of Elementary Associative Learning"—Prof. Richard Thompson. 5 p.m., Palo Alto Veterans Administration Medical Center, building 7, room B108.

FRIDAY, MAY 13

First Annual Symposium of the Program in Molecular and Genetic Medicine. 8:15 a.m. till 5:30 p.m., Fairchild Auditorium. For information and to register, call the Office of Public Events at 497-6389.

MONDAY, MAY 16

Registration deadline: for Nursing Educational Services Legal Workshop to be held Monday, May 23, from 8:30 a.m. till 4:30 p.m., at the Palo Alto Holiday Inn. Open to all hospital personnel. Will address nursing practice according to state and federal regulations, professional and JCAH standards, etc. A fee is charged, and continuing education credit is available. For further information, call Carole Kidder at 497-6366.

THURSDAY, MAY 19

Registration deadline: for Nursing Educational Services workshop, to be held June 2, "Burnout: Treatment and Prevention," from 8:30 a.m. till 4 p.m., 701 Welch Road, suite 327. Course will focus on defining burnout, assessing individual levels, developing standardized and individualized care plans to counteract the problem, and identifying helpful responses to others' burnout. For further information or to register, call Carole Kidder at 497-6366.

SATURDAY, MAY 21

Dept. of Emergency Services Pre-Hospital Care Program: Sports Medicine for R.N.s, M.D.s, and allied health professionals. Goal is to teach development of personal exercise programs and identification and emergency management of sports-related injuries seen in various medical practices. 8:30 a.m. till 5 p.m., Fairchild Auditorium. Will also be offered June 4 at Letterman Army Medical Center in San Francisco. For further information, call 497-6017.

WEDNESDAY, MAY 25

Nursing Grand Rounds: "Career Development: New Directions for Job Joy." Guest speakers will describe various strategies for job expansion including lateral transfers, administrative opportunities, clinical nursing specialist research and combining nursing with other careers (such as medical law). 3:30 till 5 p.m., M104. For further information, call Karen Kawauchi days at 497-6923, or Kit Laird nights at 497-6377.

Giraud attacks reporting, treatment of research animals by University

Editor, *Campus Report*:

Often, when reading a press account of something of which I have firsthand knowledge, I am led to wonder if the reporter and I had indeed been at the same event. That feeling overcame me powerfully at seeing the two stories (April 6 and 13) by Mike Goodkind, initiated by a press conference we both attended about the wounded dog found collapsed in the doorway of an unattended lab at night and promptly put out of its misery by an outside veterinarian.

Since the case is likely to be the subject of legal action, any comment on the dog's condition or sequence of events is inadvisable.

This is frustrating, because Goodkind, who is running a poor second to *The National Enquirer* in accuracy in animal stories, puts quotes around the words "fact sheet" for a statement issued by the humane societies, but reports as holy gospel the whoppers pronounced by the Medical Center and VA authorities.

If, as Associate Dean of Administration David Mendelow states, that poor, sad animal really was considered to have received "proper care," one might well ask that Stanford promptly be enjoined from jurisdiction of any dog—indeed, any animal whatsoever. If not, some people in high places should get their mouths washed out for what they are trying to palm off on us.

Mendelow's statements that "constant monitoring by ourselves as well as the U.S. Department of Agriculture ensures that we will provide optimum care to our laboratory animals" is a highly fragmentary version of the facts. It is about the equivalent of someone who has just flunked out of school reporting to his parents that constant monitoring by himself and his professors ensures his being a model student.

For flunk Stanford did, and where was Mike Goodkind when we needed him to tell us so?

As it is, it has until quite recently been one of the best-kept Stanford family secrets that the University last year lost its accreditation for the care and housing of its laboratory animals. This, for an institution of Stanford's magnitude and opulence, is quite scandalous enough to be newsworthy, especially since we are unique in this disgrace among the institutions we normally compare ourselves to. Even UC-Berkeley, generally known as one of the local chambers of horror for animals, is accredited.

The accrediting agency is the American Association for the Accreditation of Laboratory Animal Care (AAALAC). Its task is to oversee compliance with the guidelines set down by the National Institute of Health (NIH), probably the chief source of federal funding for animal experimentation. In 1981, during which Stanford received $53,594,935 from the NIH alone, placing it No. 1 in funding levels for California, compliance with its standards was so poor that AAALAC put Stanford on probation.

During the same year, the U.S. Department of Agriculture (USDA), which is obliged under the Animal Welfare Act to make a minimal number of laboratory inspections for adherence to its quite minimal requirements, also came out with a long catalogue of violations, which ranged from general filth and decrepitude of animal runs and cages to rabbits getting sprayed with acid and monkeys housed in cages in which they could not even stand up.

But there is a lot more wrong with Stanford's husbandry of its animals than the proposed new underground (!) facility will cure. The priority accorded to the quality of veterinary care (whose existence is mandated by federal law) has been pitifully low. James Dewson III, Director of Laboratory Animal Medicine, with his pen still wet from signing his name to the reports damning his facilities, tells the press that, at Stanford, "nobody needs to have their consciousness raised" about the proper care of what he calls "the partners in research" (which they are in quite the way the chicken you eat is your dinner partner).

The USDA, for one, disagreed. Its April 13, 1981, report reads: "There appears to be a poorly defined line of responsibility for the veterinary care on this campus. . . . Lack of feedback or response by the researchers and management. . . severely compromises. . . disease control, prevention, and provision of adequate veterinary care."

In its June 5 follow-up report, the USDA expressed the hope that a new veterinarian would bring about substantial improvements. She, it turns out, is the one who, upon being informed by a medical student that a dog was suffering and dying, refused to bestir herself to help.

The attitude of the management is perhaps best summarized by a statement made by Dewson last September to a Mercury reporter concerned with laboratory animal welfare. "I mean come on," he said, "let's stop talking about poor little pussy."

There is, however, a good deal to be said about "pussy" and the other 80 million or so animals estimated to lose their lives in American laboratories each year, many under conditions that most people would, in this day and age, find unbelievable and many, with self-protective disbelief, reject hearing about.

Animal research is big business, with enormous vested interests. The federal government spends an estimated $5 billion a year on it, and it maintains an empire with more economic ramifications than meet the eye. It supports a whole industry, from breeders of laboratory animals through middlepeople, transporters, animal housing construction, and feed companies up to the researchers themselves and the institutions they are part of. It maintains one of the most powerful lobbies on earth, and representatives of Charles Rivers Breeding Laboratories for mice to university presidents hotfoot it to Washington and the state capitals to flex their muscle whenever a piece of animal protective legislation might cut into their hegemony looms on the horizon. They have been exceedingly successful so far.

One of their greatest achievements has been to bamboozle us into thinking that everything that is done for their benefit is also done for ours. That is a myth which we have helped maintain with our willing suspension of disbelief that science could do wrong or medical research not be wholly aimed at curing us of cancer and heart disease, or that the animals that serve these noble purposes are not suitably safeguarded.

In effect—and more and more serious scientists are saying so out loud—a huge amount of such research neither has, nor is often even intended to have, the slightest applicability to human use, or even scientific validity. An enormous amount replicates needlessly what has already been proved over and over again, or what is so obvious as to need no substantiation, or continues to use animals for what could more accurately and cheaply be done by some of the alternatives modern technology has begun to provide. The only beneficiary of such research, for which we, the taxpayers, are the unwitting sugar-daddies, is the researcher's career and ability to generate more grants with which to continue to do the same.

The suffering thus imposed upon an astronomical number of animals is gigantic. All too often they are the captive victims of all the cruelties, even if not of explicit intent, of callousness, negligence, clumsiness, and indifference.

The recent case of the Stanford dog is not, as Stanford authorities would have us believe, an isolated one, except in one respect—that of accidentally bringing to light what happens all too often behind hermetically closed doors, protected by people's fear of losing their jobs, by students' apprehension over damaging their careers, or researchers' reluctance to jeopardize their relations with colleagues or superiors. All this is supervised by some generally feeble in-house system of controls and perpetuated by a primal urge to cover up rather than correct.

What the animal rights movement—more and more, as its power is growing, the target of attacks by those who have a vested interest in defeating its purposes—is demanding is accountability from the scientific establishment for the lives in its power. Just as war is too important to be left to the generals, so sway over tens of millions of animals—the most powerless of creatures—is too important to be left to the biomedical industry.

We have a financial and, above all, an overwhelming moral right to demand public participation—until that millenium comes in which we no longer exploit animals for our own purposes—in drawing the line, however complex and tortuous that task may turn out to be, between the "legitimate" use of animals and the frivolous, self-serving, and useless.

We shall have to exercise the responsibility, so far all too imperfectly carried out by the biomedical establishment, to insure that those lives in our service receive all the protection science and humanity are capable of.

Isaac Bashevis Singer has said: "In their behavior toward animals, men are Nazis." We have a moral imperative no longer to be Good Germans.

Lise Giraud
Librarian, Green Library

Dewson replies...

'We have openly, unstintingly striven to meet, exceed USDA standards of care'

Editor, *Campus Report*:

Thank you for giving me the opportunity of replying to Lise Giraud's letter in this issue of your paper. Ms. Giraud is entitled to her opinions, but it ill-serves the Stanford community to allow her misconceptions to stand as fact. Specifically, we should all be aware of the following:

1) The Medical School's accreditation by the American Association for the Accreditation of Laboratory Animal Care (with whom we had a voluntary, fee-paying membership) was ended because of Stanford's choice *not to comply* with only a single recommendation.

The completion, next year, of a $12 million Research Animal Facility, will then meet the recommendation of physically separate areas permanently set aside and targeted solely for a) preoperative preparations, b) scrub, c) veterinary survival-surgical procedures, and d) postoperative intensive care for animals. In the meantime, strict attention to veterinary medical care and to aseptic surgical procedures continues to insure (as it has for the past 20 years at Stanford Medical School) that the standards set forth in the present NIH Guide are met.

Our loss of accreditation was based on the arrangement and use of available space, not on the quality of animal care nor on the nature of use of animals in the biomedical research projects at the Medical School. Stanford laboratory animal workers have long been compensating for admittedly insufficient and inappropriate facilities.

2) Ms. Giraud has noted that the U.S. Department of Agriculture criticized Stanford's animal facilities in a report filed in April 1981; she also cites a June 1981 follow-up report. Ms. Giraud fails, however, to mention anything from any of the eight USDA reports which have been filed since mid-1981 (and which are available to her under the Freedom of Information Act).

These reports present a situation entirely at odds with that put forth by the paraphrased and incomplete notations given in Giraud's letter. Since 1980-81, incidentally, we have spent more than $1 million to make extensive repairs and renovations to facilities which will soon be replaced by new ones; we have openly and unstintingly striven to meet—and to exceed—the standards promulgated by the USDA, which is the primary agency charged with the enforcement of the provisions of The Animal Welfare Act.

3) Particularly bothersome in Ms. Giraud's letter is a statement that a Stanford veterinarian " . . . refused to bestir herself to help. . . " an injured dog taken from the Palo Alto Veterans Administration Hospital. This comment is an injustice to a dedicated professional (board-certified in Laboratory Animal Medicine) who, in fact, demanded that the dog in question be brought immediately back to the VA for treatment. She refused only to go to the individual's apartment to treat the dog, or to return the stolen animal to the student after treatment.

Finally, I must say that, at least from my vantage point, the condition of Stanford's animal facilities and the many ramifications thereof has been neither a family secret nor a scandal. UC-Berkeley has no medical school, so Giraud's comparison is misleading. The Stanford community must rest assured that we are doing everything within our power to develop and maintain animal facilities and animal care at an unarguably first-rate level.

James H. Dewson, III, Ph.D.
Director, Division of Laboratory Animal Medicine

Humanistic understanding of thinness

Editor, *Campus Report*:

The cult of thinness in upper-class women, although certainly linked to the sociological factors reported by Professor Dornbusch, cannot be understood fully without a resort to depth psychology, literature, etc.

Culture itself arises through a rejection of the flesh, archetypally in the Oedipal crisis, which concerns women as well as men. Lacan further shows that this involves a traumatic encounter with nothingness. A sense of total loss ("castration" and a female equivalent) leads to a compulsive repetition of the crisis which is a later version of crises of birth, weaning, and so on, all coalescing complexly in the psyche. Food is very much a part of the picture at all stages.

The crisis of sexual maturation, in which death and nothingness are supremely encountered again (death of childhood, fear of the flow of instinctual life which leads to death and involves death in the procreative act) brings all this to a head.

Prime literary examples of this are Prince Hamlet: "to be or not to be" and his disgust with "sullied flesh," and Princess Herodiade ("I want nothing mortal"), both upper-class sensitives and thin, as we imagine them. Or Katherine Hepburn's role in *Philadelphia Story*.

Why the preponderance of women in anorexia nervosa? Probably because they have extra reasons to fear sexual maturation: the dangers in childbirth, the fear of being exploited by the race for that purpose (Simone de Beauvoir emphasizes this) and perhaps the dread of male *intervention* which is a dramatic and graphic version of the splits—nothingness, again—in Being which are the essence of Becoming (as in the ovum). *Integrity* of a sort is lost along with the childhood integrity of innocence.

Of course, this has to be overcome like all the other crises, but it sure isn't easy for the sensitive, as we in the university know from some of our most interesting students. Easier to jog a lot or even to starve at times. . . .

So the persistance of the pattern goes back much farther than the sociological fact of the leisure class. The same goes for the causes of shyness (obviously just as rooted in metapsychology and the reluctance to live at times). Growing up is a grave matter concerning the whole person and calls for holistic—humanistic—understanding.

Robert Greer Cohn
Professor of French

Wessells comments on essential qualities of undergraduate students

Reflecting staff fatigue, last week's Campus Report *seriously scrambled the last half of Humanities and Sciences Dean Norman Wessells' talk to alumni in Los Angeles. It is reprinted below in proper sequence.*

If I had a short shopping list of skills to gain in college for one of my student advisees I might include: thinking, writing, speaking, values, and aesthetics.

By thinking, I mean the development of analytical skills. By writing and speaking, the ability to express oneself with facility, logic, and skill whether on paper or while on one's feet. By values, I mean a sense of ethics, morality, and concern for others, from family to co-workers, from community to country to world.

And finally by aesthetics, I mean an appreciation for the finest in our human culture. I do not mean, necessarily, eschewing Monday night football or the beauty of the Beatles. But I do mean intolerance of the vulgar and violent, impatience with the self-serving and unprincipled, and that private, personal appreciation of a well written book, a painting, or a play. It is attaining what the greeks termed "the consolations of philosophy."

David Starr Jordan spoke on this topic in 1892 when he toured California, urging the young to attend college. Jordan said, "To turn from the petty troubles of the day to the thoughts of the masters, is to go from the noise of the street through the door of a cathedral. If you learn to unlock these portals, no power on earth can take from you the key. The whole of your life must be spent in your own company, and only the educated man is good company for himself. The uneducated man looks out on life through narrow windows, and thinks the world is small." To turn from the petty troubles of the day—is not that itself a recipe for survival from the information load?

But how do such abstractions relate to the real nuts and bolts of an education, the course and the major fields of study? Is there a simple route to follow that leads to guaranteed Nirvana? I fear not. The best route is to concentrate upon ideas, people, history, process.

Let me give you brief descriptions of three undergraduate courses:

Classics 11, The Age of Heroes, studies the heroic epics of Greece, Mesopotamia, England, and France, their common features, style, and ethical values.

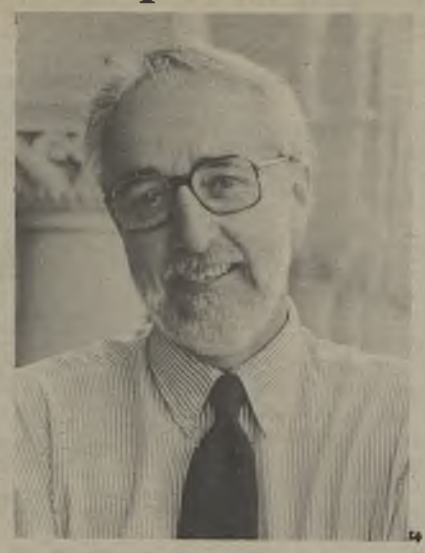
History 110, The Age of the Reformation, relates the Reformation to the urban setting and the economic and social forces of the rising national states.

Biology 130H, Biological Clocks, examines the physiology of innate daily, tidal, monthly, and annual rhythms that govern the basic activities of most organisms, including humans.

Why study the Age of Heroes, the Reformation, Biological Clocks? Not for the facts. Instead, for the experience of study. To think about those things, to be forced to organize, to analyze, to establish one's own way of looking at things—that is what it's really about. It is training in method, indeed training for an effective life.

But there are probably 1,200 courses undergraduates can take at Stanford. How to choose among such richness? That is where our new structured curricular requirements come in.

Those courses expose students to diversity and alternate views of our roots in Western Culture, our philosophy, ethics, personality, and so on. We mix with it technology, the natural sciences, and the mathematical parts of human knowledge.



We say, for instance, that quantitation is important, that no graduate of today can hope to feel at ease in the new society if she or he does not have at least some awareness that quantitation is our servant, not our master, and why? Indeed already there is a hyper-awareness among nearly all our undergraduates, be they in English or Classics or Chemistry, that contact with computers and numbers is now a part of becoming educated.

But these words may seem out of date when we think of the real world of unemployment and the problems for our work force as we turn from an industrial economy to a service economy. What of preprofessionalism, arising more forcefully than even during Depression days, from worries about the economy, jobs, future security, and personal independence?

Well, at Stanford we do not have formal undergraduate curricula in business, in accounting, in computer science, in pre-medical or pre-law studies, in other disciplines best left, we believe, for later years. We do our best to instill in the minds of freshmen and their parents that studying what one enjoys is the best route to prepare for later life.

What "good" is a French major? A Classics major? says the financially aggrieved parent? The answers are clear and not just wishful thinking.

Over the past few years, we have invited alumni who majored in the humanities as undergraduates to return to Stanford and talk about their careers to undergraduates in their departments. As the experiences of those alumni unfold, the potential history or English major hears firsthand: of the values of having been a philosophy major to a young woman who is the field operations manager of the San Francisco Municipal Railway; of the "utility" of a

Norman Wessells

religious studies major to a computer software engineer; of the importance of a history major to a dentist.

The reasons why such majors have proved valuable, these alumni say, are those I ennumerated above: method, thinking, learning to write, and exposure to ethics. All are part of every major at a great liberal arts University. It isn't important whether the classes are in French literature, or art history, or developmental psychology. It is what goes on in such courses. . . what is in the minds of the takers. . . that counts.

What deans do

Today you are listening to deans of Stanford's seven schools. Several weeks ago someone asked me "What on earth does a dean do?" In fact, I've been telling you little by little. Deans worry about what a university is in society, what it should do for its students, and how it can do it.

In a few words, a dean tries to create an environment for two things: ideas and people—the special types of ideas that are part of research and teaching; the special type of people represented by our marvelous faculty and our select, intellectually gifted students.

What is the setting of that environment? Practically, for me, it is my School. Humanities and Sciences at Stanford is an immense organism. We are talking about some 457 professors, 185 other professional teachers, 4,000 majors, 75,000 total course enrollments, 500 secretaries, laboratory technicians, business managers—and on and on.

We are responsible for a marine station, an art gallery, an art museum, three theaters, and a music program consisting of more than 100 concerts and recitals each year. The enterprise involves administering a budget this year of 35 million dollars in Stanford funds and 20 million dollars in research grants. We are labor intensive, which of course, means that our problems and opportunities are human ones.

Our Humanities and Sciences hallmark is breadth; we are artists and writers, economists and computer scientists, and chemists and classicists—we are scholars of Rome and Caeser, of leptons and steroids.

That we are this broad an amalgamation is a statement to ourselves and to our students. We value the vast diversity of human knowledge and would know that we are part of it, and much of it can be part of us. And that statement goes forcefully to our students as we require them to sample across the spectrum.

Perhaps some specifics can give you an idea of what we deans do. Part of creating an environment is building, with planning, luck, and hard work, this great faculty that makes the University's name.

This year, suddenly, unexpectedly, Stanford has become the number one place in the world for the formal study of language. That sounds esoteric, no doubt, but it really isn't.

For formal linguistics, as it is called, begins to give us a precise, logical, indeed mathematical, description of words, sentences, semantics. And the result will have a profound impact upon the new super-computers, upon Artificial Intelligence, robotics, and the world that is coming, like it or not.

But also, formal linguistics relates to psychology and the study of the mind. We think, after all, in words. Learning how we describe and perceive our world, how our speech center works, indeed how the brain functions. Stanford's group in cognitive science was already number one—now an even stronger, broader alliance has been welded.

So what did deans do? We had the task of sensing the opportunity and then helping to assure the successful wooing of three senior "stars"—one from MIT, one from Texas, one from Wisconsin. Finding three senior billets in these days of budget reductions wasn't easy.

But that was only a beginning: next came salaries, equipment, office and laboratory space. And these days, real estate is a big question. With houses on campus listed for $295,000—$430,000, you can imagine that we, like our neighbors at Hewlett-Packard or Varian, spend much time on questions of housing allowances, equity loans, and the like.

But, it is worth it, for a new spire of excellence will mark Stanford's horizon, and other new faculty, graduate students, and undergraduates will all benefit. And by bringing together such diverse intellectual leaders, we facilitate the ferment that generates new knowledge. That indeed makes deaning worthwhile.

You will perhaps hear of other new areas being added over these next years. We are planning now, for instance, to greatly expand the undergraduate writing experience, to add enrichment to programs for juniors and seniors, and to foster other new areas of scholarship and teaching.

You can be assured that though our financial belt will be tight, we will be reallocating, pruning back the weak, sustaining the strong, and artfully, I hope, striking out in new directions.

Another component of an academic environment is the equipment or the tools, of doing research. The tools of scientific research change with advances in technology, and a modern lab in biology, chemistry, or physics looks vastly different from labs even just 10 years ago.

The tools of the humanist, however, until recently, have been pen, paper, and books. During the last two years several deans and administrators have been involved in winning a major grant from the Pew Foundation of Philadelphia to provide our humanities faculty with word processing equipment. IBM has expanded our project with a wonderful gift of 150 Personal Computers—one computer for each new member of the humanities faculty who wants one and a machine for each humanities department office. Our project includes a training program designed specifically for our humanist "technical aborignees" and already the productivity and morale of our humanities faculty is climbing to new heights.

In addition to simply word processing, the faculty will soon have the capability of being linked to computer networks that will provide access to many of the nation's great research libraries as well as Stanford's own collections. I suspect the work habits of many of those faculty quite literally will be transformed by these new tools.

Individual student achievements

We deans are people and some of our most pleasant times come from opportunities to do small things for individuals. One day last Autumn an undergraduate came to me to describe his desire to do research in corrosion of bronze sculptures.

He had studied a great deal of art history and chemistry. He had already made contacts at Stanford and in France to work on his project. I was impressed with his knowledge, his drive, and with the unique nature of his project; his is a perfect example of the beautiful way two disciplines sometimes fit together.

So the School used gift funds from an alumnus to give him a research grant to enable him to purchase supplies and to carry out the project this summer. I would bet that he will not be the only beneficiary of his work. Prof. Albert Elsen of Art is already worrying about potential corrosion of the spectacular Rodin sculptures that will soon grace our campus thanks to Mr. and Mrs. B. Gerald Cantor.

I could list many other seemingly small things: sending students to Washington, D.C., the Aegean Sea, or Latin America for summer projects; getting a student together with the one "right" faculty person who can make the difference in the student's education. In reality, however, these are among the most important services a dean can provide, for the impact on each individual is profound and long-lasting. And that makes it very worthwhile for us.

It has been a pleasure to talk to you today about Humanities and Sciences and how what we do relates to our students. Those wonderful young people will not live in an easy world.

The horrendous consequences of the population explosion are beginning to be seen in Central and South America—much worse is yet to come. The information load I alluded to, and even the tragedies of burgeoning populations, differ in one enormous way from the genetic load of *Homo sapiens* and all other species.

The genetic load is biological, chemical in nature—it is part of our very fabric.

But that is *not* the case with the information load and all that is included with it. Such things are, potentially at least, under human control—*they are not inevitable*. With education, with strength of character, with will and realization that the individual can make a difference, even on a world scale, the graduate need not merely survive but may make some real contribution to the public good.

We have an obligation at Stanford to prepare young citizens for the real world. Our buildings, our collections, our faculty, are vehicles to that end.

You, as alumni, are part of the history, and a testimony to what has been accomplished in the past. And much of what we do is only possible because of your generosity and sacrifice. For that we thank you. We appreciate your trust.

Capitalism, communism both 'wounded giants,' Gurley says

Armed to the teeth, both communism and capitalism are "wounded giants," says Stanford economics Prof. John G. Gurley.

"World communism now appears to be in the beginning stages of a long-term decline," he declares in a new book, *Challenges to Communism*, published in the Portable Stanford series (W.H. Freeman, $20 cloth, $10.95 paper).

Author of a 1975 Portable Stanford book on "Challengers to Capitalism: Marx, Lenin and Mao," Gurley notes that "communist countries have declined economically since the early 1970s, partly because of the slowing growth of the capitalist countries but largely because of their own internal problems."

While the owners and managers of capital have been weakened as the leading social class in capitalist countries, communist regimes have oppressed the working classes. In the Third World, the inability of any social class to attain dynamic political leadership has "contributed importantly to a weak economic base," he observes.

In capitalist countries, "contentious disunity" is likely to persist, he adds. "If programs to strengthen the capital-owning classes do not succeed. . .governments most likely will step in to bolster the unsteady owners of capital.

"These government incursions into the private sectors probably will occur sporadically—as with the U.S. government's involvement with Lockheed, Chrysler, savings and loan associations, steel imports, and so on—until an augmented government-business partnership has been formed, in which the government is the senior partner."

Bureaucratic deadweight

In communist countries "the growing deadweight of bureaucracies" poses a major barrier to further economic advances, he adds.

"If workers are sufficiently oppressed, they cannot ,or will not work hard and effectively, and economic progress cannot be achieved. In this case, the workers must overthrow their oppressors to open the way for an era of rapid socialist development. . . .

"If industrial progress continues for another few decades in Eastern Europe, the urban working classes will become not only numerically large but also mature in their understanding of their social needs. They will then be a potentially revolutionary force, a greater threat than they are now to the existing communist parties. In years to come, this situation may also arise in China and in other developing communist countries."

The main problem in many non-communist Third World countries is that their normal progress has been distorted by larger or more advanced nations.

Political vacuums have been filled "by weak and shifting coalitions of classes, by foreign capitalists or alien regimes, or by the domestic military forces," he comments.

This weak political structure has contributed to slow economic growth. According to the World Bank, the per capita gross national product of Third World countries averaged only 2.5 to 3 percent annually between 1960 and 1980, compared to more than 3.5 percent in the First World of predominantly capitalist countries and about 4.5 percent in the Second World of communist nations.

Third World view

"The Third World probably has little or no chance to catch up to the first two worlds," Gurley says. "Indeed, the most likely prospect is that it will fall farther and farther behind." While some countries may move up fairly rapidly, "the poorest of the poor would seem destined to sink, relatively speaking, into the abyss of economic misery. . . .

"Although Marxist-Leninist parties are potent revolutionary weapons, they have had little or no success in achieving rapid socialist development after the revolutions have occurred in the poor countries of the Third World."

On a long-term basis, he speculates, there may be a "Europeanization of Europe," as West Europeans have more disagreements with the U.S. and East Europeans forge closer economic and ideological ties with nearby Western regimes rather than the Soviet Union.

"If the populations of European nations become rather evenly split between those favoring various types of welfare capitalism and those favoring various types of socialism—as is now true in Britain, France, Scandinavia, Italy, Spain and elsewhere—there is likely to emerge. . .a damaging and dangerous fragmentation born of divisive swings of the political pendulum. . . .

"If satisfactory economic progress cannot be made, demands will develop and be heeded for some paring of democratic processes and institutions."

In other areas of the world, he speculates that "the Chinese and the Soviets have compelling reasons for seeking to rejoin hands. Whether the handclasp will be as firm as it was in the 1950s remains to be seen. . . .

"Marxist-Leninist revolutions in Latin America are less certain than in Asia and Africa, owing to the stake the U.S. has in maintaining private enterprise throughout the Americas, with economic and military

John Gurley

power to back up its desires. . . . The determination of the U.S. to turn back all threats to capitalism might even succeed, before too long, in reversing the revolutions in Cuba and Nicaragua."

Both the capitalist and communist systems "have grave internal weaknesses, and each has served to enfeeble the other," Gurley concludes. "When two wounded giants face each other, each armed to the teeth, it is fairly certain that love will be in short supply."

A 1942 Stanford graduate in economics, Gurley returned to the University as a professor of economics in 1961. From 1963 through 1968 he was managing editor of the *American Economic Review*, the official publication of the American Economic Association.

He teaches several hundred undergraduates a year in courses ranging from elementary economics and money and banking to Marxian economic theory and Chinese economic development.

He was the first recipient of the Walter J. Gores award for teaching in 1971 and has been selected by graduating seniors to speak at Class Day five times.

A former varsity tennis player, he still "serves and rushes the net, earns money on the side for opera tickets, runs the oval at Angell Field each day, and goes after mealy bugs, aphids, and snails in the garden."

His latest book is dedicated to Cynthia Gunn, who has edited and managed the Portable Stanford series for nearly a decade.

Panofsky to shed administrative role at SLAC in August, 1984 at age 65

Prof. Wolfgang Panofsky, director of the Stanford Linear Accelerator Center since 1961, plans to relinquish his administrative post Aug. 30, 1984.

His action follows a long established, informal agreement among top SLAC administrators to relinquish their administrative responsibilities soon after turning age 65.

An internationally acclaimed physicist and arms control expert, Panofsky will retain his tenured professorship at the University.

In President Donald Kennedy's absence from campus, Provost Albert Hastorf said Panofsky "has done an absolutely brillant job in providing both intellectual leadership and managerial skill to the development and operation of SLAC.

"His leadership continues to set extremely high standards, both nationally and internationally. We look forward to his continued energetic involvement in the intellectual life of this community."

In a Jan. 10 letter to Kennedy and Hastorf informing them of his decision, Panofksy noted that "the two-mile linear accelerator, the Stanford Positron Electron Accelerator Ring (SPEAR), and the Positron-Electron Project (PEP) have all been established as major productive research tools within the SLAC framework, and the SLAC linear collider (SLC) has been acknowledged as an exciting new step, both in collider technology and as a truly unique research tool by the scientific community and the Executive Branch of government.

"The SLAC faculty is recognized as second to none in experimental physics, particle theory, and collider technology. The SLAC administrators are highly capable and the staff has performed stably and creatively. Thus a directorial transition can take place with the prospect of a scientifically exceedingly promising but technically challenging future, in the absence of crises as to mission, scientific leadership, or personnel.

"Governmental support prospects look

Wolfgang Panofsky

excellent, but this is of course a matter subject to the vagaries with which you are only too familiar."

Panofsky's decision was made public May 3, following selection of a search committee for his successor. Headed by Hastorf, the committee will include SLAC Profs. Sid Drell, David Leith, Richard Neal, Stan Brodsky, and John Rees; Profs. Cal Quate, applied physics, and Stan Wojcicki, physics; Prof. Ned Goldwasser, of the University of Illinois, chairman of SLAC's Scientific Policy Committee, and one other outside scholar, whose acceptance is pending. Noel Kolak will provide staff support.

Appointment of the SLAC director is made by the Stanford Board of Trustees under the terms of the contract between the University and the Department of Energy, and is subject to Department of Energy approval.

SLAC has about 1,300 employees and an annual budget of $80 million, not including construction.

Nuclear information restrictions could disrupt research

Following is an April 29 letter to Ms. Trisha Dedik Chico from Gerald J. Lieberman, vice-provost and dean for graduate studies and research on the proposed rule of the Department of Energy for "Identification and Protection of Unclassified Controlled Nuclear Information." 10 CRF Part 1017, 48 FR 13988 et seq., April 1, 1983.

We write to comment on the proposed rule implementing Section 148 of the Atomic Energy Act of 1952, as amended. As a research university committed to the principle of openness in research, we fear that the breadth and vagueness of the regulation as proposed would both impair our ability to apply the principle and inhibit basic research activities.

As an institution maintaining research libraries of some five million volumes, we fear that the scope of the proposed regulation is so great that it might encompass an unknowable subset of our collection, which is available to all of our students, staff, faculty, and to other scholars. And as a teaching and research institution, we fear that the regulation as proposed could chill or threaten the free interchange and propagation of information required for the success of fundamental research activities which are essential to our national and economic security.

In light of the (following) comments. . .we submit that this proposed regulation is so fatally flawed as to require its withdrawal, or at least, its complete redrafting, before any thought is given to its issuance as a final rule.

COMMENTS BY STANFORD

Section 148 of the Atomic Energy Act of 1952 as amended directs the Secretary of Energy to prescribe regulations, if and to the minimum extent necessary, to prohibit unauthorized dissemination of certain unclassified information.

The information is generally referred to in the proposed rule as Unclassified Controlled Nuclear Information, or UCNI, and will sometimes be so referred to here.

The task of devising such regulations is obviously fraught with First Amendment problems. It may be possible to draft a rule sufficiently careful, narrow, and precise to avoid these problems, but the pending proposal does not even acknowledge, let alone avoid them.

All research institutions would be seriously infringed upon by the proposed regulation. Stanford's standing policy prohibiting secrecy in research makes our position particularly difficult.

(This) policy provides that all interested persons must have access to the underlying data, to the processes, and to the final results of research. Under this policy, classified research, for instance, is unacceptable.

Our problems with the regulation as proposed fall into two main classes:

First, as a federal contractor, we are apparently required to see that UCNI in our possession is *"[a]t a minimum. . .protected and controlled in a manner similar to* that customarily accorded proprietary business information in the organizational element concerned." Section 1017.4(a); emphasis added. This directive is not reasonable, or even meaningful, in a university context. It seems to apply to any information, no matter when produced or by whom, as long as it was ever "developed by or for" the United States Government. Section 1017.2(g).

Taken literally, it would even apply, for instance, to books published by commercial publishers, containing the results of research done at other institutions without indication that the work had previously been classified, and that are available on our library shelves. We doubt that this interpretation was intended, but regulations purporting to restrict the exchange of information must not leave the reader in doubt.

Again, section 1017.3(b), which deals with previously classified material, is so inclusive as to permit application to all those basic and advanced courses in fields of physics, electrical engineering, materials science and the like, that teach the basic information discovered and classified before the early 1950s and since declassified. Indeed, the language might be read to reach political sciences courses which include material on arms control.

In any event, we do not have the ability—nor, indeed would we be willing—to search our documents or censor our classes for material that might, under the very vague proposed standards, constitute UCNI, with the futile and repugnant object of making known and unclassified information secret.

Second, and perhaps more important to DOE, the regulation as proposed might seriously impair our ability to continue to do important basic research under contract or grant from the department.

As already indicated, the proposed application of business standards of protecting proprietary material to a university is highly inappropriate. Although we do occasionally deal with proprietary information, this is a very exceptional circumstance; we require that such data be specifically identified in advance so that we can be certain that its acceptance is consistent with its research guidelines.

In particular, while we will use our best efforts to keep that precisely identified data confidential if necessary, we insist that all research *results*—all *new* information developed in the course of the research—be publishable.

But the proposed rule is completely contrary to the needs and practices of Stanford and similar institutions. Not only is there no clear indication that UCNI *provided* by the government to a contractor will necessarily be identified, but worse, the rule provides no assurance that *results* will be distributable, or even that the contracting agency will signify in each case whether or not the results will be disseminable. That is, there is no provision that will enable a principal investigator interested in nuclear research to make an informed decision about whether the institutional policy against secrecy would be violated by any particular project.

Congressional intent

It was not the intention of the Congress that the authorization to the Secretary to promulgate rules about UCNI be exercised in a way that has this unlimited potential to chill research, teaching, and the general interchange of information.

On the contrary. Whatever may ultimately be decided about the constitutionality of regulations authorized by section 148, the Congress at least attempted to assure that they would be as little obtrusive upon freedom of communication as could be.

Section 148 originally (PL 97-90) directed the Secretary of Energy to prescribe such regulations as might be necessary to prohibit unauthorized dissemination of three categories of unclassified information, but only if and to the extent that the Secretary determines that unauthorized dissemination "could reasonably be expected to have a significant adverse effect on the health and safety of the public or the common defense and security by significantly increasing the likelihood of a) illegal production of nuclear weapons, or b) theft, diversion, or sabotage of nuclear materials, equipment, or facilities." 42 USC §2168 (a)(2).

A year later, the Congress amended the section (PL 97-415): it added the phrase "with respect to atomic energy defense programs," in order "to ensure that the authority conferred upon the Department of Energy under section 148 authorized only the withholding of information that 1) falls within one of the three categories specified in subsection 148 a. (1) (A)-(C), *and* (2) is related to the Department's atomic energy defense programs." Senate Report No. 97-113, p. 43, U.S. Code Congressional and Administrative News Advance Sheet No. 11, February 1983, p. 3613 (emphasis in original).

In addition, it provided that any determination by the Secretary shall be subject to judicial review pursuant to 5 USC §552 (a) (4) (b) (providing for equitable relief against the improper withholding of information by a federal agency).

Most important, it provided that the Secretary must prepare on a quarterly basis, and make available to any interested party, a report detailing the application of the regulation during the period, including the identity of the information "protected from disclosure," the specific justification for the determination to withhold, and a justification that the regulation has been applied "so as to protect from disclosure only the minimum amount of information necessary" to the purposes stated in the section. 42 USC 2168 (a), (d), and (e).

Neither when section 148 was added to the Atomic Energy Act, nor when it was subsequently amended, was there any indication that it was intended to repeal or modify any other Sections of the statute.

In particular, the concern to keep implementation of the section as narrow as possible is consistent with and indeed reinforces section 3.b, which states one of the basic purposes of the Act: to provide for. . . "a program *for the dissemination* of unclassified scientific and technical information and for the control, dissemination, and declassification of Restricted Data, subject to appropriate safeguards, so as to encourage scientific and industrial progress."

Again, section 141(b) sets forth, inter alia, the following principle for guidance of the DOE in fulfilling the statutory policy of controlling dissemination and declassification of restricted data in such a manner as to assure the common defense and security: *"The dissemination of scientific and technical information* relating to atomic energy *should be permitted and encouraged* so as to provide that free interchange of ideas and criticism which is essential to scientific and industrial progress and public understanding and to enlarge the fund of technical information." (Emphasis added.)

Statutory provisions

These statutory provisions have withstood the test of time, having remained untampered with by the Congress for over 30 years. Thus, there can be little doubt as to the precise intent of the Congress in limiting the Secretary's regulatory authority under section 148 to the *"minimum* restrictions needed to project the health and safety of the public or the common defense and security. . ." (emphasis added).

Whether by accident or design, the DOE in its proposed 10 CFR 1017 regulation has clearly overstepped the Congressional mandate to exercise *maximum restraint* in promulgating its restrictions. The proposed regulation is so vague, ambiguous, inconsistent, and couched in such general categorical terms as to be capable of interpretation as giving the Secretary *maximum flexibility* to prohibit dissemination of anything and everything he chooses, rather than following the statutory admonition to impose only minimum restrictions.

Neither the statutory nor the Constitutional requirements can be met by a regulation that does not provide certainty about what information is *not* UCNI: a producer or disseminator of material that may include "nuclear information"—that is, any college, university, library, publisher, bookstore—must be able to proceed with assurance in dealing freely with *any* information it may come by, unless that material is clearly designated on its face as restricted, or produced under a contract which affords notice that the results may not be transferred or revealed. That is a minimum requirement of freedom of speech. That is also the only way to implement the reporting requirements of the section (42 USC 2168[e]).

The proposed regulation at certain points seems to direct itself only to federal employees, agents, and contractors, see e.g. section 1017.4(a); this is nowhere clearly established, however. In any event, it is as a federal contractor that Stanford and other research universities are chiefly affected.

Reporting requirements

Those reporting requirements contemplate, as indeed the rest of the language of section 148 bears out, that the Congress envisioned UCNI as being only information in the control of the Department of Energy, so that the Department could screen it before release, and mark it as restricted if it is to be so.

In fact, section 1017.2(n) defines UCNI as "unclassified information protected against unauthorized dissemination pursuant to section 148 of the Atomic Energy Act, *(and is so designated)*. . ." (emphasis added). If that parenthetical is intended to mean that anyone may freely disseminate any material in his or her possession as long as that copy is not marked (or actually *known* to the possessor at the time of acquisition to be a copy of designated UCNI), some of the harm the rule would work could be alleviated by making this clear.

But such a reading is not suggested by the structure of the proposed regulation: for instance, it provides in section 1017.5(c) that "No government organization, including government contractors and subcontractors, shall release UCNI currently within its possession without consultation with the originating organization and then only upon the approval of the Secretary or his delegate."

Since no material is currently "designated" UCNI in the sense of being so marked, nor could any be prior to the issuance of a regulation or order, this seems to contradict the benign intent suggested above.

Again, with respect to previously classified information, the proposed regulation gives a number of examples of material to be protected against dissemination but nowhere suggests that material now freely available—in libraries, for instance—is *not* covered. It is ironic that the language employed by the Congress in an attempt to direct the Secretary to regulate narrowly and with specificity has, in the proposed rule, merely been repeated in various permutations and presented as "examples," illustrative and not exhaustive, of what the Secretary actually intends to control.

Even if all *existing* information that the Secretary considers UCNI were identified and marked, and the public were assured that it runs no risk in accepting, reading, discussing, and transmitting any unmarked information, the problem of *new* information, the production of which is so vital a part of the activities of a research university, would remain unresolved and disasterous.

The proposed regulation is completely devoid of any procedural guidance to enable an investigator doing federally funded research, and teaching in the area of his or her research, to ascertain whether or not information may fall within any of the proscribed categories.

The only safe route would be to request that the department censor all results prior to publication or even discussion with individuals not specifically involved in the funded research—a procedure so foreign to an institution committed to open research as to be completely unacceptable.

The regulation does not even utilize the most obvious means to limit the damage they can do. For example, while the proposed regulation purports to define "atomic energy defense programs" as anything utilized or engaged "in support of" certain activities involving or safeguarding

Huggins uses new process to convert coal to motor fuel

During the second World War, when Nazi Germany found itself cut off from much of the world's oil supplies, its scientists were able to produce motor fuels by synthesizing it from coal.

Now Stanford Prof. Robert Huggins has been able to speed up that somewhat cumbersome technique using a newly developed class of materials.

The technique is named the Fischer-Tropsch process after the two German scientists who developed it in the 1930s.

"It was very important to the Germans during World War II. They ran all their autos, trucks, and airplanes on fuels derived from coal without access to petroleum," said Huggins, professor of materials science and engineering.

Fifty years later dwindling oil reserves and the existence of extensive coal deposits in the U.S. have reawakened interest in the process as a long range alternative, not just to make motor fuels, but synthetic materials as well.

"Almost all artificial fibers are now made from petroleum. If this became scarce we would need other 'feedstocks' for fibers and plastics."

The first step in the conversation is called the steam gassification of coal. This is a simple chemical reaction between coal and steam which makes the gases carbon monoxide and hydrogen. The more complicated second step involves flowing these gases together across a catalyst.

All important catalysts come from a group of chemical elements called transition metals which are able to readily receive or donate electrons.

The Fischer-Tropsch process generally uses a nickel catalyst.

In the presence of the nickel many of the carbon monoxide and hydrogen molecules break apart and individual atoms of carbon, hydrogen, and oxygen attach to the surface of the catalyst. Normally these atoms then readily recombine to form hydrocarbons—the simplest being methane, a useful fuel—and water.

It was at this point that Huggins and his former student and associate Turgut Gur saw a way to increase the rate at which hydrocarbons were produced. They put their catalyst on top of a newly developed material called an "ionic conductor."

This is a solid with a very special crystal structure in which ions (atoms with an electric charge) are important for carrying electrical currents rather than the very much smaller electrons which carry them in metals and semiconductors.

Huggins applies a voltage across the

Robert Huggins

ionic conductor. In the presence of this, the atoms of oxygen attached to the surface of the nickel catalyst are given an electric charge before they have time to recombine with hydrogen atoms and form water.

They are now oxygen ions and can then be pulled off the nickel surface and driven through the ionic conductor by applying an electric voltage.

The ions are finally released as oxygen gas on the other side.

This continuous removal or "pumping" of the oxygen from the surface of the catalyst controls the rate of the overall reaction and by using modest voltages for the "ion pump" hydrocarbon production can be made very rapid.

One other advantage of using the ionic conductor is that the final product in addition to hydrocarbons is pure oxygen which has a much greater technological value than the water which was produced by the old process.

Huggins thinks that the process is still far from being commercially feasible. The main problem is that the ionic conductor they have used so far only performs well above 600 Celsius (1,100 Fahrenheit) while all hydrocarbons except methane are unstable above this temperature. Therefore, to make heavier products such as fuels, a new ionic conductor will have to be found which will operate at low temperatures.

Huggins says that this project evolved out of an earlier experiment using almost identical technology in which he and his student were catalytically decomposing nitric oxide.

"Nitric oxide is an important constituent of exhaust gases and using this approach we were able to change that rate (of decomposition) immensely."

He sees a bright future for this rather unique approach to catalysis.

"There are many possible reactions (it could be applied to) to accelerate, decelerate or shift them in this manner."

Part of the funding for this project came from the National Science Foundation in the form of a seed grant through Stanford's Center for Materials Research.—**S. J. Bending**

Lieberman assails proposed regs. . .

continued from page 1

added. "We insist that all research results—all new information developed in the course of the research—be publishable. . . .

"The (proposed) rule provides no assurance that results will be distributable, or even that the contracting agency will signify in each case whether or not the results will be disseminable.

"There is no provision that will enable a principal investigator interested in nuclear research to make an informed decision about whether the institutional policy against secrecy would be violated by any particular project."

Where the Atomic Energy Act of 1952 said "the dissemination of scientific and technical information relating to atomic energy should be permitted and encouraged," Lieberman observes, "the proposed regulation is so vague, ambiguous, inconsistent, and couched in such general categorical terms as to be capable of interpretation as giving the Secretary (of Energy) maximum flexibility to prohibit dissemination of anything and everything he chooses. . . .

"A university contractor engaged in purely basic high energy research into the nature and interrelationship of matter, such as the Stanford Linear Accelerator Center, or a mixed type facility, such as the Stanford Synchrotron Radiation Laboratory, is without any means of determining whether newly generated information, or information currently in its possession, is such that it cannot be disseminated under this proposed regulation, nor does it have any way to judge whether information it is receiving from others may be within a proscribed category.

"Our physicists, our electrical engineers, our computer scientists, and many other scholars in allied fields daily work with, produce, and teach material that may be covered by the proposed rule, which completely ignores one of the primary purposes of academic institutions—to develop, create, expand and disseminate the fund of scientific and technical knowledge."

Energy regs. . .

continued from page 20

atomic weapons, weapon components, or special nuclear material, there is no clue given as to what the phrase "in support of" is intended to mean in this context.

Clearly it is not synonomous with "is related to" which was the equally vague phraseology utilized in the legislative history as explanatory of the Senate's intent in amending section 148a. (PL 97-415) to narrow its intended application. If the phrase "in support of" is read as "in *direct* support of "Atomic Energy Defense Programs" (and such a construction would be consistent with the stated Congressional intent to constrict restrictions to a bare minimum) a modicum of reasonableness might possibly be attributed to this definition; but, there is no hint in the regulation that such is the intended construction.

Thus the generator, holder, or receiver of information of the general sort referenced in the statute is left in a complete quandary as to how to make an informed judgment as to whether dissemination of his particular information is or is not proscribed.

A university contractor engaged in purely basic high energy research into the nature and interrelationship of matter (such as SLAC), or a mixed type research facility (such as SSRL), is without any means of determining whether newly generated information, or information currently in its possession, is such that it cannot be disseminated under this proposed regulation, nor does it have any way to judge whether information it is receiving from others may be within a proscribed category.

Our physicists, our electrical engineers, our computer scientists, and many other scholars in allied fields daily work with, produce, and teach material that may be covered by the proposed rule, which completely ignores one of the primary purposes of academic institutions—to develop, create, expand and disseminate the fund of scientific and technical knowledge.

When it comes to raising teen-agers, having two adults at home helps a lot

Having an additional adult present significantly improves adolescent behavior in single-parent families, a new Stanford study shows.

Based on detailed analysis of national data, the study findings were reported Friday, April 8, by Prof. Sanford Dornbusch at the Pacific Sociological Association meeting in San Jose.

"The presence of any other adult in the household brings adolescent control levels closer to those found in two-parent families," he said.

"Within our system of social welfare, numerous agencies have attempted to reduce the likelihood that a single-parent household will include other adults, particularly unmarried partners.

"Our findings indicate that extended single-parent households have a positive impact upon social control of adolescents, and thus may have value in a fashion seldom considered in previous governmental formulations of policy. . . .

"We do not know whether it is the lack of surveillance, lack of appropriate teaching, or lack of support for the single parent that leads to a reduction in control of adolescent deviance.

"But the presence of any other adult in the household brings control levels closer to those found in two-parent families.

"This suggests that there are functional equivalents of two-parent families, nontraditional groupings that can do the job of parenting, and that raising of adolescents is not a task that can easily be borne by a lone parent.

"It may take two to raise an adolescent."

At present, half the U.S. families with incomes below the poverty level are headed by single parents.

Supported by the Stanford Center for the Study of Youth Development, the analysis was based on data from a national sample of youths aged 12-17 from the third cycle of the National Health Examination Survey, conducted in 1966-70.

While the data studied are more than a decade old, "unfortunately no such rich depository of information on family structure, family decision making, and adolescent deviance exists for a later period," the researchers noted.

Besides Dornbusch, who holds the Reed-Hodgson professorship of human biology and is a professor of sociology and education, the researchers included Prof. J. Merrill Carlsmith, psychology, director of the Center; Steven J. Bushwall, undergraduate who received his degree in sociology; Prof. Herbert Liederman, psychiatry; Prof. Albert H. Hastorf, Stanford's provost; Prof. Ruth T. Gross, the Dexter and McCormich professor of pediatrics; and Philip L. Ritter, research associate at the Center.

Staff employment opportunities

Exempt

41655-AW (JCC:8880) MISC PROFESSIONAL: Position is located in Program Coord Div of Research Lib Group, supporting daily operation of Collection Mgmt, Preservation, & Shared Resources Programs of the corporation; analysis of data submitted to RLG Conspectus; design, formatting & analysis of collection develop't verification studies; consultation w/ members of the program committees; submission of tapes, & mgmt of input for ESTC & other special databases; analysis of institutional performance in RLG-ILL; mgmt of RLG's reference liaison program; staff support for grants admin; mgmt & analysis of statistical reports; QUALIFICATIONS: MLS degree or equiv; strong bkground and/or training in an academic discipline sufficient to understand the relationships between academic res & lib collections; approx 3 yrs' exp as a reference librarian/bibliographer/cu rator and/or cataloger; familiarity w/ RLIN, SPIRES, SCRIPT, & WYLBUR; reading knowl of 1 or more foreign langs.; C06; $1854-2312.

41656-AW (JCC:8880) MISC PROFESSIONAL: Position is located in Program Coord Div of Research Lib Group, supporting daily operation of Collection Mgmt, Preservation, & Shared Resources Programs of the corporation; analysis of data submitted to RLG Conspectus; design, formatting & analysis of collection develop't verification studies; consultation w/ members of the program committees; submission of tapes, & mgmt of input for ESTC & other special databases; analysis of institutional performance in RLG-ILL; mgmt of RLG's reference liaison program; staff support for grants admin; mgmt & analysis of statistical reports; QUALIFICATIONS: MLS degree or equiv; strong bkground and/or training in an academic discipline sufficient to understand the relationships between academic res & lib collections; approx 3 yrs' exp as a reference librarian/bibliographer/cu rator and/or cataloger; familiarity w/ RLIN, SPIRES, SCRIPT, & WYLBUR; reading knowl of 1 or more foreign langs.; C06; $1854-2312.

32946-LL (JCC:5940) CLINICS STAFF NURSE IV: Research nurse will monitor several clinical res protocols for treatment of Hodgkin's disease & non-Hodgkin's lymphomas, studying primary chemotherapy & radiotherapy treatments & toxicity of treatments; involve patient care, patient interviews, review of chemotherapy records, assessment of treatment toxicity & mgmt of data, incl some computer entry & retrieval; clinical studies w/ interferon will incl Phase I-II testing of new products & a Phase III adjuvant study in nodular lymphoma; help to coord lymphoma teaching conferences & interface w/ several add'l res projs, incl monoclonal antibody studies for diagnostic & therapeutic use; QUALIFICATIONS: valid Calif Registered Nurse's License; prev exp w/ Oncology patients.; K04; $2061-2229.

28244-AW (JCC:5050/5058) Sys Programmer III/IV: Team member w/ respon for designing, implementing, & maintaining sys software for IBM 3081 mainframe in RLIN; program design; detailed specification & documentation, program develop't, sys integration, testing, & maintenance; developm't & maintenance of RLG Pascal runtime environ & related program develop't tools & develop't of mainframe sys support facilities for program-to-program commu between remote large-scale host computers in support of the Linked Sys Proj; QUALIFICATIONS: thorough knowl of Pascal programming lang, IBM 3081 computer, MVS operating sys & assembly lang; 3 yrs' working exp w/ IBM 3081; 3-5 yrs of directly applicable exp for SP III & 5 or more yrs for SP IV; knowl of RLG computing environ, incl MILTEN & ORVYL sys software desirable; exp in mgmt of vendor-supplied software also desirable.; C07/C08; $2113-3344/2464-3848.

39480-TC (JCC:5588) LIFE SCI RES ASST I: Work w/ immunology & chemotherapy of virus infections; major proj involves cell culture & biochemical studies of human cytomegalovirus, w/ an emphasis on immunogenic proteins as studied w/ murine monoclonal antibodies; participate in tissue culture studies w/ new antiviral drugs; involve develop't & analysis of monoclonal hybridoma cell lines & immunological reactions w/ viral proteins; QUALIFICATIONS: BA or BS in human biology or equiv exp; theoretical understanding of virology & exp w/ lab virology procedures & techniques.; C05; $1670-2086.

31981-TC (JCC:5596) LIFE SCI RES ASST II: Perform experiments to study interactions between hormones & human hemopoietic cells; radio-labelled hormone-receptor binding, processing & degradation by cells will be determined to assess regulatory mechanisms in human hemopoiesis; mathematical analyses of binding kinetics utilizing Scatchard plots will be evaluated; human leukemic cell lines grown in tissue culture & purified populations of normal hemopoietic cells obtained by density separation & immunologic tech will be used as target cells; work incl immunofluorescence & complement-mediated cytotoxicity studies of purified cells; some supvry respon for lab; QUALIFICATIONS: related degree or equiv exp in cell biology, tissue culture work & radioisotopic techniques preferred.; C06; $1854-2312.

24130-TC (JCC:6818) SOC SCI RES ASST II: Research Asst to a Prof & res staff of Social Ecology Lab, Dept of Psychiatry; involved in contacting & obtaining data fr subjs in ongoing studies thru phone, hospital-based, & possibly home interviews; analyze & interpret data using existing computer programs & hand calculators; res bibliographic mat'ls relevant to ongoing res projs & participate in writing manuscripts; short, local trips using personal transportation will be required to complete these activities; expected to develop new standards for measures; QUALIFICATIONS: MA in social sci or equiv exp; ability to conduct structured telephone or home interviews; computer data analysis skills.; C04; $1511-1880.

21689-JB (JCC:7534) FACIL ENGINEER/COORD II: Respon for planning, coord & execution of maintenance, repair & minor construc projs of an Architectural/Structural nature; prep plans, documents, drawings & specifications as nec to implement projs; performs inspection of facilities to ascertain mat'l condition & establish scope for corrective action; acts as a proj mgr; maintain contract files & process nec inspection reports, purchase reqs & payment certifications; respon for prep of reports which outline field conditions & operational problems; QUALIFICATIONS: knowl of Architectural/Structural maintenance & construction practices; finish schedules, bldg structural components & roofing sys; current bldg & fire codes; able to read plans & interpret specifi meet & interview people courteously & tactfully; excel commu skills, both oral & written.; C07; $2113-2724.

30567-LL (JCC:8880) MISC PROFESSIONAL: Language Lab Director; manage offc & lab facilities (102 student booths, each w/ Level III ER-840 Sony 4-track recorders); duplicate cassettes for students; prov maintenance of all audio & video eqpt; recruit, train & supv approx 10 student lab attendants; prov tech recommendations to Lang Lab Committee for improvements & long-term planning; QUALIFICATIONS: substantial exp in 'hand-on' operation of audio & video eqpt; knowl of computer sys; ability to manage lab facilities, eqpt & operating budget; abiii-ity to supv student assistants; prev exp in an academic institution desired.; C06; $1854-2312.

Hospital

Please submit all applications/resumes to the Hospital Personnel Department to the attention of Celia Corchado, 770 Welch Rd., Suite 100.

SECRETARY III—Hospital Modernization Program — #3538 (R-16): Responsibilities: Under genl supvn of Deputy Director of HMP, provide administrative support to HMP staff as reqd, as well as primary sectl support to Deputy Director; position involves typing at corrected rate of 60 wpm, minute taking, scheduling of meetings, & making travel arrangemts; must be able to use or learn to use word processor, organize & maintain filing system; possess good grammatical/writing skills; good oral communication skills; Qualifications: Prefer min of 3 yrs' secretarial experience; permanent, full-time, M-F, 8-5pm, $8.31-$11.46 hrly

Carpools

Need ride: San Jose (No. Capitol) to Stanford (ERL) and back, 8:30 and 5, M-F. Call Maria at (408) 280-2568 (day) or (408) 926-5328 (night).

Riders needed for vanpool M-F. Leave Newark 7 a.m.; Leave Stanford 4:45 p.m. Call Mark, 7-4342.

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Nonexempt

20035-PM (JCC:2596) SECY II-SPEC: 75%, 8-3pm or flex time; formatting, editing & typing proposals, tech manuscripts using Greek letters & equations, & corresp fr longhand; answer phone; keep Lab journal lib current, xeroxing, sorting & routing mail, stocking offc supplies, assisting w/ Dept'l files & some occasional lib research & errand-running on campus; QUALIFICATIONS: typ 65 accurately; knowl of proper syntax; familiarity w/ math & tech symbols; formatting & editing reports & proper formatting of business letters; prior exp w/ tech typing preferred; good commu skills over phone & in offc; good organizational skills; send appl/resume to Robin Holbrook, SMRL 119 Organic.; B12; $983-1030.

24129-TC (JCC:6810) SOC SCI RES ASST I: Res Asst to a Prof & the res staff of Social Ecology Lab, Dept of psychiatry; involved in contacting & obtaining data fr subjs in ongoing studies thru phone, hospital-based, & possibly home interviews; may analyze data fr ongoing res proj using existing computer programs & hand calculators; collect & compile bibliographic mat'ls relevant to ongoing res projs & asst in prep of manuscripts short, local trips using personal transportation will be required to complete activities; QUALIFICATIONS: typ 40-50; BA in social sci or equiv exp; ability to conduct structured phone or home interviews; some computer data analysis skills helpful.; B12; $1310-1373.

32943-PM (JCC:2546) SECRETARY I: 50%, prefer 1-5pm; work in Oncology as support person for scientific team; filing; xeroxing; typing of forms; screening & routing telephone calls; sporadic typing of manuscripts, fellowships & grants proposals fr handwritten or rough typed copy; willing to learn Xerox 860 word processor; QUALIFICATIONS: typ 50; knowl of genl telephone & office procedures; contact: Shirley Coles, 497-7423.; B09; $565-595.

31161-PM (JCC:2554) SECRETARY II: 50%, 8-12; Fixed term 5/1/83-8/31/84; performs duties in offc of Assoc Dir for Public Services; typ corresp, reports, position papers & admin documents & forms on both typewriter & a word processor; maintains Public Serv databases online & enters lib publications into Wylbur sys &/or other automated sys; organizes Assoc Dir's time schedule & sets up mtgs; organizes & maintains a complex filing sys; receives & screens visitors & phone calls; sorting mail; handles travel arrangements, etc; QUALIFICATIONS: typ 75; prev sec'l exp; able to learn & use automated sys; commu well both orally & in writing; good spelling punctuation & English syntax skills; good interpersonal skills; ability to maintain confidentiality; prev lib exp; prev exp w/ WYLBUR &/or SPIRES: contact Bob Johnson, Green Lib, Rm 223 (497-3152).; B11; $623-655.

31162-PM (JCC:1763) LIBRARY SPEC III: Fixed term 6/1/83-5/31/84; performs duties in Serials Dept; catalogs serials w/ LC & RLG copy; compares mat'ls/photocopies; establishes correct entry form of corporate body entries & creates authority file records; establishes govt doc access point(s) according to SUL policy; prep data for keying by staff; recatalogs serials w/ title or main entry changes, etc; establishes catalog entry for series; supv Lib Spec I, etc; QUALIFICATIONS: typ 40; prev lib exp; ability to learn & apply AACR II cataloging rules & MARC-S format for serials bibliographic info; ability to meet production goals; learn to use RLIN catalog subsys; familiarity w/ LC schedules & subj headings; reading knowl of 1 foreign lang, preferably Spanish desirable; prev supvry exp; contact Bob Johnson,; B14; $1440-1514.

SLAC

94543-JM (JCC:8880) Mechanical Engineer: Mechanical design & analysis of components for the linear collider vacuum sys incl stress analysis, heat transfer analysis & ultra high vacuum design & analysis; follow-up of fabrication, procurement, assembly & installation of components & SYS; QUALIFICATIONS: BSME or equiv; several yrs exp in ultra high vacuum sys design; knowl of mechanical design, heat transfer, stress analysis & computer use required; familiarity w/ computer aided design, vibration analysis & shop practice desired.; C99; $2400-3000. APPLY AT SLAC

94542-JM (JCC:8880) Mechanical Engineer: Mechanical design & analysis of components & sys for the linear collider proj involving most of the following disciplines: stress, heat transfer, vibrations, electromagnets, vacuum & cryogenics; follow-up of fabrication, procurement, assembly & installation of components & sys; QUALIFICATIONS: BSME or equiv knowl of mech design, stress analysis & computer use required; familiarity w/ computer aided design, vibration analysis, heat transfer analysis & shop practice desired; will consider recent engr grad or one w/ a few yrs exp.; C99; $2000-2700. APPLY AT SLAC

94582-JM (JCC:6714) ACCELERATOR SYS OPR TR: TMS Unit; rotating shift; genl operation of complex sys to dir, tune & maintain electronic beam; perform corrective & preventive maintenance; fabricate, install, modify, etc. electronic & electro-mechanical components & sys; QUALIFICATIONS: AA in electronics or equiv; several yrs related exp incl digital electronics, fast electronics, etc.; A00; $1811. APPLY AT SLAC

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, May 10, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

33459-PM (JCC:2462) OFFICE ASST III: Book Order Clerk; 8-4:30; about 100 book orders daily fr booksellers & others, domestic & foreign (25% foreign); fr each order the coder extracts info & translates it into number codes according to book title & customer; precision & strict attention to detail are essential; all Sales Dept corresp is read daily, along w/ important journal articles & trade news dealing w/ book publishing; QUALIFICATIONS: typ 35; rudimentary reading knowl of a modern European lang desirable; neat, legible handwriting required; an acquaintance w/ organization of institutions of higher learning, & of libs, is essential; ease w/ titles & subtitles of esoteric scholarly works, & familiarity w/ bibliographical terms in lib & academic work; send appl/resume to Robert Lloyd,; B11; $1246-1310.

27292-PM (JCC:2462) OFFICE ASST III: Receptionist for Univ admin offc; greet visitors, faculty, staff & students; prov wide range of genl info & make referrals as approp; answer phones & handle 28-line switchboard; schedule use of conference rooms, offc car & signature matrices; distribute incoming mail; type corresp; handle petty cash; xerox billing; prep Univ acctg forms; respon for opening & closing offc, etc; QUALIFICATIONS: typ 55; good commu skills; use tact & good judgmt in dealing w/ people; accurate typist; prev exp in handling phone; have a record of good attendance & punctuality; send appl/resume to Elaine Gloystein, President's Office, Bldg 10; B11; $1246-1310

28282-BP (JCC:2562) SECRETARY III: 50%; serv as executive assistant & sec in organizing mtgs, travel schedules, & report prep; supvn, organization & direction of independent sec'l projs for principal investigator & group of grad students, undergrad student employees, & consultants & technicians; mgnt of sec'l, acctg, procurement & maintenance activities for Stanford Student Astronomical Observatory; handling of appt papers for student teaching assistants; respon for astronomy lecture courses ; QUALIFICATIONS: typ 60; able to compose corresp, edit reports & proposals for syntax, spelling & style; able to supv student employees; knowledgeable about Univ & dept, or able to learn the organization quickly; able to establish filing sys dealing w/ tech reports, procurement, proposals; send app/resume to beverly Yates, AEL 107.; B14; $720-757.

250 world class players

Ultimate Frisbee contest coming

About 250 world class frisbee players from all over the west will compete Saturday and Sunday, May 7-8, in the Ultimate Frisbee Invitational, to be held from 10 a.m. to 4 p.m. both days next to Stanford Stadium.

Ultimate Frisbee is a fast-paced game between two seven-player teams, with action similar to football, basketball, and soccer. The object is to score points by passing the disc to a teammate in the end zone.

Preliminaries and semifinals will be held Saturday, with the finals and awards slated for Sunday.

Included in the tournament will be frisbee golf, in which players follow an 18-"hole" course—the frisbee is thrown at targets, with each throw counting as a stroke as in regular golf.

The Frisbee Golf competition is open to the public along with free instructional clinics and demonstrations. Spectators are welcome at all the competitions.

Stanford's frisbee program is headed by Tom McRann, who holds the Guinness Book of World Records record for the greatest distance an object has been thrown purely by muscle power. To earn this title, McRann tossed Skyro, the long-distance flyer, 285.9 yards.

Dance Division set to present annual Spring Migration concert

The Stanford Dance Division will present its fifth annual "Spring Migration" concert at 8 p.m. May 11, 12, 13, and 14, in Roble Dance Studio.

This year's concert involves a large number of students, undergraduate and graduate, as performers and choreographers. Faculty members Susan Cashion, Diane Freccero, and Jancy Limpert will also present choreography performed by students.

"Spring Migration" is an example of the Dance Division's continuing efforts to provide the Stanford community with a center for dance and other performance activities.

This year the studio has been the scene of master classes with guest artists, end-of-quarter choreographic showings, an Invitational Dance Concert in the fall, and a Dance Week concert in the winter. "Spring Migration" is the single event sponsored by the Dance Division which draws exclusively on students as performers.

Tickets for "Spring Migration" are $4 general admission, $3 for students, and $2 for Dance Quorum members and will be available at the door. For further information contact Jancy Limpert at 497-1234.

Rental housing

HOUSING AVAILABLE

□ **June:** Tahoe hse, on water, 4BR w/tennis crt. No pets or sublet. $2000 for 2 wks, $3000/mo. Call Linda Catron, 921-3433 or Marilyn Yalom, 497-1994 (day).

□ **Aug. '83 to Jan. '84:** Fully furn Cape Cod Colonial hse in Palo Alto; 3BR/2½BA, study, lrg. FR, W/D, pool, 1 mi. to Stanf. Nr schls, shops, park, Com. Ctr. Prof going on sabbat. $1500/mo. Call 325-1709.

□ **June 2 to Sept. 30:** LONDON HOUSEBOAT. Lux. conversion, exclus., semi-rural Chiswick on Thames, nr city ctr. Fully furn., central heat, contin. hotwater, 2BA, W/D, dishw, freezer. $900/mo. Call Beard, 323-2755 or 497-5546 (day).

□ **June 5 to July 9:** Furn. 2BR/2BA condo, Greenhse II. Pool. $750/mo. Call Bill, 497-1415 (day) or 494-1921 (eve).

□ **June to Aug (approx. 10 wks):** Charming, Los Altos Cape Cod, 3BR/2BA. Hot tub, lovely y d. Tennis & activities nrby. Call (415) 961-4218 (eve).

□ **Mo. of Aug.:** Apt. in Paris, furn, dbl LR, 1BR/1BA, kitchen, balc., 1 xtra rm. 6th (top) flr—no elevator. On quiet st. in 15th Arrondissement, few hundred meters to Institut Pasteur, nr Metro, Montparnasse. EXCHANGE for Stanf. apt. or RENT for $600/mo + util, $200 dep. (refundable). Write Dr. Maurice Hofnung, UPMTG Institut Pasteur, 28 Rue Dr. Roux, 75015 Paris, France, tel: (1) 306-19-19, x2156, or call Douglas Brutlag, 497-6161 (day).

□ **Late Aug. 83 to late Mar. '84:** Fully furn. campus hse, 3BR/3½BA, guest/FR, DR, study. $1400/mo. incl. grdnr. Call 497-1941 (day), 493-0777.

□ **June 13 to Sept. 5:** Lrg. furn. 2-story hse, 3BR/2BA, LR, den, lrg. ktchn, lndry rm, encl. yd, cov. patio, BBQ. Nr park, tennis, shops. 10 min. bike to inner quad. $900/mo + util. Call Dekker, 321-7963.

□ **June, July, Aug.:** Rm w/priv. BA, Menlo Pk. Share hse w/single person. $325/mo. + ½ util. Call 325-2236.

□ **July & Aug.:** Lrg. furn. studio treehse; ktchn, BA. Bike to Stanf. Barron Pk area. $400/mo. Call 497-6352 (day), 493-7083 (eve).

□ **July:** Furn. studio, ktchn, BA. Russian Hill in S.F., 2 blks to No. Beach. Priv. gar. $675/mo. Call 497-6352 (day), 493-7083 (eve).

□ **June 22 to Sept. 3:** Summer rent, 2BR/2BA fully furn. hse on 3+ acres in Woodside. Office, frpl, 2 lrg. decks, hot tub, view, privacy, hike trails & trees. Incl. dishes, linens. $950/mo. incl. garb., water, clean. serv. Call Ann Holmes, (415) 588-3040, 8 am to 3 pm; after 5 pm call 851-2167.

□ **End June to end Sept. (flex):** Fully furn. hse in Crescent Pk, Palo Alto, 3BR/2BA, patio, garden. Cul-de-sac. Walk to park, pool, tennis, schls. Bike to Stanf. $1250/mo incl water, grdnr. Call 321-1142 or 497-4364 (day).

□ **Sept. to Nov. 15, '83:** Furn. 1 or 2BR apts. Olympic pool, sauna, jacuzzi, tennis, racq. ball. Adult complex. Dep. req. & refs. 1 apt. air-cnd. Rte 280 to campus. $600/mo. Call Prof. Arnold, (415) 968-0951.

□ **July 1 to July 23, 1983:** Furn. 3BR/3BA campus hse, LR, DR, 2 studies, spac. ktchn. No pets. $1000/mo. incl. grdnr. & garb. Call J. Keller, 497-0851 (day), 857-0409 (eve).

□ **Beg. July 1, '83:** Univ. owned rental hsng: unfurn. lrg. studio, w/frpl & pool, on campus, for Stanf. fac. & staff only. $500/mo. Call Marsha Lee, 326-7195.

□ **July 10 (flex) to April 1, '84 (flex):** Fully furn. lux. hse. w/pool, Steinway; 3BR/2BA, AEK, W/D, 2 studies, frpl, fenced yd. Nr. Med. Ctr., bike to campus. $1500/mo. (nego) incl. pool serv. Call 497-1348 (a.m.), 325-4533 (lv. message), 322-9866 (eve).

□ **Aug. 1 to mid-Sept. '84:** Portola Valley, hse, 3BR/2BA, 2 frpl, multi-level, spac. decks, scenic views. Rdwd. beams, stained glass, oriental rugs, sculpture, art. Lrg pool w/solar. On wooded hillside acre. Use of car nego. $1800/mo. Call 851-8743.

□ **June 1 to Aug. 1, '83:** Old Palo Alto hse, LR, DR, ktchn, 5BR/2BA, deck. 1 mi. to Stanf. Poss. rent from 6/1 to 6/1/84. Call 328-4395, between 4 & 5:30 p.m. or after 10 p.m.

□ **NOW:** Rm. in old Victorian hse, fully furn., ktchn. priv., lndry, walk to Stanf. & dwntwn. Short term rent pref. $400/mo. Summer rms. also avail. Call Peggy, 327-2510.

□ **Sept. '83 to May '85:** EVERGREEN, COLO. Denver suburb: BR/2½BA unfurn. hse, LR, DR, study, loft, AEK, frpl w/wood, W to W carpet, deck, cable TV, ath. club mbshp avail. 2 car gar. 4 levels, 1 acre, mtn views. $1400/mo. or EXCHANGE for hse nr. Stanf. Call (303) 674-2244.

□ **June 8 to July 8, '83:** Prof. wife, son 17, seek campus hse or apt. Fellow at CASBS, local refs. Call Arthur Goldberger, Econ. Dept. U. Wisc., (608) 263-3876 (day) or (608) 238-6138; or Molly Agras, (415) 323-2829.

□ **Sept. 20, '83 to Mar. 25, '84:** Adult visit. German prof. & family needs furn. 3BR hse or apt. vicinity Stanf. Call 494-3347.

□ **Aug. '83 to June '85:** Stanf. MBA student, wife; nonsmokers, 3 children, seek 3BR/2BA hse, furn or unfurn. on or nr campus. Lease for 1 or pref. 2 yrs. Or EXCHANGE for Denver residence. Call (303) 674-2244.

□ **July & Aug. (2 mos):** Grad student, wife, 2 children seek local rental/caretake. Or EXCHANGE for 3BR apt. in NYC at Columbia U. Local refs. Call Delson, 855-2619 or 493-0404.

For $6 your brief housing ad will appear in two issues. Make the check out to SCHOA and send it with your ad to the Rental Housing Listing Service, P.O. Box 7772, Stanford, CA 94305. The deadline is Wednesday for the following issue. Questions should be directed to Dorothy, 857-0414.

U-Zulu Dance Theater will appear for Pan-African Cultural Night May 7

Africa Week program opens tonight with Toure talk on Pan-Africanism

"Building Pan-Africanism," a free public talk by Kwame Toure, formerly known as Stokeley Carmichael, will inaugurate Africa Week 83 at 7:30 p.m. Wednesday, May 4, in Annenberg Auditorium at Stanford.

Africa Week 83, built around the theme "Africa and the World," will continue from May 6 to 14. A film showing of "Ashes and Embers" by Haile Garima (Ethiopia) and "Free Namibia" is planned at 7:30 p.m. Friday, May 6, in Annenberg.

Pan-African Cultural Night with the Richmond Steel Band, the U-Zulu Dance Troupe from South Africa, and African folktales by Peter Harras will be held at 7:30 p.m. Saturday, May 7, in Dinkelspiel.

A rally on "U.S. Foreign Policy in Southern Africa" with the participation of the Pan-African Dance Troupe, will take place at noon Monday, May 9, in White Plaza.

Francis Moore Lappe will talk on "Political Economy of Hunger" at 7:30 p.m. Monday, May 9, at CERAS.

A symposium on "Africa and the World Economic System" with Cheryl Payer, author of *The World Bank: A Critical History*; the Hon. Ben Mkapa, Tanzanian Ambassador to the U.S.; and Prof. Raj Krishna of the University of New Delhi will take place at 7:30 p.m. Thursday, May 12, in Kresge Auditorium. Prof. Donald Harris will moderate and Prof. David Abernathy will serve as discussant.

Africa Night, featuring an African dinner and dance with the Hedzoleh Dance Ensemble from Africa, will be held at 6:30 p.m. Saturday, May 14, at Encina Station.

An intramural soccer tournament also is planned at 4:30 p.m. Friday at the soccer field.

Africa Week 83 is sponsored by the Stanford African Students Association.

GSB public managers to meet May 7

Some 150 Stanford Business School public management graduates are expected to be on hand for the tenth anniversary conference of the School's Public Management Program, Saturday, May 7.

The all-day conference will be open to the public on a space-available basis. There is a fee.

The conference is celebrating the School's pioneering Public Management Program, which was started in 1973 as the first-known program of its kind within a business school. Enrollment has increased from 19 students the first year to 50 students a year out of an entering class of 320 MBA candidates. A total of 396 persons have graduated from the Public Management Program since its beginning.

Keynote speaker at the conference will be Charles L. Schultze, former chairman of the Council of Economic Advisers under President Carter, who will discuss the topic, "Does America Need a New Industrial Policy?"

Also included will be a talk by former Dean of the Stanford Graduate School of Business Arjay Miller, who was instrumental in starting the Public Management Program; workshops led by members of the faculty; and a panel discussion on careers featuring public management graduates.

For more information on attending the conference, call (415) 497-2837.

Take your pick of these events:

Spring Faire opens Friday at White Plaza

The annual Stanford Spring Faire will fill White Plaza with art, crafts, and food booths from 10 a.m. to 6 p.m. Friday through Sunday, May 6-8.

The Faire will feature 150 craftspeople and artisans who have been screened from 600 applications. A wide variety of unusual, one-of-a-kind articles—ceramics, leather, handmade jewelry, and toys—will be on sale.

Gourmets will appreciate the wide selection of international food prepared at the Faire. Vietnamese, Japanese, Greek, Polish, and Mexican dishes will please almost any palate.

Musicians, puppeteers, magicians, jugglers, and folk dancers are among the wide variety of entertainment provided. Face-painting and handwriting analysis are also available.

The Spring Faire is an event sponsored by the Bridge, a peer counseling and personal growth center at Stanford offering drop-in counseling services, classes, and workshops. The Faire is the primary source of funds for the Bridge, a volunteer student organization whose programs and services are free and open to everyone.

Ceramist Couch at Governor's Corner

Menlo Park ceramist Christine (Pixie) Couch will show new works on Friday, May 13, from 1-6 p.m. at the new Program Center, Governor's Corner, Stanford campus.

Couch, a professional potter for 12 years, will show pieces which are individual free-form stoneware and function as a vehicle for her brushwork flowers. The technique involves pouring porcelain slip over stoneware forms while still damp. Colored slips are brushed over and through the porcelain and the brushwork added, lending a watercolor effect. Glaze is added only to detail certain areas of each piece in the final firing.

Couch has exhibited extensively locally including Los Robles Gallery and Leaf & Petal in Palo Alto, Horizon Gallery in Mill Valley, and Following Sea in Hawaii. She is a member of the Association of San Francisco Potters.

She also works on the Stanford staff in the Department of Applied Earth Sciences.

Campus Conference Saturday, May 14 features 15 faculty 'breakthroughs'

Breakthroughs is the theme of the 51st annual Stanford Conference to be held Saturday, May 14.

Fifteen faculty speakers who have made outstanding contributions in teaching and research will offer alumni and friends of the University attending the day-long academic program a wide variety of topics in three lecture periods.

Highlight of the program, sponsored by the Stanford Alumni Association, will be a noon address by President Donald Kennedy.

The day's activities will begin at 8:15 a.m. with the annual meeting of Alumni Association members. Lecture sessions will be at 9:30 a.m., 10:45 a.m., and 1:45 p.m. The speakers and their topics include:

First Session: Judith C. Brown, assistant professor of history, "Legacy of the Renaissance: The Myth of the Perfect Family"; Sharon A. Hunt, clinical assistant professor of medicine, "Heart Transplants"; Robert H. Mnookin, professor of law, "Children's Rights: Moving Beyond Kiddie Libbers and Child Savers"; Calvin F. Quate, professor of applied physics and electrical engineering, "Imaging and Images: Unconventional Ways of Viewing"; and Stanley G. Wojcicki, professor of physics, "Breakthroughs in Particle Physics."

Second Session: Charles Bigelow, assistant professor of computer sciences and art, "From Oral Literature to the Computer"; Victor R. Fuchs, professor of economics, "How We Live: Private Choices, Public Policies"; Andy Geiger, director of athletics, "Triumphs in Women's Athletics"; Michael L. Ray, professor of marketing, Stanford Graduate School of Business, "Zen and American Business"; and Lee S. Shulman, professor of education, "Practicing Professionals: The Management of Uncertainty."

Third Session: John M. Chowning, professor of music, "The Computer and the Nightingale"; Konrad B. Krauskopf, professor of applied earth sciences, emeritus, "Nuclear Waste Disposal"; Lynn W. Phillips, assistant professor of marketing, Graduate School of Business, "Analyzing Contemporary Marketing Strategy"; Arthur L. Schawlow, professor of physics, "Lasers and Their Lives"; and Haresh C. Shah, professor of civil engineering, "Planning for Earthquakes."

The final session, at 3 p.m., will be a panel discussion on "The Changing Face of Stanford" with Amy Blue, director of project management; Robin Hamill, director of housing programs; Robert Nerrie, manager of University projects; and Lynda Weisberg, assistant provost, Office of Planning and Management.

Members of the Glass of 1933 will be holding their golden anniversary reunion on campus that weekend and will be inducted into the Alumni Association's Half Century Club during the luncheon on Saturday.

The Campus Conference is open to all interested people. Tuition is $10 per person and box lunches are available for an additional $7. For further information, contact the continuing education staff at the Stanford Alumni Association, Bowman Alumni House; (415) 497-2021.

Duane to perform original songs

Stanford songwriter Tim Duane will give his final performance as a Stanford student in a free concert of original compositions from 7 to 9 p.m. Saturday, May 14, in the Tresidder Large Lounge.

The concert will feature a solo performance of acoustic guitar, piano, vocals, and harmonica. Several of his songs will be premiered at the concert which is sponsored by the campus group Stanford Talent for Original Productions.

Duane grew up in the tiny Sierra Nevada gold rush town of Nevada City, and he got his start as a performer there with four nights each week in a local restaurant. From there he entered the local county fair circuit, which lead to later contracts with the California and Nevada State Fairs.

Duane has completed a bachelor's degree in human biology and is presently finishing a master's degree in civil engineering. He will work in alternative energy next year after a summer of travel with his guitars throughout the western U.S. and Canada.

Charles Fuery

Pianist Fuery to give concert for DMA May 15

Pianist Charles Fuery will present his DMA (Doctor of Music Arts) recital at 8 p.m. Sunday, May 15, in Tresidder Lounge. Presented by the Department of Music, his concert is free.

Fuery will perform two preludes and fugues by Bach, Mozart's *Sonata in B-flat Major*, *Valses Nobles et Sentimentales* by Ravel, *Sonata in F-sharp Major* by Beethoven, and works by Chopin.

Fuery received his A.B. in music from UC-Berkeley, where he studied under a Regents Scholarship. He was awarded the Eisner Prize in 1975, a Hertz Traveling Fellowship to London in 1979, and a Stanford young artist award in 1980. In 1981 Fuery performed Beethoven's 4th Piano Concerto with the MIT Orchestra.

Fuery teaches piano at UC-Berkely, where he studies with Nathan Schwartz. He expects to receive his DMA degree from Stanford this year.

Kent Underwood

Summer Sports Camp opens June 20

The annual Stanford Summer Sports Camp will be held from 8 a.m. to noon Monday through Thursday, June 20-July 14, at the Roble Gym complex, with a possible afternoon extension. The varied program is designed especially for fun-loving children, ages 7-12.

Campers will have access to several of Stanford's athletic facilities including Roble Pool, DeGuerre Racquetball Courts, Encina Weight Room, and Roble Tennis Courts. Sports activities include badminton, basketball, bowling, dance, field hockey, fitness and exercise, football, frisbee, golf, New Games, softball, soccer, tennis, track and field, swimming, raquetball, and more. Campers will have daily special activities, such as guest appearances by sports celebrities.

A highly competent staff has been assembled from the Stanford Varsity and Club Sports coaches and the Stanford Teacher Education Program under the direction of Shirley Schoof of the Department of Athletics, Robert Garcia of the School of Education, Jackie Shannon of Bing School, and Tom McRann of the Department of Athletics.

The camp is a place where children can meet new friends and have a good time as a part of the Stanford community. The reasonable registration fees allow enrollment for the full four-week session, with sibling discounts, or enrollment per week.

The camp provides an exciting, fun atmosphere in a safe, fitness-oriented environment. Daily refreshments, T-shirts, and certificates of participation will be presented to all campers.

Fees range from $50 for one week for a Stanford-affiliated child to $150 for the four-week session for a non-Stanford-affiliated child. In addition, an afternoon session is being planned.

For more information or to register, call Shirley Schoof at 497-3089 or Bob Garcia, 497-2103.

Fabrizio slates multi-image show on Japan

"Images and Sounds of Traditional Japanese Culture and Arts," a multi-image and sound presentation by Margaret Fabrizio, senior lecturer in music, will be held at 8 p.m. Friday, May 13, in Annenberg Auditorium.

Fabrizio, a harpsichordist, spent a rewarding month as a student at the Oomoto Seminar for the study of the traditional arts of Japan where she gained insights into the processes of learning and teaching.

Her presentation will focus on visual and musical impressions of traditional Japanese drama, culture, and aesthetics through No drama, and the tea and rice planting ceremonies.

Sponsored by the Center for East Asian Studies and the Art Department, this program is open to the public free of charge.

Kent Underwood lute, guitar recital slated

The Stanford Music Department will present doctoral candidate Kent Underwood in a free lute and guitar recital at 8 p.m. Tuesday, May 10, in Dinkelspiel Auditorium.

Underwood will divide his concert between Renaissance music for lute and 20th-century works for classical guitar. Renaissance composers on the program will include Capirola, Luis Milan, and Dowland. Contemporary works for guitar will include *Suite* by Ernest Krenek, *Five Impromptus* by Richard Rodney Bennett, *La Espiral Eternal* by Leo Brouwer, and *Kaleidoscope II* by Robert Strizich.

Underwood is currently completing his Ph.D. in music at Stanford. He graduated from the San Francisco Conservatory of Music, where he studied classical and baroque guitar with Michael Lorimer. Underwood has appeared in Italy and the U.S. with the Complesso Barocco under Alan Curtis, and has performed with the San Francisco Chamber Opera, California Bach Society, and San Francisco Contemporary Music Players. Last year he was a visiting artist at the Idyllwild School of Music and the Arts.

Underwood appeared with the Lydian Ensemble at Stanford April 19.

Summer swimming schedule

Recreation coordinator Shirley Schoof has announced the summer swim hours in response to many requests for the information.

DeGUERRE POOLS—June 20 through September 23

Monday through Friday, noon to 2 p.m.: Faculty and staff with University ID, students with spring or summer quarter ID, Stanford Executive Program participants with swim cards, spouses with any of the above ID.

Monday through Friday, 2-6 p.m.; Saturday and Sunday, noon to 6 p.m.: All of those listed above plus all other summer conference participants and Summer Family Swim Card holders.

ROBLE POOL—June 20 through August 12

Monday through Friday, noon to 1 p.m.: Faculty and staff with University ID, Stanford Executive Program participants with swim cards, spouses of the above (no students).

Monday and Wednesday, 2-6 p.m.; Tuesday and Thursday, 3-6 p.m.; Friday, 1-6 p.m.; Saturday and Sunday, noon to 5 p.m.: Faculty and staff with University ID, students with spring or summer quarter ID, Stanford Executive Program participants with swim cards, spouses with the above ID, and all other summer conference participants (no children).

Faculty/staff family cards (for children) are $20; a daily swim card is $1.

For conference participants the fees are $42 for a family season ticket, $15 for an individual season ticket, and $4 for a weekly swim card.

Summer recreational swim cards will be available at the DeGuerre complex from noon to 6 p.m. Monday through Friday (noon to 5 p.m. on weekends).

Chorale to sing at Mem Chu Friday, May 13

The Stanford Chorale, under the direction of Prof. William Ramsey, will perform at 8 p.m. Friday, May 13, in Memorial Church. The 30-voice group is presented by the Stanford Department of Music.

Their program will include the following: *Laetatus sum* by Monteverdi, *Let Thy Hand Be Strengthened* by Handel, *Magnificat* by Durante, *Psalm 67* by Ives, *Four Part Songs* and *Two Motets* by Brahms, and works by Paul Chihara and Hindemith.

The Brahms works have been chosen in celebration of the 150th anniversary of his birth.

Doctoral student Sharon Paul will conduct the works by Ives, Chihara, and Hindemith in fulfillment of a Doctor of Musical Arts project.

Tickets for the May 13 concert are $4 general, $2 students and senior citizens.

'Pity the Sorrows of a Poor old Man' by Theodore Gericault.

Lithographs of Revolution, Romanticism on display?

On exhibition at the Stanford Museum are more than 50 prints and illustrated books from the Museum's Collection documenting the early development of lithography during the Age of Revolution and Romanticism.

Lithography is a relatively young member of the printmaking family; it differs in several important ways from its older, more established brothers of woodcut and engraving.

For one thing, we know who invented it, and when and where: Alois Senefelder, a student trying to publish a play, accidentally discovered its possibilities in Munich during the last two years of the 18th century.

For another, lithography is neither a relief nor an intaglio print. It is planographic; that is, it does not depend upon the difference in level between the worked and unworked portions of a stone, plate, or block. Simply stated, lithography is based upon the antipathy of grease and water, and many of its early practitioners called it "chemical printing."

From a practical standpoint, it was a faster and cheaper process, capable of withstanding larger editions. From an artistic standpoint, it did not reproduce, as much as multiply the original, and thus provided a new avenue for draftsmanship. Senefelder's discovery revolutionized the commercial and artistic aspects of printing. Lithography by 1830 had almost totally supplanted the more traditional techniques.

The Stanford exhibition offers an overview of the first quarter-century of its development. The earliest publications were issued in Germany, where the technique was seen as essentially reproductive. These lithographs of Old Master paintings and drawings were timid and conventional, little indicating the possibilities of the new technique. In England, on the other hand, artists such as Thomas Stothard and Benjamin West tried their hand as early as 1801-03 and their simple, but fluid and expressive, pen lithographs rank among the most original of the incunabula.

But it was in France that lithography truly came into its own. After the Napoleonic Wars, as life resumed a more normal tone, there was an outpouring of lithographs.

By 1820 Paris was taken over by a craze for lithography. Amateur and artist alike took up pen and chalk. New printing establishments appeared overnight, turning out a flood of topical prints, from politics to fashion.

Established artists—as well as caricaturists and illustrators—found lithography worth exploring. Some of the finest lithographs of the 1820s come from R. P. Bonington, Henri Delacroix, and Theodore Gericault.

Bonington's misty views of Normandy, Delacroix's illustrations of Goethe's *Faust*—termed by that author as "rough, but spirited. . . outdid my own imagining"—and Gericault's depictions of London's beggars as well as his magnificent work horses bring lithography to a technical and artistic peak that remained unequaled for more than half a century.

The Stanford Museum is open to the public Tuesday through Friday from 10 a.m. to 5 p.m.; Saturday and Sunday from I to 5 p.m. (closed on Mondays).

I-Center film show on Afghani nomads

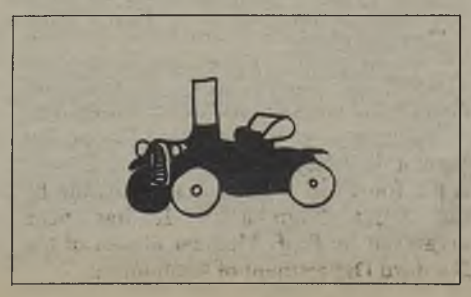
The Other Cultures Film Series will explore a group of Afghani nomads in "Sons of Haji Omar" at 7:30 p.m. Thursday, May 5, at the International Center.

The film looks at a small group of Afganistan's Pashtoon nomads as they follow their annual traditional migration into the high mountain pastures of the Hindu Kush.

Watching them during the spring lambing camp, the Narin bazaar, and a climb to the Khawak Pass gives us an insight into their economy, family life, social customs, and religion.

A 75 cent donation will be requested at the door to help cover the cost of the film. For further information on the Other Cultures Film Series or other I-Center events, please call 497-1831.

I-Center watercolors



Watercolor landscapes by Lorraine Schreiber will be shown at the International Center through may 30, with a reception for the artist at 5 p.m. Friday, May 6, at the I-Center.

The headline last week mistakenly put the exhibit at the Faculty Club.

Le Barbier de Seville tonight at Dinkelspiel

The Alliance Francaise of San Francisco will perform in French the play, *Le Barbier de Seville*, a comedy by Beaumarchais at 7:30 p.m. this evening (Wednesday, May 4), in Dinkelspiel Auditorium.

The programs are in English. Tickets available at the door are $3 students; $6 general.

Lectures

NMR imaging systems

Dr. Joel Blank, vice-president marketing and general manager of Diasonics Inc., will speak on "Nuclear Magnetic Resonance Imaging Systems" at the general meeting of the Institute of Electrical and Electronic Engineers, 7:30-9:30 p.m. Wednesday, May 11, in Fairchild Auditorium.

Blank's lecture is open to all interested people without charge. An election of officers will follow the presentation.

Architectural history

Architectural historian and writer Sally Woodbridge will speak on "Architectural Legacy: The Splendid Survivors" at 8:15 p.m. Thursday, May 12, in Annenberg Auditorium.

Her lecture is one of a series on the architecture of San Francisco sponsored by the Committee for Art at Stanford. General admission is $4, students $1.

Money in politics

Dr. Thomas E. Mann, executive director of the American Political Science Association, will deliver the 1983 William Bennett Munroe Memorial Lecture at 4:15 p.m. Thursday, May 12, in Room 163B of the Political Science Department.

His topic will be "Money in Congressional Politics."

Mann is the author of several books and articles, including *Unsafe at any Margin: Interpreting Congressional Elections*. His talk is free and open to the public.

Third Republic France

Prof. Herman Lebovics of State University of New York, Stony Brook, will present a free public lecture on "The Alliance of Cotton and Wheat: The New Conservatism of Third Republic France, 1880-1900" at noon Thursday, May 12, in the History Corner, Student Lounge (Room 302) at Stanford.

Lebovics' specialty is modern European history. His research is in German social and intellectual history of the late 19th century and French social and intellectual history of the same period, and comparative history. His publications include *Agrarians vs. Industrializers* and *Social Conservatism and the Middle Classes in Germany 1914-1933*.

Henry Latrobe's U.S.

John Chamberlin Van Horne, associate editor of the American Philosophical Society Library in Philadelphia, will speak on "Portrait of the Early Republic: Benjamin Henry Latrobe's America, 1796—1820," at 3 p.m. Sunday, May 15, in Annenberg Auditorium.

Latrobe, America's first architect and engineer, arrived in this country from his native England in 1796 and is especially noted for his supervision of the rebuilding of the national Capitol in Washington after it was burned by the British in the War of 1812.

Van Horne is currently working on a documentary of Latrobe's professional drawings, journals, letters, sketches, and miscellaneous papers. His talk is sponsored by the Associates of the Stanford University Libraries.

A reception will follow in the Louis R. Lurie Rotunda, Cecil H. Green Library.

Laurence Maslon as Herman Glogauer, Christine Roum as May Daniels, and Celia Maurice as Helen Hobart in *Once in a Lifetime*, beginning next Wednesday, May 11.

Dramatists plan *Once in a Lifetime*, classic comedy by Kaufman, Hart

The Stanford Drama Department production of Kaufman and Hart's classic American comedy, *Once in a Lifetime*, will open at 8 p.m. Wednesday, May 11, in Little Theater.

Performances continue Thursday through Saturday, May 12-14, and the following week Wednesday through Saturday, May 18-21.

Once in a Lifetime, which opened on Broadway in 1930, marked the first collaboration of the most successful team of comic playwrights in American theatrical history, George S. Kaufman and Moss Hart. According to director Steven Vineberg, "The play is a prime example of a kind of peculiarly American genre that isn't written anymore: hard-boiled, wisecracking, screwball comedy."

Set in Hollywood during the "talkie" revolution—the very early days of sound movies—the play concerns the efforts of three down-and-out vaudevillians to cash in on the general confusion that reigned in Hollywood at the time by opening a voice school to teach movie actors how to talk.

Vineberg, who last year directed the Drama Department's highly successful production of *Moonchildren*, has been writing about movies since 1969 and has been the movie critic for *The Stanford Daily* since 1980.

He first became interested in the early sound period while a student at Brandeis University, where he wrote an honor thesis on early movie musicals. "Much of my research for that project focused on the beginning of sound in 1927, and from what I read, the chaos Kaufman and Hart portrayed in *Once in a Lifetime* is not an unreasonable exaggeration of the truth," Vineberg said.

The three unemployed vaudevillians are played by Tom Lindblade as the innocent, straight-man George Lewis: Sean Laughlin as the opportunistic con-man Jerry Hyland: and Christine Roum as the hard-boiled, wisecracking May Daniels. Laurence Maslon plays Herman Glogauer, head of the Hollywood Glogauer Studios, a character based on the late Samuel Goldwyn.

Celia Maurice is cast as Helen Hobart, a Louella Parsons-type gossip columnist; Graham Winton plays Rudolph Kammerling, a temperamental German director based on the early German film director F.W. Murnau. Stephen Weeks plays playwright Lawrence Vail, who is invited to Hollywood to write a play but is given nothing to do, a character probably based on Kaufman's own Hollywood experience and a part that he played in the original 1930 production.

The five sets in the production, which include a film studio and a pullman car, have been designed by Wendell Cole, who has also designed the 1927 flapper-period costumes. In the designs, Cole has relied on the art-deco style of the 1920s jazz age. The cinematic lighting is designed by undergraduate senior Nan Buck; and, the caricatures and special graphics by Laurence Maslon.

Tickets are available at Tresidder ticket office and major Bay Area agencies and by telephone, 497-4317 with major credit cards. General admission is $4; student and senior admission is $2. Because of the limited audience capacity of Little Theater early ticket purchase is advised.

Come celebrate the end of the rain on the Lagunita plain Sunday, May 15

Alea II, the Music Department's Ensemble for New Music, will present an afternoon of new music Sunday, May 15, to celebrate what they hope will be the end of the rainy season. The group is directed by Jonathan Berger.

Their "Rites of Spring" will begin with a free 1 p.m. concert at Lake Lagunita featuring the world premiere of *Colony*, a large-scale work for 4-channel computer-generated tape by William Schottstaedt. The work was composed at the Center for Computer Research in Music and Acoustics (CCRMA) over the last two years.

Also on the lake program will be *Pat the Hat* for 4-channel tape by Douglas Fulton and *Water Music* for instrumentalists and boat rowers by David Jaffe. Fulton and Jaffe are both DMA composition students at Stanford.

The audience is invited to join the composers and performers for a picnic after the concert. Please bring food and drink to share.

At 6 p.m. the second event, also free, will commence on the steps of Dinkelspiel Auditorium with the world premiere of Paul Nahay's *Carillon Piece* performed by University Carilloneur Prof. James Angell and the composer. Nahay is also a DMA candidate in composition.

The concert will continue inside the auditorium with a performance of *Octandre* by Edgard Varese, Stravinsky's *Octet*, the world premiere of Pierre Garriguenc's *Quintet for Wind Instruments*, *String Trio* by Michael Gandolfi, and *Entr'acte* for flute and piano by Jonathan Berger performed by Yvonne Kendall, flute, and Naomi Sparrow, director of Stanford's piano program.

Other performers on the program include Shelley Whitehouse, flute and piccolo; Peggy Bruggman, oboe; Terry Cross and Joseph Limacher, clarinet; Ruth Bonaparte, harp; Cristina Ruotolo, violin; Anne Witherell and Elwood Williams, trombone; among others.

DMA candidate Jeannine Wagar will conduct both Varese's *Octandre* and Stravinsky's *Octet*.

Thomson to give first Jordan lecture

Keith Stewart Thomson, professor of biology and dean of the Yale Graduate School, will give the first annual David Starr Jordan memorial lecture at Stanford Friday, May 6.

He will discuss "Theories of Vertebrate Evolution: Fossils and the Neural Crest" at 4 p.m. in Braun Auditorium of the Mudd Chemistry Building. A reception will follow.

A noted evolutionary biologist and fish paleontologist, Thomson received his BSc degree from the University of Birmingham and his Ph.D. degree from Harvard. He has been at Yale since 1965 where he has worked on the evolutionary origins of the major vertebrate groups, especially the evolution of terrestrial from aquatic forms.

In his lecture, Prof. Thomson will discuss the convergence of evolutionary biology, physiology, developmental and cell biology in studies of the vertebrate skeleton and how the results of those studies relate to theories of vertebrate evolution.

Soviet change ahead?

The prospects for significant changes in the Soviet Union are the subject of a lecture sponsored by the International Relations Program and the Center for Russian and East European Studies.

Timothy Colton, professor of political science at the University of Toronto, will speak on "The Prospects for Reform in the Soviet Union," at 11 a.m. Friday, May 6, in History Corner (Building 200), Room 34.

Colton, who is currently fellow at the Wilson center in Washington, D.C., is well-known as the author of *Commissars, Commanders, and Civilian Authority*, an authoritative study of civil-military relations in the Soviet Union. He is the author of a forthcoming book on Soviet politics.

Ball, Robertson talk on social security

Robert Ball, former commissioner of the Social Security Administration (SSA), and A. Haeworth Robertson, former chief actuary of SSA, will discuss "The Future of Social Security" at 8 p.m. Friday, May 6, in Bishop Auditorium of the Graduate School of Business at Stanford.

Ball currently serves on the National Commission on Social Security Reforms. Robertson called attention to the unsound financial condition of the social security funds. He is now managing director of William M. Mercer, Inc., an employee benefit and compensation consulting firm.

Sponsored by the Stanford Center for Economic Policy Research, the conference is the fourth in a series made possible by the Koret Foundation. It has been organized by Prof. Michael Boskin of the Stanford Department of Economics.

Sidney Drell to talk on arms control issue

"The Scientist's Dilemma in Facing Questions of Arms Control" is the subject of an address by Dr. Sidney Drell to be presented at noon Tuesday, May 10, at Bechtel International Center.

Drell is Lewis M. Terman professor of theoretical physics and deputy director of the Stanford Linear Accelerator Center. He received his A.M. and Ph.D. degrees from the University of Illinois after graduating from Princeton.

Drell has since used his expertise in theoretical physics to advise governmental and private organizations in such areas as arms control and energy policy. From 1973 to 1981 he served as consultant to the National Security Council and the U.S. Arms Control and Disarmament Agency. For two years, until 1980, he was a member of the Energy Research Advisory Board, U.S. Department of Energy. He is currently chairman of that department's High Energy Physics Advisory Panel.

The presentation is one of the regular Tuesday Luncheon/Lecture series at the I-Center. Luncheon tickets are available at a cost of $2.50 one week before the event at the Center office on the second floor, or at the door as they last. Brown baggers are also welcome at no charge.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., May 4, to cover the week of Mon., May 16, through Sun., May 22. Calendar items are entered into CIT's IBM computer and may be examined by anyone. Type ADMIN INFO PUBLIC EVENTS.

MONDAY, MAY 9

Women's Golf: Cardinal Club Celebrity Tournament. All Day. Stanford Golf Course.

Biological Science Seminar: "Sexual Selection in Bowerbirds and Birds of Paradise," by Dr. Jared Diamond, Physiology Dept., U.C.L.A. 4:15 p.m. Room T-175, Herrin Hall.

Electrical Engineering/STARLAB class: "Scattering of Radiation-belt Electrons onto the Ionosphere by Whistler Mode Electromagnetic Waves Propagating in the Magnetosphere," by Hung-chun Chang. 4:15 p.m. McCullough 134.

Math Dept. lecture: "Rank and Nullspace Calculation Using Matrix Decomposition Without Column Interchanges," with Leslie Foster, San Jose State University. 4:15 p.m. Room 380c, Math Corner.

Edwin William Schultz Memorial Lectureship in Medical Microbiology: "Molecular Studies on Replication and Pathogenesis of Hepatitis B-like Viruses Using Animal Models," by Dr. Jesse Summers, Inst. for Cancer Research, Philadelphia. 5:15 p.m. Fairchild Aud.

STARTS Fabulous Film Couples Film Series: "You Can't Take It With you," starring James Stewart and Jean Arthur. 7 p.m. and 9 p.m. Tresidder Room 270. $2.00 students, faculty, staff; $3.00 general.

School of Medicine/ Office of Student Affairs Panel Discussion: Reflections on Medicine: "Education, Lifestyle, Diversity". A panel of physicians from academic and community situations speaking to undergraduates. Dean Purpura, moderator. 7-9 p.m. Fairchild Aud.

TUESDAY, MAY 10

Center for East Asian Studies Film: "Xian". 1980 documentary (videotaped) by Shirley Sun on Chinese archaeological discoveries from Xian. Shows army of artifacts from the tomb of the Ch'in Emperor and other priceless treasures. Noon. Room 216, Lou Henry Hoover. Free.

Learning About Racism Lunch Series: "Vision of a Non-Racist Society," by Sal Alverez of the National Farmworker Ministry; president of Hispanic Catholics of America. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Room.

Bechtel International Center Lecture: "The Scientist's Dilemma in Facing Questions of Arms Control," by Dr. Sidney Drell, Deputy Director of SLAC. $2.50 for hot lunch. Brown baggers welcome. Noon. I-Center.

School of Humanities & Sciences Conference: "A Major Event". An opportunity to gather information about all academic majors. Soapbox speakers, music, demonstration, food, alumni, faculty, & student participation. Giant Raffle- obtain tickets from dept. reps. 10 a.m. to 4:30 p.m. Inner Quad.

Stanford Museum of Art: William Nicholson Graphics Lunch Hour Tour. 12:15 p.m. Stanford Art Museum.

Tower Talks Presents: "Authoritarian and Totalitarian Regimes: A Tenable Distinction?," by Sidney Hook, Senior Research Fellow. 3:30 p.m. Lou Henry Hoover Room, Hoover Tower. Free.

Seminar in Fluid Mechanics: "Quantum Turbulence," with Prof. Russell J. Donnelly, University of Oregon. 4:15 p.m. Material Science, Room 550a.

Applied Physics Colloquium: "The Anomalous Quantum Hall Effect: An Incompressible Quantum Fluid with Fractional Excitations," by Dr. Robert Laughlin, Lawrence Livermore Nat'l. Lab. 4:15 p.m. Applied Physics 200.

Music Dept. Concert: Kent Underwood, lute & guitar. Music for Renaissance lute by Vincenzo Capirola, Luis Milian, & John Dowland. 20th-century music for guitar by Ernst Krenek, Richard Rodney Bennett, Peter Maxwell Davies. 8 p.m. Dinkelspiel Aud. Free.

1982-83 Tanner Lectures in Human Values: "The Incompleat Egoist: From Rational Choice to Moral Theory," by David Gauthier, Professor of Philosophy, University of Pittsburgh. 8 p.m. Skilling Aud.

The Committee for Art at Stanford: "Treasures from Shanghai Museum - 6000 Years of Chinese Art," by Professor Per-Olow Leijan, visiting lecturer in art from Stockholm, Sweden. Reception will follow lecture. 8:15 p.m. Annenberg Aud. Free.

WEDNESDAY, MAY 11

CROW Lecture: "Lesbian Sexuality." by Martha Kirkpatrick, psychiatrist, Los Angeles. Noon. Terman Aud. Free.

Stanford Museum of Art: William Nicholson Graphics Lunch Hour Tour. 12:15 p.m. Stanford Art Museum.

Chemical Engineering Colloquium: "Technology & Public Policy," by Dr. Ralph Landau, Consulting Professor, Dept. of Chemical Engineering and Economics. 4:15 p.m. Chemical Engineering Conference Room.

ASSU Sunday Flicks: "All That Jazz". 7 & 9:30 p.m. Memorial Aud. $1.50.

Stanford Hillel Lecture: Professor Shlomo Avineri of Hebrew University will speak on the topic of Israel and the Palestinians. Mr. Avineri is the author of the controversial book, *The Making of Modern Zionism*, and former director-general of Israel's Ministry of Foreign Affairs. 8 p.m. Kresge Aud.

Spring Migration '83: Dancers in performance, presenting works by students and faculty. 8 p.m. Roble Dance Studio. $4 general ; $3 students; $2 quorum.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

THURSDAY, MAY 12

Theology & Natural Sciences Lunch Series: "What is Intelligence - Ethical Use of Computers," by Brian Smith, lecturer, Computer Science, Stanford. Bring bag lunch or arrange to eat at Otero. Noon. Otero Dining Room, Wilbur Hall.

History Dept. Lecture: "The Alliance of Cotton and Wheat: The New Conservatism of Third Republic France, 1180-1900," by Prof. Herman Lebovics. Noon. History Corner, Bldg. 200, Student Lounge.

Drama Dept. & Casa Italiana Lecture: "Contemporary Italian Theatre," by Giuseppe Bartolucci. Video tapes on contemporary Italian theatre groups and lecture. 2:30 - 4:30 p.m. Memorial Hall, Room 129. Free.

Perspectives on Twentieth Century Japan Colloquia Series: "Japan's Defense: Remilitarization or Free Ride?" by Col. David Holt, United States Air Force. 4:15 p.m. Room 238, Lou Henry Hoover Bldg.

Solid Mechanics Seminar: "Application of Interactive Robotics in Rehabilitation," with Prof. Larry Leifer, Mechanical Engineering , Stanford. 4:15 p.m. Skilling Aud.

Condensed Matter Physics Seminar: "Microclusters: Magic Numbers and Coulombs Explosions," by K. Sattler, Faculty of Physics, University of Konstanz , West Germany. 4:15 p.m. Applied Physics 200.

Industrial Engineering Symposium: "On the Economics of the Risk to Life," with Prof. Brian Arthur, Stanford Univ. 4:15 p.m. Terman Aud.

"Other Cultures" Film Series: "Wet Earth & Warm People" (Indonesia). From rice paddy to village, filming fishermen, soldiers, two-wheeled carts, bamboo rafts, people at work and at play. In Djakarta pedicabs vie for street space with late model automobiles. 7:30 p.m. Bechtel International Center. 75 cent donation requested.

Spring Migration '83: Dancers in performance, presenting works by students and faculty. 8 p.m. Roble Dance Studio. $4 general ; $3 students; $2 quorum.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

Lecture on Architecture of San Francisco: "Architectural Legacy: The Splendid Survivors," by Sally Woodbridge, Architectural Historian. Members of Committee for Art $3; Non-members $4; students $1; Stanford students are free. 8:15 p.m. Annenberg Aud.

FRIDAY, MAY 13

Residential Education: Ceramics by Pixie Couch, discussion and show. Show and sale of her work. 4 p.m. discussion by the artist. 1-6 p.m. Orrin Elliott Program Center.

Medieval Studies Lecture: "Jews and Christians in and around the Synagogue of Rouen from 26 January 1096 to 1100," by Prof. Bernhard Blumenkranz. Reception after the lecture in the History Lounge. 2:15 p.m. Room 307, History Corner.

Baseball: vs. California. 2:30 p.m. Sunken Diamond. $2 general, Stanford students free.

Mathematics Dept. Lecture: "Existence and Regularity of Minimizers in the Calculus of Variations," by Prof. John Ball, Herior Watt Univ. 3:15 p.m. Bldg. 380-c.

Materials Science & Engineering Colloquium: "Role of Oxygen in Industrial Single Crystal Growth of Silicon," by William C. O'Mara, Rose Assoc.: management consultants, Los Altos. 3:30 p.m. Peterson Lab. , Room 550A.

Center for East Asian Studies Multi-Media Show: "Images and Sound of Traditional Japanese Culture & Arts". Margaret Fabrizio, senior lecturer in music, Stanford University, will give a multi-media presentation of impressions of traditional Japanese drama, culture, and aesthetics. 8 p.m. Annenberg Aud.

STARTS Great Directors Film Series: "Le Gai Savior," by Jean Luc Godard. 8 p.m. Geology Corner, Rm. 320. $2.50.

Spring Migration '83: Dancers in performance, presenting works by students and faculty. 8 p.m. Roble Dance Studio. $4 general ; $3 students; $2 quorum.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

Music Dept. Concert: Stanford Chorale. Monteverdi-Laetatus sum; Durante-Magnificat; Handel- Zadok the Priest; Haydn-Stabat Mater; Vaughan Williams- Valiant for Truth; Stravinsky-Anthem; Ives-Psalm 67. 8 p.m. Memorial Church. $4/$2.

STARTS/Coffee House: The Jimmy Nadel Quintet. An evening of jazz entertainment by the director of Stanford's Summer Jazz Workshop. 9-12 p.m. Coffee House. Free.

SATURDAY, MAY 14

Childcare Council of the Stanford Community: Escondido Spring Celebration Flea-Market Fair. Flea market and fair for children with face-painting, puppet shows, candle-dipping, balloons and a coffee house inside Pepper Tree. Fund-raiser for the scholarship fund of the Childcare Council. Flea Market from 10 a.m. to 2 p.m.; Square Dance 6:30 p.m. to 10 p.m. Pepper Tree yd. 859 Escondido Rd., Stanford. No admission charge; booths for sale at $10.

Classical Guitar Recital: Richard Mooney performs works by Bach, Barrios, Tansman, Villa-Lobos, & Lauro. 5/14/83. Bechtel International Center. $2.00.

Stanford Talent for Original Productions: Tim Duane, songwriter. Original music for acoustic guitar. piano, and vocals. 7-9 p.m. Tresidder Large Lounge. Free.

Music Dept. Concert: Stanford Glee Club. 8 p.m. Dinkelspiel Aud. $4/$2.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

Spring Migration '83: Dancers in performance, presenting works by students and faculty. 8 p.m. Roble Dance Studio. $4 general ; $3 students; $2 quorum.

SUNDAY, MAY 15

Baseball: vs. California. 1 p.m. Sunken Diamond. $2 general, Stanford students free.

University Public Worship: Preacher: Burton Mack, Claremont Graduate School. 11 a.m. Memorial Church.

Music Dept. Concert: Alea II-Contemporary Music Ensemble. 12-6 p.m. An afternoon of new music around the Stanford campus. Free.

Associates of the Stanford University Libraries: "Portrait of the Early Republic: Benjamin Henry Latrobe's America, 1796-1820," by John Chamberlin Van Horne, American Philosophical Society Library. Reception to follow in Lurie Rotunda, Green Library. 3 p.m. Annenberg Aud.

Music Dept. Concert: Charles Fuery, piano. Bach-Prelude & Fugue in B Major, Prelude & Fugue in B minor ; Mozart-Sonata in B-flat Major,K. 333; Ravel-Valses Nobles et Sentimentales; Beethoven-Sonata in F-sharp Major; Del TrediciFantasy Pieces; Chopin-Three Mazurkas; Nocturne in B Major, op. 62, No. 1; Polonaise-Fantaisie. 8 p.m. Tresidder Lounge. Free.

EXHIBITS

"City Views and Plans". A selection of city plans and views, maps and prints from 16th and 17th century Europe. Exhibits Gallery, Second Floor, West Wing, Green Library. Feb. 1 - May 13.

Prints of William Nicholson. Stanford Art Museum. March 20 - May 22.

The Prints of William Nicholson. Tues.- Friday 10 a.m.- 5 p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

Early Lithography: 1803-1830. Museum, Miedel Room. April 12 - June 19.

Stanford Senior Class Art Show. 7 a.m. to 11 p.m. Tresidder Coffee House and Upper Lobby. May 1 - June 15.

Lorraine Schreiber, watercolor paintings. Reception on Friday, May 6th, 5 - 7 p.m. I-Center. May 4 - May 30.

VISITORS FROM OTHER COUNTRIES

May 9: Dr. Antonie Knoester, director, economic policy, Ministry of Economic Affairs, The Netherlands.

May 10: Dr. Tony van de Graaf, adviser to the prime minister on economic affairs. The Netherlands: Eisenhower Fellow.

May 13: Mr. Ian McLean, member of Parliament, New Zealand.

May 16: Mr. Joong-bae Kim, editor, *Dong-A Ilbo*, Seoul, Korea.

Mr. Kusuma Snitwongse, chairman, international relations, Chulalongkorn University, Thailand.

For further information, please call 497-1984. Maria Bun.

CAMPUS REPORT

Volume XV, Number 32 | A publication for Stanford University faculty & staff | May 11, 1983

Counter-petition on Hoover starts; Senate debate May 26

A proposed inquiry into the Hoover Institution's relationship with Stanford University threatens academic freedom, three Stanford professors say in a petition circulated to their colleagues.

More than 70 of Stanford's 1,100 faculty members have signed petitions asking the Board of Trustees to conduct a public inquiry of the Hoover's alleged political partisanship.

It is "disingenuous" to claim that such an investigation would be sought if Hoover's orientation were liberal, says Prof. Alphonse Juilland, French and Italian. "Whoever believes that belongs in Disneyland.

"Our thrust is not to defend the Hoover Institution. They can take care of themselves. the petition (for the inquiry) represents a grave threat to academic freedom."

Joining Juilland in the counter-petition to the Faculty Senate, President Donald Kennedy, Provost Albert Hastorf, and the Board of Trustees were Profs. John McCarthy, computer science, and Oleg Sherby, materials science.

"Hoover's ties with the Reagan Administration disturb us no more than the preeminent role played by Harvard professors in the Kennedy Administration. . . .

"We are concerned by the dangerous precedent such an investigation would represent, both inside and outside the University. Since academic practices deemed improper at Hoover could not be acceptable in the University's schools, departments, and programs, similar investigations may be requested of Stanford departments which may appear too liberal or too conservative or too radical.

"Stanford's investigation of Hoover's politics could trigger similar investigations (elsewhere). . .resulting in a generalized witch-hunt with liberals trying to track down conservative bias while conservatives would strive to oppose liberal prejudice."

In an interview, Juilland said "the fire may spread from the Tower to the Quad. . . . It's ironic that petitioners who are liberal champions of academic freedom were so thoughtless and imprudent."

The Faculty Senate is scheduled to discuss the original petition May 26.

The Bell Tower's noon-hour dedication attracted many passersby.

Mickey Mouse brightens new clock tower day

A bit of Stanford's earliest history was restored May 10 with the dedication of a new clock tower and bells.

The 45-foot tower, catercorner from Engineering Corner, is new, but the bells date from March, 1901, when they and a four-faced clock were installed atop Memorial Church's tower.

Now, because of thousands of hours of restoration work by dedicated volunteers, and a gift from the president of the Board of Trustees, William Kimball '41, and his wife, Collier '42, the mellow tones of the bells, sounding out the traditional "Westminster Quarters" and the hour, can be heard from the center of the campus.

Student humor being what it is, no one was particularly surprised to see, the morning of the dedication, that the west clock face had a colorful Mickey Mouse neatly inserted in the center. Mickey's hands were skillfully designed to be a part of the clock's hands.

"Leave Mickey there," said Kimball with a laugh, when he saw it.

Most viewers, without peering up through one of the big windows, won't find out something else unusual about the

Senate considers simpler form for evaluations

Student evaluation of teaching should become simpler and more systematic, a key Stanford committee believes.

Recommendations from the Committee on Academic Appraisal and Achievement will be considered by the Faculty Senate Thursday, May 12.

Following surveys of student and faculty use of present evaluation forms, the committee suggests five basic questions be asked in most courses:

How would you evaluate the contribution of this course to your learning experience?

How would you evaluate this course overall?

How would you evaluate this instructor's teaching overall?

Considering such factors as course organization, readings and assignments, assessment methods, and teaching style, what were the best things about this course?

What improvements, if any, would you suggest if this instructor is to give this course again?

Finally, students would be asked to make any general comments they feel would be useful to the instructor. The teacher would have the option of adding additional items to the basic form.

The student replies would be tabulated and reported only as frequency distributions, rather than compared to norms for a broader group. Results would be released only to the faculty member, department chairmen, and others appropriate for administrative review. The right to release the information for other purposes would reside solely with the faculty member.

In a report to the committee based on a review of the professional literature, Prof. Nathaniel L. Gage, education and psychology, concludes that "student ratings are valid to a substantial degree as indices of instructor effectiveness in fostering achievement in multisection courses."

So far as improving teaching is concerned, "when instructors are left to their own resources, ratings provide little help," he adds.

"Augmented feedback, or more specifically expert consultation, seems to be the key element for making rating data

People

Gordon Wright

French attitudes toward crime are examined in a new book by emeritus Prof. Gordon Wright of the Stanford History Department, *Between the Guillotine and Liberty* (Oxford University Press, $19.95).

Everywhere in the world, Wright observes, public disillusionment with crime "stimulates a visceral urge to abandon the reformist efforts of the past two centuries in favor of simple and extreme solutions," with some favoring harsh repression and others seeking social transformation and the abolition of prisons.

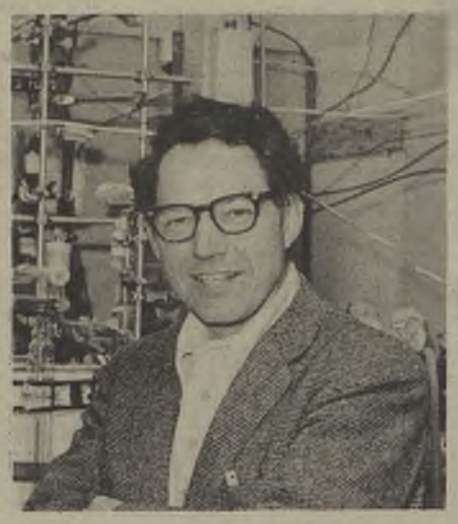
The Mitterand government's decision to abolish capital punishment and institute other reforms "stands in sharp contrast with the prevailing law-and-order trend in most Western nations," he notes. "That contrast may permit a more valid judgment of the relative effectiveness of these two approaches to the crime problem."

Buffeted between popular extremes in their own country, "French politicians and crime specialists are likely to cling to a

Gordon Wright

traditional zigzag middle course of moderate reformism," Wright believes.

"Past failures have had a sobering effect but have not destroyed the conviction of leading experts and of many citizens that the effort is worth pursuing.



"Something, they believe, can be done to limit the growth of crime and to make the techniques of punishment at least marginally more humane.

"Although experience seems to prove that most lawbreakers have not been successfully rehabilitated by any methods so far tried, it also proves that a significant minority of first offenders, for whatever reason, manage to stay out of further trouble.

"For most reformers, this partial success justifies the continued effort to maintain and increase the size of the non-recidivist minority."

A leading American historian of France, Wright served as American cultural attache at the Embassy in Paris and is a former president of the American Historical Association.

He held the endowed William H. Bonsall professorship in history at Stanford. His other books include *France in Modern Times*, *Insiders and Outsiders*, and *The Ordeal of Total War, 1939-45*.

James Collman

Prof. James Collman, 50, of the Stanford Department of Chemistry has been named California scientist of the year, the California Museum of Science and Industry has announced.

The $5,000 award was made "in recognition of his design and synthesis of a new class of chemical catalyst, using knowledge from biological respiration.

"This achievement significantly advances. . . understanding of the reduction of oxygen in all living cells. (It also) offers great promise for the improvement of fuel cells and other energy converting" methods.

A Stanford faculty member since 1967, Collman holds the George and Hilda Daubert professorship in chemistry. A member of the National Academy of Sciences and the American Academy of Arts and Sciences, he received a dean's award for distinguished teaching from the School of Humanities and Sciences in 1981.

Collman was selected by a panel headed by Prof. Herbert Kaesz of UCLA. One of the nine members was Prof. Wolfgang Panofsky, director of the Stanford Linear Accelerator Center. The award was presented May 4 in Los Angeles.

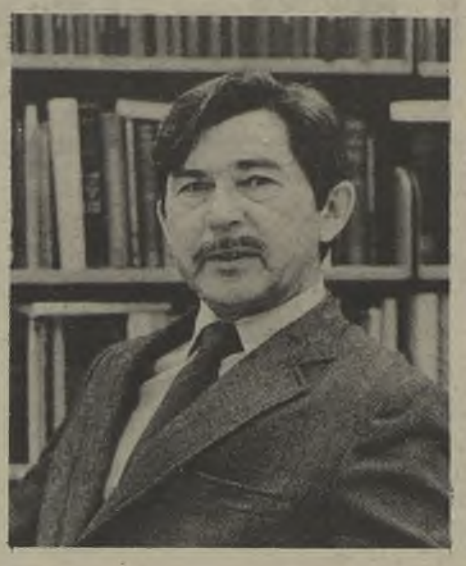
Previous winners include Dr. Robert Hofstadter, Dr. Arthur L. Schawlow, and Dr. Theodor W. Hansch, all of Stanford University, and all of whom went on to win the Nobel Prize.

Sudipto Bhattacharya
Michael Gibbons

Stanford Business School professors have been awarded two of three faculty research fellowships for 1983-84 given by Batterymarch Financial Management, an investment advisory firm in Boston.

Recipients are Sudipto Bhattacharya, 31, associate professor of finance, and Michael R. Gibbons, 28, assistant professor of finance. The other recipient is a member of the New York University faculty.

The fellowships, which carry a stipend of $40,000 each, permit nontenured faculty members to take a year off from teaching to do basic research in investments and financial economics.



Bhattacharya, who joined the Stanford faculty in 1980, will devote his studies to the quantitative measurement of performance of investment portfolio managers, development of contracts to screen out lower quality portfolio managers, and to examining disclosure regulation in financial and product markets. Bhattacharya also intends to investigate the issue of optimal contracts for and role of intermediary firms, including venture capitalists.

Gibbons, a member of the Stanford faculty since 1980, is interested in studying the factors responsible for long- and short-term fluctuations in bond prices and interest rates, using month-by-month computer-based data for the last 55 years.

Stanford Business School professors have won four of the nine awards made since the Batterymarch faculty research fellowships were established three years ago.

Bhattacharya, born in India, holds a bachelor's degree in physics from the University of Delhi, a post-graduate diploma in operations research and economics from the Indian Institute of Management, and a doctorate in finance and economics from Massachusetts Institute of Technology.

Gibbons graduated summa cum laude from Butler University with a bachelor's degree in economics, and also holds master's and doctoral degrees in economics from the University of Chicago.

Henry Taube

Stanford chemistry Prof. Henry Taube has been selected to receive the 10th John C. Bailar Jr. Medal at the University of Illinois.

Taube was cited for "distinguished contributions to the advancement of inorganic chemistry, notably his investigations of electron transfer reactions."

He delivered the annual Bailar lectures May 2-3, at Illinois.

Taube has received both of the American Chemical Society's major inorganic chemistry awards and the National Medal of Science. He is a member of the National Academy of Sciences and the American Academy of Arts and Sciences.

The medal and lectures are named in honor of an emeritus professor of chemistry at the University of Illinois. Bailar was a member of the faculty from 1928 until he retired in 1972, when his former students established the medal.

Mauro Cappelletti

Stanford Law Prof. Mauro Cappelletti was recently named an Honorary Professor of the Universidad Externado de Colombia, in Bogota, on the occasion of a series of lectures he gave at a conference of lawyers, judges, and law professors held there in early April.

Cappelletti was the keynote speaker for three sessions of the conference, speaking on "Dimensions of Justice in the Contemporary World," "Judicial Responsibility," and "The Protection of Collective and Diffuse Interests."

Cappelletti has been a Stanford law professor since 1970, and holds a concurrent position as professor of law at the University of Florence.

Since 1976 he has been on leave from Florence and has been professor of law at the European University Institute, also in Florence, which is the graduate research institution of the European Economic Communities. At the Institute, where he is chairman of the Department of Law, Cappelletti has directed two large international comparative law projects: the first, "Access to Justice" and presently, "Methods, Tools, and Potential for European Legal Integration in Light of the American Federal Experience."

Seymour Martin Lipset

Prof. Seymour Martin Lipset, political science, sociology and Hoover Institution, was the first Phyllis and Milton Clark Distinguished International Lecturer April 28 at UC-San Diego.

His topic was "American Public Opinion and Middle East Policy."

The Clark lectureship was established by the family of Phyllis Clark, dean of international education and director of the International Center at UC-San Diego, and the late Milton Clark. It is intended to bring scholars from outside UCSD to foster international understanding and good will.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.
Published by the Stanford University News Service. Patricia J. Black, editor; Karen Marman, design assistant; Debbie Jeppson, production assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto, CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

Ann Swidler

Women's views of love are triumphing, says Ann Swidler after 3-year study

BY DONALD STOKES

Men and women of mainstream America are finding ingenious ways to adapt their concepts of love to the changing cycle of the sexual revolution.

They use the movies, soap operas, popular songs and novels, not as models for their own lives but as a means to express what they disagree with.

Nearly all Americans believe in love and marriage, more so than the people of any other nation. But there is growing anxiety about the fragility of modern marriage.

These are among the findings of Ann Swidler, assistant professor of sociology at Stanford, who for three years has been studying love in the American culture.

She and her assistants have chosen as their human test-tube the middle and upper working-class suburbanites in San Jose, Calif.

When Swidler decided to study how modern people find meaning in life she resolved to study not beliefs in a God who, for many people, is too far away to affect daily life, but instead to research a belief system that many people find intensely relevant in their daily lives.

"I chose to study the modern religion of love—not love relationships, who marries or divorces and why, but the beliefs of contemporary Americans about what love is, what makes a good love relationship, and in the end what makes a good life," she explained.

"I have found that love is an intensely important ideal for most Americans."

Swidler's team has interviewed about 100 suburbanites and also a number of specialists in the formulation of cultural ideas about love, such as marriage counselors, ministers, therapists and leaders of self-help groups of various kinds.

"My main aim is to find out what is happening to mainstream American culture. I examine how culture is actually used, when and under what circumstances people integrate cultural meanings into their life experience. Our research examines how myths, symbols, stories, and common wisdom about love shape person experience."

Swidler is writing a book that sets out her findings. It has the tentative title *Talk of Love: How Americans Use Their Culture.*

She finds that mainstream Americans are caught in a crossfire between traditional views of love, lifelong commitment, and the residue of the 1960s stress on the need for personal liberation. She finds, however, that these Americans are quite good at finding innovative ways to reconcile competing ideologies.

Swidler recounts her findings in a rapid, intense flow of intellectual enthusiasm, playing with ideas that occasionally go off into abstract flights of fancy. She also clearly enjoys what she refers to as "the nitty-gritty of real peoples' lives."

She loves to find out, for example, how each married couple tells the story of how they met, building it into a myth that supports their sense of uniqueness. She is also interested in consumption—from buying houses and clothes to eating in fast-food restaurants—as forms of cultural expression.

She throws herself into her research with an absorption that also dominates her teaching. Although she is now on sabbatical leave from Stanford with a Guggenheim fellowship, she visits her office regularly to guide those of her students who need it.

Swidler believes that one of the distinctive aspects of modern Western culture is what people believe about love. "In most cultures love is recognized as a passion, a dangerous appetite, of the kind that led Paris to get his people into a war over Helen of Troy.

"But the courtly love of the 11th and 12th centuries changed all that. For the first time people believed that loving someone made you more noble, more virtuous, that it brought out the highest side of your character. So knights who loved a lady were willing to perform heroic deeds for her.

In the modern period, that belief is very much alive. Our cultural ideals, whether about heroism in war, or moral courage, or social justice can usually be best expressed through an ideal of love.

"Look at the winners of this year's Academy awards. In *Gandhi*, the love interest was small, but for Americans it needed to be there. In *Sophie's Choice* or *Tootsie*, important social issues are explored in resolving a love relationship. Dustin Hoffman has to relearn American sex roles to be truly worthy of the woman he loves; Sophie's victimization could be felt only through the narrator's hopeless love for her, and her romantically doomed love for Nathan.

"Indeed, we have trouble seeing someone as a hero unless she or he loves someone. The fact that someone loves makes them sympathetic, even if in other ways they are relatively unappealing.

"So love is a really important cultural symbol for Americans, important in ways that go far beyond their practical need to have someone to share life with, to marry, or to have a family with.

"Some of the deepest social values often operate in cycles," she said. One generation may value free love and free sex, while another will value the family and think people should stay married all their lives.

"It has been hard to accept that some of what we regard as some of our most deep-seated values are subject to the same cycles as skirt-lengths or hair-styles.

"I think we are now entering another cycle, this time of conservatism.

"The latest paper I am working on deals with the tension in modern marriage between the desire on the one hand for commitment and permanence, and on the other hand for freedom and choice. The difficulty people have is that the two are really incompatible. The tension is between the belief that love is commitment as against love being a free choice.

"I have become aware of a great deal of anxiety in this area. The realization is common that marriage is a fragile institution these days. Very often people say to me 'I wish marriage was as secure as it was in my parent's generation.' Then often they pause and add 'But I wouldn't put up with the things they did. It was good enough for them, but I would not be willing to make the compromises they did.'

"In general, women want higher levels of personal communication than men do. The classic instance in most marriages is when the woman says 'Honey, why don't we talk more?' and the man replies 'Talk? Talk about what?'

What is happening today in the middle-class, I think, is that the women's view of love is triumphing. More men, as well as more women, are thinking of love and marriage as most women have thought for a long time; that love means primarily companionship and intimacy and sharing.

"Husbands, particularly those under 35, are tending to come around to the women's view that communication is vital in marriage. But among those who are older there is still the feeling that talking about emotions is either hard or unpleasant or too difficult.

"Movies play a prominent part in people's thinking about love and marriage, with novels and TV also frequent references. People mention these

continued on next page

Swidler/ continued from page 3

all the time, as a way of describing what they *do not* believe in.

"The view that Americans are suckers, that they believe in all the advertising and all the things they see and read for entertainment, is simply not true. All the time, people say to me 'Oh, the Hollywood idea of love is completely wrong. You can't expect bells to ring, or lightning to strike when you kiss your partner. You cannot expect the electricity to be there always. Loving somebody really means being understanding and caring and respecting and being willing to work out the problems together.

"The striking thing about the stereotype of love is that almost nobody believes it. People actually define that their own concept of love by their criticism of the standard ideology."

In response to the suggestion that the soap operas are a molding factor for millions of women today, and that in soap operas there is far more disaster and wrongdoing than love, Swidler said:

"My speculation is that people don't look on soap operas as a reflection of real life, but as something to use as negative pointers—like gossip. They don't think the stories are true, but instead they say 'Wasn't it terrible, what X did to Y.'

"People form their values not only by patterning themselves on cultural images, but by distancing themselves from them. It is rather like gossip. Do we gossip about people we admire? No. We gossip mostly about those we disapprove of, and we do that to establish a view of what is right. We define our moral values to each other by our gossiping, our views on soap operas, and so forth.

"I argue that Americans use their own culture critically. They use it to define their own attitude by critiquing the positions of others."

In addition to her own book in preparation, Swidler is one of the five coauthors of another work, to be called *Habits of the Heart* (a phrase from de Tocqueville) on the subject of the moral bases of social commitment in America. It will examine the way in which a set of American cultural traditions withers and dies, or is reappropriated and given new meanings by Americans in particular social locations.

The book will focus particularly on the relationship between private satisfactions, like love and family, and public commitments to community and nation.

Swidler's interviews with her subjects are unusual for a social scientist. She tries to engage people in active dialogue by asking difficult questions as well as easy ones.

To those who see love as a spontaneous choice she asks whether there is need for sacrifice in love relations, and whether obligation plays a part. The reply is usually 'Obligation is the wrong word. If you love somebody you enjoy doing things for them. It should not be a sacrifice.'

Swidler believes that this attitude places the love relationship on a very fragile base. "The way they talk about their relationship undermines any notion of real solidity. The language in which they describe their love relationship leaves them nothing to fall back on, if choice and spontaneous wanting to be together and being happy together fails them.

"Americans like to put the individual at the center of their thinking, and see him freely-choosing everything he does. That is a real problem for it allows you to describe things beautifully when things are going well, and it leaves you nothing to say when things go badly.

"People's confusions about love reflect wider cultural difficulties. People find it hard, for example, to work out how can one be devoted to the common good, in marriage or in public life, without endangering one's self-interest.

"They also feel that love, like other social commitments, is truly valid only if it is freely chosen. But this stress on spontaneous choice conflicts with the sense of love as a duty or an objectively valid moral commitment.

"The individuality love affirms remains in tension with the social interdependence it generates. The moral logic people employ in this central arena of experience provides a unique opportunity to analyze the dynamics of American culture in action."

The more modern view (of love is that). . .you may love one day and not the next. The self is always changing and unpredictable. There is never any sure resolution in which you ride off into the sunset and live happily ever after.

—Ann Swidler

Swidler emphasizes that Americans place a very high value on love. Research by various sociologists indicates that 95 percent of Americans believe that a stable marriage is the best way to live.

The attitudes of those couples who live together outside marriage are fundamentally similar to those who are married. About half the people she interviewed had been divorced, and almost all of them expressed the wish to have good love relationships and marriage. Only a few were permanently disillusioned with marriage.

"Peoples' standards are higher today," said Swidler. "People often compare themselves to their parent's generation and say 'It is a difficult problem, I believe in commitment, but my parents were willing to put up with troubles that modern people just won't put up with. If things get bad enough, you have to leave"

"Very often those we interviewed would say, about other people, 'They aren't willing to stick with it when the going gets rough, they are not willing to be patient through troubles—that's terrible!' At the same time people are only willing to compromise so far in meeting the high standards that a love relationship ought to have. They are much less willing to lead lives of quiet resignation.

"They are willing to sacrifice a lot, but they want their marriages to be very good. If they come to believe that their marriages are crummy they are not willing to stay tied together forever."

"The general view today is that it is important to be willing to make concessions, to work things out, but the goal should be to make a really close, happy marriage," said Swidler. "To stop halfway, and resign oneself to a bad marriage is moral failure. Many people regard somebody who does that as actually a bad person.

"People believe that it is up to you to make you life really good, that you should be engaged in a constant quest to make your life satisfactory. People do not believe in resignation.

"Middle-class people, in particular, believe that you can make your life good, and that it is up to you to do so.

"What is happening is that Americans' standards about what a love relationship should be have gone up."

Has all this made people happier?

"My personal belief is that we are happier. There is still a lot of nostalgia about the past. We tend to think that in those days there was no alienation and that relationships lasted. But we delude ourselves—there was a lot of misery in marriage in the 'good old days.' "

Swidler is very interested in how middle-class Americans make use of the culture in their environment, in such matters as how they reconcile conflicting beliefs.

"I have found that some of the stereotyped ideas turn out to be very different when you examine them closely. I went into this study thinking that people are torn between two conflicting ideologies. First is that when an individual becomes mature he falls in love and makes a commitment, and in doing so becomes an adult. From then on the task of living was to hang onto that commitment.

"The more modern view is that you never really know who you are, that life is never settled, and you are engaged in a perpetual quest for one thing after another, in which you can never resolve your problems.

"You may love one day and not the next. The self is always changing and unpredictable. There is never any sure resolution in which you ride off into the sunset and live happily ever after. You are constantly burdened with uncertainty, but you have all the excitement of growing and changing.

"In this second setting love becomes a constant challenge, a never-ending source of excitement, and it is never really decided in terms of a commitment.

"I find that people are worried by these cross-currents. But they have all sorts of ingenious ways of reconciling their misgivings.

"Generally, I found that people are extremely creative and active in reshaping the culture around them. When people told me, for example, that they were happily married, I questioned them about their thoughts on growing and changing.

"A frequent response was: 'The way to change is not to keep changing marriage partners all the time, to look for somebody more exciting. That is a way of simply trying to escape from yourself. The real challenge is to stay with one person, and to work out the problems and challenges in that relationship."

"The point is that people who are committed to their marriages find a way to reconcile the desire for commitment and the desire to keep growing and changing. You get a great many variations on that capacity to reinterpret the cultural influences around them."

Swidler has a research agenda that stretches beyond her current project on love. Her first book, *Organization Without Authority* (Harvard University Press, 1979) dealt with the role of ideology in the counter-culture organizations of the early 1970s. Now she hopes to use the theoretical insights gained from studying love to look again at how culture works in organizations.

Her hunch is that in modern society, large organizations are the key places where new cultural models are tried out and take root.

"People are shaped by social forces beyond their control. What we fundamentally value in life is not something we make up in our heads but what comes to us through the social world we inherit.

"That is an unAmerican way to view the world. Americans typically see the world as the individual being primary, and an individual's preferences as their own free choices, that essentially an individual creates his world for himself.

"What sets sociologists apart is that they don't really believe this. Sociologists believe that what individuals become is determined by their social circumstances."

Swidler is married to a sociologist at UC-Berkeley. They have a son, Abraham.

She grew up in a family that was very intellectual, she says, and also deeply concerned about public issues. Her father was a New Dealer, at one time general counsel of the Tennessee Valley Authority, and later chairman of the Federal Power Commission during the Kennedy and Johnson administration.

Her mother was a feminist "before it was fashionable."

Swidler grew up in stormy political times, and she was interested in politics and public life. She hopes her contribution will be to examine whether America as a culture has the resources to deal with the political challenges it faces.

Computing services to separate into academic and administrative areas

Stanford will separate academic and administrative computing, starting this summer.

This change has been approved by Provost Albert Hastorf and Vice-Presidents William Massy, business and finance, and Lawrence Crowley, medical affairs.

A faculty member will be appointed to the provost's staff to plan computer and information development involved in teaching and research, as well as networking for these functions.

The faculty member also will manage integration with Center for Information Technology (CIT) operations and related systems networks.

This person also will be responsible for the University's Low Overhead Time-Sharing Systems (LOTS), a computer facility dedicated to student computing for which students have free access to perform classroom assignments and unsponsored research tasks under the direction of the faculty.

Provost Hastorf intends this new member of his staff to provide leadership and advocacy for future directions for computing and information technology at Stanford.

Under the reorganization, the Center for Information Technology will operate the CIT based machines and deal with administrative computing and administrative systems including both operation and planning.

These services are extremely important to the University community and the changes are intended to strengthen and improve CIT's ability to provide them, Hastorf said. Edward E. Shaw will continue as director of the Center and will report to Massy.

Hastorf is now beginning the process of consulting with deans of schools and relevant faculty for suggestions with respect to current Stanford faculty members who might fill the new role on his staff.

The good old days—smallpox at Encina, a day off to greet the fleet, a murder

75 YEARS AGO (1908)

When a case of smallpox in Encina Hall was confirmed, the University asked students who could not show vaccination certificates to refrain from attending classes for 10 days.

* * * *

The chairman of the Committee on Public Exercises, Prof. C. A. Duniway of the History Department, declared that the last day of instruction before final exams was to be a university holiday so that the student body might view the arrival of the fleet in San Francisco harbor. It was also arranged for 300 of the naval officers to visit Stanford.

50 YEARS AGO (1933)

Acting under the stress of strained economic conditions, the Board of Trustees shook the campus with a bombshell report that swept aside Stanford's famed "500."

Basing the validity of their revolutionary action on a statement made by Mrs. Stanford in 1903, just before her death, the trustees announced that beginning autumn quarter women would be admitted on a ratio roughly estimated to be 55 men to 45 women.

This proportion corresponded to that prevalent at the time Mrs. Stanford issued her official edict in May of 1899 limiting the women to 500. In 1899 Mrs. Stanford noted a steady increase in women attending universities throughout the state. To halt this movement at Stanford, the limiting restriction was read into the Founders' Grant, though with men and women placed on an equal standing.

President Wilbur said, "It seems clear that under the stringency which the University is facing, the paramount purpose of the founders 'to maintain the university at a high degree' can best be served by considering the limitations imposed by Mrs. Stanford as 'incidental and subordinate.' " Under the new system, Dean of Women Mary Yost explained, women would be admitted under the same acceptance regulations that govern men. In the past as many as four or five women had applied for every vacancy in the quota. This had created a rigid competitive system.

* * * *

Every Stanford School of Law graduate who took the California state bar examination passed it, according to word received by Prof. Marion R. Kirkwood, dean of the Law School. Stanford had maintained nearly a 100 percent record for several years. Over 500 law students from the state took the bar exam and 215 passed, 42 percent of the total.

* * * *

David Lamson, sales manager for the Stanford University Press, was indicted for the murder of his wife, Allene Thorpe Lamson, '26, who was found dead in a bathtub in their vine-covered home at 622 Salvatierra Street on campus.

25 YEARS AGO (1958)

President Wallace Sterling reported that the University's expenditures for the academic program had increased by 77.4 percent over the past five years. The endowment stood at $75.4 million. Income was divided among tuition and fees, $6.1 million; endowment income, $2.8 million; expendable gifts, $4.4 million; building funds, $1.9 million; government research, $5.8 million; and special funds and other income, $1 million.

Personnel update

Rules change for personal time off

Effective May 1, 1983, the University revised the guidelines on the use of paid personal time off as described in Guide Memo 22.7.

The new guidelines provide that regular full-time staff may schedule paid personal time off, with supervisory approval, in increments of up to eight hours but cannot exceed eight hours in a month. The maximum of 24 hours of paid personal time off in a 12-month period remains unchanged.

Part-time regular staff are eligible for paid personal time off in an amount proportionate to their work schedules.

Paid personal time off (PTO) is provided by the University in recognition of the fact that some personal matters may require attention during a staff member's normal work hours. The changes to the policy were established to further reduce the need for staff members to use accrued vacation time to maintain their pay while attending to personal matters.

Hundreds attend 'A Majors Event'

Fourty-four departments at Stanford joined in presenting A Majors Event, a promotion designed to guide students in making better choices of their majors.

Held all day on Tuesday May 10, and centered in the Inner Quad, the event was attended by hundreds of students. Each department had a stall managed by members, where explanatory material was handed out and questions answered. The interest shown was keen, and most stalls were kept busy.

The event was organized by Audrey Bernfield, director of career counseling in the Program on Human Biology. She had worked on it for five months.

Twelve speakers addressed the crowds during the day, drawing attention to the opportunities offered by their respective departments. Ancillary events, including film shows, conferences, discussions and receptions, were held in each of the participating departments.

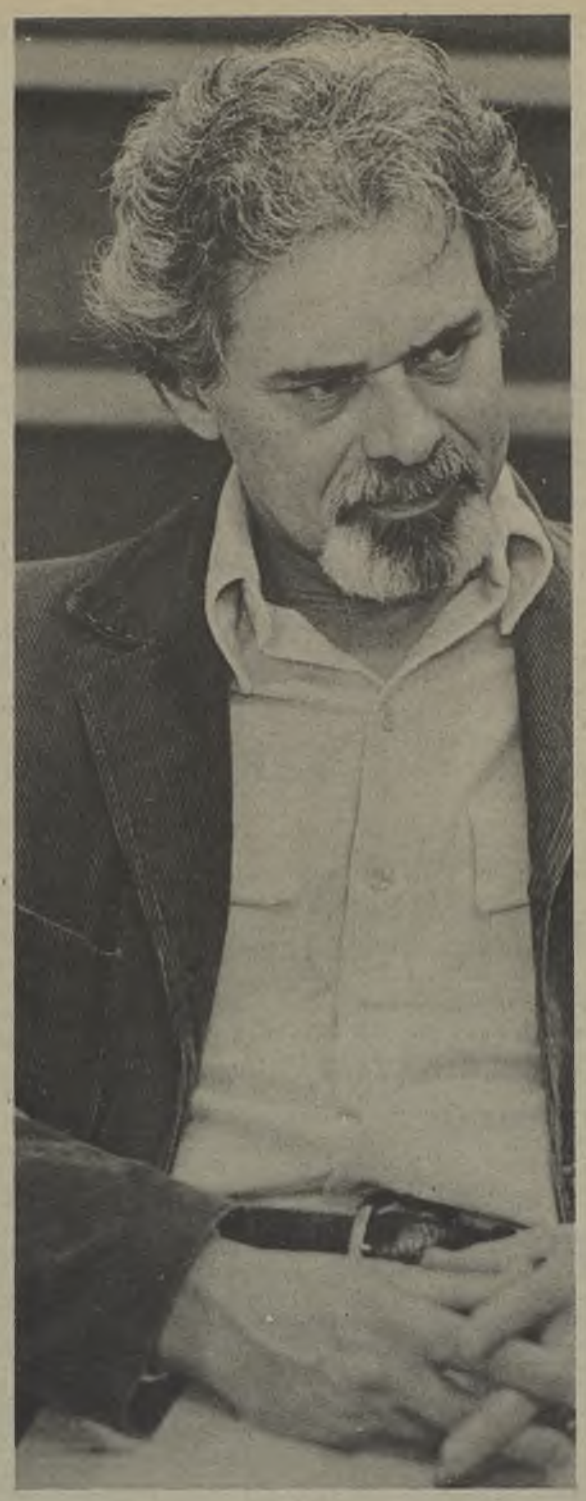
More construction on Campus Drive

A sewer line installation will begin Thursday, May 12, from Via Palou to Panama Street in the eastbound lanes of Campus Drive.

Those lanes will be closed with a detour on the westbound lanes during construction, which is expected to last until the latter part of June.

The cross streets (Jordan, Via Palou, and Panama) will be open intermittently as required.

Notice to the Stanford Community



Stanford is applying to the Occupational Safety and Health Standards Board for a variance to install a Garaventa incline wheelchair lift on one of the two stairs that serve the Dinkelspiel Auditorium stage.

This lift will be for handicapped use. The mechanism is installed to one side of the stairway. The stair is partially encumbered when the lift platform is down and in use.

"You have the right to full party status in the variance proceedings and a right to petition the Standards Board for a hearing. For further information, contact the Cal/OSHA Standards Board at 1006 Fourth Street, Third Floor, Sacramento, Calif. 95814, phone (916) 322-3640. All pleadings relating to this variance request are available for inspection of Inspector's Job Site Office/Trailer for Braun Music Center."

Writer Gilbert Sorrentino talks about the novel and real life

BY MILLICENT DILLON

What the novel is not about: It is not about "real" life. It does not represent or imitate "real" life. It does not even necessarily refer to "real" life.

The novel is not about anything except itself, its language and its structure.

So says Gilbert Sorrentino, professor of creative writing at Stanford, and author of a number of highly praised—and unconventional—novels including *Mulligan Stew* and *Crystal Vision*.

In his current seminar on "Reading for Fiction Writers" Sorrentino focuses on modernism in literature, as exemplified in three crucial works, *Against Nature* by J.K. Huysmans, *At Swim-Two-Birds* by Flann O'Brien, and *Jealousy* by Alain Robbe-Grillet.

Sorrentino considers *Against Nature*, a novel of the Decadence published in France in 1884, to be crucial to the beginning of modernism in literature. An account of a man who leads a hermetic existence in which he drives out the natural and replaces it with the artificial, *Against Nature* is a work in which plot and character are subordinated to structure.

It is precisely this notion of the preeminence of structure that Sorrentino calls the essence of modernism, a movement that is still continuing.

"We have all been trained to read in terms of association with objective reality. Through structure, through making the reader aware of the structure of the work he is reading, he is forced to read differently," he says.

If causal-temporal sequences are shattered, if the usual devices of fiction are turned awry, the reader is forced to pay attention to the text. If the devices of fiction are revealed as devices, the reader can no longer go on reading as he always has, for escape, for comfort, and for information.

It is a revolt, but a revolt not without precedent, says Sorrentino. "*Tristram Shandy* by Sterne is nothing *but* the device laid bare. In that book the writer says, 'I'm going to show you how I made this book.' "

Sorrentino considers the modernist movement an outgrowth of and a reaction to the romanticism of the 19th century, and the first step in the modernist movement to be the Decadence. The decadents agreed with the romantics in their opposition to industrialization and its effects, in their loathing for the idea of progress, and in their disinclination for bourgeois life. But the decadents went much further. Where the romantics had worshipped nature, the decadents saw it as evil. They distrusted even the idea of nature, even the idea of attempting to imitate it in their work. This sense of artificiality, of the literary work as a discrete object is at the core of modernism.

Crucial to the revolt of the modernists was a rage at what had been done to language, how it had been robbed of its imaginative force.

"Writers from Huysmans on were saying to the world, 'You have taken our language away from us for your own uses. Michel Foucault has noted that in the 19th century language became a useful tool, a vector of ideas, a handmaiden to capitalism and its attendant disciplines."

What the modernists did, continues Sorrentino, was to redeem the language from usefulness, to disengage it from its function as a bearer of information. "They took language back from the sciences, back from politics and the market. They reduced the function of language as signifier. In that way language became its own subject—useless, if you will, but not valueless.

"We are now in the same position as Beckett, who says that he has nothing to say and no means to say it, but must say it anyway. It is a kind of writing out of silence into silence.

"In these novels there is no 'payoff' for the reader. The romantics were perhaps the last to provide a payoff: the hero scorned or the hero rewarded. The endings might have been bleak but they still gave emotional satisfaction or a reward to the reader.

"That was basically a kind of capitalistic attitude. You put 'money' (feeling) into the book as you read it and you got 'money' (feeling) back. The ending paid you interest on your investment.

"But in *Against Nature* there was no payoff, no ending. The hero was neither crushed nor triumphant. The reader invests his energies and gets 'paid' only in terms of the act of reading."

Huysmans' work was the beginning of the end of the general audience for literature, says Sorrentino. Huysmans spoke only to those few who knew what he was up to.

"But isn't that snobbery?" a student asks. "If it's snobbery, it's also self-defense," Sorrentino says, "to take the book away from people who would use it as something other than a book." And he quotes Pound, "It's an artist's privilege to write for a few intelligent people."

As for criticism in general: "Many critics of fiction are curiously uninterested in fiction in its formal terms. It's as if you asked someone, 'How do you like that dentist?' And he answered, 'I don't know, he was boring,' or 'I didn't like his fingers.' Then you might ask, 'But didn't he do a good job?' The answer might be, 'I don't like the pictures on his wall.'

"It's all based on a quite rigid misunderstanding of what art literally is. The true business of art is not 'communication,' though that may be a facet of it. The business of the artist is to *make*.

"The romantic artist of the 19th century was supposed to be the idiot savant, without intellect, working from 'inspiration.'

"But for the modernists elaborate planning and construction are essential—though many people still think an artist is doing something dirty by the use of conscious planning, especially when the construction is so overt as to become the work's entire content. The usual charge is that such work is cold, or mechanical, or anti-human."

He cites the critic Maurice Blanchot, who has argued that the popular novel can be read by anybody, since it has already been read by everybody. But the literary work is always read for the first time every time it is read.

"Gore Vidal, Truman Capote, Norman Mailer—there's really no need to read them; you know what they're going to say. But a writer like Flann O'Brien speaks out of a literary tradition that is clearly set against the habitualization of reader response."

Sorrentino is the author of six novels, *The Sky Changes*, *Steelwork*, *Imaginative Qualities of Actual Things*, *Aberration of Starlight*, *Mulligan Stew*, and *Crystal Vision*. He has also published a number of volumes of poetry. His *Selected Poems* were issued in 1981 by Black Sparrow Press.

A new novel, *Blue Pastoral* is about to be issued by North Point Press.

His work has been the subject of a complete issue of *The Review of Contemporary Fiction*.

Born in Brooklyn in 1929 of Irish-Italian parents, Sorrentino was raised as a Roman Catholic, going to public schools, but receiving religious instruction.

"If you're born and raised a Roman Catholic, you never quite get out from under it," he said in a recent campus interview. "Maybe that's where I get some of my feeling about structure. The learning of catechism, rite, and response is highly structured."

None of the members of his family had any interest in literature, though "my grandfather, my mother's father, told me marvelous stories. He was an Irishman of enormous wit and charm and funny as hell. He was sarcastic, cynical, irreverent, bawdy, and he told wonderful tales. I don't know if that has anything to do with my being a writer.

"My father's father would sit and talk to me by the hour as well. But he spoke only Sicilian. I never understood a thing he said. He was here for 75 years and never learned English. My father used to say to him, 'Pop, why don't you learn some English?' And he'd say, 'Why? I'm not an American.' "

Sorrentino grew up in the Bay Ridge neighborhood of Brooklyn. "It's just south of South Brooklyn. It had a true character: its own language, its own mores, its own sense of what was correct. There were constant references made to legendary characters who came out of the neighborhood, their adventures, feats, their specific insanities."

He knew from the time he was 12 that he wanted

continued on next page

Sorrentino...

continued from page 6

to be a writer. "I didn't know exactly what it meant but I knew that whenever I wrote a composition I could make things come out as I wanted them to, insofar as my limited abilities allowed me."

When he got out of high school he did not go on to college. "What did I do? What didn't I do? I just worked. I had many jobs, as a clerk in an insurance company, as a clerk in a textile factoring house on Madison Avenue, as a counterman and a dishwasher in a restaurant.

"Then I went to Brooklyn College for a year and a half."

He left college to go into the army and served as a medic for two years. Once out of the army, he went back to school for two more years. "I never got a degree. I was there four years, but I never finished some of the requirements. I wasn't going to take political science or gym.

"I went back to school to learn about literary structure, particularly the structure used by writers of the 16th and 17th centuries. I loved—and still do—the work of the pastoral poets and Ben Jonson—he is one of my favorite writers, a thorough, conscious artist. I also studied Latin and Greek. But then I began to lose patience with school. I was beginning to write seriously and I was meeting a lot of other writers."

Among his peers were Robert Creeley, Ed Dorn, LeRoi Jones (now Amiri Baraka), and Hubert Selby. He found himself in a true community of writers on the lower east side in Manhattan.

"It simply happened. It all quite accidentally came together, one of those curious things. Black Mountain College, a very famous college of the arts, closed because of lack of funds. Most of the faculty and students went to either San Francisco or New York.

"At the same time I began to publish a little magazine called *Neon*, and LeRoi Jones began to publish a little magazine called *Yugen*.

"Many of the Beat writers—Ginsberg, Corso, Kerouac—returned to New York from California. John Ashbery, Kenneth Koch, James Schuyler, and Frank O'Hara were forming the nucleus of what would be called the 'New York School.' And many more writers were present. This all happened between 1954 and 1958.

"It was a renaissance of sorts, if that isn't too pompous a word.

"At the same time, of course, New York was the home of abstract expressionist painting, and the writers began to talk to the painters. We all hung out in the same bars and went to the same parties; we lived in the same neighborhood.

"In those days just about everyone in the arts came to New York either permanently or for a long stay. I don't think that's true any more."

For Sorrentino the conversations with the abstract expressionists had a profound influence. "The painters were doing something which writers had just begun to think they could do, which was to make an art divorced from what had been given us as the 'correct subject matter.'

"Painters had already begun to understand that it was possible to do something based very firmly in a European tradition—cubism and surrealism—but to paint in a new way, an American way, that way that had nothing to do with the figure.

"Writers at that time were trying to get away from a concern with acceptable subject matter, 'the great ideas of Western man.' We were trying to work our American experience into new forms.

"Faulkner was very present to us as well as Williams, Pound, Wallace Stevens, Djuna Barnes, Nathanael West, and we were enormously interested in poets like Rimbaud, Mallarme, and Apollinaire.

"The problem was that there was a generation of very conservative American writers who were thought of as the mainstream of writers in this country: in poetry, Robert Lowell, Richard Wilbur,

"Gore Vidal, Truman Capote, Norman Mailer—there's really no need to read them; you know what they're going to say.

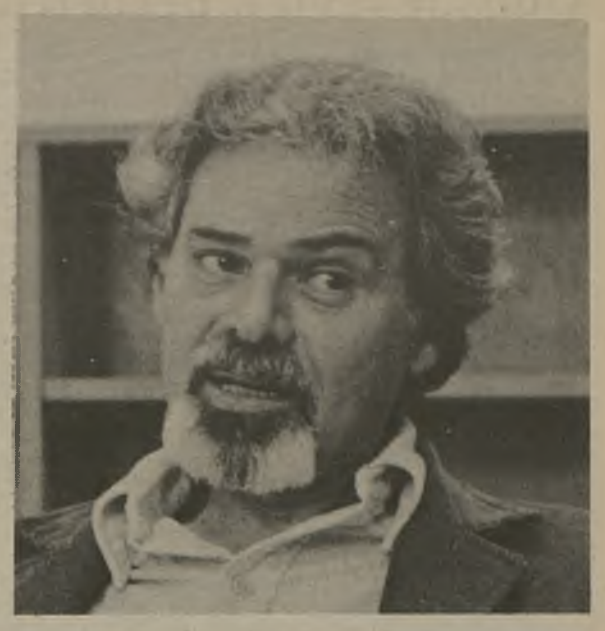
—Gilbert Sorrentino

Richard Eberhart, for instance, working essentially out of an early 20th century English tradition.

"And the novel, despite the innovations of maligned and misunderstood writers, had settled into the conventional—strong on 'message' and totally devoid of formal interest.

"We chafed under that. It was contemporary painting and be-bop in an odd way, that suggested to us, by example, that what we were doing had some value even though it was mocked, or, if not mocked, efficiently smothered. I think of the reception given a writer like Jack Kerouac, who was deemed a barbarian who wrote nothing of value in his 'formless, structureless' novels.

"What that meant of course was that his form and structure didn't look like what the arbiters of taste 'knew' form and structure to be. In fact, Kerouac was a very remarkable and powerful writer.



"Creeley has a wonderful quote concerning those years, something like 'To be a writer in the late '40s or '50s was difficult because those in positions of literary authority took form to be something extrinsic to the given instance.'

"His point being that a novel was a set of ideas placed in a ready-made form. Thomas Mann, the writings of Gide, that was form. Mailer, Hemingway. We all *new* what a novel was, didn't we, an intricate box that one studied, then imitated.

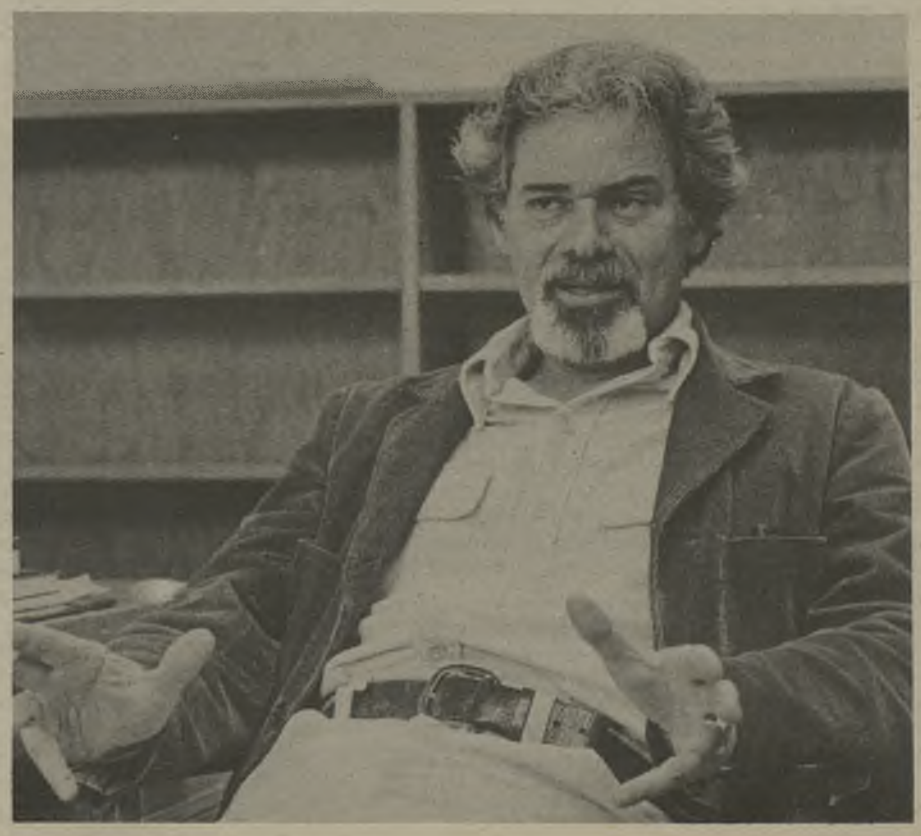
"If you did something that didn't look like what had been canonized, you were labeled. The kindly label was 'experimentalist,' which meant and still does that you really didn't know what you were doing, you were just fooling around.

"The unkind label, the one used for Kerouac, was that of barbarian, know-nothing, illiterate. As Truman Capote said, 'That's not writing, that's typing.'

"That was supposed to be a witty remark, but said by Capote all the wit is of course drained out of it. Whatever small talent Capote once had was exhausted years ago by the demands of the market."

To Sorrentino it was the sense of community among the artists and writers that made it possible for them to go on with their work. "When an artist is young he needs that kind of support. To be any kind of a decent artist is to come into your statement feeling that you've got the work of God, that you're carrying the 'truth.'

"The young must wish to wipe out what's stale and fake. Even though they don't know what they're doing.



"The sense of having support from people who believe what you believe, even if they're all half-baked or half-crazy, is enormously important. You need someone to say, 'I saw your story last week and it was great,' and then you say, 'What do you think of that lousy story by So-and-So in Such-and-Such a magazine?' And then they say, 'That bum.' Young people need that.

"They must be outside the concerns of 'marketing' their work—they need the arrogance of a clique, a group. They must believe that they are *right* in an absolute sense."

But literary community of the kind Sorrentino had is not easy to come by these days. He believes one of the chief obstacles to such communities now is economic.

"Recently a friend of mine in New York was talking to a group of young students at the Art Students League. He told me afterward that he found himself saying to them the exact opposite of what people had said to him when he was young. Then older people would say how they envied the

Outside review needed to strengthen Stanford's stature in humanities—Cohn

Editor, *Campus Report*:

In a talk to L.A. alumni, Dean Norman Wessells (of Humanities and Sciences) echoed by President Donald Kennedy, claimed that work in the humanities was "climbing to new heights" because of the support given by his office, which so far consists mainly of word processors.

He exulted over the growing program in "mathematical" formal linguistics because it feeds into integrated circuits and the like. His praise of our philosophy department as "hot" ran along similar high-technological lines.

In short, he could not have demonstrated more clearly the folly of having scientists in charge of the humanities, especially in a time of severe peril to the latter (I refer partly to the drastic drop in our ratings recently).

It is not a question of attacking science *per se*, when I affirm along with many others that it is becoming a rampant cancer in our bailiwick. President Lyman expressed alarm precisely about this encroachment. In its own area, the more of it the merrier, I assume (though interesting questions can be raised, and have been raised, even there by imaginative scientists like Einstein, Heisenberg, Feynman). But in the humanities the *dosage* is all-important.

Let's make a comparison with the gender-proportions in "individuation": as long as the identifying sex keeps a determining lead over the other sex in the person, the more of both the better for culture. In an artist of genius like Leonardo one can sense that delicate situation: a bit more of his analytic propensity, which was enormous, and his masterpieces of painting would have leaned toward fussiness or a sort of pedantry of precision?

But the imbalance in the humanities (and also the social sciences) at Stanford has gone much farther than that and is threatening to go even farther.

It is not only a matter of methods; more gravely, it is one of the all-important *spirit*. C. P. Snow points to a vital difference: the humanities look back and all around, the science almost exclusively forward. You can't get much more different than that. . . .

How can we attract the leading humanists from elsewhere if they get wind of what Dean Wessells is saying and doing and realize the disastrous drift here? They have already gotten the smoke signals, many of them, and demonstrated a disheartening but fully understandable reluctance to come (and not just because of housing problems).

We are sick to the gills institutionally and need help. We need an outside review badly and immediately, by the very best humanists who can be persuaded to come here for a few days for that purpose.

Robert Greer Cohn
Professor of French

P.S. Just before he died, Charles McCabe wrote the following: " . . . cultivated men are a better choice to overlook the future of humanity than mechanics and technicians." George Will wrote recently: " . . . even more than we need persons conversant with new technologies, we need a citizenry acquainted with the ancient patrimony of our civilization."

A Soviet scholar visited Geophysics

Editor, *Campus Report*:

As a recent host of a Russian visitor to the Geophysics Department, I was particularly interested in the *Campus Report* article of Michael Taksar describing typical Russian visitors. Taksar may describe the "typical" situation, but our experience was more positive.

It may be that if you wait for the National Academy of Sciences to send you a Soviet visitor, they will send you a Russian of the type Taksar described. We had our own budget, identified a promising Soviet scholar, and invited him to Stanford. After waiting through Soviet bureaucratic churnings, including several false starts, more distressing to Boris than to us, he eventually came.

Boris took his work seriously. He approached many problems differently than we do. Naturally we also quizzed him on political matters. He said he was not a party member, but he religiously defended Pravda on philosophy and history. On the other hand, questions about daily life he answered candidly, mixing the good with the bad. He told us his concerns and those of his family. The many people he met here arranged sightseeing for him throughout California and even a short trip to Texas. He expressed many ideas, and must have brought some ideas back with him.

Ducks' plight reveals our morality

Editor, *Campus Report*:

The trouble with Stanford is the trouble with the world. Tremendous strides in the medical, social, and physical sciences have not provided the spiritual growth necessary to free us from the bondage of self service.

Articles in the May 4 issue of the *Campus Report* pointed an accusing finger at us all. . . workers standing by watching baby ducks floundering in "dangerous water". . . animal rights and animal research defenders hurling personal insults at each other in print, but nothing really changes for the animals.

What is the matter with us? Where is our heart and where are our morals? The problem at Stanford is no different from the problem everywhere. . . but it is a serious moral issue. We have become bored observers of life, defending only our right to do nothing.

Grads may lack IQ needed for top jobs

Editor, *Campus Report*:

I was a little bit startled by the article "Long-term job outlook called bleak" in the April 20 issue which summarized the research project by Russell W. Rumberger of the Institute for Research and Educational Finance and Governance at the Stanford School of Education.

His conclusion was that in the years to come college graduates will find their earnings advantage over high school graduates declining and that many graduates will face deteriorating opportunities.

It seems strange to me that with a lot of effort and research *a fundamental point is not discovered.*

One could start with the studies of Dr. Terman, who developed the Stanford-Binet test used to measure I.Q. One of his basic premises was that half the population had an I.Q. above 100 and half below.

In fact, he set the score a little bit high because his original test group was from California and when applied on a national basis the scores averaged slightly below California.

In any case, he found that approximately 35 percent of the population have an I.Q. between 85 and 100 and another 35 percent between 100 and 115; 13 percent fall between 70 and 85 and 13 percent fall between 115 and 130; and approximately two percent fall below 70 or above 130.

Once upon a time we thought of college as being the place to train *the minds of those who had greater capability than the average*. Yet that is not what college is doing. According to the 1980 Census, 44.7 percent of males of all races (a higher percentage if one counts only whites) had one or more years of college.

Now it is difficult for me to believe that the screening by colleges is so precise that this 44.7 percent represents the very top people and that absolutely none of these people had an I.Q. below 100.

Of course, if I am correct, one of the reasons why college graduates or persons completing more than one year of college may not get the kinds of income benefits that existed many years ago is because they may not have the intelligence needed on many jobs paying higher incomes.

I have heard educators say that in the not too distant future more than half of our population will have gone to college. To me that means that colleges are fighting to become trade schools in the great game of being bigger and having more students and generating more revenue.

We have heard a great deal about the long-term decline in test scores on the Scholastic Aptitude Test. I believe that it is part of the problem described above—more and more people, coming further and further down the I.Q. scale, are taking the Scholastic Aptitude Test. Since these tests are a test of both knowledge and intelligence, it seems natural that the median scores will decline. If we suddenly ordered every high school graduate to go to college and to take the S.A.T., then we would find a further decline in the median score.

What I believe is happening and will continue to happen between now and the end of this century is that people who formerly ended their schooling at high school—in many cases people with an I.Q. in the 95-105 range—will now spend four more years out of the work force completing an education which will adequately prepare them for the kind of jobs that were available in the past to high school graduates.

I do not think this is a matter of education; I think this is a matter of intelligence. No person should be blamed or praised because of his intelligence, since none of us have any significant control over our intelligence. Evidence seems to indicate that intelligence can be seriously damaged in the early years of life by an inadequate diet, but nothing has shown that a super diet can raise intelligence.

It is unfortunate that many people with a high I.Q. feel that it is something they should brag about. I have always wondered about that, because according to the law of filial regression slightly more than half should be less intelligent than their parents.

I think a parallel can be drawn in a more physical form. No one has yet been able to find a way to put two quarts of milk into a one-quart milk container.

Robert Kahn, CMC
Stanford 1938

Sorrentino. . .

continued from page 8

young artist, the freedom and all that. 'Now,' he said. 'I feel sorry for them. How will they do it, with things the way they are?'

"When I was a kid," Sorrentino goes on, "if you had a job for a hundred dollars a week and you got canned, you went on unemployment for $50 a week, one half of your salary.

"Maybe you could help somebody paint his apartment and pick up $10 or help somebody move and pick up $15 or $20 for a day's work. So over a period of a month you could make $300 in all. You paid $40 a month for rent, beer was 10 cents a glass, a reasonable meal was $2. You could be canned and still live.

"Now I don't know how you'd do it. Let's face it. If you have to come up with $50 rent and you have $30, you can always come up with the extra $20. But if you're paying $500 a month rent and you're short $350, how are you going to come up with that? It's a very different scene."

From 1965 to 1970 Sorrentino worked at Grove Press, first as an editorial assistant, then as an editor, and finally as a senior editor.

"Grove was a commercial house but it published real books. It was clearly the single most important publisher of modernists in the U.S. from 1960 to 1970. The list of writers published by them is a litany of modernism: Beckett, Burroughs, Ionesco, Adamov, Bataille, Robbe-Grillet, Duncan, Olson, and dozens more."

While he was at Grove, he wrote two novels, *Steelwork* and *Imaginative Qualities of Actual Things*. "I used to write every night for two hours."

In 1970 he left Grove and began to teach. "I taught at the New School and at Sarah Lawrence, not in any sense in a tenure-track position. I wasn't involved in faculty meetings. I was like a jobber. At the New Schpol, for instance, for X amount of dollars I taught two classes each semester.

"I didn't come to teaching until late. When I was young I resisted it. Rightly or wrongly, I felt that the academic milieu was not right for me. I am in no sense a scholar. Most of the things I know I learned by reading, thinking, working things out in my own mind."

In his wide-ranging reading the most interesting critical attitude he has found is in the work of the Russian Formalists, a group that worked in the Soviet Union just before the '20s and who were soon silenced by the Soviet regime.

"The reason I admire them so—Shklovsky, Eichenbaum, Roman Jakobson—is because of the way they view literature. They did not conceive Formalism as fixed. What they said one year could change the next.

"Their criticism was rooted in the literary work itself. They had no immutable set of theories that they applied to all works. Rather, their theories grew out of the idiosyncracies of the works they studied.

"It seems to me that's what criticism should be.

"Criticism that discusses literature in terms of other disciplines—sociology or psychology or what have you—may be valuable to sociology or psychology, but it doesn't teach you anything about the literary qualities of the work itself, what makes it that unique thing—literature.

"Talk about literature in extra-literary terms is simply an elevated bar-talk. Nothing wrong with it. It's delightful. Chit-chat to pass the time.

"But literature is a narrow proposition. Its medium is language and it must be dealt with in terms of its medium."

Latin American policy protest aims at Shultz, commencement

Protesting Latin American policy, more than 100 chanting demonstrators marched to the Stanford campus home of Secretary of State George Shultz Thursday, May 5.

More than 1,000 members of the campus community have signed petitions opposing U.S. policy toward El Salvador, Nicaragua, and Guatemala in the past two weeks. More names will be sought before June 12, when Shultz is scheduled to be featured speaker at Stanford's commencement, rally organizers said.

Now on leave as a professor in the Stanford Graduate School of Business, Shultz currently is in the Middle East. No one else was inside his home when the protesters arrived after a rain-soaked march from White Plaza. About a half dozen police watched the protesters, who remained outside light wooden barriers, well away from the house itself.

Dipping their hands in a red-colored solution, they symbolically smeared a large "Federal Reserve note" marked $1 billion for 40,000 lives lost in the region.

Charles Hale said Shultz would be sent a letter, demanding peace, national self-determination, and an end to military intervention. He said the petitions would be given to Shultz June 12.

These urge the following actions:

"In El Salvador: Stop all military aid until the government agrees to unconditional negotiations among all parties involved in the conflict, and to the prosecution of those responsible for civilian murders and human rights violations.

"In Nicaragua: End CIA covert action against the Nicaraguan government, thereby complying with the letter and the spirit of the Boland amendment, passed by Congress.

"In Guatemala: Comply with U.S. policy established under the Carter Administration, which suspended military aid to Guatemala because of persistent and massive human rights violations."

Hands soaked in red splattered large replica of dollar in last week's protest

At a White Plaza rally preceding the march, David Ayon accused Shultz of complicity in the continuing slaughter of civilians in El Salvador. Catholic sources estimate that an average of more than 100 civilians a week are being killed by security forces, he said.

"So far this year, nearly 1,500 Salvadoreans have been killed by U.S. bullets, fired from U.S. guns by soldiers trained in the U.S.," he added.

The Cinco de Mayo demonstration was organized by the Stanford Central American Action Network and MECHA.

Wood vigorously advocates strategic nuclear defense in debate with Panofsky

Both the U.S. and the Soviet Union should seek ways to drop the nuclear pistols now poised at each other's head and start to raise a defensive shield instead, Lowell L. Wood Jr. of Lawrence Livermore Laboratory said Wednesday night, May 4, at Stanford.

Special studies group leader at Livermore and an assistant to Edward Teller, Wood vigorously supported President Reagan's strategic nuclear defense proposal in a debate with Prof. Wolfgang Panofsky of the Stanford arms control faculty.

Both agreed that the continued buildup of nuclear offensive weapons was "more and more intolerable," in Panofsky's words.

"I'm not aware of a singly comprehensive study that maintains a defensive strategy has a high likelihood of working" against nuclear attack, he added.

Wood said that a "significantly reliable" strategic defense may be possible, although its economics "can only be settled by technological exploration."

Reliability claimed

The Lawrence Livermore expert said the likelihood of as many as 10 nuclear warheads penetrating a defense may prove "vanishingly small." While the effects of even one explosion would be devastating, "it's a harsh world out there," he said.

The present offensive buildup by both sides is "profoundly unstable. . .it will not continue," Wood added. The reaction times from a suspected nuclear launch have become so short that "computers, not political leaders" will be calling the shots.

"Strategic arms are either used early or they're lost," he said.

Press claims that President Reagan's proposal is simply "wishful thinking" with no technical basis simply are "untrue," he declared.

The militarization of space is "regrettably an accomplished fact," Wood said. "The Soviet Union is the only nation with an operational military capability in space," including a system for killing satellites in place since the late 1960s.

Just a vision

Panofsky responded that Reagan's hope for an impenetrable defense was "a vision." He said there simply is "no evidence" that any defensive system could prevent penetration of all but a few strategic weapons.

Panofsky emphasized that defensive systems have many points of vulnerability—satellite sensors can be jammed, delivery vehicles destroyed. "The problem is one of dynamics," he added: trying to create an effective defense can stimulate the other side to develop new offensive capabilities.

"The way to decrease nuclear weapons is to reduce nuclear weapons"—not

Wolfgang Panofsky

develop another layer of weaponry, he emphasized.

While there are "no difficulties" in continuing to spend $1 billion or more for research on such systems, Panofsky said it was a "great disservice" for the President to "hold out hope of a change of policy" without any indication of its feasibility.

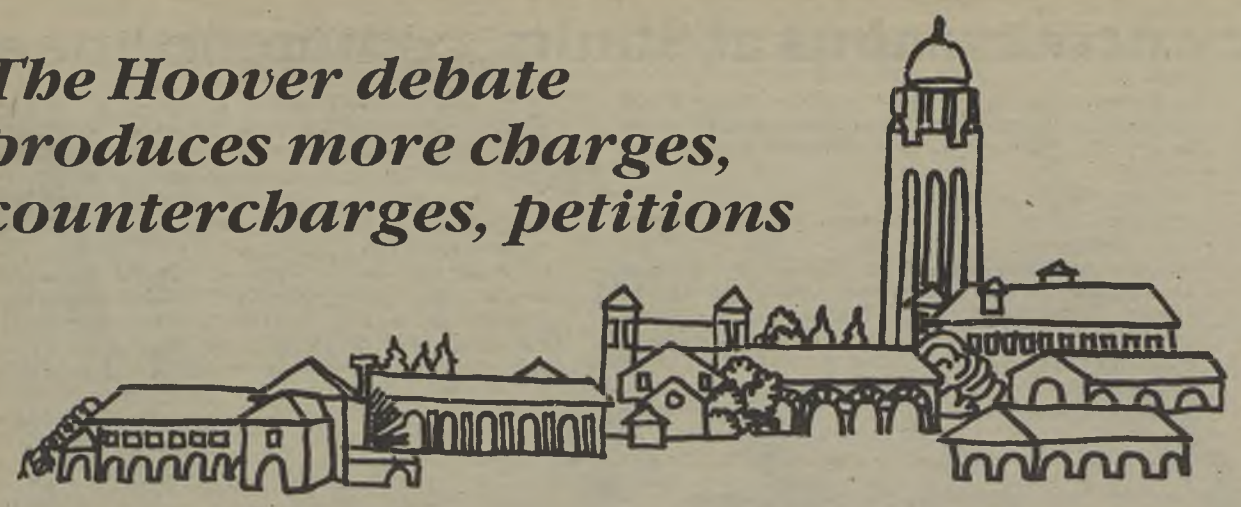
"There is real, specific reason to believe (both sides) could move toward strategic defense" within a decade, Wood replied. An "effective" defense may be achieved in five years, a "very effective" one in 10.

Both the U.S. and the Soviets should stop the production and deployment of new offensive systems, Wood said. This would be "a very definite advantage" for the U.S., since the Soviets still maintain four ICBM production lines while the U.S. has none.

Space militarization

Wood said the militarization of space "appears irreversible," Then he added: "But if war comes anywhere, I'd prefer it far from the homes of man. . . . It's better in space than in the air, ground, and water of the biosphere."

Wood said research on strategic nuclear defensive systems "might very aptly be shared" by the U.S. with the Soviets. Development and deployment of such systems would be "more sensitive," he added. At present, the Soviet ballistic missile defense system is "quite a bit advanced," compared to the U.S.



Using nuclear weapons would be "exceedingly odious," Wood argued. "Shields improve the likelihood there will be no war."

He said it was "exceedingly unfortunate" that classified information limits free public debate on this issue. Panofsky maintained that "classified work does not have a major impact on the debate."

Attended by a near capacity audience in Kresge Auditorium, the debate was sponsored by the Stanford Arms Control and Disarmament Forum. Provost Albert Hastorf served as moderator.

—Bob Beyers

The Hoover debate produces more charges, countercharges, petitions

Duignan: Petition has numerous misstatements

The faculty petition on the Hoover Institution contains many misstatements. Let us try to separate fact from fiction.

Fiction: Hoover received $4 million from Stanford this year—a 64 percent increase since last year.

Fact: The only funds Hoover received from Stanford is the $2.65 million assigned for its library and archives. The $4 million figure is inaccurate; the additional $1.3 million the petition claims Hoover gets is her own money! The University manages some of our endowment funds; it does not give us any endowment funds; it simply passes on to us income from our funds that the University manages.

Fiction: Hoover is a politically partisan organization within the University, which is inconsistent with traditional values of academic independence.

Fact: Hoover takes no political stand as an institution. Its individual scholars have many differing views and are not even all Republicans: 11 are Democrats, 10 are Republicans, and three are Independents. Many left-liberal Stanford faculty have received fellowships from Hoover, as have scholars of non-conservative persuasions from other universities.

Fiction: Hoover enjoys a hazy, quasi-independent status. Its research fellows are not subject to the University academic hiring process or to approval by the University's president, Donald Kennedy.

Fact: The appointment of *Senior Fellows* requires approval by a committee appointed by the president of the University to review nominations made after a nation-wide search has been made. The director of the Hoover Institution gives advance information to the president as to appointment of persons for *Senior Research Fellows* (appointed for limited periods only). *Senior library personnel* are selected by joint committees composed of Hoover and Library personnel; their recommendations are reviewed by the president. *Junior scholars and other staff members* are chosen in accordance with procedures similar to those used by the rest of the University.

Fiction: Hoover is a two-tiered organization, comprising a "conservative inner core" of policy advocates made respectable by an "outer ring" of professional academics, most of whom are Stanford professors.

Fact: Between them Hoover members contain five Nobel Laureates; 32 members of the American Academy of Arts nd Sciences, the American Association for the Advancement of Science, the National Academy of Science and the National Academy of Education.

In terms of publications, honors, and previous appointments at prestigious institutions, Hoover compares with any academic institution in this country. We have no need to be made respectable by an "outer ring" of Stanford academics. All joint or courtesy appointments were initiated by the faculty, not by Glenn Campbell.

Fiction: The mere perception that Hoover is politically partisan harms Stanford's reputation as a value-neutral center for higher learning.

Fact: The request for "value-neutral" scholarship comes with ill grace from critics who themselves lean heavily toward the liberal and left end of the political spectrum and who—in some cases—seek to impose their own value judgments as regards weapons research, sexism, racism, or elitism on the rest of the community. Far from harming Stanford's reputation, Hoover enhances it by providing a forum for alternative viewpoints.

Fiction: Hoover is creating a "two-class professoriat" in the University's social science departments—those who receive research funds and other benefits from Hoover, and those who do not.

Fact: Any Stanford professor is free to apply for Hoover grants. Many have in fact chosen to do so. Two-class professoriats exist everywhere in academe: some professors are smarter, earn more, win more awards, write more, etc. Hoover did not invent the system.

Fiction: Hoover's near total shift over the past decade from an archive and center for international studies to a think tank studying economic and regulatory policies constitutes a perversion of Hoover's original charter.

Fact: Hoover maintains both an international and domestic studies program of high repute. There is nothing in the Hoover charter that forbids the Institution to engage in domestic studies. The University president and the Board of Trustees approved the expansion of our interests and accept it each year when its work is reported to them.

Fiction: Hoover injects political criteria into the decisions to hire research fellows. It is the only part of the University not bound by the Academic Council's statement on academic freedom, which prohibits political discrimination in hiring.

Fact: Hoover's political composition more nearly corresponds to that of the American electorate as a whole than that of the social sciences and humanities departments at most major American universities that heavily incline toward the liberal and left. This creates the optical illusion that Hoover is nothing but a conservative haunt—notwithstanding the substantial number of Democrats (just over half) who serve on its senior staff. Hoover has more balance than any social science department at Stanford. We number not just Democrat but Republicans. We associate with our programs many left-liberal scholars. Yet

Manley, Rebholz offer reflections on Hoover as a political organization

Following is a May 4 paper on "Reflections on Hoover as a Political Organization" by John F. Manley, professor of political science, and Ronald A. Rebholz, professor of English.

So far the tone of much of the Hoover Institution's response to the faculty-student petition has been set by Director W. Glenn Campbell when, as reported in the April 24, 1983, *Peninsula Times-Tribune*, he leveled the term "character assassination charges" at those who raised questions about partisan political activities by the Hoover Institution.

Normally we would ignore such rare displays of invective in a university community, but on at least one issue Hoover has a good point. The burden of proof is properly put on the initiator. That is why we have compiled and made available to the Faculty Senate a five-page compendium of materials on Hoover's alleged political activities. (For excerpts, see *Campus Report* May 4, p. 8-9.)

That is why we have also called the public's attention to Hoover's *Annual Reports* as an authoritative source on Hoover's activities. We believe readers of these documents will see that the issues raised in this debate cannot be reduced to "guilt by association" and a liberal "witch hunt."

No one expected Hoover to like the petition but in an academic community, when questions are raised for discussion, shouldn't some effort be made to discuss them as really presented? As we see it, the major concerns of those who have called for an inquiry include the following:

1) Does the Hoover Institution receive millions of dollars from private sources outside the University, and from private funds earmarked for Hoover but administered by the Univerity, and, if so, who gives this money, why do they give it, and who decides how it is used?

2) If only about one-third of Hoover's budget ($2.7 million) goes to the Hoover library, what sort of activities are funded by the remaining two thirds ($5.7 million)? And would those who supply this money continue to do so if Hoover were in fact nonpartisan?

3) Does the Hoover Institution, as suggested in its own 1981 and 1982 *Annual Reports*, engage in political and partisan activities of concern to the broader Stanford community?

4) Was the *New York Times Magazine* correct in July 1978 when, in an article by Kenneth Lamott, it was reported that: "Through its ties with the right wing of the Republican Party, the Hoover Institution is exerting increasing political influence. It is the brightest star in a small constellation of conservative think tanks that serve as workshops where out of office intellectuals can fabricate the underpinnings of domestic and foreign-policy positions for the Republicans."

5) Without denying the need of any political party for research and support, do we, as a community, want such activities (to the extent that they are shown to exist) centered at Stanford?

6) To the extent that Hoover, as an organization, engages in partisan political activities, does not Hoover, directly or indirectly, ensnare the University in such activities?

7) And, finally, to the extent that such activities are found, by objective investigation, to exist, are they compatible with Stanford's national reputation as a center of independent, nonpartisan, objective research?

Such legitimate questions are not an example of McCarthyism. They pose serious issues for this university. That is why many have asked for a public inquiry in a responsible and appropriate forum. These are controversial questions but let us not be deceived by the rhetoric: none of the real issues in this debate centers on the politics or activities on any individual member of the Hoover Institution or the Stanford faculty.

We do not believe that such questions can be answered by claiming that Hoover is just another part of Stanford and should not be singled out for special attention. Hoover is not like a regular department, and most members of Hoover's research staff are not recruited in the same way as Stanford faculty. Individual faculty members and members of Hoover obviously have full rights to engage in whatever political activities they please—as individuals.

But what about an institution that receives and dispenses millions of dollars? Just because that institution does not take formal positions on issues, does this make it nonpolitical? Perhaps. But we doubt it.

Experienced Stanford faculty members and a great deal of the media discern in Hoover a large and dominant core which sets the tone and tends to pursue overwhelmingly a fairly consistent political line. Is Hoover no more than a collection of diverse individuals who happen to congregate in one place? Are we to believe that because Hoover contains some Democrats—perhaps even some liberal Democrats—that it is a pluralist institution without any discernible political leaning?

Some people say Hoover is a valuable asset to the University. We agree. As a library and archive Hoover must and should be retained.

But what about the political side of Hoover? Is it not true that most of Hoover's budget supports research and publications rather than archival activities? Is it not true that to many observers Hoover's research and publications appear political? And is it not true that many of Hoover's activities appear partisan? Are these aspects of Hoover assets to Stanford University? We wonder. Many others wonder.

Are we to believe that Hoover, with its millions of dollars from outside sources, and its overt political connections, is nothing more than a tall archive? Hoover seems to claim and the press certainly reports that it is one of the leading conservative think tanks in the country. Do we want to be associated with such an organization? Does any other university accept such large funds and allow one of its parts to pursue such goals as Hoover? *Should* any university allow such activities?

These are the sort of questions that many faculty and students think should be discussed: in the Faculty Senate, among the student body, the President's Office, the Board of Trustees, and perhaps even by an objective board of scholars from outside the university. These substantive issues are too important to Stanford to get bogged down in an endless debate over who at Hoover is a Democrat or Republican, or how many members of Hoover are affiliated with radical left or radical right journals. Such a focus trivializes important questions and diverts attention to secondary issues.

These are questions that, in an academic community dedicated to reasoned discourse, should be considered dispassionately. We all know this is difficult. But a focused inquiry into the facts should help us sort out fact from rhetoric. Stanford now needs such an inquiry, and we believe that it is up to those most directly concerned with preserving the well-being and integrity of the University to provide it.

Duignan. . .

continued from page 10

some departments refuse to let some of our conservatives teach.

The problem of political imbalance lies outside Hoover.

Fiction: Hoover's widely recognized promotion of the Reagan candidacy and the Republican Party generally threatens its own tax-exempt status and that of the University.

Fact: Hoover as an institution does not support Reagan or any other presidential candidate. Hoover contains critics as well as supporters of President Reagan's policies.

A few members of Hoover's regular staff have served the Reagan administration—just as individual professors from Stanford, Harvard, and other prestigious universities have served the Kennedy and the Carter administrations, thereby providing a public service in which their parent institutions took pride. The Hoover staff has very little influence on the Reagan administration. Few of the Hoover staff went to Washington but most instead chose to remain here.

Fiction: The faculty would oppose a liberal or left institute or program as well if it appeared on campus. The faculty also claims to do only value-free research and teaching.

Fact: Some left-liberal faculty only oppose conservative activists; they do not oppose radicals, Marxists, communist groups or individuals. It is interesting that Hoover's most outspoken critics (Drekmeier, Carnoy, Levin, Rebholz, Roth, etc.) also supported the Maoist group led by Franklin when he rampaged around the campus intimidating and threatening conservatives and carrying on partisan political warfare. Indeed they signed a petition asking Stanford to reinstate this political partisan and pay his hearing expenses! So much for opposing the left on campus.

Consider the record of some militant Stanford faculty and student activists during and since the Vietnam War. Riots, sit-ins, demonstrations, occupation of the President's office, storming and firing of Hoover buildings, intimidation of conservatives, refusing to let invited guests speak, periodic calls for the U.S. out of El Salvador, support of the Sandanistas, a committee to investigate companies doing business in South Africa, but not one demonstration or sit-in over Cambodia, Cuban refugees, boat people, the Soviet invasion of Afghanistan, no petitions or letters to get the Soviets and Cubans out of Angola.

When was the last time you attended a Hoover-led demonstration, sit-in or teach-in? Have you ever seen Milton Friedman lead an army of screaming yahoos in an attack on the president's office? When did Glenn Campbell ever break up a meeting or interfere with faculty rights to speak?

Gann: Hoover helps deflect charges of political bias against University

A group of Stanford faculty, joined by a number of students, has petitioned for a review of Stanford University's ties to the Hoover Institution.

Among several issues raised, is the charge that Hoover is "partisan" because Hoover fellows have served in the Reagan administration.

The second charge concerns the quality of Hoover's permanent staff who are said to be academically inferior to those of their colleagues who have joint or courtesy appointments which refurbish Hoover's so-called tarnished image.

The third hinges on the selection process; a conservative political outlook is said to be among the factors taken into account in fellowship appointments at Hoover.

Hoover takes no political position as an institution; Hoover fellows, like faculty members, can take any political stands or serve in any administration they choose. Hence the first charge is without merit.

The second charge is equally easy to refute. In terms of publications, previous appointments at prestigious institutions, membership of prestigious academic bodies, Hoover's senior fellows compare fully with the quality of full professors at any major university.

The third accusation raises issues of a more complex kind. As Seymour Martin Lipset and Allan Ladd have established in numerous studies, the American professoriate in the humanities and social studies departments at prestige universities lean heavily toward the liberal and left end of the political spectrum.

The bias does not necessarily derive from the recruiting policies of the universities. Job seekers to some extent select themselves; those who aspire to an academic career tend to be more liberal in their views than those who seek careers in business or the armed services or similar occupations.

The fact remains, however, that most universities are politically biased toward the left. A socio-political survey of the Hoover Institution's personnel would show—not that they are all conservatives—but that the voting pattern of Hoover fellows probably roughly corresponds to that of the American electorate as a whole. This creates the optical illusion that Hoover is a Republican haunt—notwithstanding the substantial number of Democrats (just over half) who serve on its senior staff.

The charge of political partisanship in academe raises complex issues. It is a problem more for the left than the right. Throughout American prestige universities, conservatives are usually ill-represented in social studies and humanities departments. The leftist bias is even more pronounced in fields such as Chicano Studies, Ethnic Studies, African Studies, Black Studies, and Women's Studies. We are not aware of any conservative scholar who holds a teaching position in such subjects at the major universities.

How far does bias operate in the selection process? The question merits investigation. Could an Evangelical Christian opposed to the ERA be hired in any Women's or Feminist Studies program in any major university? Would a Cuban, anti-communist, a refugee from Castro's Cuba, now proud of his U.S. citizenship, get a fair shake when applying for a job in a Hispanic Studies program?

Would an applicant be acceptable to a School of Education, if he were to explain to his selection board that secular educators had something to learn from the Lubavitcher Rebbe or the Old Amish on the grounds that their followers suffer neither from drug addition, welfare dependency, prostitution, high suicide rates, or permissiveness toward homosexuality?

Would an Afrikaner known to be sympathetic to the present government in Pretoria ever even be considered for a position in African history? Merely to raise such questions—we believe—is to answer them mostly in the negative.

How does this affect the case of Hoover Institution? The Institution—we are convinced—is an asset to the university by reason of its vast holdings and its highly-qualified staff. Hoover is also an asset because its mere existence as part of Stanford University serves to deflect charges of political bias and excessive liberal-left wing representation on the faculty widely made in the community at large.

Hoover Institution

Hook: The test is always the quality, not quantity, of scholarly works

Following is a May 4 letter to President Donald Kennedy.

I have been reading with a growing sense of concern the orchestrated attacks against the Hoover Institution and its fellows on the ground that their alleged ideological bias compromise their academic integrity and violates the spirit, if not the letter, of the principles of academic freedom. Since I have spent the larger part of the last ten years as senior research fellow at the Hoover Institution, my observations and experience during this period are relevant in assessing the validity of the charges that are being aired on the campus.

Politically I am a life long Socialist, an old friend and admirer of Norman Thomas, currently a member of Social-Democrats, U.S.A., and vice-president of The League for Industrial Democracy. Philosophically I am an experimental naturalist who has applied the principles of pragmatic analysis, learned from my teacher, John Dewey, to the major social and political problems of our time.

My fields of intellectual inquiry have been critical metaphysics, social and political philosophy, the philosophy of law, history and education, with special interest in the thought of Karl Marx and the legacies of Marxism. I have published extensively in all of these areas.

When I retired, after reaching emeritus status as Professor of Philosophy at New York University, I received several offers to continue my research elsewhere but decided to accept Dr. Glenn Campbell's invitation to come to Hoover for several reasons. Among them were the excellence of its research and library facilities, the opportunity to engage in dialogue and critical exchange with reputable colleagues, and the salubrious climate at Stanford—all of which I had sampled during the year I spent at the Center for Advanced Study in the Behavioral Sciences when Ralph Tyler was its director.

My 10 years here have been very fruitful despite several setbacks to my health. Since 1973 I have published five major volumes: *Pragmatism and the Tragic Sense of Life*, *Education and the Taming of Power*, *Revolution, Reform, and Social Justice*, *Philosophy and Public Policy*, and this year on the 100th anniversary of Karl Marx's death, *Marxism and Beyond*, the first chapter of which is entitled "Karl Marx versus the Communist Movement" and the last "A Critique of Conservatism." In addition, I have completed a long intellectual and political autobiography which Simon and Shuster will publish next year.

Not only have my years here been productive, they have been intellectually stimulating—even more so than the longer period at New York University and other institutions at which I have taught as well as my year at the Center for Advanced Study.

The reason for this is primarily the continued challenge to my positions, the give and take with varied points of view, the stimulus to fresh thought provided by the discovery of new material. At New York University as well as at the Center there was too much of a sameness in social and political orientation.

Only in the arcane areas of epistemology and ontology did I find the bracing criticism of my first principles that is so provocative to second thought. To my surprise, despite Hoover's reputation for conservatism, I found a broader spectrum of thought among my colleagues at Hoover than I found among my colleagues at N.Y.U. and, from what I have been able to infer from reading and occasional meetings, at Stanford itself.

Having spent most of my adult life in the academy—I began to teach in 1927—with a varied educational experience that includes, amusingly enough, serving as External Examiner of Dr. Lyman and his wife when they were matriculating at Swarthmore, I believe I can distinguish the intellectually shoddy from the merely competent and the merely competent from the first-rate.

The test is always the quality and not the quantity of achievement. It is my considered judgment that my colleagues at Hoover taken as a group, regardless of the character and color of their beliefs, compare favorably with the standards of achievement reached by the faculties of our foremost institutions of higher education.

The accusation that there is a political test administered to those who are invited as fellows to Hoover calls into question the good faith of those who, without evidence, have leveled these slanderous charges.

To single out Hoover for investigation because of the *presence* of some outstanding conservative thinkers among its fellows could very well establish a precedent for investigation of other disciplines and departments at Stanford University because of the *absence* of conservative thinkers among them. Where the life of the mind is concerned such political epithets are irrelevant.

It seems to me that as the chief responsible officer of instruction at Stanford you have the authority and authentic knowledge to present the facts to the academic and general community and to cut short the campaign of harassment and innuendo against the scholars at Hoover who are no less dedicated to the pursuit of truth and clariy than you yourself.

Senior Research Fellow
Emeritus Professor of Philosophy—
New York University

Lipset: Survey shows 11 Democrats, 10 GOPs

The following letter to the Stanford Daily *was written by Seymour Martin Lipset, the Caroline S. G. Munro Professor of Political Science, professor of sociology, and senior fellow at the Hoover Institution.*

Some of the stories published in the *Daily* on Hoover contain considerable error, not worthy of Stanford faculty or students or your reporters who ought to check out statements. I would like to comment on some of these.

1) Hoover funds. The Hoover Institution does not receive any moneys from Stanford's operating or endowment funds other than the $2.8 million assigned for its library, which is integrated with the other university libraries. All of Hoover's remaining funds for administration and research either come from annual gifts for its on-going activities or are taken from Hoover's endowment income. The Hoover endowment, moneys donated specifically for Hoover, is administered as part of the Stanford endowment, much like moneys given for chairs or other research organizations. The confusion about this arises from the fact that since Hoover is part of the University, all of its funds are handled by Stanford, and the

continued on next page

Rosenzweig comments on Hoover publications, appointments

continued from page 1

called a news conference outside the entrance of Hoover Tower Tuesday, May 10, to show reporters sheafs of petitions and counter public statements by Hoover officials.

Prof. John Manley, political science, said 75 faculty have signed petitions favoring a trustee inquiry. He indicated their names would be made public, once their individual preferences were known.

"All these petitioners have claimed is that a prima facie case exists that Hoover is a partisan political organization and, as such, a potential danger to the University. . . .

"Among the core ideals are nonpartisanship, objectivity and a rejection of overt and covert political participation by the University," he said in a written statement.

"If these ideals are to be upheld, can the Stanford community ignore the existence of a $60 million research organization within its midst that openly engages in a wide assortment of political activities?

"Perhaps. But to do so endangers the University's reputation as a nonpolitical, nonpartisan institution, and thus endangers the most precious thing a great university has: its legitimacy."

Hoover officials have repeatedly said the Institution is not partisan and does not take positions on public policy issues. None would meet TV reporters.

In a campus interview May 5, Robert M. Rosenzweig, former Stanford vice-president for public affairs and former lecturer in political science, said it was "unwise" for the Hoover Institution to "make as much of its connections with the Reagan Administration as they have."

In its 1982 annual report, the Institution "reached well beyond what was justified on the merits" and was "asking for trouble," he added.

But he said it was "not true" that Hoover appointments were based on political belief.

"There's a set of intellectual questions that conservative scholars are more likely to address—the role of markets in society, for example," he noted. In contrast, liberals usually would be more interested in such questions as welfare.

"There's no question the intellectual focus at Hoover is one of greater interest to conservatives. But in a serious university, the real question is the quality of work being done. . . . Hoover does some work that's good, and some that's not so good." But overall, "it deserves to be in Stanford."

During the Stanford presidency of Richard W. Lyman, now head of the Rockefeller Foundation, Rosenzweig was responsible for organizing ad hoc University faculty reviews of "about a half dozen" individuals proposed as senior fellows at Hoover over a seven or eight year period. The highest scholarly positions within Hoover, these appointments are continuous, but do not confer tenure.

There were instances where faculty reviewing the proposed appointments asked questions or requested additional information but "nobody was turned down" as a result, Rosenzweig said. "It's also unusual for a proposed senior level appointment to the faculty to be turned down."

Where senior fellows were proposed who had joint appointments with academic departments, they were subject to the normal University review procedures, he noted.

The University "would not accept funds for the Hoover Institution for politically partisan purposes," nor would it do so for any other department, he noted. All gifts to Hoover are subject to Stanford Board of Trustees approval.

The University does not closely monitor the activities of 1,100 faculty, but any instances of politically partisan behavior improperly involving the institution would be brought to a halt. Over the years there were "a few instances of this, not involving the Hoover Institution," he said.

If an inquiry is held, "nothing very interesting will be learned," he predicted. "It's probably not worthwhile."

As originally proposed, "this is not a neutral inquiry. There's a political view that lies behind it, as there was in the conservative attack on Harvard and its links to Kennedy in the 1960s."

"It's a game the 'outs' play with the 'ins,' " he observed.

Rosenzweig currently heads the Association of American Universities in Washington, D.C.

Steering Committee schedules debate on Hoover May 26

A faculty petition calling for a Board of Trustees, inquiry into the relationships between Stanford University and the Hoover Institution will be discussed by the Faculty Senate May 26, the Senate Steering Committee decided Wednesday, May 4.

The Senate's next regular meeting May 12 already had scheduled a report from the School of Humanities and Sciences and extensive discussion of an extensive report and recommendations on student evaluation of teaching.

Academic Secretary Clara Bush has confirmed that 69 names on the petition are those of Academic Council members. Fifty are needed to mandate Senate discussion.

The petition states that "the existence of a partisan research and policy organization, whether liberal or conservative, within the University raises serious questions concerning the academic Independence, integrity and reputation of the University."

In a letter published Wednesday, May 4, by *The Stanford Daily*, Prof. Seymour Martin Lipset, president of the American Political Science Association and a senior fellow at Hoover, said his personal survey of 25 senior fellows and senior research fellows in residence at Hoover showed 11 were Democrats, 10 Republicans, three Independents, and one not an American citizen. *(See text, page 8.)*

Prof. John Manley, political science, one of those who initiated petitions for the trustee inquiry, said the names of those signing would not be publicly disclosed. Signers were not told their identity would be made public, he explained.

The Steering Committee and the Academic Secretary said any disclosure of the identity of those signing the petitions should come from those who initiated this action.

Lipset. . .

continued from page 11

allocations appear in the University budget.

2) Since the political affiliations of Hoover scholars have become a matter of public debate, I thought I would try to find out what they actually are. The core group of scholars in residence at Hoover consists of 25 senior and senior research fellows. As far as I can discover, 11 of them are Democrats and 10 are Republicans. Three inform me that they are Independents, that they do not support either party, while one other is not an American citizen.

As in academe generally, Hoover scholars vary by discipline affiliation. Economics is the most conservative field in the social sciences, and at Hoover six of the economists are Republicans, two are Democrats (one of whom belongs to the Democratic Socialists), two are independents, and one is a foreigner. The sociologists and political scientists, more liberal generally, are predominantly Democrats at Hoover by nine (including one, Gerald Dorfman, who founded and puts out the Marxist quarterly, *Politics and Society*) to three Republicans. Among the historians at Hoover, one is a Republican and the other is an Independent.

This breakdown does not include nine people who also hold the rank of senior or senior research fellow, but who are administrators either of the institution generally or of the various library collections. It also does not count 11 individuals who have retired from their previous positions because of age, who hold Hoover appointments, many of whom are either not paid by Hoover or receive moderate post-retirement income supplements. I have not looked into the politics of the 14 national and public affairs fellows, younger scholars from universities around the country, who have a one-year fellowship, awarded annually through an open nationwide competition.

There are also a number of people who have titles as Hoover fellows, who are resident elsewhere. For the most part they are not paid by the institution, and are not engaged in research for Hoover.

For the record, I would note that there are only three Hoover fellows employed in Washington by the Reagan administration, only one of whom was an active Hoover scholar before he left, a second was an administrator, and a third who has worked for many administrations was a post-retirement appointee.

3) The report in the *Daily* that Heinz Eulau "wrote a letter inviting Alvin Rabushka, a Hoover senior fellow, to accept a courtesy appointment with the department" is in error. A political science appointment for Rabushka has never been formally proposed or discussed at a department meeting.

4) The suggestion that Hoover "demanded 'reciprocity' from the political science department in return for giving a number of its faculty joint or courtesy appointments" came up in the context of discussions concerning the proposal by the department that Prof. Harry Harding be given a joint appointment with Hoover, as part of an effort to meet an outside offer. A senior member of the political science department stated that if Hoover did this, it should understand there would be no reciprocity with respect to giving Hoover people appointments in the department.

5) The report that the only book published by the Hoover Press not written by a Hoover Fellow, was one by Ed Meese is an error. Hoover has published many books by persons unaffiliated with the institution.

6) Finally, I would note that the arrangements with the University for the appointment of Hoover staff require that the no political discrimination policy applies to Hoover, and that senior fellow appointments are to be made on recommendation to the director by a search committee.

The director, in turn, recommends to the president of the university, who is supposed to have such recommendations reviewed by an ad hoc faculty committee appointed by him who advise him as to whether to nominate the candidates to the Trustees.

Juilland, McCarthy, Sherby oppose probe of Hoover

Following is the text of a petition to the Stanford Faculty Senate, President Donald Kennedy, Provost Albert Hastorf, and the Board of Trustees placed in circulation May 10 by Profs. Alphonse Juilland, French and Italian; John McCarthy, political science; and Oleg Sherby, materials science.

In Defense of Academic Freedom

The undersigned professors at Stanford University deplore and oppose the investigation of the political orientation of the Hoover Institution, although we have no objection to an impartial assessment of the scholarly excellence and achievements of Hoover appointees.

The claim that Hoover is to be investigated for political rather than conservative bias, that an investigation would be requested even if Hoover's orientation were liberal, strikes us as disingenuous. We are convinced that no such investigation would be contemplated if Hoover's bias were liberal rather than conservative. Hoover's ties with the Reagan administration disturb us no more than the preeminent role played by Harvard professors in the Kennedy administration some time ago, when no requests were made that Harvard be investigated for services rendered to the country's government.

We are concerned by the dangerous precedent such an investigation would represent both inside and outside of the University. Since academic practices deemed improper at Hoover could not be acceptable in the University's schools, departments, and programs, similar investigations may be requested of Stanford departments which may appear too liberal or too conservative or too radical.

We are also concerned about the fate of numerous institutes and programs associated with colleges and universities all over the country, the political orientation of which is mostly liberal, sometimes conservative, rarely radical. Stanford's investigation of Hoover's politics could trigger similar investigations of joint institutions, resulting in a generalized witch-hunt with liberals trying to track down conservative bias while conservatives would strive to expose liberal prejudice.

Because of the grave threat it poses to academic freedom, we urge you to oppose the investigation of the Hoover Institution's political orientation and associations.

What's the mission of Stanford University? Here's the first description

The following is a Stanford University Statement of University Mission:

The origins of Stanford's mission are based in its founding during the last quarter of the 19th Century. Higher education in the United States was taking on new definition, combining traditional undergraduate instruction carried over in our liberal arts colleges from the English university with the German university's new emphasis on scientific research and graduate training.

Out of this confluence, flavored with a uniquely American aim of using knowledge to address practical problems, emerged the research university. While maintaining balance with undergraduate instruction, Stanford has been included from the beginning among a relatively small group of research universities which account for a large share of the total national output of research and PhDs. This heritage shapes the University's mission today.

Purposes

While goals and objectives suggest accomplishments within our reach, purposes represent the horizon of our aspirations. In keeping with the enduring nature of the University our purposes indicate direction and commitment; they do not define a destination that we expect to reach. The following statements of purpose sum up the University's mission.

In the research university, there is a continuum of effort ranging from the creation of new knowledge, to the collection, preservation, and publication of scholarly materials, to the training of graduate students in scholarly and professional disciplines, and to the general, liberal, and preprofessional education of undergraduates.

It is important that Stanford advance the limits of scholarship through original investigation across a broad range of fields which meet the test of intrinsic importance and which in the aggregate provide coherent coverage of much of what is important to mankind. However, these activities must be integrated with the education of students at all levels.

At the undergraduate level Stanford's purpose is to bring knowledge and understanding to each new generation of young people; to instill in them an appreciation of scholarship, and of health and physical vitality; and to provide the basis for ethical and responsible lives, productive careers, and contributions to the public welfare.

This purpose is pursued by instruction in the critical skills of analysis, reasoning, and expression; in human and self-understanding; in their own and other cultures; in the fundamental skills and methods needed in a rapidly changing world; and in preparation for professional life and studies. It is also pursued by providing a campus environment and activities through which students develop attitudes and values in the midst of a diverse population.

Stanford's purpose is also to bring advanced graduate students and post-graduate trainees in the scholarly disciplines to the limits of available knowledge in their fields, instilling in them the motivation for extending these limits and transferring their discoveries, and providing them with the skills and experience to perform these tasks with excellence and conscience.

In the professional schools Stanford's purpose is to train graduate students in current theory and practice, and to prepare them for leadership in the practice, policy, or research aspects of their professions.

Principles

Pursuit of these purposes is guided by a number of principles that shape an operating philosophy, provide a coherent framework for decisions at all levels, and imbue the institution with a distinctive style and character. It is inevitable that conflicts will arise among these principles requiring careful resolution to maintain balance without lessening the validity of particular principles.

* Stanford shall maintain the highest standards of excellence in research and teaching, recognizing that, in a research university, there is no inherent conflict between these endeavors and that advanced scholarship and research enrich teaching.

* Stanford shall practice and defend freedom of inquiry, thought, teaching, expression, and publication.

* While maintaining a comprehensive, but not exhaustive, commitment to coverage of the basic disciplines and professions, Stanford shall concentrate its energies and resources in order to maximize its ability to sustain excellence in selected areas.

* Stanford shall maintain a maximum degree of financial and political independence, and shall not accept financial or other support that would restrict the faculty's ability and freedom to carry out its academic mission, or otherwise constrain the institution's independence.

* Demonstrated capacity for research and scholarship at the highest level shall be a necessary condition for appointment and promotion of the faculty. Because teaching ability—in its broadest sense (including undergraduate teaching, graduate training, and advising)—is very important it shall receive thorough consideration. Teaching as well as research and scholarship are expected of all regular faculty.

* Because Stanford wishes to maintain high standards of excellence in support of its academic mission, merit (in relation to program requirements) shall be the principal basis for hiring and promoting staff.

* Both individual merit and diversity of the student population shall be the criteria for admitting students.

* Undergraduate students shall be admitted according to a policy that takes no cognizance of financial need.

* Affirmative Action shall be pursued vigorously for faculty, staff, and students.

* Stanford shall maintain a residential learning and working community for students, faculty, and appropriate staff.

* Stanford shall act with integrity in all of its affairs and as a good citizen in the local community.

* The faculty, as specified in the Articles of Organization of the Faculty (1904), shall have the prime role in determining institutional policies governing academic affairs (e.g. the granting of degrees, academic evaluation, research, appointments, admissions, etc.).

* Stanford shall preserve the openness with which the administration and faculty communicate and participate in formulating policy and making decisions.

* Stanford's financial and land resources shall be managed to achieve Stanford's purposes now and for future generations.

* Stanford shall provide the facilities and other support services needed to carry out its purposes and shall insure the primacy of academic objectives by maintaining high standards of productivity and efficiency in its support activities.

University Objectives

Stanford has many objectives, each rooted in the institution's purposes and principles. They state in specific but broad terms what we are trying to accomplish. Behind each objective lie operating plans and goals by which performance and progress at various levels in the institution may be measured. The following are the University's main objectives for the next five years.

Academic Affairs

1. Improve the undergraduate curriculum by introducing integrative general education courses for freshmen (especially multi-quarter sequences), by providing more honors and seminar work for advanced undergraduates, by increasing opportunities for writing instruction, and by increasing opportunities for undergraduates to participate in research.

2. Maintain and strengthen the quality of Ph.D. and professional programs by providing adequate financial support for students as well as improved laboratory and library facilities.

3. Pay continuing attention to the quality of the faculty both as scholars and as teachers. Very careful recruitment, a commitment to increasing the number of qualified minority and women faculty, provision of opportunities for professional development, and rigorous standards for promotion are especially important policies, both during the initial hiring of new faculty and during promotion to tenured rank. Only the truly outstanding should serve on the faculty.

4. Establish policies that allow flexible responses to emerging patterns of corporate research support, while maintaining the University's essential commitment to academic freedom.

5. Review and, when appropriate, revise the organization of undergraduate studies, including the Undergraduate Cabinet, in order to make it a more effective arrangement for initiating improvements in undergraduate education.

6. Create a climate of continuing review and renewal of the curriculum at both the undergraduate and graduate levels and utilize visiting committees more effectively in the process. Respond to changing requirements in research and teaching by creating new programs and phasing out old ones. Establish an innovation fund to support this objective.

Student Affairs

1. Review, and where appropriate revise, student residential policies and programs to reflect new educational opportunities afforded us by added space for graduate and undergraduate students.

2. Help students recognize and appreciate the racial, religious, socioeconomic and other differences at Stanford; encourage interaction among diverse groups and individuals; and help students learn the skills needed to work and live effectively within this diversity.

Medical Affairs

1. Strengthen the management of the Medical Center and its three functional units (School, Hospital, and Faculty Practice Plan), and provide an environment that will attract and retain academically-oriented, top-quality executive personnel.

2. Correct major physical plant deficiencies that will allow the Center to maintain its leadership position as a major research-oriented medical school, regional referral center, and as a University teaching and community hospital.

3. Develop a strong Center-wide planning capability and specific long-range plans for both academic and service-oriented programs of the Schools and Hospital.

4. Review and revitalize the academic programs of the Medical School.

5. Develop and implement policies and programs that enhance the acceptance, understanding, and support of the Stanford University Medical Center in the local community.

Business Affairs

1. Support academic program goals by managing the University's business and financial affairs efficiently, effectively, and with integrity.

2. Modernize University accounting systems to fulfill current requirements and meet long-term needs using new technology whereever possible to minimize costs.

3. Revise University personnel policies to fit emerging needs, and to improve the productivity, the potential, and the satisfaction of those who work for Stanford.

4. Through a strengthened real estate and investment management organization develop a diversified and flexible portfolio to enhance the value of the financial and land endowments while safeguarding the long-term integrity of the university's capital structure.

5. Establish and carry out policies and programs to meet the University's essential housing needs.

6. Establish programs to keep University facilities operating at efficient levels consistent with other required uses of resources and with the needs of users.

Public Affairs

1. Organize and cooperate in efforts to protect and promote Stanford's interests through national and state educational associations and with other colleges and universities.

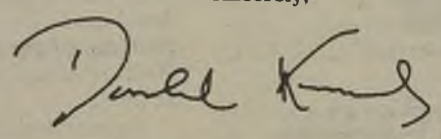
2. Promote the accomplishment of University plans by providing advice and assistance to those seeking the cooperation of local governments.

3. Encourage public understanding and appreciation of Stanford by presenting complete and accurate reports of University activities, and by presenting attractive public ceremonies, performances, and events.

Development

1. Increase total giving and achieve a closer relationship between gifts and critical University needs, including concerted fundraising efforts in the Medical Center and for unrestricted gifts.

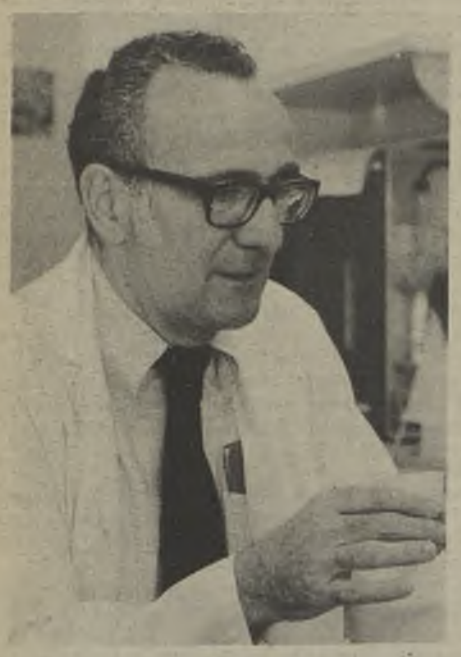
2. Complete Stanford's first comprehensive effort in over a decade to identify new prospective donors, and plan and launch the fundraising activities to be associated with Stanford's Centennial period (1985-1991).



3. Strengthen the role of volunteer leadership, especially that of trustees, in formulating and executing fundraising activities.

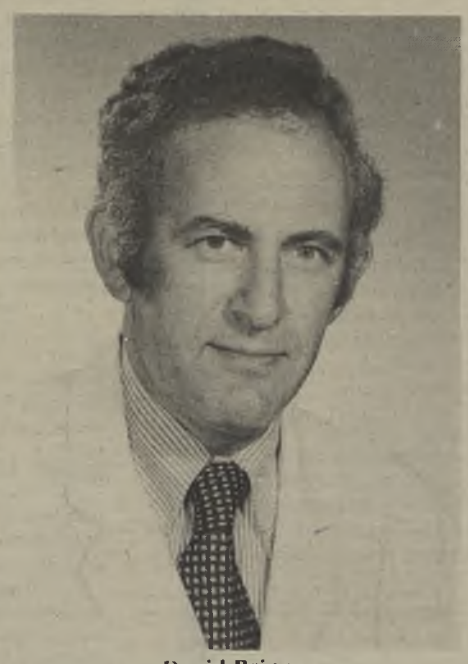
Stanford has not had, in recent times, a written statement of its purposes and objectives. Some may believe that it does not need one: a university is, after all, a place in which to gain and disseminate knowledge, and scarcely requires a formal description beyond that.

On the other hand, a great many organizations—including some that would appear to be as self-defining as universities—have found it useful to undertake deliberately the exercise of saying what they stand for, and what they hope to accomplish in support of those purposes.



I therefore offer this statement of mission and objectives, which was drafted in consultation with the Management and Organization Study Group and others. It will, I hope, lead to lively discussions about the purposes of the University and stimulate comments from the Stanford community. My goal is to keep the document alive through occasional reviews and revisions reflecting Stanford's vitality and changing circumstances.

Sincerely,



Donald Kennedy

New professorships begun at the School of Medicine

Two new endowed professorships at Stanford University Medical School will sponsor faculty members conducting research in neurological sciences and in the mechanisms and treatment of diabetes, the University Board of Trustees announced Monday.

Dr. Gerald Reaven, a professor of medicine/gerontology and a leader in understanding the role insulin plays in diabetes, has been named the Nora Eccles Harrison Professor in Diabetes Research.

Dr. David Prince, professor and chairman of the department of neurology, has been named the Edward F. and Irene Thiele Pimley Professor in Neurology and the Neurological Sciences.

Reaven, 54, has focused his research on the physiology, biochemistry and mechanism of action of insulin in the human body. He helped verify that it is certain cells' insensitivity to insulin, rather than a lack of insulin, that is the source of the most common form of diabetes. Tracking the problem to a cellular level, the physician has actively pursued new treatments aimed at improving tissue sensitivity to insulin, and thus improving control of the disease.

The Harrison Professorship is the first in the diabetes field at Stanford, and was established to honor Nora Eccles Harrison, a noted artist in ceramics, and founder of the Nora Eccles Treadwell Foundation, which sponsors advances in medical research in the areas of cardiovascular diseases, arthritis and diabetes, in California and Utah.

The chair is the second professorship at Stanford endowed by a member of the Eccles family. In 1973, the Marriner S. Eccles Professorship was established in the Graduate School of Business in the name of Nora Eccles' eldest brother, an internationally known banker, business executive and former chairman of the board of governors of the Federal Reserve System.

Prince, 50, holder of the Pimley chair, studies the intricate communication between cells in the brain. He has made important contributions to understanding the development of electrical signals and abnormal discharges in nerve cells, as well as the ways transmitters—chemical messengers of the nervous system—affect nerve cell behavior.

Prince and his colleagues were the first to record from inside neurons of the human brain, and have pioneered techniques for keeping brain tissue alive in an artificial environment to study the cellular abnormalities that can underlie neurological disorders.

Irene Thiele Pimley, a long-time San Francisco resident and patron of oriental art, was ill for many years with Parkinson's disease before her death in 1982. Her bequest to Stanford of more than $3 million for basic research into the causes and cures of Parkinson's and related neurological disorders reflected the interest she developed in the scientific background of the disease, her family said.

Pimley lived in China for many years his business interests there. He was one of the founders of the American International Group, a marine and business insurance fund that operates internationally.

Biotechnology company buys rights to DNA cloning patent

Creative BioMolecules Inc., of Brisbane, Calif., has licensed rights to the DNA cloning patent held by Stanford University and the University of California at San Francisco, Stanford announced last Monday, May 2.

John Callahan, president of the 1-1/2-year-old biotechnology company, said the patent was needed to perform quality control functions on chemically synthesized genes, including a product which offers the eventual possibility of helping persons with growth deficiencies.

The patent issued Dec. 2, 1980, covers the basic techniques of DNA cloning—often called gene splicing—which were developed by Dr. Stanley Cohen, professor of genetics at Stanford; and Dr. Herbert Boyer, professor of biochemistry at UCSF.

Seventy-four companies have taken out licenses, and current license holders total 68, said Katharine Ku, who administers the DNA cloning license for Stanford's Office of Technology Licensing.

Ku said several companies have dropped the license because they were no longer planning to use the technology, while other companies dropped out when they were acquired by other firms already holding a license.

The patent grants nonexclusive rights to this patent and a pending U.S. patent application which covers "products" of the technique. Ku said Stanford has not been actively soliciting new licensees until the outcome of the pending application is known.

Net proceeds from the licensing are split evenly between Stanford and UC and used to support research and education. To date, more than $2 million has been derived in licensing fees, Ku said.

One consumer health product, insulin, has been made and marketed from bioengineeering techniques based on the Stanford-UC patent. Other products are being made and sold in research, said Ku.

Creative BioMolecules, which has laboratories in the Boston and San Francisco areas, recently announced the availability of one such research product, its chemically synthesized gene for human growth hormone-releasing factor (hpGRF).

Callahan said the hpGRF gene will be offered for sale on a nonexclusive basis to any university or industrial group interested in the study or production of hpGRF.

The gene is a tool which a company eventually might use to manufacture medication which will trigger the release of a patient's natural growth hormone. Callahan estimated several years would elapse before any product could be available for widespread clinical use.

Creative BioMolecules specializes in nucleic acid and protein chemistries and their applications to the field of biotechnology. —Mike Goodkind

Public invited to Heart Health Fair

The first annual Heart Health Fair, sponsored by Stanford University Hospital, will take place from 11 a.m. to 7 p.m. Friday, May 20, at the Stanford Shopping Center. The public is invited, and the event is free of charge.

The Fair, intended to promote community awareness of available resources for the prevention of cardiovascular disease, is coordinated by the cardiac patient teaching committee of the department of nursing services at SUH.

Registered nurses, dietitians, and other health professionals will staff approximately 10 booths, according to Maureen Kennedy, R.N., nursing educational coordinator. These people will offer information on topics including the anatomy and physiology of the heart, cardiac risk factors, and yoga and aerobic exercise.

Blood pressure checks will be offered, and those wishing to donate blood will be able to make arrangements with representatives from the Stanford Blood Bank.

For further information on the Fair, call Kennedy at 497-6706.

Current Medical School faculty openings

Stanford University is an equal opportunity employer and welcomes nominations from women and minority group members and applications from them.

Stanford University Schooi of Medicine invites nominations and appiications of candidates for appointment to the fuil-time facuity as professor and chairperson of the department of anesthesia. This person would serve aiso as anesthesiologist-in-chief of the Stanford University Hospital.

Interested candidates should send curriculum vitae and supporting documentation to: Robert A. Chase, M.D., Chairman, Search Committee for Anesthesia, Stanford University School of Medicine, Stanford, CA 94305.

The division of infectious diseases of the department of medicine, Stanford University School of Medicine, invites applications for an M.D. Director of the Diagnostic Microbiology Laboratory.

Level of appointment, assistant or associate professor, will be determined by applicant's relevant experience and professional accomplishments. The primary function will be to introduce new diagnostic procedures and methods and to conduct a significant research program in diagnostic microbiology.

Other functions include internal medicine attending, infectious diseases consultation and teaching postdoctoral fellows and housestaff. The position is fully integrated into the division of infectious diseases.

Qualified applicants should submit a curriculum vitae, bibliography, statement of research and clinical interests, and two references to: Thomas C. Merigan, M.D., Head, Division of Infectious Diseases, Stanford University Schooi of Medicine, Stanford, CA 94305.

The department of genetics of Stanford University School of Medicine invites applications for an assistant professor of genetics.

Candidates should have scientific interests in the areas of human genetics (such as cytogenetics and human biochemical genetics), cellular genetics (particularly chromosome structure and function) or molecular genetics of higher eukaryotes, especially mammalian organisms. The position is full-time, tenure track, involving teaching and independent research.

Send curriculum vitae, bibliography and names of three references to: Dr. Stanley N. Cohen, Chairman, Department of Genetics, Stanford University Medical Center, Stanford, CA 94305.

Guthaner prepares to screen a patient using digital fluoroscopy, a relatively new, noninvasive diagnostic procedure for helping doctors detect disorders of the vascular system early on.

Radiologist predicts much use for modern, computerized diagnostics

An extension of a standard angiogram may provide more diagnostic information—while being less expensive, quicker, and more comfortable for patients—by incorporating modern computer technology, according to researchers at Stanford University Medical Center.

"Digital radiography is the wave of the future," said Dr. Diana Guthaner, assistant professor of radiology, who is researching its clinical applications.

Still not widely available, the procedure works by digitizing the information—converting it to computer language. In many situations, this allows physicians to get a better image than with a standard angiogram, which gives a picture of the body's vascular system by using X-rays.

More specifically, digital fluoroscopy is being used instead of more invasive angiograms to screen various diseases of the blood vessels, and determine heart function and blood flow. It is also being used to supplement angiograms in order to get the most out of the information obtained.

With standard angiograms, a catheter—a long tube thinner than a drinking straw—is threaded into the blood vessel physicians want to observe. An iodine contrast substance is injected through the catheter. The contrast blocks the X-rays from going through the vessel onto the film. Thus, the vessel appears white on the film, while everything else not blocked by the contrast appears black.

Piercing the skin with the catheter in order to thread it to the specific vessel is painful for the patients, Guthaner said. The iodine can be irritating, she added, which also causes pain. Many patients with heart or kidney failure cannot handle the large amounts of iodine necessary in routine angiograms. The substance makes the body retain water, she explained, which such patients cannot tolerate.

Digital fluoroscopy, on the other hand, is "virtually non-invasive and non-traumatic," Guthaner said. As a screening method, the iodine is injected into the veins rather than the arteries. It dissolves in the body's blood quicker. Therefore, its concentration in a specific vessel is lessened, which decreases the pain.

The procedure is quicker as well, she added. Following routine angiograms, the patient is required to stay in the hospital for at least six hours, which usually ends up being overnight. Digital fluoroscopy, however, is done on an outpatient basis, thereby cutting costs.

Rather than looking at an X-ray, physicians call up an image on the computer screen. This image can be enhanced by subtraction techniques, through which everything but the vessel in question is eliminated from the screen.

There are limitations to the procedure, however. Often the image is not quite clear, Guthaner said, because it can be obscured by any patient motion. And if the vessels overlap each other, she continued, the procedure is not effective.

But, she added, many patients who would forgo an angiogram because of its invasiveness will agree to digital fluoroscopy screening. This gives physicians the chance to diagnose disorders of the vascular system early on.

Digital fluoroscopy can be incorporated in standard angiograms, Guthaner said, providing more information without using more contrast.

Potential clinical applications, she continued, include determining what type of therapeutic intervention to use, aortic disease, patency of coronary bypass grafts, cardiac function, and as a follow-up for vascular surgery.

Trigg to head planning of new CHAS

Langston Trigg, Jr., has been named project director for the New Children's Hospital at Stanford (CHAS), announced Dr. Lawrence Crowley, chairman of the Board of Directors.

Trigg has been assistant director of facilities/projects of Stanford University Medical Center since 1980. He will assume his new position on June 6, 1983.

As project director, Trigg will be responsible for overseeing the organization of planning and construction of the new children's hospital at the Medical Center. He will report directly to the chairman of the board.

The boards of directors of Stanford University Hosptial (SUH) and CHAS agreed last summer to consolidate the pediatric facilities of both institutions. The new hospital—to be built at an estimated cost of $40 million—will be physically attached to SUH.

It will consolidate the 60 beds at CHAS and the 44 pediatric acute medical-surgical and pediatric intensive care beds at SUH. It will also house the Stanford-Children's Ambulatory Care Center, which provides 27 separate clinic services. It will continue to provide inpatient services in the 15 specialties now offered by both hospitals.

Langston Trigg, Jr.

Prior to coming to SUH, Trigg was facilities planner and project manager at Children's Hospital Medical Center in Oakland, where he headed up a $36 million new building project.

He received his master's degree in architecture from the University of California, Berkeley, in 1975.

What we eat counts: a medical guide

"Low calorie diets put people in a semi-starvation state," warns a Stanford University scientist in a newly published book.

"They affect the metabolism, including brain activity," said Dr. Keith Taylor, professor of medicine. "In the extreme, they cause people to become dehydrated, go into stupor, or even become comatose."

Safe diets, he continued, are those in which none of the essential nutrients is left out, and in which people lose weight at a slower, steady pace. Increased physical exercise, he stressed, can help a lot.

The new book, *Clinical Nutrition*, (631 pages, McGraw-Hill Book Company, $21.95), was co-authored by Taylor and Dr. Luean Anthony of the University of Texas Health Science Center.

"We wrote *Clinical Nutrition* to be a reference book, but also to relay the message that physicians need to think about patients' nutritional status whether they're sick or well," Taylor said in an interview. "Like a medical textbook, each chapter treats a different body system and includes the basic medical information about each one. The difference is that we emphasize nutritional matters in relation to each system."

Nutrition is a major factor contributing to health and disease, but unfortunately, physicians tend to overlook its importance, Taylor observed.

His book, he said, may be the first all-inclusive medical textbook focusing on the importance of what people eat.

"Our goal is to provide physicians, medical students, nurses, and all health care providers the information they need to be able to discuss eating habits and educate their patients," Taylor said. When a patient asks about a diet, for example, the physician has got to know about it, he added.

"You've got to know why that specific diet is good or bad," Taylor said. "If you've never heard of it, you lose your credibility with the patient. Then even if you give good advice, the patient most likely won't listen."

Keith Taylor

Taylor extensively evaluates all the popular diets. "Diets on which people eat as few as 300 calories a day, such as the liquid protein diets, are dangerous," he said. "Many deaths have been reported, especially among young women, probably due to cardiac complications."

On a more general note, Taylor and Anthony speculate that some of the diseases of western civilization may in part be due to a move away from the bushman's diet. In the past 10,000 years, agriculture and cattle herding have led humans to adopt diets possibly including too much animal food. Early man's diet, he said, consisted mostly of vegetables with some animal food. By comparison, modern man's diet is probably much more restricted.

While Taylor said all essential nutrients are probably known, the ideal balance of these nutrients, and the effects of an imbalance on the human body still remain a mystery. "In this area," Taylor concluded, "we've still got a long way to go."

—Shirley Kraus

Why animals are needed in m

The search for knowledge is on instinctive trait unique to human beings. Perhaps no body of knowledge collected during many centuries by man is more valuable than the scientific and medical information which has been developed in the laboratory, almost always with the help of animals.

Recently there has been interest and curiosity about endeavors where the relationship between humans and animals is joined in research and teaching. Stanford University Medical Center os a major research institution would like to answer some of the more common questions raised by the public.

Why are animals needed in research?

The enormous strides gained in medical knowledge during recent decades could not have been accomplished without laboratory animals. Dominick Purpura, dean of the Stanford medical school, estimates that more than 90 percent of all medical knowledge in the last century has been directly dependent on studies involving laboratory animals. The heart and heart/lung transplant programs at Stanford would not have been possible without first testing survival of the transplanted organs on dogs and monkeys. Several forms of deafness are now correctable by surgery because of the help of cats. As far as we have gone, there is still a long way to go. For every child fighting for survival against leukemia, there is a medical puzzle which only research can solve.

What do animals do to help researchers?

Certain animals are susceptible to the same diseases as humans. Often researchers can find the underlying cause by studying the disease as it occurs in animals. Before newly discovered medications are administered to people, research can assure their safety by closely assessing their effects on animals.

Granted, this information is important, but aren't alternatives available?

Yes, alternatives are available, and the use of such innovations as tissue cultures and computers has played an instrumental role in reducing the number of laboratory animals needed annually by about 35 percent in the past 10 years. This is an important conservation achievement, and has resulted in significant financial savings for taxpayers and nonprofit supporters of research. Scientists who regularly work with laboratory animals have played an instrumental role in finding innovative alternatives to animal research.

What about some of these alternatives—computers for example?

Computers simply cannot duplicate nature. But data analysis with the help of computers often enables scientists to derive answers more quickly than before. For example, a computer might screen whether a potentially helpful drug has any potential hazards by scanning whether other products containing similar materials have been found to be harmful. This helps rule out a clearly harmful substance before the drug is laboratory tested. But this knowledge is simply not complete. As a safeguard the drug must still be given to animals before it is issued to humans. Computers are clearly not a substitute for basic research; they don't create their own data. Therefore, animal research will continue to be necessary for the forseeable future.

Some persons have pointed to tissue cultures. Do these offer an alternative?

Research on cellular structure, blood samples or other biological materials, both human and animal, is being conducted extensively. Studies in a test tube (or *in vitro*) can provide many useful answers about what goes on in living organisms on the cellular or molecular level. But these studies can't really tell scientists very much about how a whole animal or human functions. For example, researchers can't learn from such studies how kidney failure affects other organs.. Also, since cells must be taken from living laboratory animals, in vitro studies do not eliminate the use of laboratory animals. In short, current technology doesn't exist to eliminate animal research.

Is all animal research essential? Critics contend there is repetitious or even frivolous research which appears to benefit no one.

The hallmarks of science are the control of variable factors and the reliability (or repeatability) of results. Therefore, experiments must be repeated—often at different locations by several researchers—to ensure that results are both accurate and objective. It is very difficult to judge in advance whether a particular experiment will yield important knowledge or benefits. If the outcome were definitely known, there would be little point in conducting the research. On the other hand, responsible scientists clearly have a moral and ethical obligation to ensure that waste does not occur—particularly if it involves the additional responsibility of dealing with research animals. This is a matter which institutions, individual scientists and even the public have a responsiblity for monitoring. But it would be irresponsible for scientists to guarantee in advance that their work will indeed always provide vital information or an immediate clinical outcome.

What animals are used in research?

A wide variety of animals is employed in research. Sometimes a species is selected because it has characteristics similar to man. Other times it is selected because its properties contrast with a parallel function in man. For example, dogs do not suffer from hardening of the arteries, so medical researchers can learn much by studying them to learn what differences exist between dogs and humans. Such knowledge might someday lead to curing of hardening of the arteries in humans. At Stanford researchers are attempting to find the source and cure for narcolepsy, a disease that causes sudden sleep attacks in people. Researchers have found that dogs often display symptoms of the malady in a manner nearly identical to humans. In other cases, such as basic studies about circulation, rats might offer an acceptable similarity—sometimes called a model—to man. To cite another example, monkeys provide an excellent model for studying whether certain forms of cancer are caused by viruses which might be prevented if vaccines could be developed.

What animals currently are being used in research at Stanford?

Palo Alto VA concludes investigation of injured research dog incident

Animal recovery cages are being constructed at the Palo Alto Veterans Administration Medical Center following an internal investigation about an injured research dog, the chairman of the facility's Animal Care Committee said last week.

Dr. Malcolm Anderson, assistant professor of radiology and assistant chief of radiology at the VA, said the report concluded that the research animal had received excellent treatment until the time it was taken from the facility by a medical student.

Anderson was directed April 6 by James DeNiro, director of the VA center, to appoint a panel and investigate the incident.

The report, Anderson said, confirmed earlier reports that the animal was bitten several times by another dog during the the post-operative period after experimental surgery.

"Specifically designed recovery cages are already being installed," said Anderson.

Until about two years ago, he said, laboratory dogs were routinely housed in small cages where contact between the animals was impossible. However, the recently installed runs, about 4-feet-by-6-feet, may have enabled the dog's paws to protrude beneath the walls of the run, allowing the dog in the adjacent run to bite them.

"Although conscious, the dog still recovering from a surgical procedure was not fully alert," Anderson said.

Besides the recovery cages, the report recommended that doors to rooms containing animals remain closed and that emergency phone numbers be posted near animal areas, Anderson said.

The dog was taken from the VA March 24, nine days after surgery, by a medical student who refused a veterinarian's request that the dog be returned to the hospital for treatment. The animal subsequently was put to death by a private Palo Alto veterinarian who told a news conference that he believed the dog was suffering and could not recover.

"If the dog did need further treatment—and we would really question whether that was the case—then treatment was clearly delayed by its removal by the student," Anderson said.

"If an animal emergency existed, as a lab worker in the program in which the dog was involved, the student should have immediately contacted personnel associated with the research program who were known to him," Anderson said.

The dog, which had been involved in an experiment intended to perfect techniques for repairing and replacing blood vessels, was found by student Peter Barran after the animal walked into a corridor through a door left ajar by painters, Anderson said.

Anderson said he was convinced that the incident was isolated and was not likely to recur.

Other members of the panel included Dr. Frances Conley, associate professor of surgery and chief of neurosurgery at the VA; Veterinarian John Hicks; Dr. Shoichi Kohatsu, associate professor and chief of surgery at the VA; and Dr. Marion Smith, professor of neurology (research).

—Mike Goodkind

June reception to honor Med School and Clinics staff

For the first time, Medical School and Clinic employees will be the focus of a reception honoring specific years of service, announced Rosemary Hornby, manager of the school's Human Resources Group.

The event is scheduled Thursday, June 2, from 3 to 5 p.m. in the lobby of Fairchild Auditorium. Those receiving invitations are employees who have 5, 10, 15 and 20 or more years of service. In addition, invited employees will be free to invite a fellow worker to join the group.

"We would like to provide an opportunity to show our appreciation for employees' years of service and hard work at specific anniversaries in their school career.

"Several of the people with more than 20 years started with the school when it was in San Francisco. In addition to the recognition, this event is an opportunity to reflect a bit on our history," Hornby said.

Hornby said her department was flexible in determining number of years service and will count time spent working in the Hospital or other areas of the university.

Employees of the Faculty Practice Program and the Clinics will be eligible for invitations to the school reception. Some employees, because of their work arrangements, might also be invited to the hospital and/or FPP events, she said.

ledical research laboratories

There are between 15 and 25 species at the Medical Center at any given time depending on research needs. The vast majority of animals—about 95 percent— are rats and mice of breeds which are helpful in research but too fragile to survive in the wild. Animals are chosen carefully for their ability to provide the best scientific outcome possible. In January 1983, for example, individual species present in the facilities of the Division of Laboratory Animal Medicine included three calves, 62 cats, six chickens, 43 old world monkeys, 103 dogs, one ferret, 13 reptiles (including frogs, turtles and toads), one goat, 88 guinea pigs, 99 hamsters, 4,612 mice, one pig, 536 rabbits, 1,867 rats, 13 owls, and 84 ground squirrels. In addition there are separate specialized breeding colonies for monkeys and mice.

Where does Stanford get its animals?

Most animals are purchased from specialty suppliers, including the rats and mice bred specifically for biomedical use. Farm animals are purchased from agricultural suppliers, while dogs and cats currently are bought from pounds and shelters outside California. Legislation currently is pending which would make the use of pound animals in research illegal. Stanford, and other institutions such as the University of California, takes the position that it would be wasteful to breed dogs specifically for the purpose of research while annually millions of animals are euthanized because they are unwanted.

What about the use of animals in teaching?

Institutions sometimes use animals to demonstrate anatomical principles or surgery techniques to students. However, Stanford does not regularly use animals in the formal training of medical students, although research animals frequently are employed in the education of physicians or scientists who must master skills eminently needed for a human application.

What is Stanford's position on animal welfare and what standards are required for animal care?

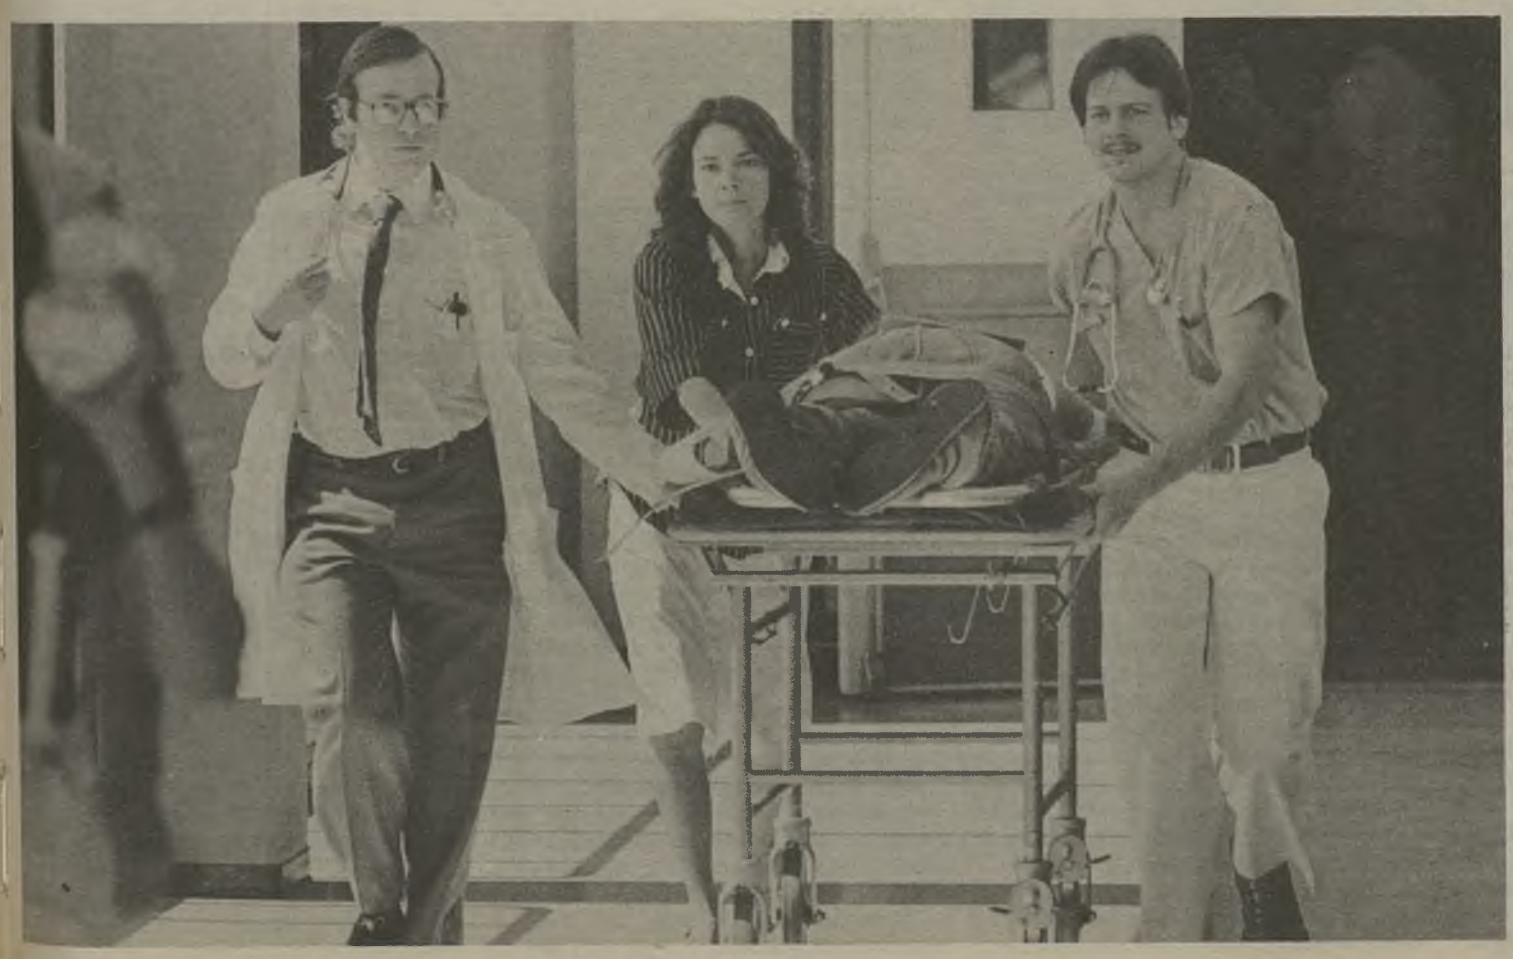
Stanford University clearly has a moral and ethical obligation to protect its laboratory animals. And it also has explicit obligations rooted in law. Under federal regulations, researchers must take steps to eliminate any pain greater than a pinprick. In all surgical procedures involving animals, anesthesia must be used, and operating room standards are similar to those required for humans. Great precautions are taken to ensure that animals do not suffer pain, even when they must be killed so that research may be completed. Of course not all animals are euthanized. Stanford, for example, has a colony of rabbits whose contribution is to provide small quantities of blood which is made into serum used in the treatment of heart transplant patients. These rabbits on the average live far longer lives than rabbits in the wild or those kept as pets. Primates undergoing long-term behavioral studies live and breed in colonies at Stanford without the risks of predators or untreated disease found in nature. Dogs participating in medical experiments live in kennels under conditions conforming to stringent government guidelines, which include required exercise for each animal.

Who at Stanford is directly responsible for providing and ensuring standards of quality animal care?

Direct care is provided by the Division of Laboratory Animal Medicine, comprising a staff of 30 persons, including about 20 fulltime employees directly involved in the "hands on" care of individual animals. The Division employs a veterinarian and at least one resident from an accredited veterinary program. The veterinarian has the obligation and authority to stop any experiment anywhere in the university if evidence of abuse to animals is discovered. A nine-member committee, including a student, a law professor, and a veterinarian not otherwise connected to the university, supervises the division and its functions in animal health and welfare.

Who outside the institution is responsible for monitoring animal care?

There are numerous applicable laws and regulations concerning treatment of animals. The United States Department of Agriculture is the primary agency responsible for enforcing the requirements of the Animal Welfare Act, and agents conduct frequent, unannounced inspections of facilities.



Does Stanford see areas where improvements can be made?

Yes, particularly in the physical facilities where animals at Stanford are housed. Although quality care is being provided in the current aging facilities, Stanford believes it can improve both quality and efficiency. A new $10 to $12 million state-of-the-art animal facility is being built to replace older existing facilities. When this centralized facility is completed in 1984, Stanford will be able to provide the finest level of animal care possible. In the meantime, current widely scattered facilities are undergoing renovation or temporary replacement.

Do animals benefit from the ongoing research?

Absolutely. Medical answers which are applicable to humans very often can be used to alleviate diseases and suffering among animals. These medical solutions are used for all animals, including those found in laboratories, agricultural environments and in human company as pets. Perhaps one of the most dramatic examples of research valuable to animals and humans involved an attempt to keep infant sea lions alive using cow's milk. Research disclosed that lactose, milk sugar, was damaging to the young pups. Since human premature infants fed cow's milk often exhibited the same symptoms as sea lion pups, research at Stanford led to the development of an infant formula beneficial to both human infants and sea lion pups who could not be fed by their mothers.

The issue involved with the humane treatment and ethics of laboratory animals is ongoing. Stanford is anxious to maintain a dialogue with other researchers and the public who share a concern for this topic. If you have questions or wish to discuss this issue, please write Director, Division of Laboratory Animal Medicine; Quad 7, Building 960T, Stanford University; Stanford, CA 94305.

Word was that the roof caved in on West 3B in the Hospital Monday morning, but fortunately it was only a drill. Hospital personnel responded swiftly when the disaster drill was announced, and evacuated 20 volunteer "casualties" from the site. Special patient holding and evaluation ("triage") areas were set up at the mock disaster site, at a secondary site near East 3B, and at the Emergency Department. The periodic drills are aimed at helping departments revise and consolidate their disaster plans in preparation for the "real thing."

PHOTO BY ED SOUZA

Medical Center Calendar

WEDNESDAY, MAY 11

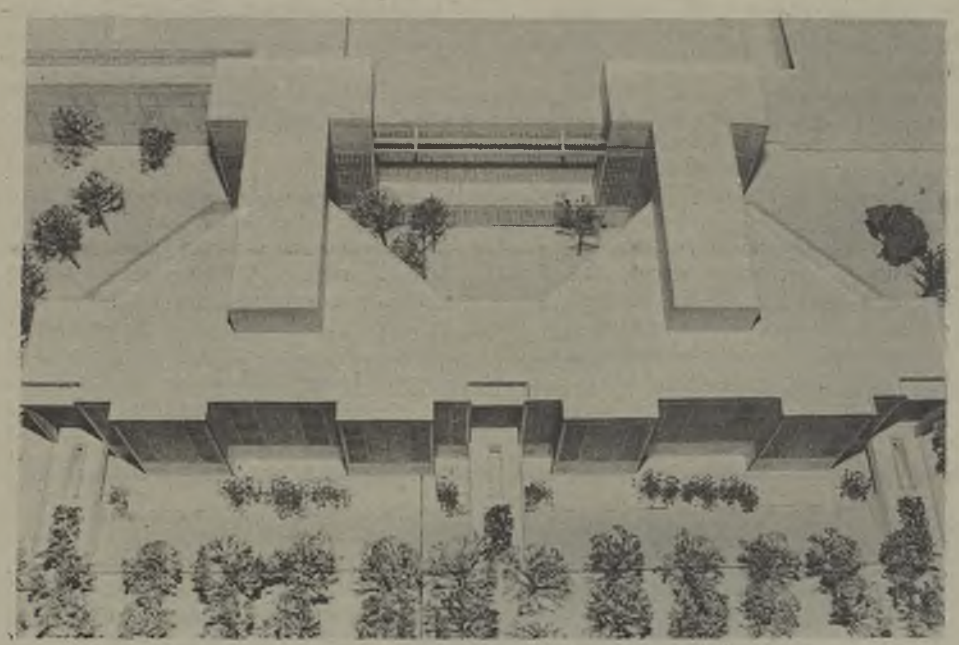
Registration deadline: for Nursing Educational Services Basic EKG Interpretation Workshop to be held May 25, June 1, 8 and 15, from 7 till 9 p.m., 900 Welch Road, room 15. Intended for nurses with little or no experience in dysrhythmia interpretation. Basic instruction in cardiac anatomy, physiology and electrophysiology, and "hands-on" practice of interpretation with instructor guidance. A fee is charged, and continuing education credit is available. For further information, call Carole Kidder at 497-6366.

Hematology support group: Meeting for patients with leukemia, myeloma, hemophilia, and other hematologic diseases. Family members and significant others welcome. 10:30 a.m. till noon, TF-122c. For further information, call 497-6961.

Dept. of Neurology grand rounds: "Neuronal Substrates of Elementary Associative Learning"—Richard Thompson, Ph.D. 5 p.m., Palo Alto Veterans Administration Medical Center, building 7, room B108.

Div. of Hematology noon conference: "Drug cross resistance in cancer chemotherapy"—Dr. Branimir Sikic. Noon, L201.

Stanford Help Center workshop: "Surviving Life-Threatening Surgery—Coping with the Emotional Aftermath"—Lawrence Starkey, L.C.S.W. Noon to 1:30 p.m., Stanford Help Center/Galvez House.



Dept. of Cardiology: "Nuclear Magnetic Resonance Imaging Systems"—Dr. Joel Blank (Diasonics Corp.) 7:30 p.m., Fairchild Auditorium.

THURSDAY, MAY 12

Friends of Psychiatry and Behavioral Sciences special program: "No Less a Woman: Self-Image and Sexuality After Mastectomy"—Regina Kriss, Ph.D. Film, lecture, and panel discussion. 8 p.m., Fairchild Auditorium. For further information call 497-6376.

Dept. of Medicine grand rounds: "Candidosis in the Immunocompromised Host"—Dr. Frank Odds. 8:30 a.m., Fairchild Auditorium.

Dept. of Pharmacology seminar: "Gene Amplification in Mammalian Cells"—Dr. George Stark. 4:15 p.m., Pharmacology Library R358.

This study model of the hospital modernization design has been built by the architects to assist in the planning stages. A final model will be made later this summer for display in the hospital.

Committee OKs modernization design

The University Committee on Land and Building Development (UCLBD) on May 3 gave its unanimous approval to the proposed architectural design for the Stanford University Hospital modernization.

The hospital plans next will be submitted for approval of the City of Palo Alto Architectural Review Board. They will be discussed at a study session of the city group on May 24.

Members of the Hospital Board of Directors approved the design at their April 13 meeting. The University Board of Trustees will review the design at their June 10 meeting.

The university committee (UCLBD), which consists of faculty, staff and student representatives, examined land use, circulation, elevations, materials to be used in the building and landscaping.

The architects for the project are the NBBJ Group, Palo Alto. The firm of Carter Hull Nishita McCulley Associates of San Francisco is preparing the landscape design.

A design review committee, composed of university architects, a Hospital Board member, representatives of campus and medical center facilities departments, and others, has worked with the architects through various studies of the building and development of landscape details.

The design includes a four-story building which will include a diagnostic and treatment wing and eight new nursing units, to be located immediately next to the present hospital building.

The architects describe the addition as a quiet background building with a design that minimizes its scale. It will have a sense of unity with the original building, designed by Edward Durrell Stone, without duplicating it. It will be close in height to the existing building.

The primary circulation areas of the new building include an atrium and courtyards adjacent to wide corridors.

Dept. of Biochemistry seminar: "Cytoplasmic Activation of Human Nuclear Genes in Stable Heterokaryons"—Dr. Helen Blau. Noon, M114.

FRIDAY, MAY 13

Dept. of Psychiatry and Behavioral Sciences lecture: "Isolation and Structural Characterization of Neuropeptides"—Dr. Frederick Esch (Laboratories for Neuroendocrinology, Salk Institute for Biological Studies, La Jolla). 3 p.m., M114.

First Annual Symposium of the Program in Molecular and Genetic Medicine. 8:15 a.m. till 5:30 p.m., Fairchild Auditorium. For information and to register, call the Office of Public Events at 497-6389.

Div. of Family Medicine Friday noon lecture series on Women and Health: "Barriers to Health Care for Older Women"—Donna Ambrogi (managing attorney, Bay Area Law Center on Long Term Care; coordinator, Care Giver Task Force, Older Women's League). Noon, M114.

Dept. of Pediatrics grand rounds: "Hepatitis B Vaccine"—Dr. William Robinson. 8 a.m., M106.

Div. of Child Psychiatry grand rounds: "Auditory Attention Strategies in Hyperactive Children"—Margot Prior, Ph.D. (LaTrobe University, Australia). 11 a.m. till 12:15 p.m., Faber Auditorium, Children's Hospital at Stanford.

Div. of Child Psychiatry special presentation: "Theraplay: A New Treatment Using Structured Play for Problem Children and Their Families"—Dr. Ann Jernberg (Theraplay Institute, Chicago). 1 till 3 p.m., Clinic Conference Room, Children's Hospital at Stanford.

Dept. of Gynecology and Obstetrics grand rounds: "New Developments in the Treatment of Postmenopausal Patients"—Dr. Howard Judd (UCLA). 8 a.m., A336.

MAY 14 and 15

Dept. of Anesthesia workshop: "Hemodynamic Monitoring/Pulmonary Artery Catheterization." 7 a.m. till 5:30 p.m., Fairchild Auditorium. Designed for physicians dealing with critically ill patients with hemodynamic instability in operating room and critical care areas. For further information, call 497-7662.

MONDAY, MAY 16

Registration deadline: for Nursing Educational Services Legal Workshop to be held Monday, May 23, from 8:30 a.m. till 4:30 p.m., at the Palo Alto Holiday Inn. Open to all hospital personnel. Will address nursing practice according to state and federal regulations, professional and JCAH standards, etc. A fee is charged, and continuing education credit is available. For further information, call Carole Kidder at 497-6366.

Dept. of Medical Microbiology seminar: "A New Mechanism for Sensitivity in Biological Regulation"—Dr. Daniel Koshland, Jr. (UC-Berkeley). 1:15 p.m., M114.

TUESDAY, MAY 17

Dept. of Dermatology special lecture: "Cutaneous Markers of Endocrine Disease"—Dr. James Beckett. 10 a.m., A153.

Dept. of Genetics seminar: "Molecular Analysis of the Human X-Chromosome"—Dr. Louis Kunkel (Harvard). Noon, S336.

Stanford Help Center workshop: "Helping Children Grow Through Limit Setting—a lecture discussion for parents of preschool children"—Sharon Levin, L.C.S.W. Noon to 1:30 p.m., Help Center/Galvez House. To reserve a place, call 497-4577 before May 12.

Dept. of Psychiatry grand rounds: "Psychotherapy with Schizophrenic Patients"—Dr. Otto Will, Jr. 11:30 a.m. till 1 p.m., Fairchild Auditorium.

WEDNESDAY, MAY 18

Div. of Hematology noon conference: "The Spleen in Myeloproliferative Syndrome"—Dr. Theodore Cohen. Noon, L201.

Div. of Orthopedic Surgery grand rounds: "Total Hip Prosthesis Design"—Dr. Indong Oh. 7:30 a.m., M114.

Calendar items must be received in the Office of Public Events, 800 Welch Road, Suite 221, by the Wednesday noon seven days prior to the issue in which the activity is first to appear. Contributions from the Hospital, Medical School, and Clinics are welcome. For further information call 497-6389.

...News Notes...

Rose Grobstein, *chief pediatric social worker at SUH, was among three nationally prominent social workers honored last month by the National Perinatal Social Workers Association.*

In ceremonies in Boston last month, Grobstein, a charter member of the association, was given a plaque noting her pioneering efforts in the field. Grobstein helped found the first intensive care nursery at Stanford in 1962.

* * * *

Invitations from Dean Dominick Purpura for the Medical School Staff Recognition Reception were sent out recently. The reception is scheduled for Thursday, June 2, from 3 to 5 p.m. in the lobby of Fairchild Auditorium.

Invitations were sent to medical school employees with five, 10, 15 and 20 or more years of service, but past employment records are difficult to trace and the Human Resources Group would like to reach all employees who are eligible to attend this year's reception. Those who feel they should have received an invitation but didn't, should call their department administrator or the HRG at 497-5975.

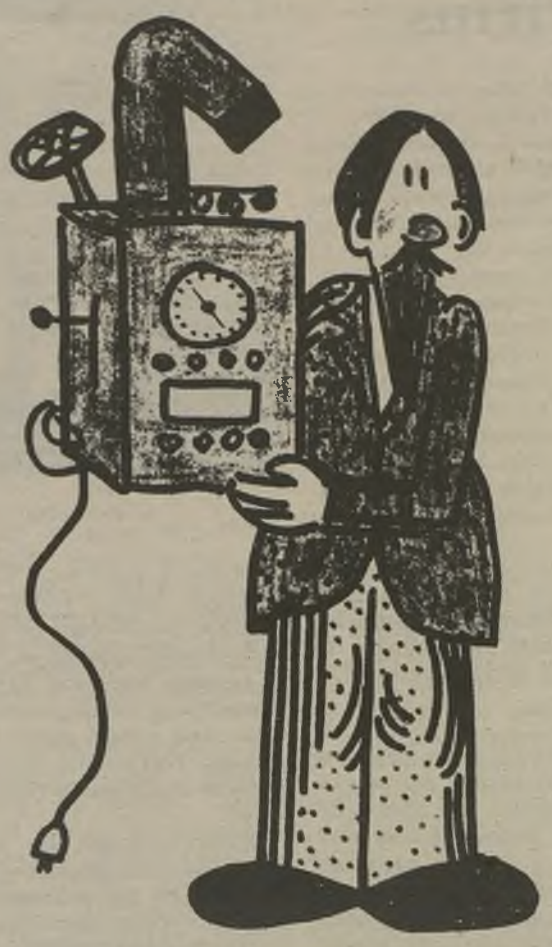
* * * *

Doctors, nurses and administrators of SUH are reminded to please fill out and return the recently distributed questionnaire regarding the perceptions these three groups have of one another, to the department of nursing as soon as possible.

Respondents to the questionnaire, which takes about 15 minutes to complete, remain anonymous.

Student entrepreneurs conference expects 1,000 May 21

Organized entirely by students, Stanford's second annual Conference on Entrepreneurship is expected to attract more than 1,000 persons Saturday, May 21.



Featured speakers will include:

* Jim Treybig, founder of Tandem Computers;
* J.R. Simplot, inventor of the frozen French fry, now a leading investor in high technology;
* Sandra Kurtzig, founder of ASK Computer Systems;
* David F. Dixon, founder of the U.S. Football League and World Championship Tennis;
* Nolan Bushnell, founder of Atari, Pizza Time Theater, and Catalyst; and
* Morton Binn, chairman of Atwood Richards, an industrial bartering firm.

Dedicated to the memory of Frederick E. Terman, the Stanford electrical engineer popularly known as "the father of Silicon Valley," the conference will include 40 workshops on opportunity development, capital formation, industry trends, and entrepreneurship in large organizations, among other topics.

Workshop leaders will include James D. Guzzy, founder and president NTX Communications Corp., Santa Clara; Donald M. Dible, author of *Up Your Own Organization*; Craig Taylor, Asset Management Co., Palo Alto; Paul Hait, founder, American Innovation Corp., Palo Alto; William Younger, partner, Sutter Hill, Menlo Park; Lawrence Wodarski, acting district director, U.S. Small Business Administration; Charles Cagnon, author of *Business Ventures of Citizen Groups*; and Ronald Cape, board chairman, Cetus Corp., Berkeley.

Also: Thomas G.P. Guilbert and Judith Ann Hartmann, partners, Guilbert and Hartmann, Portland; James H. Pooley, editor of *Trade Secrets*; George Limbach, partner, Limbach, Limbach, and Sutton, San Francisco; James E. Rueter, president, Entrepreneur Support Center and Paula Colozzi, president, Entrepreneur's Alliance, Santa Clara; Patrick Corman, vice-president, Regis McKenna, Palo Alto; Rick A. Warp, president, Technical Advisers, Inc., Palo Alto; Thomas A. Fairey, chairman and founder, AIMS and PLUS, Inc., Austin, Texas; and Ellen Lapham, president, Syntauri Corp., Los Altos.

Industry trends will be discussed by Chuck Peddle, president, Victor Technologies, Scotts Valley; Robert Price, president, the Price Corp., San Diego; David B. Lockton, chief executive officer, Dataspeed Inc., Burlingame; Robert W. Pittman, chief operating officer, Warner Amex Satellite Entertainment; Marcia Klein, president, The Learning Co., Portola Valley; William Little, chief executive officer, MMR Technologies, Mt. View; William H. Hill, president, William Hill and Co., Napa Valley; and Charles Rosen, cofounder and chairman, Machine Intelligence, Inc., Sunnyvale.

Also: Bijan, president and designer of men's clothes, Beverly Hills; David A. Norman, cofounder and president, Businessland, San Jose; Ken Williams, president, and Roberta Williams, director, Sierra On-Line Inc., Coarse Gold, Calif.; Alain Leonnet, president, Lion Imports, San Francisco; Happ Klopp, president, The Northface, Berkeley; and Roy Larson Raymond, president, Victoria's Secret, San Francisco; Richard Meehan, president, Earth Science Associates, Palo Alto; Thomas Volz, vice president-marketing, Southwest Airlines, Dallas; Linda Cline Chandler, partner, Chandler Roberts, Inc, Santa Clara.

Other workshop leaders will include Niels Reimers, Stanford director of technology licensing; Bernard Ross, board chairman, Failure Analysis Associates, Palo Alto; Michael Boone and Larry Burke, Boone Corp., Newport Beach, and John Halamka, Colossus Computers, Stanford; Carolyn Morris, chief executive officer, Xpertek, Inc., Palo Alto; Robert Halperin, president, Raychem Corp., Menlo Park; John J. Gray, senior vice president, Western Pacific Railroad, San Francisco; William F. Miller, president, SRL International, Menlo Park; and Tom Peters, coauthor, *In Search of Excellence*.

Registration for those outside Stanford is $40, including lunch and a wine and cheese reception. Advance registration must be postmarked by May 12, including checks payable to Stanford University Center for Entrepreneurship. For more information, phone (415) 497-9651.

Last year's conference on entrepreneurship attracted more than 500 Stanford students from engineering, business, and the liberal arts.

This year's conference is cochaired by Bruce Johnson, senior in mechanical engineering, and Mary Van Maren, first-year MBA student in the Graduate School of Business.

It is one of several activities coordinated by the newly formed Stanford Center for Entrepreneurship, located at Owens House. Thayer Wendell, second-year MBA student, heads the student management committee. Members include Deborah Chen, senior in mechanical engineering; David Gleba, junior in electrical engineering; John McCarthy, second-year MBA; Mike Orsak, senior in economics; LuAnn Piccard, 1982 graduate in mechanical engineering; Steven Wisch, senior in political science; and John Zoglin, first-year MBA.

Center activities include a new venture assistance program, on-site visits, and internships with startup firms.

Entrepreneurs serving on its Board of Advisers include Howard Head, inventor of Head skis and the Prince tennis racket; Jim Levy, president of Activision; and Philip S. Schlein, chief executive officer of Macy's of California.

Board members from Stanford are James Adams, associate dean of engineering; Jean Fetter, associate dean of graduate studies and research; Robert Jaedicke, dean of the Graduate School of Business; William M. Kays, dean of the School of Engineering; Gerald Lieberman, vice provost and dean of graduate studies and research; and Prof. Karl Vesper of the University of Washington School of Business.

Students seem relatively happy with campus accommodations, survey shows

Though griping about dorm living is an accepted form of letting off steam for students, Stanford students seem to be relatively happy with their accommodations, according to a recent survey conducted by Facilities and Services.

The survey covered residents in all types of student housing facilities except Escondido Village. The questions aimed to determine the students' perception of their personal safety and the safety of their property, the state of physical repair and cleanliness of their quarters, and the responsiveness to their needs of the Housing Facilities Office staff.

Of the approximately 1,560 questionnaires distributed, 538 (34.5 percent) were completed and returned.

Most students feel safe from personal harm in their residences—50.9 percent feel reasonably safe and 41.6 percent very safe. So far as the threat of fire is concerned, 54.1 percent feel reasonably safe and 27.5 percent very safe.

Most students have not reported health, safety, or security hazards, but of those who did (19.1 percent) 26.2 percent had to make a second call to get the hazard repaired, and 42.7 percent thought the repair was not made promptly.

One fifth of the students felt their personal property was "somewhat insecure" or "very insecure" in their campus residences. Slightly more than 6 percent reported something had been stolen from their room.

Two out of five felt their bikes were insecure when parked outside the building. Only one in 10 felt that way about their cars. A majority felt there was not enough space for bikes, and 45 percent felt the same way about auto parking.

About three out of four students felt their dorm room, lounge, bathrooms, grounds, and furnishings were in "very good" or "reasonably good" physical repair. A similar majority felt their accomodations were at least "reasonably clean."

Roughly two-thirds said their residence temperature and lighting was "just right," But one third felt common areas were "too cold" and similar numbers felt lighting in corridors, lobbies, and outside was "too dark."

Ample space on the questionnaire form was allowed for comments, and more than 600 were received. These were transcribed by living groups and were distributed to their managers.

Jack Albrecht, assistant director of facilities and services and project manager for the measures of responsiveness program, stated "although we would like to have had at least a 50 percent response, we have received sufficient response from residents for the various types of housing to guide the staff of the Housing Facilities office in the most effective use of their resources."

Terry McGovern, manager of housing facilities, said, "We are pleased with the evaluation student residents have given our facilities managers within the four housing areas surveyed. We will analyze as best we can all critical data and comments received, and improve our communication with those areas of housing. Our priorities for improvement will be directed first toward issues of safety, followed by housekeeping, physical repair, personal comfort, and others."

The next survey to be reported upon will determine the responsiveness of the Facilities Project Management division of Facilities and Services, according to Jason Mavis, associate vice-president, Business and Finance. This will be followed by surveys for Purchasing and Contracts, Stores, Commissary, Word Graphics, and Operations and Maintenance.

"The surveys being taken are invaluable in helping us apply resources where they can best be used to satisfy the needs of the community and provide the services of most benefit," Mavis said.

Six themes of success mark innovative high-tech firms

To stimulate innovation, corporate managers should follow the example of America's own high-tech firms—not Europe or Japan, a Stanford expert contends.

Both small and large, these companies exhibit six "themes of success," says Modesto A. Maidique, associate professor of engineering management. In a study based on 100 interviews with high-tech executives, coauthored by Prof. Robert H. Hayes of the Harvard Graduate School of Business, he describes the themes as:

1) Strategic focus: an extraordinary concentration on products, markets and business themes, which results in good understanding of customers and technologies.

2) Adaptability: the daring and willingness to take a "you bet your company" kind of risk to stay abreast of technology and the market.

3) "Hands on" top management: in large companies as well as small, good high-tech managers understand the fundamentals of their technology, interact directly with key experts, and have the authority to make change happen.

4) Entrepreneurial culture: the hallmarks include close, open communication; dissolving of the classic organizational barriers to innovation; and multiple funding sources for new ideas.

5) Organizational cohesion: a commitment to long-term employment, a common purpose, and few accoutrements of seniority, rank or specialization. "The appearance of an executive dining room is one of the surest signals that a company has stopped being a high-tech firm," Maidique says. One chief executive said, "the toughest job in managing high technology growth is too keep the firm from ripping apart at the seams."

6) Sense of integrity: honesty, fairness and openness are not sacrificed for short-term gain.

One chief executive officer explained that "in such a high risk environment you must have mutual trust to succeed."

Strategic focus, organizational cohesion, and integrity all imply stability and conservatism, Maidique observes. But adaptability, entrepreneurial climate, and hands-on management are synonymous with rapid or even precipitous change. "The fundamental tension is between order and disorder," he says.

"The successful high-technology firm must be managed differently at different stages of the firm's evolution. A steady commitment to order and organization will produce one-color, Model T Fords. Continuous revolution will bay incremental improvements and productivity gains.

"Successful companies alternate periods of continuity and consolidation with rapid reorientation that redefines a business to capitalize on changes in competitive condition and technology."

Core job

A core job of high technology managers is overcoming the traditional patterns of established organizations, he adds. "By defining jobs and responsibilities, and arranging them in serial reporting relationships, established organizations encourage the performance of a restricted set of tasks in a programmed, predictable way. Not only do formal organizations resist innovation; they often act in ways that stamp it out."

Small firms as well as such large organizations as IBM, Texas Instruments, and 3M have found that periodic change is required for adapting to their environment. And all reorganized from a position of relative strength, rather than in response to financial difficulties.

The sustained, sharp strategic focus of the successful firms contrasts dramatically with conglomerates.

"Two of yesterday's technological stars, ITT and RCA, have paid dearly for

Modesto Maidique

diversifying away from their strengths," Maidique notes. "Today they are both trying to divest many of what were once highly touted acquisitions."

Leading high-tech firms concentrate research and development in one or two areas, and sustain support even in slack periods. This enables them to dominate research in the more risky, leading edge area.

Strategic focus also is reflected in continual reinforcement of selected priorities by top management: planned manufacturing improvement at TI; customer service at IBM; entrepreneurial product champions at 3M; and new products at H-P.

Yet these and similar firms, large or small, are willing to adapt rapidly. They have the agility and daring to try "wrenching shifts in direction" to maintain their market leadership.

In its early years, General Motors shifted rapidly into diesel engines, revolutionizing the railroad industry. In the mid-1960s, IBM redefined the boundaries of competition for decades with its introduction of the System 360.

Besides probing the potential of new technology, top managers must be willing to internalize the risks and make major changes in organization and resource allocation, Maidique declares. "That is why few firms are as tough to compete against as those whose success is due largely to the leadership of a small entrepreneurial group, one which is still in charge and at the height of its powers."

SA-1 companies

The speed and efficiency with which small companies can develop innovative products often baffles managers in large firms.

To foster an entrepreneurial culture, H-P splits up divisions soon after they exceed 1,000 employees. TI is subdivided into 32 divisions and 3M had 40 until recently.

Both TI and 3M also provide a variety of funding sources for internal entrepreneurs.

At IBM, "we encourage our scientists to rebel," one manager said. The disk memory for computers was developed as a bootleg project by a handful of employees who broke the rules and risked their jobs because they believed in their project.

Maidique notes that "young people in a rapidly evolving technological field are often as good, sometimes better, sources of new ideas as more experienced persons."

Besides breaking down barriers based on age, successful high-tech firms foster collaboration between product designers, marketing and manufacturing personnel. Rewarding excellence in each of these fields is important. Some firms consciously rotate managers through different functions to encourage greater cooperation instead of competition between departments.

The integrity of top managers includes candid self-understanding.

"Successful high-tech companies are able to reconcile their 'dream' with what they can realistically achieve. This is one of the reasons they are extremely reluctant to diversify into unknown territories," he comments.

Maidique previewed the findings of his research at a meeting with Stanford Engineering School alumni in Los Angeles, hosted by TRW, May 7.

Japan's cost advantage in producing cars grossly exaggerated —Bresnahan

Japan's cost advantage in car production has been "grossly exaggerated," according to Assistant Prof. Timothy Bresnahan of the Stanford Economics Department.

Estimates that the Japanese have a $1,500 to $2,000 advantage per $5,000 subcompact are "a big myth," he says.

Highly publicized at a 1981 conference which Bresnahan organized, these estimates by James Harbour and others contain two fundamental flaws:

1) They give equal weight to each of the Big Three U.S. producers, when in fact General Motors has the lowest costs and about half the total market; and

2) They assigned idle plant costs to U.S. cars at a time when Japanese automakers were operating near capacity.

When these two factors are taken into account, the likely Japanese cost advantage for subcompacts probably runs between $300 and $800 a unit, Bresnahan says. This is still a significant difference, but suggests the U.S. remains competitive with imports.

The U.S. labor cost disadvantage of about $500 per car is about the same as the cost of transporting a new car to the U.S. from Japan, he notes.

The Japanese auto industry benefited from a permanent shift toward smaller cars as a result of the oil price shocks of the 1970s. "They had the small car lines in place where the U.S.—and to a lesser extent, Europe— did not," he adds.

Where American firms now are scrambling to improve their efficiency in assembly work and the "fit and finish" of new cars, they have moved ahead of the Japanese in the technology of new models, Bresnahan says.

U.S. manufacturers are "vastly better" on engines and drivetrains. Most of the U.S. product lines are "much newer" than the Japanese and the recall rate should go down with time.

Except for Honda, Japanese car designs are now "quite mature" and will pose an increasing problem over time for the imports, he adds.

"The U.S. had—and has—a virtual monopoly on the market for larger cars," and now is benefiting from a domestic market shift in this direction.

Japanese manufacturers have "a lot on the ball" and "can produce excellent autos," he concedes. Their advantage in assembly and in-plant technology was one factor in the recent GM-Toyota agreement to build cars at Fremont.

"It's easier to change a car than reshape a work force," Bresnahan says. While some workers are now being recalled to U.S. plants, American firms generally will be making greater use of new technology for production as the market strengthens.

The Stanford economist sees no way in which more than half the auto workers now laid off will return to work in the same industry.

U.S. quality will "pick up quite a bit" and newer product lines will make American industry very competitive, he adds.

The new Corvette, which has sold as much as $10,000 above dealer list, and the Camaro are signs of the future. "Look at the sporty end to see where the trends are," Bresnahan suggests. "That's where the payoff comes first from new technology. The cars look good and are well put together."

Where U.S. industry made the best of a bad situation from politically mandated increases in fuel economy in the past, the Japanese now are doing so with voluntary export constraints.

Both GM and Ford will use up their fuel economy "credits" sometime in 1984, Bresnahan says.

The export constraints encouraged the Japanese to move toward larger cars, which has proven to be the market trend, he adds. Higher profit margins per unit have been plowed back heavily into stronger dealer networks, strengthening their long-term competitive position.

While Big Three U.S. sales appeared relatively flat until this month, the dollar volume rose 15 percent or more, reflecting higher unit prices. This was much faster than consumer spending generally.

While Chrysler may have "mortgaged its future" in battling back toward current profitability, Ford "needs only one hit" to do well and "GM can make a mint," he believes.

While Ford has done well internationally, there's very little export market for most U.S. cars. On the other hand, the middle third of the U.S. has retained a strong preference for U.S.-made cars and "demographics are now on the American side," Bresnahan says. As young families have more children, the demand for six-seat cars and station wagons will rise.

He personally drives a 1970 Volkswagen with a rack on the rear for a Japanese bicycle.

His views sparked lively discussion at a meeting of the Stanford Center for Economic Policy Research April 12.

Center for Integrated Systems groundbreaking ceremony planned May 19

The Center for Integrated Systems at Stanford— America's largest joint venture in electronics, computers, and related fields—traces its origin to the blind daughter of a Stanford family.

Formal groundbreaking for the new $14.5 million center is planned at 4:30 p.m. Thursday, May 19, at the site. Already deeply excavated, it is located near the Campus Drive and Via Palou intersection, between the Medical Center and the Main Quadrangle. (Principal speaker will be William Hewlett, cofounder of Hewlett-Packard. Hewlett-Packard President John Young and Richard DeLauer, Undersecretary of Defense for Research and Development, will speak at 8 p.m. following an invitational dinner.)

The center's construction is made possible by $750,000 in gifts from each of 19 major corporations. Federal research funds in programs linked by the center has risen from $8 to $12 million in the past two years.

Help for blind daughter

But the CIS story began with people, not statistics. Prof. John Linvill, an electrical engineer, wanted to help his blind daughter, Candace, read regular books. He invented an electronic device to do just that, called the Optacon.

William R. Hewlett

To work, the Optacon required a large integrated circuit. This was designed and built in 1970 under the supervision of James Meindl, an electrical engineer whom Linvill recruited as an associate professor.

Then the largest integrated circuit built on any campus, the Optacon chip was three by four millimeters and contained 144 phototransistors. Meindl and his colleagues kept on building record-breakers in the Integrated Circuits Laboratory on campus.

Linvill and Meindl now codirect the Center for Integrated Systems. It has attracted 60 affiliated faculty at Stanford from electrical engineering, computer science, materials science, applied physics, and radiology.

Just three years ago—in 1980—the center was nothing more than an idea with a "hunting license" for funds. But the hunters were very well known in Silicon Valley: Young, of Hewlett-Packard; DeLauer, then of TRW; George Pake, vice-president of research for Xerox; and Bob Noyce, vice-chairman of Intel. All except Noyce were Stanford alumni or former faculty members at the University.

Under their leadership, CIS began quickly and then accelerated. "It's as though we started to walk, then run, and finally hopped on a bicycle," says Meindl.

Academic quality, basic research opportunities, and access to some of the best student brains in the country were the key factors.

Graduate student strength

Stanford has 540 graduate students in electrical engineering, more than any other U.S. university, and has repeatedly ranked among the top three institutions in faculty quality with MIT and Berkeley.

In computer science, graduate enrollment totals 205 and the faculty has consistently ranked first nationally. Stanford confers 25 computer science Ph.D.'s annually, one-eighth of the U.S. total.

While MIT, Berkeley, RPI, CalTech, Carnegie Mellon, North Carolina, Texas, and several other others are setting up joint ventures between industry and academe in microelectronics, CIS so far is the only program to receive so much support from so many different corporations.

Its sponsors include General Electric, Hewlett-Packard, TRW, Northrop, Xerox, Texas Instruments, Fairchild Camera and Instrument, Honeywell, IBM, Tektronix, Digital Equipment Corporation, Intel, International Telephone and Telegraph, General Telephone and Electronics, Motorola, United Technologies, Monsanto, American Microsystems-Gould, and Philips-Signetics.

Each company will have its own office in the center's new building, and each already has assigned high level executives as liaison to CIS. Continuing support of $2 million annually from the companies already has been projected.

Less duplication of efforts

Besides reducing duplication of effort in fundamental research, CIS provides sponsors lead time in watching work in progress and access to highly qualified graduate students.

The Center will provide a research base for an average of at least 30 Ph.D.s and 100 master's degrees annually. These will be awarded through Stanford's regular academic departments.

John Young

"Never before have computer designers in a university had such access to such high technology in semiconductors," Meindl says. "And never, in any institution, have people in integrated circuits had such a broad set of collaborating colleagues in computer science."

As its name implies, the CIS will provide a way for semiconductors to support research in computer sciences and for computer science to support semiconductor design and fabrication.

"This is something new, rapidly evolving, and unique," says Meindl. "We're entering the domain of manufacturing research."

Both he and Linvill believe the best way to tap American creativity and productivity is to "run fast, not scared." And both are strong believers in linking technological advances to liberal education and society.

Restriction not workable

In the long run, says Linvill, "restriction is not a workable strategy" in trade or ideas. Closer, two-way ties with industry should enhance basic research and shorten the lead time in its application, Meindl says.

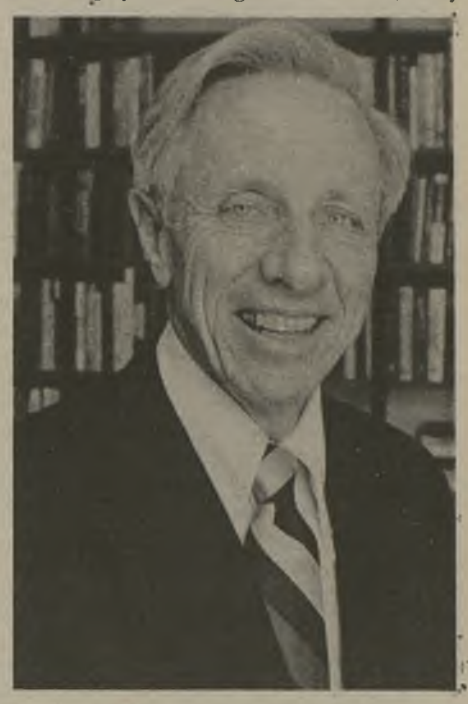
Corporate support "broadens our academic freedom" by diversifying the funding of research, he adds. "It gives faculty entrepreneurs a broader market for their ideas for new research."

Besides formal meetings with their sponsor advisory committee, "all kinds of informal ties will keep faculty aware of what the problems are in industry, and vice versa," Linvill says.

James Meindl

Meindl notes that "secrecy, cost, and managerial control go way up" as ideas move out of the laboratory toward the marketplace. "It's to their benefit to use us for long-range research, that nourishes the roots of new product ideas."

Linvill cites two current examples:



1) Many companies are interested in developing new computer-based work stations. The SUN (Stanford University Network) terminal, which includes the largest integrated circuit developed at any university, can provide a useful source of ideas.

2) While many companies are developing different systems for networking computers, there still is a need for a fundamental intellectual look at their structure.

Forum for communication

Linvill believes the center can provide a forum where communication can proceed among competing U.S. firms, fundamental science can be discussed and developed, and elements of hardware important to enhance productivity can be reviewed and targeted.

CIS also can foster integrated efforts by such disciplines as solid-state physics, device physics, integrated circuits, very large scale integrated (VLSI) circuits, computer systems, artificial intelligence, and computer science.

John Linvill

University-industry cooperation also can improve life-long professional education in rapidly evolving technology. The "half-life" of knowledge in some fields now is as short as five years, he notes.

Better use of resources

Besides making better use of scarce intellectual resources, Meindl believes joint research can stimulate innovation, and improve productivity and quality.

At the national level, potential problems concerning closer ties between industry, academe, and government include: 1) restrictions on publication, 2) ownership of patents and copyrights; 3) a tendency toward development of new products rather than basic research; 4) potential constraints on research, threatening creativity, and 5) de-emphasis on arts and humanities "which must be avoided," Meindl says. "The quality of life still depends on the arts and humanities."

On balance, he believes, the promise of joint sponsorship of university research far outweighs these potential problems. He remains optimistic that the U.S. can be a world leader in technological innovation, productivity, and quality. He sees the groundbreaking and construction of CIS as a step in this direction.

Need ride: San Jose (No. Capitol) to Stanford (ERL) and back, 8:30 and 5, M-F. Call Maria at (408) 280-2568 (day) or (408) 926-5328 (night).

Research report to C-AAA:

Student ratings often valid guide to teaching effectiveness, Gage says; ratings, expert consultation both needed to improve classroom instruction

The following "Glance at Research on Students' Ratings and Collegial Evaluation of Teaching in Higher Education" was prepared by Prof. N. L. Gage of the School of Education, a member of the Subcommittee on the Evaluation and Improvement of Teaching of the Committee on Academic Appraisal and Achievement.

The research literature on the evaluation of teaching comprises hundreds of papers, technical reviews, and books. Most of this literature by far deals with student evaluation of teaching. This brief review will examine only two quantitative syntheses on two important questions about student ratings and one of the few significant papers on the use of evaluations by colleagues.

1. *Are the average ratings received by instructors correlated with the average achievement of their students?*

Research on this question can be done only in multisection courses where the content, purposes, and measures of student achievement are ostensibly the same across sections.

Cohen (Peter A. Cohen in "Student ratings of instruction and student achievement: A meta-analysis of multisection validity studies," *Review of Educational Research*, 1981, 51, 281-309) synthesized the findings of 41 independent studies reporting on 68 multisection courses. The correlations between mean overall rating of the *instructors* and the mean achievement of the instructors' students averaged .43. The correlations between the mean overall *course* ratings and mean student achievement averaged .47.

Of approximately 20 dimensions on which these studies varied, only three were substantially related to the correlation between mean student rating of the instructor and mean student achievement.

a) When students knew their final grades before rating their instructors, the correlations averaged .85; when students did not know their final grades before making their ratings, the correlations averaged .38.

b) When achievement tests were graded by an external grader, the correlations averaged .52; when achievement tests were graded by the students' own instructors, the correlations averaged .15.

c) When the instructors were full-time faculty members, the correlations averaged .48; when the instructors were graduate students, the correlations averaged .34.

Other study characteristics were essentially unrelated to the obtained correlation between ratings and achievement. These other characteristics were:

* random assignment of students to sections;
* control for scoring bias in the achievement criterion;
* control for author bias in the achievement criterion;
* control for rating instrument bias;
* statistical control for student ability;
* control for students' prior knowledge of the instructor;
* the length of the period of instruction;
* the degree of the teachers' autonomy;
* the number of sections involved in the study;
* the overall methodological quality of the study;
* the course content's emphasis on hard discipline, pure knowledge, or life studies;
* the course level (introductory-level or more advanced);
* institutional setting (doctorate-granting or other institutions);
* source of study (published or unpublished);
* year of publication of the study.

All but two of the 41 studies yielded positive correlations. One of the studies that yielded a negative correlation, that by Rodin and Rodin, is well known because it was published in *Science*, but it used highly questionable methods for measuring student achievement.

The reviewer concluded that "The present meta-analysis provides strong support for the validity of student ratings as measures of teaching effectiveness. Teachers whose students do well on achievement measures receive higher instructional ratings than teachers whose students do poorly."

Nonetheless, in my opinion, the substantial correlation (r = .43) between a) "time at which ratings were administered" (whether ratings data were collected before or after students knew their final grade or examination score) and b) the correlation between mean rating and mean achievement raises some questions.

In only four of the courses the ratings were collected after the students knew their final grades; in 56 courses, the ratings were collected before the students knew their final grades. In the four multisection courses in which students knew their final grades at the time they made their ratings, the four correlations between mean rating and mean achievement averaged .85. In the other 56 multisection courses, in which the ratings were made before the students knew their final grade, the 56 correlations averaged only .38.

But suppose we assume that even in the latter courses, where students made their ratings before knowing their final grades, the students had some inkling, before they knew their final grades, of what their final grade was going to be.

This "inkling" might have to some extent the same effect on the correlation as would the actual knowledge of the final grade. That is, it would tend to increase the correlation between mean rating and mean achievement.

If so, the mean correlation of .43 over all 60 courses (and even the mean correlation of .38 in the 56 courses where the students did not know their final grades at the time they made their ratings) might be produced by the same tendency that resulted in the extremely high mean correlation of .85 in the four courses where the students did know their final grades.

This tendency would be one whereby students rate more favorably, or "reward," instructors from whom they expect to receive higher grades. This interpretation of the overall correlation of .43 differs from the one which attributes the correlation to the validity of students' ratings as indices of instructor effectiveness.

But is the expectation of higher grades determined by a perception of instructor leniency, or generosity, or by a perception of instructor effectiveness? The latter possibility emerges in courses that use the same final examinations *graded objectively*.

In such courses, the rating-achievement correlation may reflect an accurate perception on the part of the students that the instructor is indeed more effective in fostering higher student achievement. That higher achievement is, in turn, reflected in an *objectively* determined higher grade.

The latter interpretation is supported by the fact that the correlations between instructor ratings and achievement averaged .52 when achievement tests were graded by an external grader but only .15 when they were graded by the students' own instructors.

In the latter condition, instructors would have had an opportunity to foster higher ratings by grading more leniently. But this opportunity did not raise the correlation between student ratings of instructors and student achievement.

Accordingly, I concluded that **student ratings are valid to a substantial degree as indices of instructor effectiveness in fostering achievement in multisection courses.**

2. *Are ratings by students effective in improving college teaching?*

Improvement in teaching can take two forms: long-range improvement extending over many semesters, and short-range improvement from early to late within a given course.

Cohen (Effectiveness of student-rating feedback for improving college instruction: A meta-analysis of findings. *Research in Higher Education*, 1980, 13, 321-341) brought together the results of 17 studies containing 22 comparisons. Each comparison dealt with the improvement in instruction, as rated by students, on the part of instructors who received midsemester student-rating feedback and the improvement of instructors who did not receive such feedback.

Cohen converted the results of all of the comparisons to what they would have been if all of them had used a five-point scale. With this conversions technique, he found that the average end-of-semester rating for the feedback groups was 3.86 on the five-point scale (with five representing the desirable end of the scale), while the mean rating for the no-feedback groups was 3.70.

That is, the instructors who received midsemester feedback averaged .16 higher (on a five-point scale) on the end-of-semester overall ratings than instructors who received no midsemester feedback. This gain can also be expressed as .38 of a standard deviation unit, or a percentile rank gain of 15 points. That is, instructors who received the midsemester feedback have an average end-of-semester percentile rank of 65 as compared with 50 for instructors who did not receive midsemester feedback.

The consistency of the effect of midsemester feedback is evident in the finding that the feedback group received higher end-of-term "total" ratings than the no-feedback group in 20 of the 22 comparisons. Of the 22 comparisons, 10 resulted in statistically significant differences between feedback and no-feedback groups, and all of these significant differences favored the feedback group.

Different dimensions of instruction were affected in different degrees by the feedback. The dimension called "skill" showed the largest average standardized mean difference, or effect size (.47), in 14 comparisons.

"Feedback to students" showed an average effect size of .40 in seven comparisons. On the other hand, "Rapport" showed an average effect size of only .25 in 11 comparisons, "structure" showed an average effect size of .29 in eight comparisons, "difficulty" showed an average effect size of only .09 in five comparisons, and "interaction" showed an average effect size of only .09 in nine comparisons. Cohen's review does not give descriptions of these dimensions of instruction or the ways in which they were measured; for such details, it would be necessary to examine the original reports of the studies he reviewed.

Students' perceptions of their own learning or progress in a course were labeled "Student progress ratings." The average effect size in four comparisons on these averages was .30, favoring the students of the instructors who received feedback.

Similarly, student attitude toward the subject being taught was more favorable in the classes with midsemester feedback, with an average effect size of .42 in the four comparisons made on this dimension. Finally, achievement was higher among the students of instructors who received feedback in three of the four comparisons on this dimension, but none of these differences in achievement was statistically significant; the average effect size was .19.

The effect size resulting from each of the comparisons of feedback and no-feedback instructors was correlated by Cohen with nine characteristics of the studies. These characteristics and their correlations with effect size were as follows:

Study Characteristics	Correlation with Effect Size
Random assignment of comparison groups	-.06
Statistical Control for prefeedback ratings	-.07
Duration	.09
University setting	.09
Instructor experience	.03
Use of augmentation of feedback	.64
Use of self-rating discrepancies	.26
Use of normative data	.11
Source of study	.08

Accordingly, Cohen concluded that "only one variable, augmentation of feedback," was significantly related to effect size. Augmentation refers to whether the student-rating feedback was accompanied by consultation or various improvement strategies or both.

"The evidence indicated clearly that such augmentation of the midsemester feedback results in substantially greater improvement, as measured by end-of-semester student ratings. The effect size for comparisons of augmented feedback with no feedback averaged .64 while that for nonaugmented feedback with no feedback averaged only .20."

Thus a typical instructor receiving augmented feedback was performing (at the end of the semester) at the 74th percentile. This can be compared with the typical instructor receiving only student ratings (58th percentile) and the typical instructor receiving no midsemester feedback (50th percentile).

In short, this quantitative synthesis of the results of 22 experiments with midsemester feedback suggests that such feedback is conducive to the improvement of end-of-semester ratings by students and, further, that the effect of such feedback is enhanced considerably by its being augmented with consultation. "These results clearly suggest that instructors need more than just student-rating feedback to markedly improve their instruction."

Whether these results have implications for the value of end-of-semester feedback, as against midsemester feedback, is unknown. Cohen's review dealt with three studies that measured overall teaching effectiveness in subsequent semesters.

The findings of these studies did not differ from those of studies assessing change from the middle to the end of the semester. Further, Cohen found that the use of "normative" data—data that make possible comparisons of an instructor with his colleagues—did not seem to enhance the improvement results from feedback.

What implications do these findings have for using student-rating feedback to facilitate within-class improvement? It is evident that **when instructors are left to their own resources, ratings provide little help. Augmented feedback, or more specifically expert consultation, seems to be the key element for making rating data useable for improvement purposes.**

It is also clear that instructional change cannot be

continued on next page

Evaluation...

continued from page 1

useful for improvement (of teaching).

"It also seems clear that instructional change cannot be accomplished on all teaching dimensions. Therefore, instructors should only request midterm student feedback for aspects of teaching that they are able to modify.

"Finally, rating items and dimensions that supply specific information should be preferred to verbal ratings. With these considerations, student ratings are a valuable data source improving instruction at the college level."

In its report to the Senate, the committee noted that the present 32-question form was not administered in 41 percent of the courses where it should have been used. Even when it was distributed, 30 percent of the students failed to fill it out. A simplified form should encourage wider use.

The recommended changes may receive heightened support from academic deans and others concerned with teacher evaluation and improvement, the committee noted.

In a letter to the committee, Humanities and Sciences Dean Norman K. Wessells noted that department chairpersons will be required to bring at least one set of recent student evaluation forms for professors to the conferences where salaries are set.

Instituted during winter quarter this procedure will help provide impetus for faculty use of some formal procedure in student evaluation of teaching, he said.

"High quality teaching characterizes many of our faculty. More must be helped to attain that ranking. Student evaluations are one means of providing direct feedback for that purpose. Equally important, those student evaluations provide a critical form of data for administrative purposes in reappointment and promotion."

The Committee on Academic Appraisal and Achievement is headed by Prof. Susan Matisoff, Asian languages. Its Subcommittee on the Evaluation and Improvement of Teaching is headed by Prof. Walter Lohnes, German studies.

Responding to SLAC-SSRL protest, Kennedy reaffirms open research policy

Following is a memo from Donald Kennedy to members of SLAC/SSRL and the Stanford communities.

I have received the petition regarding the SSRL research project. The sponsors request, in two attached communications, that I appear at SLAC to discuss the proposed research and, that I meet, under unspecified circumstances, with others who are concerned about the problem.

First let me turn to the petition itself. It is somewhat difficult to interpret, because the language used by the framers misstates the issue. The petition asks support for the proposition that Stanford should "oppose any research explicitly dedicated to nuclear weapons testing and instrumentation undertaken at SLAC or anywhere else on campus, even when unclassified."

Signers might have experienced more hesitation had the authors stated their recommendation more realistically: "Stanford should, as a matter of institutional policy, prevent faculty members from conducting research projects, even ones that they judge to be morally acceptable and that are unclassified, if an end-use of that research relates to nuclear weapons testing and instrumentation."

This revised formulation is more realistic, for what we are talking about is the *institutional regulation of individual behavior*. The University policy in question here was made by faculty, and it governs the work of faculty. The framers of that policy decided, after extended debate during a period of great controversy over weapons research, that it was *not* appropriate to regulate their colleagues' research on the basis of prospective end-use.

To bar the SSRL proposal, the faculty—through the Senate and its Committee on Research—would have to renounce the present policy, and then enact another. Furthermore, a new mechanism would be required that would 1) predict the possible end uses of a given research project, and 2) evaluate their acceptability.

I discussed this matter in my quarterly report to the Academic Council, well before the present petition was framed. What I said about the policy then still holds, and I reiterate it now:

"In the present instance, we have a research program that will produce some output clearly related to nuclear weapons testing. A careful reading of the proposals reveals that in fact a wide variety of work, including a number of programs on the fundamental properties of living materials, is to be conducted, although the weapons applications are understandably stressed in the short form of the proposal directed to the funding agency. The heterogeneous mix of intentions and prospective uses for this proposed facility demonstrates clearly just how tricky and difficult it is to judge end-use and intent. Sometimes the search for knowledge leads one to unexpected places; no research can safely be predicted to be free of harm—nor, conversely, can a piece of work that includes a military end-use automatically be defined as 'bad.'

"That is why the Committee on Research and the Senate reached the conclusion I described earlier—that is, that University restrictions on resarch would not be imposed based upon intent or end-use, but only upon conduct. The Stanford faculty decided that to open the door to prohibitions of this kind would, in the long run and in the aggregate, do more harm than good. It foresaw that today's benign restriction might become tomorrow's suffocation: that once you begin making value judgments about the possible outcomes of scientific work there is no place to stop. In summary, we placed our faith in the ultimate net benefit of free inquiry.

"I therefore do not plan to try to change the University's policy on research in order to eliminate the proposed program nor do I think that my colleagues should wish to do so. I would hold that view even if the project under consideration were much more heavily devoted than it is to end-uses with which I am personally uncomfortable.

"Good general principles often get their severest and most meaningful tests in such uncomfortable situations. That is why those who are devoted to civil liberties sometimes find themselves defending dreadful people, and it is why the courts frequently have to release felons when it turns out that the police discovered their felonies in inappropriate ways.

"Our policy is that Stanford scientists are free to conduct work of their own choosing as long as it can be carried out in accordance with principles of openness and freedom of publication. The principle underlying the policy is that the social benefit flowing from free and unimpeded efforts to gain new knowledge will outweigh the cost exacted by the occasional pieces of dangerous knowledge we obtain as a result of free inquiry. Because I believe in the principle, I support the policy."

The proposing group from the Lawrence Livermore National Laboratory has already agreed to appear at SLAC to discuss the proposed research project, and SLAC representatives have quite properly taken their concerns both to the Committee on Research and to the Senate. Prof. Panofsky has also invited Prof. Bienenstock and me to appear at SLAC to discuss, with him and with his faculty and staff colleagues, the other issues raised by the proposed research. I intend to accept his invitation; he will make the arrangements.

As to the second request, I have emphasized that the policy in question is a faculty policy, and I have given my reasons for not urging its reconsideration. I have done so not only to the Academic Council but to student groups in various settings, and I expect that will continue.

accomplished on all teaching dimensions. Therefore, instructors should only request midterm student feedback for aspects of teaching that they are able to modify.

Finally, rating items and dimensions that supply specific information should be preferred to verbal ratings. With these considerations, student ratings are a valuable data source improving instruction at the college level.

3. *How can the evaluation of college teaching by colleagues be conducted?*

Evaluation by colleagues or peers is widely regarded as a desirable supplement for student evaluation of teaching. Nonetheless, according to Cohen and McKeachie (P. A. Cohen and W. J. McKeachie, The role of colleagues in the evaluation of teaching. *Improving College and University Teaching*, 1980, 28, 147-154), the percentage of colleges and universities using such evaluation has decreased over the years.

These writers went on to consider the dimensions of teaching that colleagues are best qualified to judge. The set of dimensions they identified concerned the following:

* Mastery of course content
* Selection of course content (knowledge of what must be taught)
* Course organization
* Appropriateness of course objectives
* Appropriateness of instructional materials—readings, use of media, etc.
* Appropriateness of evaluative devices—exams, written assignments, reports
* Application of most appropriate methodology for teaching specific content areas
* Commitment to teaching/concern for student learning
* Student achievement based on performance on exams and projects
* Support of departmental instructional efforts

When colleagues provide information on inclass instructor behavior for use in making personnel decisions, "Classroom observations should be carefully planned and the data should be collected as systematically as possible."

But observation by colleagues can create an artificial classroom atmosphere, unnerve instructors, and result in highly favorable ratings owing, perhaps, to faculty concern for reciprocity. Sentra found that colleague ratings based on limited classroom observations had reliability (interobserver correlations) too low for use in evaluating teaching for administrative purposes; it would take the average of the observations of approximately 10 colleagues to raise reliability to an acceptable level (J. A. Sentra, Colleagues as raters of classroom instruction. *Journal of Higher Education*, 1975, 46, 327-337).

But, when colleague ratings of teaching are correlated against student ratings of teaching, the correlations turn out to be fairly high; the five coefficients cited by Cohen and McKeachie range from .62 to .87.

But this substantial correlation may result from the colleagues' knowledge of the faculty members' reputation as determined by student ratings. To correlate colleagues' ratings with student achievement would require the study of multisection courses similar to those used in the studies of correlations between student ratings and student achievement.

Some administrative arrangements have been suggested for collegial evaluation of teaching. One writer suggested that colleges financially support selected committees of faculty members, each of whom would visit classrooms and make reports on teaching effectiveness.

Another writer proposed that the rating procedure safeguard the anonymity and independence of the colleague making the ratings and that at least three colleagues be chosen by administrators or instructors or both to make the evaluations of an instructor's teaching. But no college or university is named as having used such systems.

Variety of programs offered in workplace skills, supervision, accounting

WORKPLACE SKILLS DEVELOPMENT

Challenges of the workplace will be explored in the following courses, each of which is structured to develop skills helpful to effective work performance in many different kinds of jobs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore, please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy, ext. 7-0657.

Telephone Techniques—This workshop focuses on using the telephone and having an effective telephone personality. Topics include an overview of the skills required, tactful phraseology, and examination of issues and problems.

- Thursday, 6/30, 1-3

Office Interaction: Getting and Giving Cooperation—Does your job include answering questions, giving information, assisting people who call or come to your office? This workshop focuses on how to make these interactions both efficient and productive. Participants will explore the ways that they and the people they work with experience the communication/problem solving process.

- Schedule to be arranged

Office Interaction: Working With Pressure—How to function at your best in spite of the pressure of continuous office interactions. Participants will examine ways to increase concentration and patience for effective workplace relations.

- Schedule to be arranged

Assertiveness Training—Assertiveness Training introduces verbal and nonverbal skills for handling uncomfortable situations. As a result of active involvement in this course, participants will be able to ask for what they want in clear statements, assertively deal with conflict on the job, maintain a feeling of self-worth while effectively dealing with manipulative demands, and make assertive decisions.

- Tuesday, 7/12, 8:30-12:30
- Tuesday, 7/19, 8:30-12:30
- Tuesday, 7/26, 8:30-12:30
  (Attend all sessions.)

Career Exploration Workshop assists staff members in making more effective career decisions. It consists of seven sequential one-hour workshops which provide methods for self-assessment (interests, skills, values, career motivations, interpersonal skills), information about Stanford career possibilities, and practice in decision making and development of action plans. Checking ideas against job market reality is emphasized.

Some of the tools used in the self-assessment process include the Strong-Campbell Interest Inventory Test, the Quick Job-Hunting Map, Firo-B, and problem-solving and values clarification exercises. Discussion includes reality testing of the kinds of skills the University looks for, the kinds of jobs on campus, and the personal qualities necessary to get ahead. Exercises on strategizing and decision making are used along with the development of short- and long-term career goals. Instruction and information on resume writing and interviewing are included, with information on the use of the Stanford Employment Department and its organization.

- To register, call Marilyn Gilla, ext. 7-0659.

On-The-Job Goal Setting—How can you focus your energies and skills more effectively to increase the satisfaction you get from your work, as well as the contributions you make? Susan Strong will provide practical steps for setting and reaching well-stated workable goals.

- Schedule to be arranged.

Skills Development Center—The clerical skills program upgrades skills of employees on their present jobs, helps them prepare for additional responsibilities, and provides clerical training specifically related to Stanford's policies and procedures.

For information about the clerical skills program, call Marilyn Gilla, clerical skills program coordinator, ext. 7-0659.

Is lack of typing skills getting in the way of effective use of your computer terminal? Marilyn Gilla teaches both beginning and intermediate keyboard skills for staff members starting to use a terminal. For information, call ext. 7-0659.

CONTROLLER'S OFFICE WORKSHOPS

The Controller's Office schedules these workshops throughout the year. For more information and/or the current schedule of workshops, call Alice Forbes, ext. 7-4531.

Course 1: Introduction to the Stanford Accounting System—(two two-hour sessions). For employees new to Stanford who monitor either departmental or auxiliary activity expenditure statements. The course includes the organization of the Controller's Office, discussion on account numbers, responsibility for the use of funds and record retention. Practical work includes practice in reading an expenditure statement and in forecasting for future results.

Course 2: Travel—(one two-and-a-half-hour session). For employees who need to understand the University's travel policy (Guide Memo 36.7) to complete travel and expense reports. The Travel Workshop summarizes travel policy, defines allowable travel costs, and provides practice in completing the necessary forms for Advances (SU-34A) and Expense Reports (SU-35).

Course 3: Equipment Administration—(one two-and-a-half-hour session). For employees who are new to the field of equipment administration as well as for those who want to "brush up" and/or need more information on the new computerized system. The emphasis of this workshop is on how to use the manual, forms and reports.

Course 4: Payroll/Personnel—(three two-hour sessions). For employees completing forms related to Payroll/Personnel actions and record keeping. This workshop includes a review of policies and procedures, and practice in completing all necessary forms.

Course 5: Fund Accounting at Stanford and How to Read Fund Statements—(two two-hour sessions). The purpose of this workshop is to teach interested employees the fundamentals of fund accounting as practiced at Stanford. The University's financial statements are discussed as well as fund statements and fund summary reports.

Course 6: Fundamentals of Grant and Contract Administration—(four two-hour sessions). This workshop is planned for administrators and others involved with the preparation of proposals as well as accounting procedures for expenditures, monitoring, and forecasting for sponsored research projects. Members of the Sponsored Projects Office will participate in the workshop. The sessions planned are:

1. Introduction and Overview of Definitions, Federal Regulations and the role of SPO.
2. Proposal Preparation.
3. Proposal Processing and Post-Award Administration.
4. Contract and Grant Rebudgeting, Forecasting, and Financial Management.
5. Grant and Contract Closeout, Updates, Issues, and Trends.

Course 7: Grant and Contract Administration Update—(one two-hour session). This new workshop is planned for administrators and other interested employees to discuss current issues and problems in grant and contract administration. A specific topic will be chosen for each update session.

Course 8: Procurement—(two two-hour sessions). This new workshop reviews the procurement process along with criteria for choosing the correct form amongst the SU-10, SU-11, SU-12, SU-13, SU-14, SU-15, SU34A, SU-34B, SU-35, SU-40, SU-41, and SU-43.

Course 9: Grant and Contract Administration Update—(one two-hour session). This new workshop is planned for administrators and other interested employees to discuss current issues and problems in grant and contract administration. A specific topic will be chosen for each update session. The topic for this first workshop is the closing out of sponsored projects. A panel discussion is planned, followed by a guest speaker, Fred Bentley, associate director of SPO, who will speak on current issues.

SUPERVISORY DEVELOPMENT PROGRAM

The supervisory development program includes a two-session orientation to the personnel administration aspects of supervision, two intensive supervisory skills courses, and shorter workshops on specific aspects of supervision. All courses and workshops combine theory and practice and apply directly to participants' on-the-job experience.

Supervisory courses and workshops are given regularly through Staff Development. They may also be adapted to specific departmental needs and presented in departments. New workshops are developed to meet general and departmental needs.

Class size is generally limited and enrollments accepted in the order received. Classes often have a waiting list; therefore please inform us if you cannot attend a class for which you are enrolled.

- To register, call Bea Tracy, ext. 7-0657.

Fundamentals of Supervision—is a course in how to develop employee performance, establish effective supervisor-employee communication, and establish and maintain the supervisory role. Participants learn through discussion and practice of skills, incorporating new skills into their own supervisory style. An orientation meeting prior to the sessions introduces the basic principles on which the course is based.

Participation in the course requires at least three months of experience as a supervisor. Attendance at all sessions is also required.

Session topics are:

Session 1, Setting Job Standards
Session 2, Teaching a New Job
Session 3, Communicating about Performance
Session 4, Giving Recognition
Session 5, Identifying and Solving Performance Problems
Session 6, (Group Choice of Topic) Review

Fundamentals of Supervision (A)
- Monday, 6/13-8/1, 1:30-4:30

Fundamentals of Supervision (B)
- Wednesday, 7/27-9/7, 9-12

Effective Interviewing—introduces methods for making productive hiring decisions by getting sufficient appropriate information in interviews. The workshop is centered around practice exercises that are progressively more complex; participants will learn to plan and conduct interviews related to the specific responsibilities and duties of open positions.

- Friday, 7/15, 8:30-4:30

Managing Conflicts—which can and do occur in any work setting, and when well handled can renew motivation and be a catalyst for innovation. When ignored or mismanaged, however, conflicts can cause serious damage to morale, productivity, and well-being. Effective conflict management involves guiding the disputants to solve their own problems. In this workshop participants will learn how to find out the nature and scope of the conflict, how to elicit suggestions, and how to get agreement to an action plan while controlling bickering and outbursts without taking either disputant's side.

- Friday, 7/22, 8:30-4:30

continued on next page

Staff Development/continued from page 24

Self-Control of Speaking Anxiety—If you are ready to break out of your scared-to-death frame of mind Self-Control of Speaking Anxiety will help you develop qualities and techniques enabling you to speak with more ease. You will learn positive ways of controlling physical tension while you prepare and give presentations.

- Wednesday, 6/22, 8:30-4:30

Confident Speaking—This workshop is for staff members who regularly present talks as a routine part of their jobs. Special techniques to help you prepare, practice, and deliver your train-of-thought will be demonstrated and practiced in class.

Preparation and Practice Skills
- Wednesday, 6/29, 8:30-4:30

Delivery Skills—
Body Language and Vocal Expression
- Wednesday, 7/6, 1-5
- Wednesday, 7/13, 8:30-12

Giving Directives is a practical three-step procedure for giving directives of all kinds. Participants will also learn the specific effects of language on directives.

- Friday, 7/8, 8:30-4:30

SPECIAL INTEREST COURSES

Courses from the Learning Assistance Center

The following courses have been developed by the LAC to respond to specific staff training requests. Each course combines classroom instruction and individual tutorials with the instructor. Class size is limited to provide for maximum participant involvement, and enrollments are accepted in the order received.

Time Management—Is a day simply not long enough? This workshop helps participants discover where their time goes, set up a schedule and establish priorities, and become more effective at accomplishing what they decide to do. The class meets four times (one hour each time), and the instructor meets with each participant for three individual half-hour sessions.

- Friday, 7/1-7/22, 12-1

Stanford Publishing Course (Presented by Stanford Alumni Association)—An intensive program for publishing professionals who wish to update their skills, recharge their batteries, and gain a working knowledge of the various facets and operations within the book or magazine industries. The course is conducted by leading publishing executives and distinguished Stanford faculty. A special discount on tuition is offered to Stanford faculty and staff.

- Monday, 6/20-7/1
- For more information, contact Bill Peabody at Bowman Alumni House, 497-2021.

English as a Second Language—Tutorials—For non-native speakers of English. Participants contract for individual tutorials (the minimum is six). Especially recommended for those who have completed one of our ESL classes, but open to any non-native speaker who wishes to have individual instruction for reading, speaking, or writing English. Conferences may be planned around vacation schedules. *Conferences will be held between June 27 and August 12.

- To arrange your first conference, call the Learning Assistance Center, ext. 7-2207.

Courses from the Association for Continuing Education

The Association for Continuing Education delivers courses accredited by local colleges and universities. For more information call ext. 7-0657.

CPL 102—Introduction to BASIC—A good beginning course in BASIC, the most popular and easily understood computer language available today. Students will learn the computer operations they seek for a given application through a process of self-checking exercises and flow-charting. It will not be necessary for students to have access to a computer to learn from this course. (Certificate only.)
(Tuition $90; book $14.86.)

- Tuesday and Thursday, 6/21-8/25, 12-1

CPL 105—Introduction to PASCAL—An introductory course in PASCAL for people who want to acquaint themselves with modern programming tools and concepts. It will give students with no previous programming experience a good grasp of the fundamentals and provide a foundation for learning correct and disciplined programming skills. (Certificate only.)
(Tuition $90; book $12.25.)

- Monday and Wednesday, 6/20-7/20, 12-1

The Staff Training Assistance Program

The Staff Training Assistance Program provides reimbursement of tuition costs to $75 a quarter for courses and academic programs related to job performance. If tuition costs for a given quarter are less than $75, costs for textbooks and other required course materials can be partially or fully reimbursed. (If costs exceed $75 in a given quarter, departments may provide financial assistance beyond that available through STAP.)

Courses may be taken at Stanford or elsewhere. To receive STAP reimbursement a staff member completes a STAP form, available through Staff Development, ext. 7-0657. Supervisory approval is required.

You must include a receipt and/or canceled check to be reimbursed.

California may trail the national surge in support for public schools

California may trail the national surge in support for public schools by several years, a Stanford educator believes.

"The market's turning in a major way, but California may be one of the last states to see it," says Prof. Michael Kirst, former president of the State Board of Education.

The turn-around could take as much as three or four years here, he adds. "The problem is money in the till.

"The California economy has not recovered. California has not raised taxes. More than 20 other states already have done so, including Michigan, Ohio and Pennsylvania"—all hard hit by the recession.

Kirst and several faculty colleagues spoke at the first Friends of the Stanford School of Education conference on campus April 23.

Kirst warned that education of Hispanics is "utterly floundering," even though Hispanic enrollment has risen from 10 to 27 percent as a share of California's public school enrollment since 1970.

Hispanics and Asians now account for nearly all the enrollment growth in California schools. By 1987, 57 percent of enrollment may come from minority groups, including blacks.

Hispanic education issues are "heavily laden with gut-level reactions," not careful analysis, he said. "That's very disturbing."

In a similar vein, Prof. David Tyack, education and history, said sheer survival is no longer the schools' primary concern. "The preservation and enhancement of equality" in educational opportunity is "the number one issue on the agenda," he said.

Until recently, declining enrollments and school closings were the major issues for school boards, he noted.

Tyack predicted that "the likeliest future for education is neither crisis nor breakthrough. . . .

"Education is beset by Cassandras and panaceas. Because public education is deeply embedded in American society, it will not change rapidly."

A much larger share of the public would like to see the nation develop the best education system in the world (84 percent) than become the most efficient industrial system (66 percent) or the strongest military force (47 percent), Tyack noted.

Schools should provide for "equality of dignity" among students from different groups. But if schools don't provide the skills needed to compete in mainstream society, students will be cheated, he added.

Prof. Robert Calfee, who has frequently taught in San Jose elementary schools, said: "the view from inside the classroom is not all bleak."

He's developed new ways of teaching reading that "work like gangbusters." After reading straight through conventional classroom stories, he asks leading questions for students to answer about the material covered.

Friday the 13th! Prof. William Ramsey (above) and graduate student Sharon Paul will conduct the Stanford Chorale

Help Center program on surgery set

The Help Center will sponsor a discussion on "Surviving Life Threatening Surgery" from noon to 1:30 p.m. Wednesday, May 11, at Galvez House.

Areas to be covered in the discussion include the onset, preparation for surgery, the experience of hospitalization, aftercare, and reintegration into family/relationship/work.

The discussion is intended for those who have undergone life-threatening surgery in the last six to 12 months. It will be led by Lawrence Starkey, L.C.S.W.

Helping Children Grow

Sharon Levin, L.C.S.W., will lead a discussion on "Helping Children Grow through Limit Setting" from noon to 1:30 p.m. Tuesday, May 17, at the Help Center.

The focus of this workshop will be to clarify limit setting. Some issues to be addressed are age-appropriate limits, parental conflicts around limit setting, and the dilemmas working parents face in setting limits. Call 497-4577 by May 12 to reserve a place.

The Help Center is an employee benefit program open to Stanford University, Children's Hospital, Stanford Medical Center, and SLAC employees and their immediate families.

All workshops, seminars, support groups, lectures, and counseling sessions are free. For more information about any Help Center program, call 497-4577.

Rental housing

HOUSING AVAILABLE

A timely moment: William Kimball cuts the ribbon.

Why a clock? It refreshes our spirits

Why, asked President Don Kennedy, at the dedication of Stanford's new/old clock tower (*see adjoining story*), should funds be spent on "an opportunity to improve the aesthetic or traditional qualities of this place," rather than on scholarships or academic needs?

The key reason, he said, is the vital need "to refresh our spirit, to diversify our environment, and to pay attention to the extra things in life that add so much meaning to the rest."

If every dollar coming into Stanford had to be devoted to the central academic purposes, "this would be an austere and miserable place indeed. Pluralism of donor interest is one of those forces that relieves us of the obligation to be about our main business all the time."

Kennedy praised Bill and Collie Kimball for "this something extra—a traditional and aesthetic pleasure that reflected experiences that were important to him and to Collie, and that they wanted, together, to replace in *our* lives."

The clock and its bells, he said, should mean different things: "an invitation to rest; a reminder of our history; an attractive signal of the beginning or the end of academic episodes; a rendezvous; and a reassurance that we aren't, after all, too late.

"And perhaps it will be many other things as well; for it is now much too early to tell what role it, or indeed any new work of art or oasis of landscape, will play in our lives.

"Years from now such things will be found incorporated in a thousand individual habits, in unexpected and refreshing ways. The old clock will thus come to have new meaning to all those who make it part of their lives here, just as—in an earlier incarnation—it meant something new to Bill and to Collie."

Bell Tower...

continued from page 1

tower. Behind Mickey, on the inside wall, is one of the original clock faces that graced Memorial Church.

Furthermore, the clock has been restored to its original wind-up status it had when built in 1901 by the Seth Thomas Co. It will have to be wound once a week—with a big crank.

During its few years on the Church, before the 1906 earthquake sent the clock and tower crashing into the church, it was designed to ring constantly—except during church services.

Now, its four bells—the largest is four feet high and weighs a ton—will be heard from 8 a.m. through 7:45 p.m.

The bells' notes are best known as the Big Ben bells atop the British Parliament. But they date back to 1794, according to Gina Balestracci of the Stanford Music Department Library.

"Westminster Quarters are from a set of four variations composed by William Crotch, based on a portion of 'I Know That My Redeemer Liveth,' from Handel's 'Messiah,' " she said.

"He wrote it for Great St. Mary's Church at Cambridge University. In 1845 a set of bells was installed on Royal Exchange Church in London, with those notes, and in 1859 Big Ben was installed in the new House of Parliament."

After the earthquake at Stanford, the bells and clock mechanism just sat in storage, according to Stanford Archivist Roxanne Nilan. In 1915, a temporary tower was built on a terrace back of Memorial Church to house them.

There they rang, and the clock worked, until 1967, when the landmark wooden tower was removed to make room for major landscape changes, including Lomita Mall. during those 52 "temporary" years in the tower, the mechanism was run by an electric motor.

In the intervening years, many plans for site and use of the clock and bells were discussed, but none seemed right—and the potential cost was huge.

But several dedicated people persisted.

"When the tower came down in 1967, I felt terrible," said Prof. Henry O. Fuchs, engineering professor who retired in 1972 but still is teaching. "I was very interested in getting the clock and bells up again, somewhere on campus."

He and David Beach, teaching specialist in mechanical engineering, cleaned and restored the mechanism to working order, refurbished it to look like new, and installed it in the Terman Engineering Building library.

Meanwhile, Harry Sanders, former director of planning, and Prof. James Watkins, founder of the Stanford Historical Society, made it their personal goal to have the clock tower rebuilt. Sadly, Watkins died last fall, but the Society kept his idea alive.

Its efforts brought in Dorian Clair of Palo Alto, a clockmaker, and clock collectors John and Bill Grass, who spent endless hours "scrubbing off dirt, taking it apart, bringing it back to its original mechanical perfection," said Clair.

When everything came together, according to Shirley Chen of Stanford's facilities project management office, the steel and stucco tower, with benches and trellises around it, was built.

"Now we need a volunteer to wind it once a week," she said. —Harry Press

Staff employment opportunities

Listed here are those job openings received by the Stanford and SLAC Employment sections last week before noon on Wednesday. This listing contains only the most recent listings. A complete listing of all employment opportunities may be viewed at Campus or SLAC (for listings coded JM) Personnel. The salary range information listed indicates starting salary. Some candidates (usually internal) may be made employment offers at higher salaries depending upon applicable experience.

To obtain an application or more information or to apply for positions not listing a contact person, call or visit Personnel at Old Pavilion, Serra and Galvez Streets, 497-1827, or SLAC Personnel, for jobs coded JM, 2575 Sand Hill Road, 854-3300, ext. 2353. *Stanford University is an equal opportunity employer through affirmative action.*

Exempt

29963-VW (JCC:2120) ACCOUNTANT I: Versatile accountant reporting to Admin Offcer; respon range fr basic bookkeeping functions to problem analysis, incl statement verification & resolution; maint of over 100 accts which represent gov't & non-gov't grants & contracts; various gifts accts & an operating budget; prep of monthly statements for Principal Investigators; prep of annual close-out reconciliation; a computerized acctg sys needs to be implemented; QUALIFICATIONS: BA in Acctg w/ related field exp or 5 yrs of exp resulting in acquired knowl of acctg theory & practice; highly desirable to have computer sys exp as well as micro-computer exp.; C05; $1670-2086.

43576-TC (JCC:5588) LIFE SCI RES ASST I: Respon for maintaining tissue culture cell lines & aiding in the prep of primary cell cultures; perform radioimmunoassays & receptor assays; establishing new methods & modifying RIAs for samples fr tissue culture & serum & for interpretation & analysis of data; QUALIFICATIONS: BS degree or equiv exp; familiarity w/ basic lab skills; willing to work w/ 125I, 3H, & 14C labelled chemicals; familiarity w/ sterile tech nec.; C05; $1670-2086.

43518-TC (JCC:5999/6000) Nurse Practitioner/ Physician's Asst: Key professional in a one yr study whose purpose is to detect previously undiagnosed physical illness in psychiatric patients; perform a complete med evaluation of 2-3 patients/day; patients will be clients of public mental health programs of Santa Clara, Santa Cruz, San Benito, Monterey Counties; exams performed at location of these programs; evaluation will incl administering a standardized psychiatric interview, clarifying patients' responses to a med history questionnaire, performing a complete physical exam & drawing blood for screening diagnostic tests; QUALIFICATIONS: grad of nurse practitioner or physician's asst training program or be certified as an adult nurse practitioner or physician's asst; able to perform an accurate physical exam, formulate a problem list, & commu findings & judgments to a physician; sufficient maturity & exp to work successfully w/ psychiatric patients; facility in speaking Spanish useful.; C07/C07; $2113-2724/2113-2724.

43517-TC (JCC:5999/6000) Nurse Practitioner/ Physician's Asst: Key professional in a one yr study whose purpose is to detect previously undiagnosed physical illness in psychiatric patients; perform a complete med evaluation of 2-3 patients/day; patients will be clients of public mental health programs of Santa Clara, Santa Cruz, San Benito, Monterey Counties; exams performed at location of these programs; evaluation will incl administering a standardized psychiatric interview, clarifying patients' responses to a med history questionnaire, performing a complete physical exam & drawing blood for screening diagnostic tests; QUALIFICATIONS: grad of nurse practitioner or physician's asst training program or be certified as an adult nurse practitioner or physician's asst; able to perform an accurate physical exam, formulate a problem list, & commu findings & judgments to a physician; sufficient maturity & exp to work successfully w/ psychiatric patients; facility in speaking Spanish useful.; C07/C07; $2113-2724/2113-2724.

Nonexempt

41747-PM (JCC:2596) SECY II-SPEC: Respon in 3 areas: 1) 50% bkup for Admin Asst to Dean of Law Sch'l (incl substitution during absences); answer & screen phone calls; receive & screen visitors; typeing & transcription support; asst in travel arranging & mtg scheduling; 2) 15% devoted in providing basic sec'l support for Asst Dean; 3) 35% devoted to sec'l support for Appts Committee; typing & distributing Committee memos, as well as scheduling candidate interviews w/ faculty members, collecting, analyzing & correlating candidate evaluation forms, etc; will hire two 50% people for job share; QUALIFICATIONS: typ 75+; excel typing & transcription skills; ability to use most offc eqpt; ability to commu w/ people at all levels; knowl of or willingness to learn word processing eqpt; send appl/resume to E. Chatfield, Room 113, Crown Quad.; B12; $1310-1373.

33459-PM (JCC:2462) OFFICE ASST III: Book Order Clerk; 37.5 hrs/wk, 8-4:30; about 100 book orders daily fr booksellers & others, domestic & foreign (25% foreign); fr each order the coder extracts info & translates it into number codes according to book title & customer; precision & strict attention to detail are essential; all Sales Dept corresp is read daily, along w/ important journal articles & trade news dealing w/ book publishing; QUALIFICATIONS: typ 35; rudimentary reading knowl of a modern European lang desirable; neat, legible handwriting required; an acquaintance w/ organization of institutions of higher learning, & of libs, is essential; ease w/ titles & subtitles of esoteric scholarly works, & familiarity w/ bibliographical terms in lib & academic work; send appl/resume to Robert Lloyd,; B11; $1171-1231.

31163-PM (JCC:1747) LIBRARY SPEC I: 50%; fixed term 5/23/83-5/22/84; performs duties in Record Maintenance Unit of Catalog Dept; searches in Name Authorities (microfiche), the main catalog & Lib of Congress reference file in RLIN sys; typ tracings on authority cards & typ reference cards for nec locations; sort cards in alphabetical order, etc; QUALIFICATIONS: typ 50; high accuracy in typing; demonstrated clerical & organizational skills; atten to detail; prev lib exp; knowl of one Western European lang other than English; contact Bob Johnson, Green Lib, Room 223 (497-3152).; B10; $595-623.

43726-PM (JCC:2058) ADMIN ASST I (N): AA I provides support to Asst Chief of Med for Clinical Programs, in the continuing develop't & coord of clinical programs w/in all areas of their respon; coord of inpatient & outpatient care & develop't of programs in outpatient clinics, emergency room & intensive care units; develop & carry out studies to determine what factors influence patient census; spec assignments which can require collecting, interpreting data, & proposing recommendations for remedial action or programs; asst in implementation of new programs or procedures; attend mtgs; prov sec'l support for Asst Chief; QUALIFICATIONS: analytical & satistical skills; exp in long-range planning; ability to coord programs among a variety of Depts & indivs; sec'l skills; send appl/resume to Jon Erickson, Med Ctr S-102; B16; $1593-1671.

41668-BP (JCC:2058) ADMIN ASST I (N): 8-5pm Mon-Fri + travel; the AAI provides admin support to RLG Board of Governors & the RLG Executive Office; reports to RLG President & Executive VP & is respon for coordinating all admin functions in the Executive Office; use word processors & computing tools (WYLBUR & SPIRES) to compile corporate data, prep reports, & compose memos, letters & manuscripts; manage executive calendars w/ heavy schedules & complex travel arrangements; develop budget forecasts; reconcile operating statements; may supv support staff; asst in hiring decisions write performance evaluations; make recommendations for salary increases, promotions, & dismissals; QUALIFICATIONS: excel oral & written commu skills to deal effectively w/ central staff & board members; ability to work w/ a high; B16; $1593-1671.

31632-LL (JCC:6810) SOC SCI RES ASST I: Med Clerk will obtain & record health serv utilization data fr psychiatric patients & their med records; administer questionnaires to patients at mental health treatment facilities in Santa Clara, Monterey, Santa Cruz & San Benito counties; obtain cost data by phone fr health care providers in these counties; enter data on IBM Personal Computer & transport diskettes to Data Mgr in Palo Alto; typ nurse practitioner reports using IBM Personal Computer & Wordstar word processing program; send reports to involved M.D.; maintain patient data files; asst in arranging 90-day follow-up evaluation of patients; QUALIFICATIONS: typ 60-65; able to use med & psychiatric terminology correctly; neat, legible handwriting; relate well to emotionally disturbed patients; relate well to physicians & their offc staff; enter data into an IBM Personal Computer; use Wordstar word processing program; B12; $1310-1373

41748-PM (JCC:2462) OFFICE ASST III: Gift Processing Assistant in Law Fund Offc; requires ability to maintain accurate & detailed gift records for production of reports to volunteers, & for internal use by the Law Fund Offc; maintenance of a variety of record keeping files; prep & mailing of all nec mat'ls in connection w/ various Law Sch'l fund-raising programs; typ acknowlm'ts fr the Dean of Law Sch'l; typ letters to volunteers; occasional evening & wkend work may be nec; QUALIFICATIONS: typ 60; familiarity w/ 10-key adding machine & other offc machines & eqpt; exp w/ memory typewriter useful but not mandatory; 2 yrs related exp; good command of English grammar; ability to effectively commu over the telephone; strong typing skills; good interpersonal skills & organizational ability; send appl/resume to Emily Chatfield, Room 113, Law School.; B11; $1246-1310.

29681-BP (JCC:2462) OFFICE ASST III: Will cross-train & substitute for the existing Procurement & Maintenance Desks during absences & when workload dictates a reassignment of duties; typ genl corresp & memos for dept mgrs & maintains offc corresp files; typ & tabulates statistical info w/ respon for completeness & accuracy; performs minor reconciling of dept'l budgets; answer phones & acts as receptionist; sort mail, etc; QUALIFICATIONS: knowl of business offc procedures & practices; good sec'l skills required; good working knowl of all business machines; able to deal w/ a diversity of individuals; good public relations & commu skills; aptitude for figures & details; willing to learn use of HP3000 terminal used at Maintenance Desk; send appl/resume to Peter A. Harvey, 308 Crothers Memorial Hall.; B11; $1246-1310.

32033-BP (JCC:2554) SECRETARY II: Works closely w/ Forum admin asst & other Forum staff on a variety of sec'l tasks; heavy typing load on IBM Electronic typewriter & computer terminal (NCR text editing sys); typing corresp, manuscripts & reports; some involvement in making travel, seminar, & conference arrangements; respon for inventory & supply orders, photocopy machine records, telephone billing, & other similar tasks as assigned; QUALIFICATIONS: typ 60+; good typing skills required; exp w/ computer text editing sys preferred, or willingness to learn basic sys quickly; good judgment & organizational skills nec; contact: Gerry Bowman, 497-9626.; B11; $1246-1310.

21985-BP (JCC:2562) SECRETARY III: Sec to Chairman of Mechanical Engrg Dept; organize & manage Chairman's busy appt schedule w/out detailed consultation; act as interface between Chairman & faculty, students & visitors; typ all Chairman's corresp; prep & process a variety of univ forms; screen & organize all mail; maintain Chairman's filing sys; respon for ordering & stocking offc supplies; organize lower-level tasks for student help; QUALIFICATIONS: typ 70; dictaphone; tech typing preferred but not essential; several yrs sec'l exp; good judgment, initiative & organizational skills required; knowl of univ policy & procedures helpful; send appl/resume to Dianne Sinn, Bldg. 500, Room C.; B14; $1440-1514.

26999-PM (JCC:2562) SECRETARY III: Prov support to VP for Development, the Assoc VP for Development, & the Deputy to VP under the direct supvn of their Admin Asst; typ memo, letters, proposals, manuscripts & position papers; answer incoming calls; establishing & maintain files; arrange mtgs; maintain & order supplies; make travel arrangements; maintain calendars of VP, the Assoc VP, & the Deputy; work w/ word processor, IBM Sel II, dictating machine & computer terminal; QUALIFICATIONS: typ 65; ability to perform all duties thoroughly, quickly & accurately; handle confidential mat'l w/ discretion; excel typing; proficient in spelling, grammar & punctuation; able to work effectively w/ persons fr diverse bkgrounds & disciplines, both in person & on phone; willing to learn to operate word processor, dictating machine & computer terminal; send appl/resume to Liz Trujillo, 301 Encina Hall, Stanford, CA 94305.; B14; $1440-1514.

31432-PM (JCC:2672) MED SERV ASST III: 8:30-5pm; performs all clerical duties nec to properly register patients into Faculty Practice Program; interview patients for financial & insurance info; receives & documents patient cash payments; works under dir of Nurse Mgr or Clerical Supvr in Dermatology Clinic to accomplish the clerical functions of the patient care provided in ambulatory setting; incl patient appt setting, requisitioning lab & radiology exams, as well as heavy phone commu w/ patients, physicians & other depts; QUALIFICATIONS: 1 yr exp in a med setting; able to work in a fast pace, pressure environ; able to interact w/ public; Bilingual ability desirable; contact: Vicki Sfewart, A367 Boswell Bldg.; B11; $1246-1310.

Bargaining Unit

42329-DS (JCC:7316) FOOD SERVICE WORKER III: Thurs-Mon, 6am-2pm; prep salads for buffet, a la carte salads or sandwiches during lunch, hors d'oeuvres for spec parties; 65% for daily buffet, makes jello molds, fruit trays, relish trays & a wide variety of salads & dressings; prep special desserts & fruits; makes sure left-over foods are returned to kitchen, properly stored & reused whenever possible; 25% sets up station for sandwich and/or a la carte salads; works salad or sandwich station during lunch; 10% prep cold plates, dips & hors d'oeuvres for special parties; QUALIFICATIONS: pantry exp in restaurants, hospitals, hotels, clubs or w/ a catering serv required.; A12; $ 6.54.

New employee orientation

The next orientation session for new employees will be held at 9 a.m. Tuesday, May 17, in Room 282, Tresidder Union.

The sessions are open to all new employees without preregistration.

Ph.D. oral exams

FRIDAY, MAY 13

Ali Akbar Iranmanesh, electrical engineering, "Electron Beam-Induced Temperature Profile, 3:15 p.m., McCullough 240.

MONDAY, MAY 16

Laurel E. Burns, geophysics, "The Border Ranges Mafic Complex: Plutonic Core of an Intraoceanic Island Arc," 2:15 p.m., Mitchell 372.

TUESDAY, MAY 17

Richard Lawrence Baer, electrical engineering, "Ultrasonic Transducer Arrays for Non-Destructive Testing," 2:15 p.m., Applied Physics Room 200. **Kent D. Baugh,** civil engineering, "Rate of Formation/Decomposition and Methane Fermentability of Autohydrolysis Products from Lignocellulose," 2:15 p.m., M 33 Terman Engineering Center. **Shinichi Ichikawa,** chemical engineering, "The Effect of Particle Size on the Reactivity of Supported Palladium," 1:15 p.m., Chemical Engineering Gazebo. **Isaac Cuir Riak,** education, "Capital Accumulation and Schooling in Modern World Economy: The Political Economy of Education and Income Inequality in Jamaica," 2:15 p.m., e114 Education Bldg. (Cubberley). **Dona Lee Wong,** neurosciences, "Regulation of the Biogenic Amine Biosynthetic Enzymes in the Adrenal and Pineal Glands," 1:30 p.m., D202 Sherman Fairchild Bldg.

WEDNESDAY, MAY 18

David M. Bachman, political science, "To Leap Forward: Chinese Policy-Making, 1956-1958," 9 a.m., Political Science Faculty Lounge. **Kilsoo Kim,** mechanical engineering, "Static and Dynamic Characteristics of Materials with Beam-Microstructure," 3:30 p.m., 529 Terman Engineering Center. **Arye Nehorai,** electrical engineering, "Algorithms for System Identification and Source Location," 3:15 p.m., Durand Building, Room 450.

THURSDAY, MAY 19

Susan Valerie Cashion, education and anthropology, "Dance in San Juan de Ocotan, Mexico: A Non-Verbal Expressing of Cultural Values," 9 a.m., 204 So. CERAS. **Theodore R. Mitchell,** education, "Oppositional Education in the Southern Farmers' Alliance: 1890-1900," 3:15 p.m., e114 Education Bldg. (Cubberley).

FRIDAY, MAY 20

Kenneth M. Duvall, electrical engineering, "Signal Cancellation in Adaptive Antennas: The Phenomenon and a Remedy," 3:30 p.m., AEL 109. **Marilyn Diane Fife,** communication, "FCC Policy on Minority Ownership in Broadcasting: A Political Systems Analysis of Regulatory Policymaking," 2:15 p.m., Room 414, Bldg. 120. **Lowell J. Gallagher,** English, 2:15 p.m., Bldg. 40, Room 41-F. **Constantinos P. Halvadakis,** civil engineering, "Methanogenesis in Solid-Waste Landfill Bioreactors," 2:15 p.m., M33 Terman Engineering Center. **Lawrence K. Lam,** electrical engineering, 2:15 p.m., Applied Physics 200. **Richard Gerard Landry,** English, 2:15 p.m., Dean Albert Gelpi's Office, Bldg. One, Room 2B. **Lynda Thoman,** economics, "Two Essays in Applied Microeconomics: Repeat Purchases Under Quality Uncertainty; Labor Power and Productivity Within the Firm," 2:15 p.m., Encina Hall 414. **Thomas S. Tobey,** education and psychology, "The Evaluation of a Preventive Approach to Parenting for First-Time Parents," 2:15 p.m., e114 Education Bldg. (Cubberley).

Oslo lecturer to show rare China cartoons

Rare, original Chinese cartoons will illustrate a free public talk by Prof. Christolph Harbsmeier of the University of Oslo at 4:15 p.m., Tuesday, May 17, in Room 4 of Cummings Art Building.

The political cartoons, entrusted to Harbsmeier by various artists who drew them, will hang in Cummings Art Building from May 17 to May 25.

Harbsmeier, associate professor of Chinese at the University of Oslo, received his M.A. from Oxford and his Ph.D. from the University of Copenhagen. Among his publications are *Classical Chinese Syntax* (London, 1981) and a biographical study of the artist and man-of-letters Feng Zikai (Oslo: Scandinavian University Press, 1983).

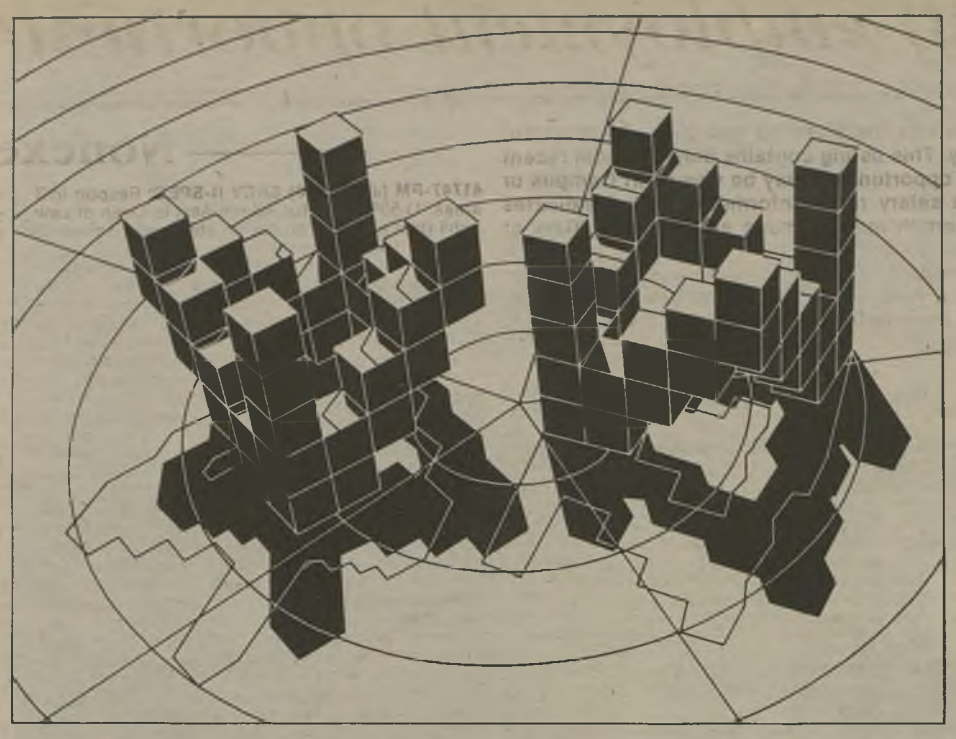
Harbsmeier will also give a brown bag lunch talk on "Nominalization and Subordination in Classical Chinese" in the Asian Languages Lounge at Stanford at noon Monday, May 23.

Sponsored by the Center for East Asian Studies, the Stanford-Berkeley Joint East Asian National Resource Center and University Events and Services, the cartoon exhibit is open during the hours of Cummings Art Building.

I-Center to hold 4th International Festival May 21

The fourth annual International Festival will be held Saturday, May 21, at Bechtel International Center at Stanford University. This day of celebration features foods, crafts, and entertainment from around the world.

Both Stanford students and community members are participating in the festival. About 20 different nationalities will be represented in the food booths alone. Specialties such as yakitori chicken from Japan, shish kabobs from the Middle East, curried dishes from India, Vietnamese eggrolls, and the exquisite "Pavlova" dessert from New Zealand will be served. Free samples of Australian, Scottish, and English beers and ales will be available for tasting.



Many handcrafts

A wide variety of handicrafts will be exhibited and sold, including items from Peru and Brazil, plus international merchandise from the Palo Alto United Nations Store. Artists will demonstrate and sell their art, and handmade American quilts will be displayed.

Entertainment will be provided throughout the day, with Irish music, Mexican songs, Peruvian folkdances, and Indian dances included. A special demonstration of the Japanese Tea Ceremony will be given, as well. Members of the Peninsula Storytellers Guild will be on hand to tell stories to children and families.

Landscape watercolors by Lorraine Schreiber will be on view during the month of May at the International Center, and these works can be seen at the time of the festival.

The International Festival will be held from 11 a.m. to 5 p.m. at the Bechtel International Center at Stanford. For more information call 497-1831.

127 plus 3 by Edward Sellery

Sellery's paintings appear 3-D

"Color Matrix," a series of paintings by Edward Sellery, will be on view in the School of Humanities and Sciences from May 16 to August 12.

Sellery invents geometric forms and then renders them as objects against flat planes in his acrylic paintings, conveying an astonishing sense of three-dimensionality.

Asked how he conceives of his intricate and compelling compositions, the 31-year-old California native says, "Using three parameters—hue, value, and chroma—you can plot the painting on a three-dimensional graph or architectural model. It's the same thing a computer might do, although a machine wouldn't have as wide a color selection or the fineness I do. The computer might produce it faster though!"

The creative titles that Sellery bestows on his work—"Chocolate Ox," "What in the World," and "Blanket Statement," for example—convey the artist's enjoyment of both visual and verbal puns and his whimsy.

Sellery graduated with a major in Fine Arts (painting emphasis) from UC-Irvine. He presently works in a non-art position at a security brokerage firm in San Francisco and is also involved in the graphic design field.

He'll tell how to plan for future

"Planning for a Precarious Future" will be discussed by Dr. Donald N. Michael at noon Tuesday, May 17, at Bechtel International Center.

Michael is emeritus professor of planning and public policy and was also professor of psychology and a program director in the Center for Research on Utilization of Scientific Knowledge, Institute for Social Research, at the University of Michigan.

He is a social psychologist with a background in the natural sciences with degrees from Harvard and the University of Chicago. His occupational career includes both government and business experience.

Michael is a fellow of the American Association for the Advancement of Science, the American Psychological Association, and the Society for the Psychological Study of Social Issues. He is also a member of the Club of Rome.

He has consulted about and published many professional papers, essays, and reports on practical and theoretical problems pertaining to personal, organizational and societal reactions to change produced by physical and social technology.

Among his major publications are *The Next Generation: Prospects Ahead for the Youth of Today and Tomorrow*, *The Unprepared Society: Planning for a Precarious Future*, and *On Learning to Plan and Planning to Learn: The Social Psychology of Changing Toward Future-Responsive Societal Learning*.

The presentation is one of the regular Tuesday Luncheon/Lecture series at the I-Center. Luncheon tickets are available at a cost of $2.50 one week before the event at the I-Center office on the second floor, or at the door as they last. Brown baggers are also welcome at no charge.

Other Cultures goes to Indonesia

The tropical archipelago of Indonesia is the focus of the Other Cultures Film Series at 7:30 p.m. Thursday, May 12, at the International Center.

"Wet Earth and Warm People," an hour-long film, centers on Indonesia's people. The camera moves from rice paddy to village, filming fishermen, soldiers, two-wheeled carts, bamboo rafts, people at work, and people at play.

Narration is provided by natural sounds and music—the laughter of children watching a puppet show; the chatter of women as they draw water from a village well; a dispute between two hot-headed fathers.

In the capital city of Djakarta, the old ways and the new sharply contrast. Viewers will see how pedicabs vie for street space with late-model automobiles.

The film is free and open to the entire community. A 75 cent donation will be requested to help defray the cost of the series. For further information on the weekly film series or other I-Center programs, drop by or phone the I-Center at 497-1831.

Piano recital set by Gregory Smith

Pianist Gregory Smith will give a free solo recital at 8 p.m. Tuesday, May 17, in Tresidder Lounge. Smith, a Stanford sophomore, is presented by the Department of Music.

He will perform two sonatas by Scarlatti, *Sonata in C Major (Waldstein)* by Beethoven, *Ballade II in F Major* by Chopin, and *Pictures at an Exhibition* by Moussorgsky.

Smith is a music major studying piano with Adolph Baller. At age 14 he soloed with the Utah Symphony, and has since been invited back twice to perform. At age 10 he was accepted into the Piano Preparatory Division of Brigham Young University, where he studied with Robert Smith, chairman of the piano faculty.

Bach, Telemann on Baroque program

The Department of Music presents the Stanford Baroque Orchestra, under the direction of Herbert Myers, and a Baroque vocal ensemble, under the direction of doctoral candidate Daniel Melamed, at 8 p.m. Wednesday, May 18, in Memorial Church.

The free concert will feature two cantatas of J.S. Bach: BWV 4 (*Christ lag in Todesbanden*) and BWV 182 (*Himmelskonig, sei willkommen*) with tenor soloist Harlan Hokin. This will be a rare opportunity to hear these cantatas performed as they were in Bach's day.

The Baroque Orchestra will also perform a concerto by Telemann with soloists Judith Linsenberg, recorder, and Roland Hutchinson, viola da gamba—both doctoral candidates in music.

The size of the choir and orchestra will be comparable to the forces used by Bach—12 singers and 15 instrumentalists, including an ensemble of cornetts and sackbuts for Cantata 4. Both groups employ Baroque performance techniques, and the orchestra plays on instruments built to 18th-century specifications.

Barnes recreates 1922 Sousa concert

John Philip Sousa comes to life again at 8 p.m. Saturday, May 21, in Dinkelspiel Auditorium when the Stanford Symphonic Band, under the direction of Arthur Barnes, recreates a summer band concert Sousa conducted in 1922. This is the Band's second annual Sousa recreation, featuring old-time band music from the park.

The program will include overtures from the opera *II Guarny* and *Euryanthe*, songs from Americana—*American Salute*, *Pop Goes the Weasel*—and encore marches by Sousa himself.

Director Barnes will solo on the baritone horn in Arthur Pryor's *Blue Bells of Scotland*.

The Symphonic Band will preview their concert at noon Wednesday, May 18, in front of Tresidder Union, and again at noon Thursday, May 19, at Civic Center Plaza in downtown Palo Alto.

Tickets for the May 21 concert are $4 general admission, $2 for students and senior citizens, available at Tresidder ticket office, 497-4317 and the door.

Theatre of Yugen in a scene from 'The Owl Mountain Pries'

Theatrical mixture of western and Japanese styles

The Theatre of Yugen, a company that combines styles from traditional Japanese *kyogen* and Western mime techniques, will give a lecture-demonstration and perform a playlet, *The Owl Mountain Priest* at 8 p.m. Wednesday, May 18, at the Elliott Program Center, Governor's Corner.

Founded in 1978 by its director Yuriko Doi, who was trained in Japan in Noh and *kyogen* as well as in Western dramatic styles, the Theatre of Yugen evokes the stylized drama and dance of traditional Japanese Noh and the earthy short comic interludes, *kyogen*, in its productions. Excerpts from plays to show stylized movements and dance will be followed by the short play *The Owl Mountain Priest* (*Fukuro Yamabushi*), a satire on a rough priest asked to perform an exorcism.

This free public performance is presented by the Center for East Asian Studies. The Elliott Program Center is located along Lagunita in the cluster of new dormitories at Governor's Corner near Santa Teresa Street and Governor's Avenue East (for parking).

Clifford Geertz to cover wide range in Harry Camp Memorial Lectures

Clifford Geertz, of the Institute for Advanced Study, Princeton, N.J., will deliver the Harry Camp Memorial Lectures at Stanford on "Works and Lives: The Anthropologist as Author" May 16, 17, 19, and 20.

The lectures will be given in Annenberg Auditorium, as follows:

Monday, May 16, 8 p.m., "Being There: Anthropology and the Scene of Writing";

Tuesday, May 17, 8 p.m., "The World in a Text. How to Read *Tristes Tropiques*";

Thursday, May 19, 8 p.m., "Slide Show: Evans-Pritchard's African Transparencies"; and

Friday, May 20, 4:30 p.m., "I-Witnessing: Malinowski's Children."

Through his essays on the interpretation of cultures, Geertz has blurred the boundary separating the humanities from the social sciences. In artfully describing other cultures, he has shown the beauty of marketing and the economy of art, the state as an aesthetic form and the politics in public processions, the moral imagination animating ritual and the practical side of mysticism. His prose both invokes worlds strange yet familiar and advances the theory of human understanding.

Born in 1926, in San Francisco, Geertz received his A.B. in philosophy from Antioch in 1950 and his Ph.D. in anthropology from Harvard in 1956.

He has held research or faculty positions at Harvard, UC-Berkeley, the University of Chicago, and Princeton University, and presently is the Harold F. Linder professor of social sciences at the Institute for Advanced Study.

Geertz has done field work in Java, Bali, Celebes, Sumatra, and Morocco. He is a fellow of the American Academy of Arts and Sciences, the American Philosophical Society, the National Academy of Sciences, the American Association for the Advancement of Science, and the Council of Scholars of the Library of Congress.

Geertz was a Harry Camp lecturer at Stanford in 1972 and since then has been asked to deliver the Lionel Trilling Lectures at Columbia (1977) and the Storrs Lectures at Yale Law School (1981).

His writings include *The Interpretation of Cultures: Selected Essays* (1973), *Peddlers and Princes* (1963), *Agricultural Involution*, *The Processes of Ecological Change in Indonesia* (1963), and *Negara: The Theatre State in Nineteenth Century Bali* (1980).

Bike Fair set

White Plaza will be the scene of a Bike Fair from 10 a.m. to 3 p.m. Friday, May 13.

Besides bike registration, there will be BMX (dirt bike) demonstrations, displays of helmets, baskets, and locks, security and safety tips, minor bike repairs, and door prizes.

The event is sponsored by the Police Department, with Alpha Phi Omega, the Tresidder Recreation Center, and some outside organizations. Some local bicycle shops will have accessories for sale.

For more information call Monica Miller of Police Department Special Services, 497-9633.

Flea Market-Fair at Escondido helps Childcare

The Escondido Flea Market-Fair, a benefit for the scholarship fund of the Childcare Council of Stanford, will be held 10 a.m. to 2 p.m. Saturday, May 14, in Pepper Tree Yard, Escondido Road, on the campus.

Booths for the flea market will be available at the Escondido Village Center for $10 until the eve of the event. Booths already planned include face painting, cake walk, paperback books, and Treasures and Trinkets.

Inside Pepper Tree there will be a coffee house with hot food and a puppet show.

A square dance will be held from 7-10 p.m., with Ken Oburn as caller.

The scholarship fund covers all the Childcare Council's centers on the campus, which are entirely parent-supported.

Childcare is of excellent quality, but the prices are high and waiting lists long. The young parents served by the centers often need financial help—hence the scholarship fund.

For more information call the Escondido Village Center, 497-1101, or the Childcare Resource Center, 497-2660.

Drama meeting set to preview Summer Theater

An informational meeting has been scheduled to discuss the Drama Department's Stanford Summer Theater Workshop 1983 at 4:15 p.m., Monday, May 16, in Little Theater.

The course offerings and play selection for the eight-week session will be announced; scheduling and student commitment will be discussed followed by a period for questions.

The workshop is open to students interested in participating in all aspects of theater production and willing to make a full-time commitment during the eight-week session.

University graduates, undergraduates, and students who have completed their junior year in high school are eligible for admission. The workshop may be taken on a no-credit basis or for eight units of academic credit.

The workshop will present two full-length plays in Little Theater and a noon-time series of six shorter plays in the Nitery. Beginning the third week of the summer session, noon-time performances will be presented Wednesday through Friday with an added performance at midnight on Friday. The evening series will begin the fourth week, each play running for a two-week period from Wednesday through Saturday.

The workshop provides a variety of opportunities for students to act, stage manage, design, and to participate in set construction, lighting, running crews, and front-of-house activities. The program is rigorous and demanding but provides a rewarding experience to students of theater.

Chicana health issues review to be held Saturday

Brazos Fuertes: Medicina y la Mujer, a conference to review Chicana health issues and the lives of Chicana health providers, will begin at noon Saturday, May 14, in Stanford's Zapata lounge and continue until 5:45 p.m.

Three panels, held in the large group instruction Room at CERAS, will explore the factors influencing the welfare of Chicanas, including socioeconomic status, sterilization abuse, high rates of infant mortality, lack of access to health services, etc.

11 a.m. to noon: Reception in Zapata Lounge.

Noon to 1:30 p.m.—Panel 1: La Chicana: Su Salud y Bienestar. Speakers will be Consuelo Chavez, Cathy Encisco, Kathy Flores, Kathy Preciado-Partida, and Sandra Salazar.

1:30-2:30 p.m.—Lunch.

2:30-4 p.m.—Chicanas as Health Care Providers: The Healing Tradition. Speakers will be Angie Dominguez Mefford, Ester Talavera, Olive Tejada-Flores, Sylvia Villareal, and Elizabeth Yaniegas.

4-4:15 p.m. Break.

4:15-5:45 p.m.—La Doctora: Personal Experience and Choice. Speakers are Carmen De La Rosa, Juan Flores, Ruby Raya, Lisa Solinas, and Laura Solorio.

The conference, sponsored by the Chicana Colectiva and the Stanford chapter of Chicanos in Health Education, is open to the public without charge.

American Indians' Festival and Pow-Wow starts Sunday

American Indian scholars and leaders ill keynote Stanford's second annual merican Indian Festival Sunday through riday, May 15-20, on campus.

Introduction by Prof. Clifford Barnett, airman, Anthropology Department. merican Indian Healers and Healing: A oss-Cultural Perspective," Family, mmunity, and Preventive Medicine, -5 p.m., Schultz Auditorium, ysiology Building, Campus Drive.

Reception at Stanford School of edicine; 5-6:30 p.m., Fairchild ditorium Lobby.

esday, May 17

Introduction by Count Gibson, fessor and chairman, Family, Comunity, and Preventive Medicine Public icy Symposium: "The Indian Health rvice and Its Challenge," with Everett odes, director, Indian Health Service; Alan Goodman, former director of vajo Health Authority; Robert Fairks and Lori Cupp, Stanford Medical dents. 7 p.m., Tresidder Room 271.

dnesday, May 18

The Dorothy Danforth Compton cture. Introduction by Gerald J. berman, vice-provost and dean of aduate studies and research. Shirley rt Hill, secretary of Natural Resources the State of New Mexico. 12 noon, Meyer Library Forum Room.

Sherry Hour to meet Shirley Witt Hill; 4 p.m., American Studies House, 566 Mayfield.

Thursday, May 19

Coffee Hour and presentation by Hans Lang, director, American Indian Museum, University of Zurich,' Switzerland. 9 a.m., Indian Cultural Center, basement, Women's Clubhouse, Old Union.

Introduction by Stanford medical student Miguel Dozier; "Cultural Research and Indian Community Development," by Prof. David Warren, director of cultural studies, College of Santa Fe, N.M.; 12 noon, Meyer Library Forum Room.

Reception for David Warren—4 p.m., 369 Wayside Road, Portola Valley.

Panel Discussion—"Problems of Identity; Who Is Indian Today?" with Indian Treaty Council and California Title IV Programs members. 7 p.m., Tresidder Union, Room 270.

Friday, May 20

Introduction: Albert J. Gelpi, Coe Professor of American Literature. Poetry Reading by Paula Gunn Allen; 12 noon, Meyer Library Forum Room. Reception following cosponsored by CROW and DOSA.

Exhibits

The Florence Pulford Collection of American Indian Contemporary Art Forms: Selections from the Northern Plains, Meyer Library Lobby, first floor.

Contemporary American Indian Quilt Art, Faculty Club.

American Indian Displays and Crafts, White Plaza.

May 20-22

Twelfth Annual Pow-Wow behind the baseball diamond, facing El Camino Real.

Black Arts Festival to have films, writers, arts, dance

Stanford University's Kuumba Arts Ensemble and Ujamaa House will present the fifth annual Black Arts Festival Monday through Sunday, May 16-22, on the campus.

This year's theme will be "Creativity toward Liberation: Self-Determination, Self-Defense, and Self-Reliance through Cultural Unity."

Weekday events include lunch discussions on black writers and intelligentsia, and a film and rally on Malcolm X.

The weekend events will start at noon Friday, May 20, with a Tresidder patio performance of the Celestial Lions, a Bay Area reggae band. That night is Cultural Night, with poetry readings, a one-act play, fashion show, and African food and music at 8 p.m. in the Lagunita Court Dining Hall.

Saturday, May 21, events will feature an Arts and Crafts Faire from 10 a.m. to 6 p.m. on the Tresidder patio deck. On the schedule are arts, crafts, and photo exhibits, poets, musicians, and the Kuumba Dance Ensemble.

The dance group, Balle Saba, will give a master class at 2 p.m. in the Women's Clubhouse ($2).

A dance concert, "Creativity toward Liberation: Dance in Motion," will be presented at 8 p.m. Saturday, May 21, in the Lagunita Court Dining Hall. On the program are Ancestral Wisdom and Balle Saba, as well as poets reading their work.

Admission is $2 in advance, $3 at the door.

The Stanford Gospel Choir will end the week with a performance at 3 p.m. Sunday, May 22, in Dinkelspiel Auditorium. Admission is $1 at the door.

The weekday schedule follows:

Monday, May 16: Noontime bag lunch discussion on black writers at Harmony House.

Tuesday, May 17: Noontime bag lunch discussion on the black intelligentsia at Harmony House; "Class, the Invasions. . ." at 7 p.m. in Ujamaa Lounge, Lagunita Court.

Wednesday, May 18: Noontime bag lunch discussion on the Black media at Harmony House; film on Malcolm X at 7 p.m. in Ujamaa Lounge, Lagunita Court.

Thursday, May 19: Noontime White Plaza rally on Malcolm X; slide show presentation and discussion on South Africa and Ghana at 3 p.m. in Ujamaa Lounge, Lagunita Court; "Class, the Invasions. . ." at 7 p.m. in Ujamaa Lounge.

For more information call Kuumba Arts Ensemble, 497-1587; Black Community Services Center, 497-1587; or African and Afro-American Studies, 497-3781.

BY ARNE FOLKEDAL

The Dance Division's 'Spring Migration' (above are Jean Massicotte and Jancy Limpert) will offer performances at 8:30 p.m. Wednesday through Saturday, May 11-14, in Roble Dance Studio.

Mendicants give annual concert

The Mendicants, Stanford's popular male vocal ensemble, will give their annual spring concert at 9 p.m. Wednesday, May 11, in Memorial Church.

The free public concert, which celebrates the Mendicants' 20th year on campus, will include music for all tastes—from pop to barbershop, spirituals to old English airs.

Ed Cohn

Hundreds to play Verdi's *Requiem* at Memorial Church

Hundreds of Stanford musicians will join forces to perform Verdi's monumental *Requiem* at 8 p.m. Friday and Sunday, May 20 and 22, in Memorial Church.

Conducted by William Ramsey, these performances will bring together the Music Department's Chorus, Chorale, Church Choir, and Symphony Orchestra. Joining them will be four very fine soloists: soprano Lila Stuart, mezzo Wendy Hillhouse, tenor Gregory Wait, and bass-baritone Ed Cohn.

Stuart and Wait are voice teachers at Stanford; Hillhouse and Cohn are well-known Bay Area opera singers. The Symphony Orchestra has been prepared for the *Requiem* by doctoral candidate Eric Kujawsky.

Verdi wrote his *Requiem* in memory of Alessandro Manzoni, an Italian national hero. It was first performed, with great success, on May 22, 1874, in Milan, conducted by Verdi.

Verdi's *Requiem* was last performed at Stanford in 1975, conducted by former choral director Harold Schmidt, to mark Schmidt's retirement. The performances this May 20 and 22 will honor the memory of Allyce Wishnevsky, a friend of music and of Stanford University, who left a gift in her name to perpetuate the life of music at Stanford.

Tickets for the performance are $4 general, $2 students and senior citizens, available at Tresidder Ticket Office (497-4317) and the door.

Calendar

Calendar items should be delivered in writing to Jean Miller, University Events and Services, Press Courtyard, Santa Teresa Street, by the Wednesday, 12 days before the beginning of the week in which the events occur. The next deadline is Wed., May 11, to cover the week of Mon., May 23, through Sun., May 29. Calendar items are entered into CIT's IBM computer and may be examined by anyone. Type ADMIN INFO PUBLIC EVENTS.

MONDAY, MAY 16

American Indian Festival Week Panel Discussion: "American Indian Healers and Healing: A Cross-Cultural Perspective," guest panel. Reception 5 p.m. - 6:30 p.m. 1-5 p.m., 7-9 p.m. Shultz Aud., Stanford Medical School.

Anthropology Dept. Colloquium: "The Historical Relationship Between Blacks & Indians," by Jack Forbes. 3:30 p.m. Anthro. Museum Room 110.

Biological Sciences Seminar: "Neurotransmission and Neuronal Markers at Sensory Synapses in the Spinal Cord," by Dr. Thomas Jessell, Dept. of Neurobiology, Harvard Medical School. 4:15 p.m. Room T-175 Herrin Hall.

Numerical Analysis Seminar: "A Fourier Method for Three Dimensional Elliptic Problems," with Alexsei Shestakov, Lawrence Livermore Lab. 4:15 p.m. room 380C, Math Corner.

STARTS Presents Fred Astaire & Ginger Rogers in: "The Gay Divorcee," featuring songs by Cole Porter. 7 p.m. & 9 p.m. Tresidder Room 270. $2 students, faculty, and staff; $3 general.

Harry Camp Memorial Lecture: "Works and Lives: The Anthropologist as Author," by Clifford Geertz, Institute for Advanced Study, Princeton. Topic of discussion: "Being There: Anthropology and the Scene of Writing". 8 p.m. Annenberg Aud. Free.

TUESDAY, MAY 17

Bechtel International Center Tuesday Luncheon/Lecture Series: "Planning for a Precarious Future," by Dr. Donald N. Michael. Noon. I-Center. $2.50 for hot lunch, brown-baggers welcome at no charge.

Learning About Racism Lunch Series: "Inherent Barriers to Inter-Ethnic Communication," by Alejandro Martinez, psychologist at Cowell Health Center. Bring a bag lunch or arrange to eat at Casa Zapata. Noon. Casa Zapata Dining Hall.

Center for East Asian Studies Films: "Community Divided" & "Tokyo: World's Safest City?". Noon. Room 241, Lou Henry Hoover Bldg.

Stanford Art Museum Lunch Hour Tour: Early Lithography. 12:15 p.m. Stanford Museum.

Applied Mechanics Seminar: "Ship-Generated Solitons," with Prof. John Wehausen, University of California, Berkeley. 4:15 p.m. Materials Science Room 550a.

Center for East Asian Studies Colloquium: Dr. Christolph Harbsmeier, University of Oslo, will speak on Chinese political cartoons and China's political situation. Dr. Harbsmeier's own collection of rare, original Chinese cartoons will be on display in Cummings until May 25. 4:15 p.m. Room 4, Cummings Art Building.

Roble Hall Lecture: "What It's Like To Be a Journalist in a Country with Information Constraints," by Bradley Martin, Asian Correspondent for the Washington Sun. 6:30 p.m. Roble Hall. Free.

American Indian Public Policy Symposium: "The Indian Health Service and Its Challenges," by Everett Rhodes, director, Indian Health Service , and Alan Goodman, former director, Navajo Health Authority. 7 p.m. Tresidder 271.

Music Dept. Concert: Gregory Smith, piano. Scarlatti-Sonata in E Major; Beethoven-Waldstein Sonata; Chopin-Ballade in F Major; Ravel-Ondine from Gaspard de la Nuit; Mussorgsky-Pictures at an Exhibition. 8 p.m. Tresidder Lounge. Free.

Harry Camp Memorial Lecture: "Works and Lives: The Anthropologist as Author," by Clifford Geertz, Institute for Advanced Study, Princeton. The World in a Text. How to Read *Tristes Tropiques*. 8 p.m. Annenberg Aud. Free.

WEDNESDAY, MAY 18

CROW Lecture: "Cross-Cultural Sexual Attitudes and Behavior: Hispanics and Anglos," by Maria Luisa Flaherty, Clinical Social Worker, San Jose. Noon. Terman Aud. Free.

Latin American Studies Lecture: "Ideology and the Corporatist State Under Cardenas," with Dr. Alama Garcia-Marsh, Assistant Professor of Sociology, University of Santa Clara. Noon. Bolivar House.

Dorothy Danforth Compton Lecture: Shirley Witt Hill, Secretary of Natural Resources, New Mexico. Sherry hour with Hill at American Studies House, 4 p.m. Noon. Meyer Forum Room.

Stanford Art Museum Lunch Hour Tour: Early Lithography. 12:15 p.m. Stanford Museum.

Chemical Engineering Colloquium: "Bubble Formation at a Flexible Orifice," by Professor Richard G. Rice, Louisiana State University. 4:15 p.m. Chemical Engineering Conference Room.

Center for Research in International Studies Lecture: "American Public Opinion and United States Foreign Policy," by Dr. John E. Rielly, President, Chicago Council on Foreign Relations. 4:15 p.m. Room 205, History Corner.

Chemical Engineering Special Seminar: "Dynamics of Catalysts and Catalytic Reactors," with Dr. Louis Hegedius, director, Inorganic Research Dept. , Washington Research Center. 4:15 p.m. Chemical Engineering Gazebo.

Roble Hall Health Series: "Exercise Physiology and Weight Control," by Barbara Hewitt of the Stanford Heart Disease Prevention Program. 7 p.m. Roble Hall.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

Center for East Asian Studies: "Kyogen-Mime" lecture and demonstration by the Theatre of Yugen. Combining styles from traditional Japanese kyogen (short comic interludes) and Western mime techniques, the Theatre of Yugen will demonstrate stylized movement and speech and Noh dance, and will perform the short play *The Owl Mountan Priest*. 8 p.m. Elliott Program Center, Governor's Corner.

THURSDAY, MAY 19

Theology & Natural Sciences Lunch Series: "Science and Ethics - Genetics," by Ronald Davis, Professor of Biochemistry at Stanford, and Ernle Young, chaplain at Stanford Hospital. Noon. Otero Dining Hall, Wilbur Hall.

American Indian Festival Week Lecture: "Cultural Research and Indian Community Development," by David Warren. Noon. Meyer Forum Room.

Perspectives on Twentieth Century Japan Colioquia Series: Professor Harry Harootunian, Max Palevsky Professor of History and Civilization, University of Chicago will speak on an unannounced topic. 4:15 p.m. Room 238, Lou Henry Hoover Bldg.

Applied Physics Lecture: "Macroscopic Quantum Tunneling and Noise in Josephson Junctions," by Gerd Schon, Institute for Theoretical Physics, University of California, Santa Barbara. 4:15 p.m. Applied Physics 200.

Solid Mechanics Seminar: "Materials with Memory : An Essay in Thermodynamics," with Prof. J. Kestin, Div. of Engineering, Brown Univ. 4:15 p.m. Skilling Aud.

American Indian Festival Week Discussion: "Problem of Identity: Who Are Native Americans Today?" Panel discussion. 7 p.m. Tresidder 207.

Nuclear Film Program Series: "Nuclear Nightmares". 7:30 & 9:30 p.m. Meyer Forum Room. Free.

"Other Cultures" Film Series: "Waiting For Fidel" (Cuba). Inside Cuba with a movie-making threesome whose hope is that Fidel himself will star in their film. The film makers are a former Newfoundland premier, a radio and TV owner, and Canadian film director. What happens while this unusual crew awaits its star shows a good deal of the new Cuba and also the three Canadians who chose to film the island. 7:30 p.m. Bechtel International Center. 75 cent donation.

Center for East Asian Studies: "Captive Island" ("Shokei no Shima") (1966). Directed by Masahiro Shinoda; with Akira Nitta, Rentaro Mikuni. The son of an anarchist whose family was murdered sets out seeking revenge but ends up burying his past. 7:30 p.m. Room 040, Building 420.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

Harry Camp Memorial Lecture: "Works and Lives: The Anthropologist as Author," by Clifford Geertz, Institute for Advanced Study, Princeton. Slide Show: Evans-Pritchard's African transparencies. 8 p.m. Annenberg Aud. Free.

FRIDAY, MAY 20

Biological Sciences Special Seminar: "Immunological Methods to Detect DNA Damage in Vitro and at the Single-Cell Level," by Dr. Paul Lohman, head, Genetic Toxicology Dept., Netherlands Organization for Applied Scientific Research, Rijswijk, The Netherlands. Noon. Room T-175 Herrin Hall.

Center for East Asian Studies Bag Lunch: Prof. Hiroshi Kimura, Center for Slavic Studies, Hokkaido University will speak on "Soviet&Japanese Relations". Noon. Room 241. Lou Henry Hoover Bldg.

African Studies Center: Conference on "Resistance: Studies in Africa, Caribbean/ Latin American, and Afro-American History". 10 a.m. to 5 p.m. Sherman Fairchild Aud., Medical Center.

Applied Mathematics Lecture: "Relaxation and Structural Optimization," by Prof. Robert Kohn, Courant Institute & M.S.R.I. 3:15 p.m. Math 380-C.

Material Science & Engineering Colloquium: "Magnetic Thin Film Disc Recording," by Thomas Arnoldusssen, IBM Laboratories, San Jose, Calif. 3:30 p.m. Peterson Laboratory, Room 550A.

Harry Camp Memorial Lecture: "Works and Lives: The Anthropologist as Author," by Clifford Geertz, Institute for Advanced Study, Princeton. I-Witnessing: Malinowski's Children. 4:30 p.m. Annenberg Aud. Free.

Stanford American Indian Organization: 12th Annual Stanford Pow-Wow. 5-12 p.m. I.M. Soccer Field.

Music Dept: Stanford Chorus & Symphony Orchestra. Verdi Requiem; the chorus will be joined by soloists, Memorial Church Choir, and the Stanford Chorale. 8 p.m. Memorial Church. $4/$2.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

STARTS/Coffee House: Michael Gulezian, folk guitar. Tacoma recording artist performs at Stanford during West Coast tour. 9-12 p.m. Coffee House. Free.

SATURDAY, MAY 21

Men's & Women's Crew: PAC-10 Rowing Championships. Redwood Shores is located 10 miles north of campus on Highway 101. Take the Ralston Avenue turnoff, and the race course is right across the street from Marine World/ Africa USA. All day. Redwood Shores.

Stanford American Indian Organization: 12th Annual Stanford Pow-Wow. All day. I.M. Soccer Field.

Bechtel International Center: International Festival. International foods, crafts, and entertainment. 11 a.m. to 5 p.m. I-Center. Free.

Drama Department: Kaufman and Hart's classic American comedy, *Once in a Lifetime*. The classic American comedy about the beginnings of "the talkies" in Hollywood and its effect on everyone connected with the industry. 8 p.m. Little Theatre. $4 general; $2 students/seniors.

5th Annual Black Arts Festival Dance Concert: "Creativity Towards Liberation: Dance in Motion," featuring "Ancestral Wisdom" and "Balle Saba". 8 p.m. Lagunita Dining Hall. $2 in advance; $3 at door.

Music Dept. Concert: Symphonic Band (Wind Ensemble). Second annual Sousa Concert: recreation of a program from 1922, featuring solos, duets, trios, favorite band transciptions, and Sousa marches. Arthur Barnes performs "The Bluebells of Scotland" on the baritone horn. 8 p.m. Dinkelspiel Aud. $4/$2.

African Studies Center: Conference on "Resistance: Studies in Africa, Caribbean/ Latin American, and Afro-American History". 9:30 a.m. to 5 p.m. Room 112, CERAS Building.

SUNDAY, MAY 22

Men's & Women's Crew: PAC-10 Rowing Championships. Redwood Shores is located 10 miles north of campus on Highway 101. Take the Ralston Avenue turnoff, and the race course is right across the street from Marine World/ Africa USA. all day. Redwood Shores.

Stanford American Indian Organization: 12th Annual Stanford Pow-Wow. All day. I.M. Soccer Field.

University Public Worship: Preacher: R.G. Hamerton-Kelly, Dean of the Chapel. 11 a.m. Memorial Church.

5th Annual Black Arts Festival Concert: Stanford University Gospel Choir. 3 p.m. Dinkelspiel Aud. $1 at the door.

ASSU Sunday Flicks: "The Spy Who Loved Me". 7 & 9:3 p.m. Memorial Aud. $1.50.

EXHIBITS

The Prints of William Nicholson. Tues.- Friday 10 a.m. p.m., Sat.-Sun. 1-5. Stanford Museum. March 20 - May 22.

Works by Graduate Students in the M.F.A. Program Stanford. Art Gallery. May 17 - June 12.

CAMPUS REPORT

Volume XV, Number 33 | A publication for Stanford University faculty & staff | May 18, 1983

The SLAC Accelepede has brought glory to Stanford by winning first prize for the best centipede costume at the Bay-to-Breakers race in San Francisco Sunday. The Accelepede consisted of 33 runners wearing modulator units (SLAC power supplies) connected with beam pipe, plus the added excitement of flashing lights and electronic beepers. Mathematician Ken Witthaus was in charge of the monster.

Public affairs has new chief: Bob Freelen

Robert E. Freelen, 49, has been named Stanford vice-president for public affairs, effective immediately, University President Donald Kennedy announced Monday, May 16.

A former Stanford student body president, Freelen has served as acting vice-president since February. He succeeds Robert M. Rosenzweig, who was named president of the Association of American Universities in Washington, D.C.

Freelen will be responsible for federal, state, and local government relations; news and publications; events and services; and the guide service.

He and his colleagues have frequently been praised by Kennedy for "extraordinarily effective" representation of the University in Washington and Sacramento.

Announcing his appointment, Kennedy said: "Bob's two highly successful tours as acting vice-president, and the breadth of his experience at Stanford are among the reasons for my confidence that Stanford's public affairs will be in good hands. He is also deeply knowledgeable about public policy in the areas important to us and he is a splendid organizer and leader of the staff."

Active in government relations for

Bob Freelen

Stanford since 1972, Freelen has been concerned with such issues as tax policy, student aid, and indirect cost recovery.

In an interview with *The Stanford Daily* last year, Freelen said "one of the

Excellent research called prime criterion for tenure

Demonstrable excellence in research "should be recognized as our primary criterion for tenure," Dean Norman K. Wessells of the Stanford School of Humanities and Sciences told the Faculty Senate Thursday, May 12.

"No person should be granted tenure here who is not demonstrably excellent as a research scholar," he declared, "We must continue to emphasize that high quality teaching is critically important, but we should embrace the concept that first-class university-type teaching is sustained by, and is directly dependent upon, continuing scholarship of the first rank. The two are inseparable."

Wessells noted that the School's faculty is now 79 percent tenured, one of the highest ratios among major universities. This will increase further as the result of changes in retirement laws.

"Unless we take new steps to reverse the trend, by the 1990s, the School of Humanities and Sciences will have only about 75 professors among its 28 departments. For comparison, Yale now has 55 percent tenured faculty and has adopted

Governance, appointments key Hoover issues—Kennedy

The key issues in the emerging debate over the relationship of the Hoover Institution to Stanford University "have to do with governance and the mode of appointment and not with who has what kind of politics," University President Donald Kennedy said Saturday, May 14.

"Political body counting, which has become kind of a feature of the present debate, is not a terribly important or useful thing on which to concentrate," he told more than 1,000 persons attending the Alumni Association's 51st annual campus conference. *(See text page 10.)*

"Indeed, consideration of those matters is not only improper under our own perceptions of academic freedom but plays its own role in turning the discussion into one that is unnecessarily strident on both sides."

About 1,500 members of the Stanford community, including at least 75 of the University's 1,100 faculty members, have signed petitions asking the Board of Trustees to conduct an inquiry into the present relationship, where Hoover is "independent within the frame" of the University.

Faculty Senate elects Heller 1983-84 chairman

Associate Prof. H. Craig Heller, 39, biological sciences, has been elected chairman of the Stanford Faculty Senate for 1983-84.

Elected to serve with him on the Senate Steering Committee May 5 were Profs. Michael Bratman, philosophy; Paul Robinson, history; Sanford Dornbusch, sociology; and Kenneth Arrow, economics.

Formed in 1968, the Senate is a key policy-making group within the University. It includes 53 elected faculty representatives and 10 ex-officio members, including the president, provost, deans of seven schools, vice provosts responsible for overseeing undergraduate and graduate education, and the academic secretary.

Heller sees the chairman's role as one of facilitating discussion in this forum. "It's like a traffic cop in Paris," he says. "Things fly by fast and furious. If they're not kept in order, disaster can occur."

Heller is former chairman of the influential Committee on Committees, which recommends faculty to serve in the governance structure of the University. He currently is a member of this group and of the Steering Committee.

Heller also is former chairman of the Commission on Investment Responsibility, a student-faculty-alumni-staff group which serves in an advisory capacity to the Board of Trustees.

Craig Heller

Born in Philadelphia, Heller graduated from Ursinus College (B.S., 1965) and Yale (M.Phil., 1968; Ph.D., 1970). A Stanford faculty member since 1972, he received the Walter J. Gores award for excellence in teaching in 1977. His research concerns the autonomic nervous system, particularly the mechanisms for regulating body temperatures in vertebrate animals. This includes the investigation of sleep, hibernation, and adaptation to extreme environments.

Academy elects three from Stanford

Three Stanford faculty members are among 77 new members of the American Academy of Arts and Sciences.

They are Prof. Theodor Hansch, physics; Bradley Efron, statistics; and Olle Bjorkman, consulting professor in biological sciences.

Earlier this year, Hansch was named to share the $5,000 Cyrus B. Comstock prize of the National Academy of Sciences. In January, Efron received a $220,000 fellowship from the John D. and Catherine T. MacArthur Foundation.

Bjorkman works at the campus office of the Carnegie Institution of Washington.

At present, 118 of Stanford's 1,100 faculty members belong to the Academy. Founded in 1780 by John Adams and other leading intellectuals of the period, the Academy is a national honorary society with a membership of nearly 2,400 scholars, scientists, and public figures.

AAUP meets June 1 at Meyer Library

The Stanford chapter of the American Association of University Professors will hold its annual meeting at 4:15 p.m. Wednesday, June 1, in the Meyer Library Forum Room.

"The Benefits Package" will be discussed by a panel consisting of Profs. Kenneth Scott, law; Alain Enthoven, business; and Jeannie Thomas, manager of benefits.

The results of the annual election will also be announced at the meeting. Nominees for the 1983-84 executive committee include Denis Phillips, education, for president; David Danelski, political science, for vice-president; James Jucker, industrial engineering, for secretary-treasurer; and Julian Davidson, physiology, and Christopher Coe, psychiatry, for members at large.

The nominating committee consisted of Profs. Leon Rosenberg, medical microbiology, Bernard Roth, mechanical engineering, and Herbert Schwartz, pediatrics.

Two immediate past presidents will also serve on the executive committee: Ronald Rebholz, English and Clifford Barnett, anthropology.

Robert Conquest

Robert Conquest, curator and senior research fellow at the Hoover Institution, has written the introduction for *Andropov: New Challenge to the West*, coauthored by Arnold Beichman and Mikhail S. Bernstam (Stein and Day, due June 10).

The book relates what is known inside and outside the Soviet Union about Yuri Andropov—his origins, skills, character, and how he managed to climb to supreme power.

Werlen trip to Switzerland

German studies graduate student Hans Werlen and his wife Martha, a secretary in the Psychology Department, have organized two unique two-week trips to the Lotschental, a secluded mountain valley in southern Switzerland, in mid-July and mid-August.

Hikers and beginning or intermediate climbers will be taught by professional Swiss mountain guides in a beautiful area unspoiled by tourism.

For a brochure or more information call the Werlens at 493-7578.

Brest named to Montgomery chair

Prof. Paul A. Brest has been named to the Kenneth and Harle Montgomery professorship in clinical legal education at Stanford Law School.

His appointment was reported to the Stanford Board of Trustees Tuesday, May 10, by John Hart Ely, dean of the Law School. He called Brest "an extraordinarily strong and central member of our faculty."

A Stanford faculty member since 1969, Brest played a leading role in developing

Paul Brest

an experimental program, called "Curriculum B," which laid the groundwork for a number of significant changes in the School's program for 1983-84.

Dean Ely noted that, in addition to being an innovative teacher, Brest is "one of the nation's leading scholars of constitutional law" and author of an unusually creative casebook in the field, *Processes of Constitutional Decision-Making* (1975).

The Montgomery chair was established in 1980 by Mr. and Mrs. Kenneth Montgomery of Northbrook, Ill. Its first holder, Prof. Anthony Amsterdam, left Stanford in 1981.

Brest was born in 1940 in Jacksonville, Fla. and graduated in 1962 from Swarthmore College.

He earned his law degree *magna cum laude*, in 1965 from Harvard where he was Supreme Court and developments note editor for the *Harvard Law Review*.

From 1966 to 1968 Brest was an attorney with the NAACP Legal Defense and Educational Fund in Jackson, Miss.

He then served at the Supreme Court as law clerk for Justice John M. Harlan, joining the Stanford Law School in the fall of 1969.

Brest was elected last year to membership in the prestigious American Academy of Arts and Sciences.

He and his wife, Iris Brest, an attorney with Stanford's Office of the University Counsel, live on the Stanford campus.

Library to honor 100 volunteers

About 100 Stanford Library volunteers will be recognized at an informal ceremony in the redwood grove between Serra St. and the Art Gallery, starting at 3 p.m. Friday, May 27.

Library Director David Weber will speak briefly and introduce the volunteers. Some of their activities include helping catalog rare maps, aiding in identification of brittle books, and helping the FAST-CAT catalog system.

Great works course seeks assistant

WANTED. Assistant to the coordinator of "Great Works of Western Culture."

Person must be an efficient administrator, and have the diplomatic skills to work with a teaching staff made up of regular members of the Stanford faculty and instructors.

Responsibilities will include teaching one class each quarter; insuring the organic unity of the course; chairing the meetings in which the teachers prepare for the teaching of the works and determine the syllabus and final examination; putting those latter documents in their final form; collecting and distributing materials which will aid the teaching of critical reading, thinking, and writing; working with the teachers, especially the new instructors, to improve their teaching; encouraging and helping organize supplementary programs, like staged readings of plays, concerts, and the film series; participating in the search committees for new instructors; and representing "Great Works" on the Core List Committee. Position is defined as two-thirds of full time.

Pay will be $15,000. Apply by May 25 to the Western Culture Program Committee, c/o Prof. Marsh McCall, Western Culture Program.

CAMPUS REPORT
(ISSN:0049-2108)

Published weekly in January, February, March, April, May, June, October and November; two issues in July and August; three issues in September and December.
Published by the Stanford University News Service. Patricia J. Black, editor; Karen Marman, design assistant; Debbie Jeppson, production assistant; Charles Painter and Ed Souza, photographers; Medical news editor, Lisa Ames, ext. 7-6911.

DEADLINES: For campus news, the Friday before each Wednesday's issue at the News Service, Press Courtyard, Santa Teresa St., ext. 7-2558. For Medical Center news, the Wednesday before each issue at the Medical Center News Bureau, TC-135, ext. 7-6911.

Second class postage paid at Palo Alto., CA. U.S. mail subscriptions at $9 per year or $3 for one quarter are available at the *Campus Report* office, Press Courtyard, Santa Teresa St., Stanford, CA 94305.

In a Harlem elementary school, Clay Bates set his goals down in writing—now he's busy achieving them all

BY DONALD STOKES

When Clayton W. Bates, Jr., was in elementary school in Harlem he wrote down in his album exactly where he planned to get his higher education, in order to become a top scientist.

He kept closely to that life plan, and has become:

* The researcher largely responsible for the type of X-ray image intensifier used in diagnostic radiology throughout the world;

* Leader of the research team that is nearing the creation of an inexpensive photovoltaic solar cell.

All this and, as they say, much, much more.

Joining Stanford in 1972 as associate professor and promoted to full professor in 1977, Bates is an athletic handsome man with an easy manner who has for 10 years been in demand as a professional photographic model, in whatever spare time he can manage.

He shrugs off mention of the fact that he was born and raised in Harlem, and the problems caused by his black background.

A pinpoint summary of his beginnings show that he was born the child of a broken marriage. His mother was a domestic. He and his sister were raised by their mother in New York City.

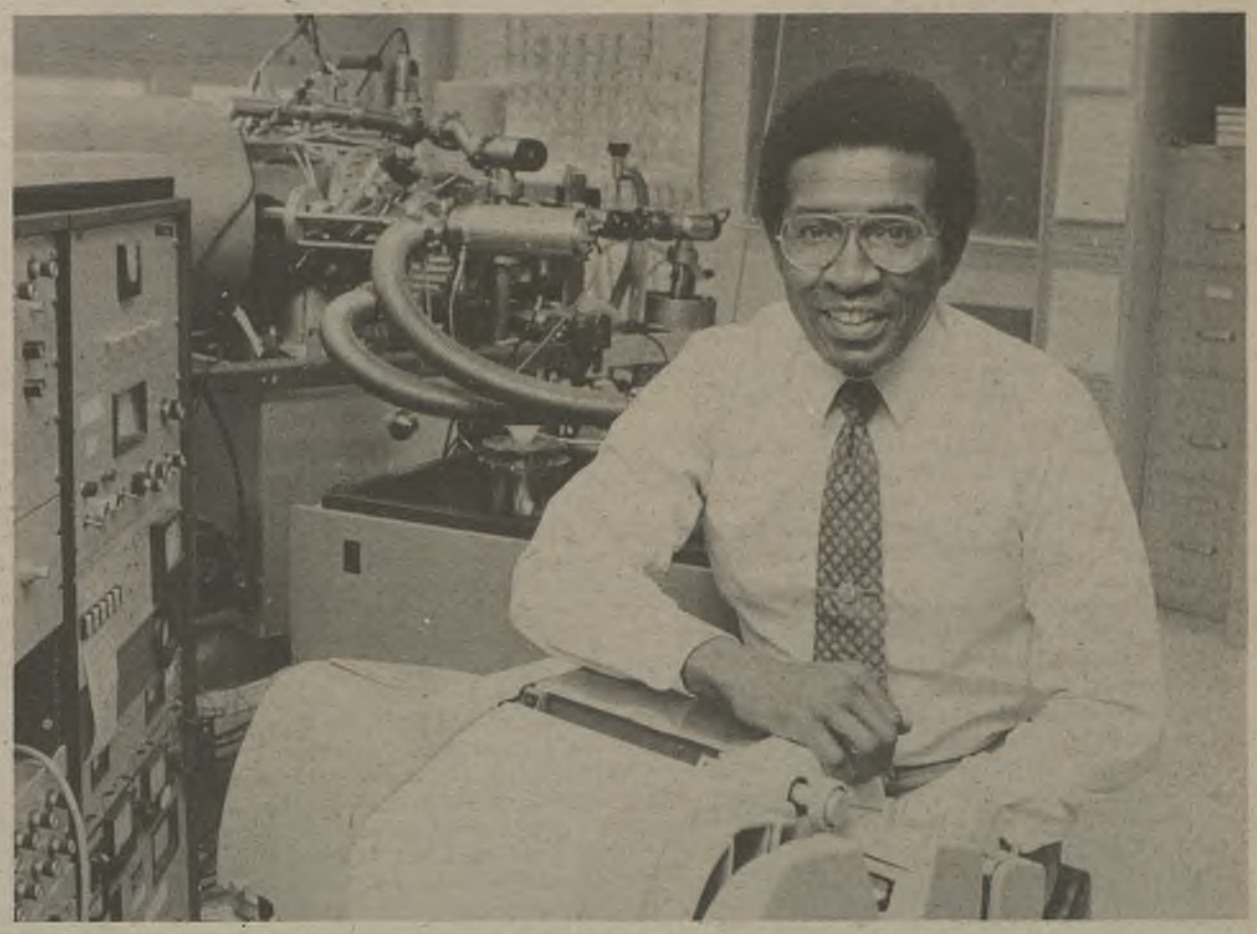
"I was interested in science and engineering as far back as I can remember," he said. "I still have the album from my elementary school, in which I wrote down exactly which schools and colleges I planned to go to, in order to study engineering.

"My first ambition was to become an aeronautical engineer. I was told that the way to do that was to study a combination of civil and mechanical engineering. So I started out as a civil engineer. Eventually I became interested in electrical engineering and got my first degree in this area."

His master's degree followed, and he finished all the course work as a candidate for a Ph.D. in electrical engineering, but then decided he was more interested in physics. He started graduate school all over and obtained his doctorate in physics at Washington University in 1966.

He worked for 10 years in private industry before joining Stanford. Among his employers were RCA (on circuit design); Ford Instrument, a division of Sperry Rand (on the atomic submarine Seawolf); Sylvania Electronics (where he got his love for solid state physics).

He spent six years with Varian Associates as senior engineer, and won their sabbatical award for 1967-68, which brought him a trip to England. He was Reader (associate professor) at the Imperial College of Science and Technology in London.



Here he was one of the principal creators of an X-ray intensifier tube for diagnostic radiology. This is now standard equipment in hospitals throughout the world. Bates' name is still associated with the tube and today, 15 years later, he still gets consulting work in the field of X-ray intensification.

Bates' major area of expertise is solid state physics. He is particularly interested in photoelectronic materials and devices. His work involves the unraveling of processes involved in the interaction of photons and electrons with the highly complex materials used in photoelectronic sensing devices.

These include photoemissive surfaces, luminiscent phosphors, and electronically conducting glasses. Bates was one of the first scientists to use X-ray photoelectron spectroscopy on glasses to determine their electronic structure. He credits his work in this area of amorphous materials for his appointment at Stanford in 1972.

He has served as adviser to various government agencies, including the National Science Foundation and the National Academy of Sciences.

"My approach is quite fundamental in my research to determine the electronic structure of fairly complex materials systems," he says.

That is what keeps us going—the excitement of the hunt! So long as you keep enthusiastic, you can keep going. Some people call research a rat race, but I can't think of anything I'd rather be doing.
—Clayton W. Bates, Jr.

One of his projects, in which he leads a team of five researchers, is into photovoltaic solar cell systems, using novel or unique techniques in preparing materials which show much promise in making a cost-effective cell.

"A solar cell has to amortize itself over a period of time, so a minimum efficiency is required for the process. In the cells we are working on the materials are cadmium sulfide and copper indium diselenide.

"The process of making our cell is comparatively inexpensive, so our cell does not have to be so efficient in order to pay for itself. The efficiency we are shooting for ranges from six to eight percent, which should be more than sufficient for it to be viable economically.

"The technique we are employing for cell fabrication is called chemical spray pyrolysis, and it is quite similar to spray painting. The equipment is extremely simple and can be used by unskilled production personnel.

"Our team prepares the materials, makes the cells, and measures the electronic properties of the materials, as well as the response of the completed cells."

All the while his team gets closer to the day when their cell will become visible as a source of competitive energy.

"We need to increase our efficiency by a factor of two. When we do that the cell will be approximately cost-effective. The best cell we have made so far has an efficiency of close to three percent. If we can make a cell with an efficiency of six percent it will pay for itself.

"In most photovoltaic cells one thinks of 10 percent as the break-even point, as the materials of which they are made are more costly.

My students and I have determined the parameters for making the materials that go into each part of the cell. We have prepared a few of these and need to prepare more. The experiments look very promising just now.

"As soon as this interview is over, I am going to hurry into the lab to see the latest results. I believe we are getting close to a solution now."

An interviewer mentioned the work of other Stanford engineers and scientists, each of whom was optimistically pushing across frontiers of research.

"That is what keeps us going," exclaimed Bates. "The excitement of the hunt! So long as you keep enthusiastic you can keep going. Some people call research a rat-race, but I don't know of anything else in the world I would rather be doing."

The photovoltaic cell is only one of the areas in which Bates is busy. He has recently been awarded three years of funding by the National Science Foundation to examine the physics of certain small metal particles which have very interesting properties.

"These particles don't act in the way larger pieces of the same metal would," said Bates. "The idea is to develop a detector of radiation in the two-to-five micron range. One can tailor the response or the absorption of these particles by varying the particle size, or the matrix in which one sets the particles.

"Practical applications? The two-to-five micron

continued on next page

Bates/ continued from page 3

range is a seductive one for the military. They are looking for detectors in that region.

"I got into these fundamental studies from looking at other practical surfaces which are called photo-cathodes. These have been part of the electronics industry for the last 50 years.

"My students and I were the first ones really to determine scientifically in detail the electronic structure of the surfaces, which have been around for so long. We have thrown considerable light on why they work the way they do.

"My colleague Bill Spicer, of the Electrical Engineering Department, was one of the first people to get me interested in these surfaces. He developed a basic theory of them when he was working for RCA in Princeton.

"This led to a theory of mine, which I believe will lead to an improved surface, a better sort of device. The theory concerns the dielectric response of a system composed of a number of materials. A certain fraction of the volume is made up of metal particles in a particular matrix. What we have done is to determine the response of this composite to electromagnetic radiation, that theoretically gives results consistent with experiments performed on these systems.

"In order to detect the radiation one has to absorb it. So what we do is to tailor the structure so that it absorbs in a particular part of the electromagnetic spectrum."

Bates has recently received funding for another project, which is to examine the silicon-silicon dioxide interface. "Much of industry today is based on silicon technology, so the study of this problem has vast implications, and is of considerable interest to Silicon Valley.

With a joint appointment in Materials Science and Electrical Engineering, Bates teaches advanced graduate courses in quantum mechanics and solid state physics, including a laboratory course on photoelectronic materials and devices. He presently supervises 10 Ph.D. research students and a number of postdoctoral visitors.

Among Clay Bates' many "roles" in modeling have been a riverboat gambler, sportsmen, a guitarist, a basketball player, and a three-piece suit executive.

Bates is active in black affairs on campus, including being adviser to the Society of Black Scientsts and Engineers, of which he was a founder. There are two other black scientists on campus besides Bates; they are John T. Gill III, associate professor of electrical engineering, and Arthur B. C. Walker, professor of applied physics.

Bates spent a year's sabbatical at Princeton 1978-79, during which he enjoyed very much the consulting work he did with Bell Labs at Murray Hill. He laughed with remembered pleasure: "Think of it—I was able to spend all my time in the labs, eight to 10 hours a day, doing research work without any university-associated responsibilities. It was great.

"One has to wear so many hats, be so many people, when a professor. There is teaching, research, advising, consulting. . . sometimes it is frustrating. I cannot spend as much time in the labs with my students as I would like to."

Bates and his wife Priscilla were resident fellows for three years, first at Roble Hall and then at Lagunita's East Court, where they guided the Black Theme house.

He had first met Priscilla when she was an undergraduate at Barnard College, New York City, and he was starting graduate school. He had known her for many years before they married. They have three children: Katherine, 12, Christopher, 8, and Naomi, 4.

Katherine may be a budding scientist, says her father, "but just as important, it appears she could be a fine athlete if she wants to."

Bates has fervent opinions on education, especially the need for parents to become involved in support of their children's schools. He was president of the local P.T.A. when Ventura School, Palo Alto, was closed.

The Bates bought an old house on Kellogg Avenue, Palo Alto, in 1976, and the garage was an old carriage-house. Opening off this was a room which apparently had once been used for shoeing horses. "There are still leather thongs and straps on the walls, and various tools. I am thinking of converting that part of the house into a complex which all the family can enjoy.

"I have a study at home which is detached from the rest of the house. I am beginning to get it into shape for use as a lab."

Priscilla Bates was busy in acting some 10 years ago, and the couple went to a San Francisco photographer to have composite photos taken of Priscilla for promotional purposes, with a view to her securing modeling jobs.

The photographer said to Clayton Bates: "Say, I'd like to take some of you too." He did so.

The photographer sent off the pictures of the two Bates, together with some 15 other hopefuls, to a major advertising agency. The only one selected for future work was Clayton Bates: "My wife has never forgiven me!" he grinned.

"The modeling work is spotty," said Bates. "Sometimes I get several calls close together and am unable to accept them because work is so pressing."

He has been a professional model in whatever spare time he can manage for the last 10 years. His picture has appeared on the United Way posters and for advertising several brands of autos.

Among his many "roles" in modeling have been a riverboat gambler, sportsmen, a guitarist, a basketball player, and a three-piece suit executive.

The roles he has played in real life overshadow the images of the lens.

Applications open for management development program for University staff

Applications for participation in the fifth year of Stanford's Management Development Program are being distributed this week through vice-presidents' offices and are also available from Staff Development.

The program is directed toward managers and administrators in both line and staff functions with substantial influence on operations, use of resources, or policy development in the University. While staff members performing such functions generally hold positions assigned to the C-8, C-9, and C-10 pay ranges, or are assistant or associate deans, those in C-7 jobs who are also doing such work are encouraged to apply.

Discussion of current issues in Stanford management is a key aspect in the program, which focuses on ways things get done in University administration, and on human resources management, management of financial resources, and the missions, purposes, and values of the University.

In addition to regular sessions, usually led by Stanford officers and administrators, participants meet informally with representatives of major University constituencies, discussing subjects of mutual interest with faculty and students. They also attend regularly-scheduled meetings of policy-making groups such as the Board of Trustees, the Administrative Council, and the Senate of the Academic Council.

Other parts of the program include initial and closing retreats, completion of projects (done in small groups), and adjunct activities, which are one-half to one-day sessions emphasizing specific management skills. Participants as a group plan some of the regular sessions, which provides for consideration of subjects of immediate concern to the group as a whole.

Administrative Council members select a group of 20 participants reflecting the organizational diversity of Stanford, characterized by a balance between line and staff responsibility, and having a range of years of experience.

Application deadline is June 24 (and may be a few days earlier in some vice-presidential areas). Results of the selection process will be reported to applicants early in August. For more information, see the Personnel Senior Staff representative from your area, call Staff Development at ext. 7-0657, or talk with a current or past MDP participant.

Participants for 1982-83 are: Hector Allen, procurement operations manager; Karen Bartholomew, assistant director, News and Publications Service; Fred Bentley, associate director, Sponsored Projects; Anne Coxon, assistant dean, Humanities and Sciences, and director, Academic Information Center; Hector Cuevas, director, Student Employment Office, Career Planning and Placement Center; Paul Fearer, manager of compensation and systems, Personnel; Margaret Ann Fidler, assistant dean for administration, Dean of Student Affairs' Office; Tamara Frost, chief, Catalog Department, University Libraries; David Glen, director of development, Athletics; Mike Goodkind, writer/editor, Medical Center News Bureau; Michelle Hall, associate director, Annual Fund, Office of Development; Joe Jezukewicz, assistant director of administrative services, Green Library; Jerry Jobe, assistant budget officer, SLAC; Rick Johnson, director of placement, GSB; Bill Lusebrink, deputy manager, Plant Engineering, SLAC; Roland Merchant, director, Office of Management/Strategic Planning, SU Hospital; Nancy Padgett, assistant director for business and finance, Athletics; Lori Rendall, assistant dean, School of Engineering; Jeannie Siegman, management analyst, CIT; Celine Walker, chief, science libraries, SU Libraries; Curt Williams, manager of engineering, Facilities Project Management Office; Jasper Williams, associate staff counsel, Office of University Counsel.

Liberal education can work well in unexpected settings, Kennedy declares

The biggest mistake made by many undergraduates is to concentrate their studies only on those they think will lead to a high-paying job.

In fact, most successful people in America find their great opportunities in areas other than those in which they received their formal education.

President Donald Kennedy and many members of the Stanford faculty spoke on this theme at "A Majors Event" May 10 in the Inner Quad. They offered their own careers as examples.

"The most educated people in the U.S. are usually those who are not doing what they were trained to do, but who nonetheless managed to make their education go in unexpected and unfamiliar contexts," Kennedy said.

Throughout the day the crowds were addressed by a series of 14 speakers, nearly all of whom stressed that too narrow a choice of studies was self-defeating, that a wide spectrum of knowledge was the most useful resource for life and a career.

What's it good for?

"The question about any major is 'What on earth is my major good for?' and the answer is: You," Kennedy told the undergraduates.

"That is not very easy for most people to accept because we are all a little utilitarian."

He told his own experience: "I arrived at the university in 1948. I was determined that I was going to major either in English or in biology.

"What I wanted to do was to become a creative writer. I went down the yellow brick road to a senior writing course led by Archibald MacLeish. . . . I was 17 at the time. I did all right with the words but I found that I had very little to say. At the end of the third week, when I had turned in my third work of pseudo-fiction the instructor said to me 'Why are you doing this?'

"I said I wanted to be a writer. He asked me what else I was interested in. I said 'Biology.' He said 'Biology is a *very* good subject, especially for you.' Accordingly I became a biologist.

"What you think you're going to need in a career is almost never what you're actually going to need. What you wind up doing in life rarely bears any resemblance to what you concentrated on as an undergraduate.

Job changes frequent

"Although I spent a good deal of my life as a biologist, almost nothing I do today has any relation to what I did as a biologist or as a student. If you trace the experience of most educated Americans that is the typical trajectory.

"The average American changes his or her job at least once in his or her first five years of career and does so a couple more times before settling down.

"What is the lesson of all this? That you are free from the kinds of constraints that we put on ourselves by virtue of our expectations about what we are going to do in the world. You are free to choose what really interests you. The subject to major in is exactly the thing you desire most, exactly what excites you the most. I want you to think of this as a liberating thought, because it opens up opportunities you may not have thought about before."

Provost Al Hastorf said that he spent his first two years in college as a dedicated prospective neurosurgeon. "I delighted in neurology till my father arranged for me to watch two neurosurgical operations. This made me become a history major.

"I spent two happy years as a history major and somehow ended up as a psychologist. For God's sake, study what you find interesting, demanding, and exciting. Don't study what you think is going to have a big economic payoff, because that may not be true 10 years from now."

Prof. Tjeerd VanAndel, earth sciences, gave examples of how people often switched interests and careers. He spoke of geology majors who ended up in law school or teaching history, of an archaeologist who found himself an oceanographer, of people who after getting M.B.A.s went into careers that had nothing to do with business.

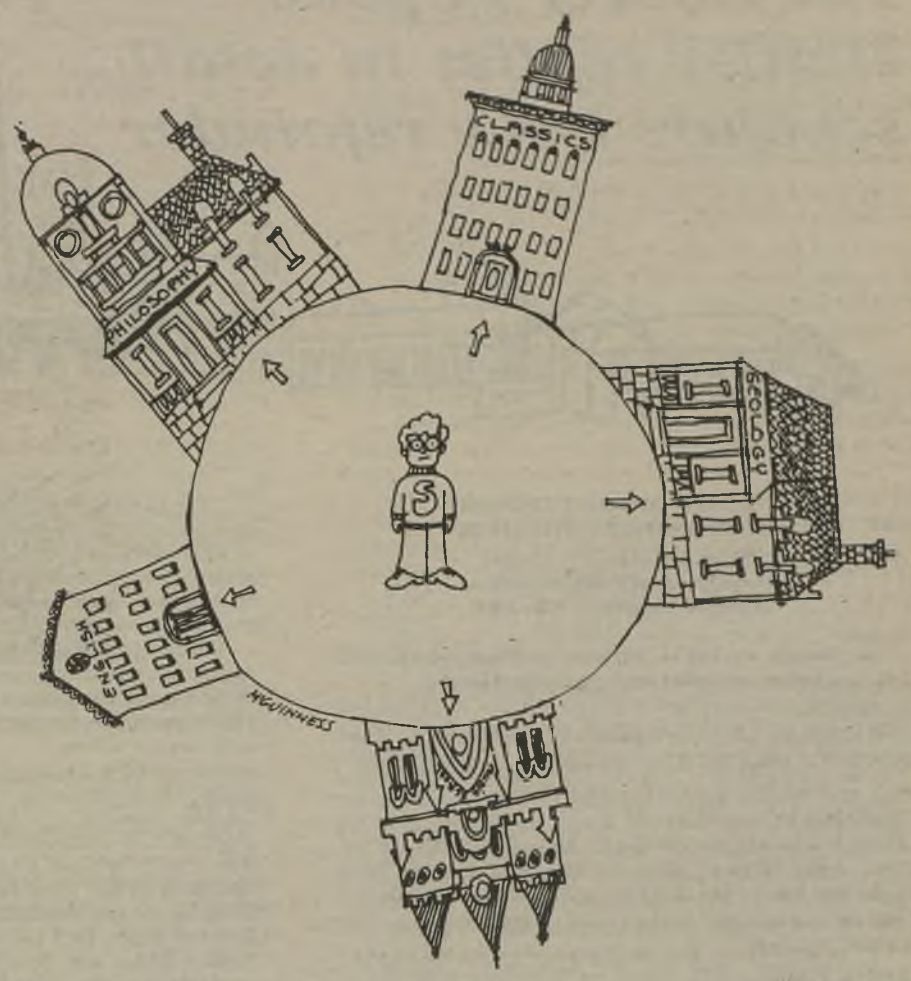
VanAndel mentioned how his own interests had spread so that he now teaches not only geology, but also human biology, and some classical archaeology.

Ivan Sag, assistant professor in linguistics, gave another perspective on the main theme. Few people would think of linguistics as anything but the study of speech, he said. In fact, linguistics was a fine example of the interaction of spheres of knowledge and research.

Linguists with corporations

Linguists are working closely with corporations in Silicon Valley, moving toward the next generation of computers. Psycholinguists were helping to research the processes of the human mind. "We have close ties with people in psychology, neurology, anthropology, engineering, philosophy, and music."

Colin Pittendrigh, director of Hopkins Marine station, recalled that if he had not happened to break a plate glass window, when a youth, and had to find a way to earn enough to pay for it, he would not have taken a job that brought him into contact with biology, and he would never have taken the career path he did.



"It doesn't matter so much what you major in, but how you go about pursuing your chosen major. Stanford education is not in any sense a trade school. Don't look on your major as preparation for any trade."

Vice Admiral James Bond Stockdale, America's ranking naval hero, holder of the Congressional Medal of Honor, said he was grateful he had been able to take his electives at Stanford in moral philosophy, literature, and some classics.

"I will never be able to thank Stanford enough for what I learned at Philosophy Corner about human nature, about how to handle fear, guilt, what courage is, how imagination affects it, and a little about the durability and nobility of the human spirit."

Departments cooperate

Forty-four departments of the university cooperated to help undergraduates become aware of the many

hundreds of courses and majors available. Students crowded around the 46 stalls where departments had volunteers who answered questions, gave advice, explained the nature of their courses, and often offered refreshments and entertainment.

The event culminated five months of hard work by Audrey Bernfield, director of advising and career planning in human biology and coordinator of the departmental student services in the School of Humanities and Sciences. She was assisted by Deborah Duncan, assistant to the director of career planning and placement.

Bernfield brainstorms

"Last fall I was brainstorming with some advising associates and a teaching assistant. We had found that a considerable percentage of students were not meeting their intellectual needs," Bernfield said.

"A lot of people have tried in a piecemeal way to get across to students the full scope of what Stanford offers. Students often think there is only one way to get to their particular goal. What we have tried at this event is to show them there is a variety of ways they can choose."

Kennedy said that "A Majors Event" was a great stimulus to the enthusiasm and entrepreneurial spirit of the various departments. "It shows that departments are not just lying there waiting for students to come by, but are actually interested in students."

The clusters of students round many of the tables were so thick that at some, of which the English Department table was typical, half a dozen volunteers were busy all day answering questions.

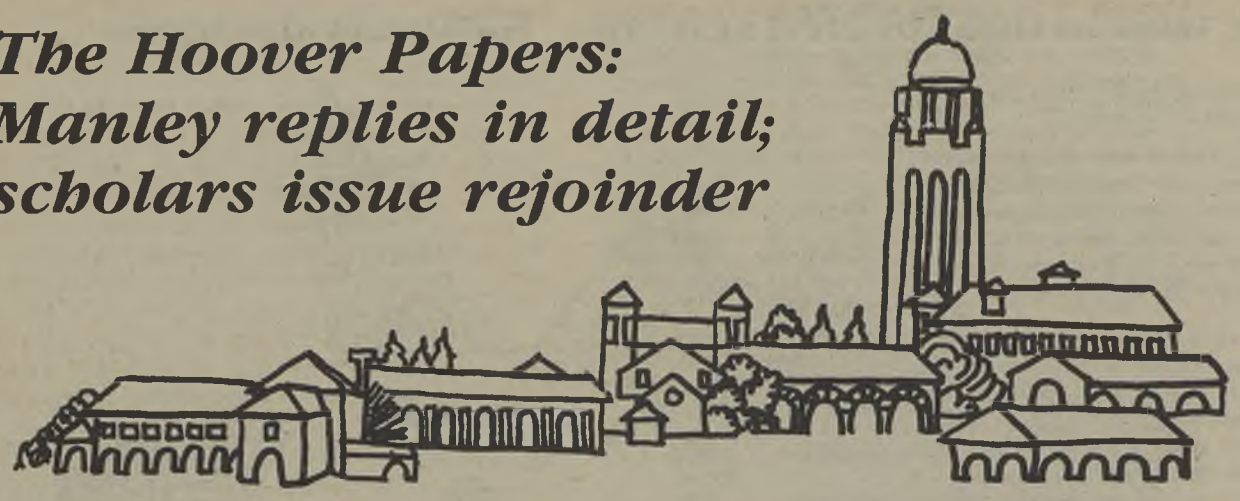
The Classics Department exhibit was a center of interest, drawing attention to the work being done in Greece at excavations. The volunteers here served retsina wine, *ouzos* liqueur, and baklava sweetmeats.

The German Department, in addition to their stall, where German beer was served to waiting lines of students, later gave a reception in Haus Mitteleuropa. The table organized by Hopkins Marine Station served broiled squid. Philosophy Department sold blue T-shirts bearing the words "What Does it Mean?"

Robert Sinclair, associate professor in materials science, gave practical demonstrations of the wonders of materials and how they can be invented or adapted.

At the Physics stall, senior students were on hand to answer questions, but these were not numerous. Physicist Alexander Fetter, chairman of the Faculty Senate, explained why: "I suppose most people who want to be physicists know where they're going."

During the day the Music Department provided a series of performances, including those on the flute, harpsichord, and brass. The Fleet Street Singers also performed.



In the evening a total of 15 dormitory dinners were organized by various departments.

The following day, May 11, each of the 44 participating departments held meetings appropriate to their particular functions.

These included panels, receptions, film shows, discussions, and slide shows. The aim of each was to encourage students to explore the possibilities of a wider choice of studies.

Freshman Kelly Gonser summed it all up: "I have discovered a lot more majors than I knew existed. My decision will be a lot harder now, but it will also be a lot more intelligent." —**Donald Stokes**

The Hoover Papers: Manley replies in detail; scholars issue rejoinder

A POINT-BY-POINT RESPONSE TO THE HOOVER INSTITUTION

By Professor John F. Manley
Department of Political Science
Stanford University, May 1983

1. Hoover is not a partisan political organization because it does not take stands on political issues.

For evidence of Hoover's diverse political activities look first at the 1982 *Annual Report* of the Hoover Institution, a document that could have been written by the Republican National Committee. In it are no fewer than five pictures of President Ronald Reagan together with Hoover-connected photographs of virtually the entire top leadership of the Reagan administration: Edwin Meese III, Caspar W. Weinberger, Donald T. Regan, William French Smith, Philip C. Habib, former top domestic policy adviser Martin Anderson (now returned to Hoover as a Senior Fellow), and a number of others.

We all know that one way a research organization participates in politics is by doing research for candidates. Does Hoover engage in this sort of activity, and, if so, for whom?

Let Hoover Director W. Glenn Campbell and President Reagan address these questions:

President Reagan: ". . .during the recent campaign, I called on more people from the institution to help with my campaign than from any other institution." (1981 Hoover *Annual Report*, p. 24)

President Reagan: "Under the leadership of your able director Glenn Campbell, and with hard work and diligence, you built the knowledge base that made the changes now taking place in Washington possible." Said at a January 11, 1982, White House reception for the Hoover Board of Overseers. (1982 Hoover *Annual Report* p. 29)

Hoover Director Campbell: "The highlight of the past year was the election of honorary fellow Ronald W. Reagan as President of the United States." (Hoover *Annual Report*, p. 11)

Hoover Director Campbell: "Since President Reagan took office on January 20, 1981, more than 30 scholars and former fellows of the Hoover Institution have been requested to participate in public service and have been appointed to positions in the executive branch of the federal government or as members of boards and commissions." (1981 Hoover *Annual Report*, pp. 11-12) Hoover has since claimed over 40 individual placements with the Administration and other branches of government.

As far as I know the Institute for Policy Studies, the Brookings Institution, and the American Enterprise Institute let their individual members do as they please politically. It would be shocking to learn that the officers of any of these institutions told anyone on the staff what to write. Nor, as far as I know, do these institutions take stands on issues.

But can anyone seriously believe that because these organizations don't take stands on issues, they are not political? Or do not serve certain partisan causes more than others? Just because these organizations are comprised of individuals and do not take stands on issues hardly makes them apolitical research organizations. If anything, such apparent nonpartisanship probably enhances their effectiveness as politically-inclined research organizations, just as is true in Hoover's case.

2. Hoover is not a partisan political organization because Hoover represents a diversity of views, and contains Democrats as well as Republicans.

No one would be so rash as to claim that everyone at Hoover sees the world in exactly the same way, but there is a great deal of evidence to suggest that Hoover is not in fact mainly a pluralistic institution of diverse views, but an organization with a mission:

History: Was the Hoover Institution established to engage in value-neutral research, or was it established to defend and advocate certain values and policies? The evidence here seems fairly decisive. As Herbert Hoover put it in a 1959 declaration to the University Board of Trustees:

"The purpose of this Institution must be, by its research and publications, to demonstrate the evils of the doctrines of Karl Marx—whether Communism, Socialism, economic materialism, or atheism—thus to protect the American way of life from such ideologies, their conspiracies, and to reaffirm the validity of the American system."

It is fashionable to dismiss Herbert Hoover's declaration as an unfortunate example of cold-war rhetoric, but a look at the Hoover Institution's activities and publications since 1959 suggest that the Institution has remained quite faithful to its founder's design.

For example, Stanford Professor of History Alexander Dallin, for seven years a Senior Fellow at Hoover, and currently chair of the University's international relations program, told the *Stanford Daily* recently that he resigned from Hoover because he perceived violations of academic standards by an "inner sanctum" of conservative activists whom he was unable to influence from inside the institution. (*Stanford Daily*, April 19, 1983, p. 1)

The press has investigated the Hoover Institution regularly, and if it is to be believed, Hoover has a quite definite tilt. To cite only three examples:

New York Times magazine, July 23, 1978, Kenneth Lamott:

"Through its ties with the right wing of the Republican Party, the Hoover Institution is exerting increasing political influence. It is the brightest star in a small constellation of conservative think tanks that serve as workshops where out-of-office intellectuals can fabricate the underpinnings of domestic and foreign-policy positions for the Republicans."

Los Angeles Times, November 18, 1980, William Endicott:

"Throughout this campaign year, Reagan turned to Hoover to provide intellectual substance for his conservative views on a broad range of domestic and international issues. Now, as he starts to shape a new administration, he is expected to lean heavily on the institution for both personnel and policy advice."

Dun's Review, April 1981, T.J.M.:

"By his own admission, President Reagan has probably learned more about public policy issues from Stanford University's citadel for scholars, the Hoover Institution on War, Revolution, and Peace, than from any other source."

It should be emphasized that even if Hoover were better balanced politically the existence of any such organization—radical left, right, or middle—with access to millions of dollars in outside private funds, would cause questions in an academic institution. The central problem of Hoover is not its conservative bent, but that it is bent at all.

3. Hoover is not a partisan political organization because it contains Democrats as well as Republicans.

This contention, put forth by Hoover Fellow and Professor Seymour Martin Lipset in the May 4 *Stanford Daily*, cannot stand critical inspection.

First, Professor Lipset boils down the 61 scholars on Hoover's current masthead to a "core group" of 25, then he reports that 11 of them are Democrats. Though Professor Lipset does not say that these Democrats are liberals, we are invited to conclude that because 11 of 61 Hoover fellows are Democrats, the Institution is fairly well balanced from an ideological perspective.

There are several problems here:

1) The partisan political activities of the Institution as such are not addressed by the fact that Lipset can identify 11 Hoover Democrats.

2) There are conservative Democrats as well as liberal Democrats. Therefore we have to know how many of these 11 Democrats are associated with the McGovern-Kennedy wing of the Democratic party, and how many are identified with the neo-conservative wing, in order to make any valid inferences about ideological diversity at Hoover. On this point, Lipset, a well-known neo-conservative Democrat, is silent.

3) Hoover has in recent years attracted a number of distinguished Stanford scholars to its masthead, and some of these may consider themselves liberal. But to know whether or not these people have had an impact on the general thrust of Hoover we would have to know if these liberals have offset the conservatives in and around Director Campbell who, Professor Dallin says, really sets the Institution's tone.

4) Since the questions about Hoover as a partisan-funded political organization do not center on the party affiliation of individual members of Hoover's staff, Professor Lipset's data are irrelevant to the major questions that have been raised about Hoover.

5) Let's say all 11 of the Hoover Democrats claim to be liberals. What would this prove? Absolutely nothing. Why? Because the faculty and students calling for public discussion of Hoover have pointed out from the start that Hoover is a two-tiered organization: a dominant inner group that is dominantly conservative and politically active, and an outer group of Stanford academics. Ironically, the existence of a few liberals at Hoover, and perhaps even a socialist or two, may make the Institution even more effective in pursuing its political activities by allowing it to claim that it is a pluralistic institution.

4. Hoover is no more partisan or political than Harvard during the Kennedy Presidency, so why all the fuss?

This argument also takes the form of noting how many Stanford faculty have served Democratic administrations. Donald Kennedy's role as FDA Commissioner under President Carter is frequently cited.

Of all the arguments that have been put forward on Hoover's behalf, this is probably the most effective. It appeals to our sense of fair play: the government needs all the help it can get, liberal professors help Democrats, conservative Hoover people help Reagan, so what's the difference?

There are three:

1. Those professors who joined the Kennedy Administration came from a variety of different departments at Harvard, not from a central liberal think tank associated with Harvard, and they did so as individuals, not as members of a left-leaning equivalent to Hoover. There was and is no Harvard equivalent to Hoover—no Franklin Delano Roosevelt Institution with millions of dollars in liberal endowment and private contributions established especially to advance liberal political causes.

2. No one has ever questioned the right of any individual faculty member or for that matter of anyone at Hoover to join the Reagan Administration. What has been questioned is the existence of a separate and unique institution within Stanford University that is largely autonomous from University control and engages in the kinds of overt political activities that Hoover appears to pursue. Hoover can justly lay claim to being one of the leading conservative think tanks in the country, a situation not really comparable to the academic brain trust around Kennedy or other liberal presidents.

3. Let us, for the sake of argument, accept the Harvard analogy. The questions that must then be faced are:

a. Does Stanford University want to become so closely connected to conservative donors and conservative politics that it counter-balances Harvard's liberalism?

b. Do we want to become a Republican counterweight to Harvard's Democratic bias?

c. Or do we want to maintain our reputation for independence and nonpartisanship?

There are dangers for a university that gets too close to one particular political spectrum. Stanford retains considerable diversity, but if the Hoover Institution has, as the press reports, a $60 million endowment, at what point does this "university" within the University raise concern? Is there nothing especially troubling about Hoover because a lot of Harvard professors worked for Kennedy? Some think so. Others are not so sure.

5. The problem with Hoover is not that it is too close to Stanford but that it is not close enough: we should therefore increase joint appointments and further blur the lines separating Hoover from the University.

The problem with this line of reasoning is that to the extent that Hoover is a partisan political organization, and to the extent that the lines between it and Stanford University are blurred or obscured, Hoover's prestige and influence are enhanced, and so too the causes for which Hoover exists. Or, to put it another way, the problem with Hoover is that it has a cause, not that it is too far removed organizationally from Stanford control.

The issue here is: can Stanford University, or any university, afford to become so closely linked to certain sources of money and to certain political interests that it runs the danger of losing or appearing to lose its independence and autonomy? Some say Hoover just offsets the liberal political bias of professors generally.

This position at least has the merit of admitting Hoover's conservative bias, but, again, such arguments miss the central point: one cannot compare the Hoover Institution, with its money and power and political leverage, to some statistical tendencies for certain kinds of professors to be more liberal than conservative. In my experience at Stanford, conservatives are by no means unrepresented in

continued on next page

Hoover Institution

continued from page 6

the departments—and certainly not so much that we need an organization like Hoover to balance us out.

As for efforts to diversify Hoover through joint appointments and the like, consider Professor Dallin's experience: "There were people on the faculty side who thought the only way to influence Hoover was to get a foot in the door by placing tenured faculty over there. I have come to believe that will not work; you'll never change the inner sanctum." (*Stanford Daily*, April 20, 1983)

6. The people who have raised these questions about Hoover are themselves engaging in a partisan political attack.

This response takes a variety of forms, but the general tone was set by Hoover Director W. Glenn Campbell when, as reported in the April 24, 1983 *Peninsula Times-Tribune*, he dismissed the faculty-student concerns as "character assassination charges."

Since then their attack has ranged from Hoover Senior Fellow Thomas Sowell's "hypocritical farce" and charges of a "witch hunt," to Hoover Senior Fellow and public affairs coordinator George Marotta's "innuendoes" and "attempts at intimidation," to cries of "McCarthyism" and "guilt by association."

These and other contributions to the public debate reached new levels when Hoover Senior Fellow Peter Duignan told the *San Francisco Examiner* (May 8, 1983):

"This is the same gang that was against the Vietnam War, supports the partisans in Nicaragua and now backs the rebels in El Salvador."

According to Duignan, this "gang" overflows with "envy and greed" because Hoover's full-time researchers can travel more and produce more writings for publication.

Regarding these comments, I will simply note the irony of such arguments coming from those who complain loudly of "character assassination charges."

More substantial are the comments of former Stanford liaison with Hoover, Robert Rosenzweig. Rosenzweig told the *Stanford Daily* (May 6, 1983) that the political charges against Hoover were a "charade," part of a game that the " 'ins' historically play with the 'outs' in politics."

Such responses do a serious disservice to the more than 70 members of the Stanford faculty and over 1,400 members of the student body and community who have called for discussion of Hoover's relations with the University. When issues are raised for discussion and dismissed as mere politics, the dialogue that is supposed to characterize the University is undermined.

All these petitioners have claimed is that a prima facie case exists that Hoover is a partisan political organization and, as such, a potential danger to the University. Such questions are not mere political questions. They express genuine concern for Stanford and are raised in Stanford's interest, not for partisan reasons.

7. The Annual Reports of the Hoover Institution are just public relations material designed to make the Institution look good, and are not to be taken seriously.

When all else fails, Hoover repudiates its own material.

The May 8, 1983, *San Francisco Examiner* quotes Hoover Senior Fellow and P.R. officer George Marotta as follows:

"Hoover's Marotta downplays the annual report, calling it a 'p.r. document, not to be taken seriously.' 'All such reports are full of self-praise and puffery,' added Hoover's Duignan."

These reports no doubt contain some puffery and are designed to present Hoover in a favorable light. But they also describe in factual detail what Hoover as an organization does. Do we not have in Hoover's own reports an accurate description of real activities and events?

Many readers of Hoover's 1981 and 1982 *Annual Reports* think the activities of Hoover are a legitimate source of concern, regardless of Hoover's efforts to minimize the documents. We believe the *Annual Reports* report a prima facie case for public discussion and that to dismiss them as p.r. as Hoover would like us to do is perhaps the best reason of all to take them seriously.

Conclusion

The *San Francisco Examiner* in a May 8, 1983, news article by Carl Irving, cautions us about Hoover in the following words:

"As the Institution became widely known for leadership that openly backed conservative causes, endowment funds flowed in, reaching $60 million earlier this year. The rate of growth in support per scholar far exceeded most other campus units in recent years."

Hoover's budget this year is over $8 million, and for next year it will exceed $9 million. Only about one-third of this money goes for the library and archive. The rest goes for other activities.

What seems to have happened in the past 10 or 15 years is that Hoover has emerged as one of the leading conservative think tanks in the country. Its endowment exceeds that of many universities, and as a research organization it enjoys many subsidies from Stanford University.

Some people are not bothered by any of this. They point out that Stanford has emerged as one of the leading universities in the world, and asks: what is wrong with an Institution that brings millions of dollars into the University?

What is wrong is that Hoover does not bring millions of dollars into the University. Most of the money goes to Hoover. It is used to support activities that appear to many observers to be political, partisan, and objectionable.

What is wrong with having such a well-endowed university within the University? Such funds obviously provide some benefits to Stanford, and not all of Hoover's work is political.

What is wrong concerns the nature of a university. Although universities often fail to live up to their ideals, they nonetheless have them. Among the core ideals are nonpartisanship, objectivity, and a rejection of overt and covert political participation by the University.

If these ideals are to be upheld, can the Stanford community ignore the existence of a $60 million research organization within its midst that openly engages in a wide assortment of political activities? Perhaps. But to do so endangers the University's reputation as a nonpolitical, nonpartisan institution, and thus endangers the most precious thing a great university has: its legitimacy.

These are subtle issues. It is hard to measure credibility and legitimacy. But if there is anything at all valid in the concerns that have been raised about Hoover, perhaps it is time for the University community to look up and see what Hoover has become. The picture of itself that Hoover projects to the outside world in its *Annual Reports* and its multiple political ties is, and must be, of concern to the broader Stanford community.

Thomas Gale Moore: Hoover does not engage in partisan political activities

In the following paper Thomas Gale Moore, director of domestic studies at the Hoover Institution, replies to the concerns detailed by Profs. John Manley and Ronald Rebholz in the May 11 Campus Report.

Having just returned from an extended trip, I discovered that a few individuals have launched a vicious attack on the Hoover Institution. While the *Daily* has published a series of articles on Hoover, mostly inaccurate, let me respond specifically to the May 10 piece by Profs. Manley and Rebholz, which levied seven charges.

1) Yes, the Hoover Institution, like the Business School, the Law School, the Center for Economic Research (Economics Department), and the Food Research Institute, to name just a few, receives millions of dollars from private sources outside the University. Such funds are usually administered by the University but earmarked for the particular schools.

The money comes from foundations, individuals, and corporations—as do the grants for other organizations on campus. No strings are attached to the money; we do not conduct contract research. Funds are sometimes designated, however, for the library, the endowment, or for research.

Why do they give it? For the same reasons they give to the Food Research Institute and other campus programs—they want to support the programs of the particular organization.

Who decides how to use the funds? The dean or head of the school; for the Hoover Institution, the director allocates the funds.

2) The other activities besides the Hoover Library that are funded by the Hoover Institution are described in the Annual Report. Profs. Manley and Rebholz should have looked past the first few pages instead of focusing exclusively on a section in which President Reagan lavishes praises on Hoover, as any good politician does when he appears before a group. Of course Hoover takes pride in being commended by the President of the United States, as would Stanford, Harvard, or most organizations. Had they looked at the rest of the report, they would have found the work of the Hoover Institution consisted of nonpartisan economic, political science, and public policy research.

For example, during the last year 20 manuscripts were produced by scholars in domestic studies that were included in our working paper series sent to some 170 scholars and academic institutions. These included such "political" studies as Olivier Blanchard's (Hoover National Fellow and Harvard University) "Identification in Dynamic Linear Models with Rational Expectations"; Patricia Danzon's (senior research fellow) "Settlement Out of Court: The Disposition of Medical Malpractice Claims"; and Charles E. McLure, Jr.'s (senior fellow) "Tax Exporting and the Commerce Clause: Reflections on *Commonwealth Edison*."

Reading further in the 1982 Annual Report, Profs. Manley and Rebholz also would have discovered that we held three major conferences dealing with such topics as the appropriate method for states to tax corporations, a fiftieth anniversary critique of Berle and Means' classic text, *The Modern Corporation and Private Property*, and a conference bringing together the best young labor economists in the country. These conferences have included as participants three Nobel Prize winners in economics and leading economists from Harvard, Princeton, Yale, and MIT.

Since by no stretch of the imagination can these activities be described as partisan, the answer to the question as to whether the money would be given if Hoover were "nonpartisan" is on a par with a question about whether Tip O'Neill has stopped beating his wife. Brookings Institution, which has a distinctly liberal image, has no trouble raising money. Ideology apparently has little bearing on the ability to raise funds.

3) The Hoover Institution as an institution does not engage in any partisan or political activity. Some Hoover scholars do become involved in influencing the government and we brag about that. I like to point to the letter of appreciation sent to me by Senator Edward Kennedy for the help I gave him in deregulating airlines. I personally have been more critical in writing of President Reagan's regulatory policies than of President Carter's, which I have praised.

4) I do like to think that the *New York Times Magazine* was right and that our research is so good that politicians, like Senator Kennedy, are taking note of it. Senator Russell Long (Democrat) has used Martin Anderson's book on *Welfare* to shape federal policy. Senator Dennis DeConcini (Democrat) is sponsoring tax legislation based on work done by Senior Fellows Alvin Rabushka and Robert Hall.

5) The Hoover Institution does no research for political parties, nor does any of the staff, unless it is on a consulting basis or they are on leave. There is one exception that I am aware of, William Schneider, a senior research fellow currently in Washington, is spending part of his time working for the Democratic Party.

6) and 7) As stated above, Hoover does not engage in partisan political activities. Several scholars have taken leave of absence to work in political campaigns, as have scholars at other institutions. But this no more makes Hoover a Republican think-tank than Harvard a Democratic university.

Profs. Manley and Rebholz go on to pose more questions of the "Have you stopped beating your wife?" variety. They admit that Hoover contains liberal Democrats, but because certain Hoover scholars are very active in this administration they conclude it is partisan. Currently, only two Hoover fellows hold full-time positions with the administration, although others have held appointments in the past. The Stanford Business School also has two faculty members on leave with the Reagan administration and the Law School has one.

Profs. Manley and Rebholz claim that Hoover's research and publications appear to be partisan. I have already cited examples of our research, which no one could contend was partisan. It is incumbent on them to identify the research they consider partisan. An examination of the books Hoover published as listed in the Annual Report proves that our publications are also nonpartisan. Let me cite just the first four of these books, in alphabetical order—see if you can detect partisan bias: Anderson, *Registration and the Draft: Proceedings of the Hoover-Rochester Conference on the All-Volunteer Force*; Bailey, *The American Pageant Revisited: Recollections of a Stanford Historian*; Buss, *The United States and the Republic of Korea: Background for Policy*; Cargill and Garcia, *Financial Deregulation and Monetary*

Control: Historical Perspectives and Impact of the 1980 Act.

Several of the attacks have questioned staff recruitment at Hoover. As chairman of our search committee I would like to explain the procedures. For senior fellows we conduct an exhaustive search, like that of academic departments on campus. We advertise; we seek suggestions from our advisory committee (chaired by Nobel Laureate George Stigler); we consult with well-knonw academics at other universities. We read the scholarly works of proposed senior fellows and ask for letters of evaluation from other well-known scholars in the candidates' fields.

Most of these candidates are full professors at some other major university at the time they are recruited. We never ask their political affiliation or their ideology. Those that pass this search-committee screening are invited to Hoover to give a seminar. The search committee may then recommend them to the director who, if he concurs, forwards our search committee recommendation to the President of Stanford for his submission to the trustees.

The procedure is a little different for senior research fellows since they normally receive only a fixed appointment (three to five years is usual). Here we seek younger academic scholars, as well as individuals who may not meet all the formal requirements of an academic department but will add breadth and insight to the Stanford community.

For example, Philip Habib, who has been nominated for a Nobel Peace Prize and who worked for Jimmy Carter, is a senior research fellow, but he lacks the requisite academic publications to hold a full-time position in a department.

Admiral James Stockdale, who taught on campus this year, does not meet the usual criteria for a regular appointment, but he brings an experience that cannot be gained in graduate school.

According to the calendar, Milton Friedman is too old to be a professor here, yet he has the vigor of most 40-year-olds and contributes significantly to intellectual debate at Hoover. None of these scholars is particularly active politically, although all have had a role in public policy-making.

It is a scary experience to be attacked in this way through unsubstantiated innuendos, rhetorical questions, and anonymous petitions. We have yet to be given a list of those who are accusing us; in most free societies it is considered a fundamental right to be faced with your accuser. It is a real danger to academic freedom when a handful of individuals can smear so many by saying so little.

The Hoover Institution has built a great reputation as a place where scholars of all viewpoints can work unhindered on their own research. Next year Joe Pechman of Brookings, whom many consider very liberal, will be a visiting scholar. Joseph Stiglitz from Princeton, a former Stanford professor and a brilliant economist, will also be in residence. Our reputation is international; Staffan Linder of the Parliament of Sweden and author of *The Harried Leisure Class* will also spend the year. The alleged political biases have failed to reduce the attractiveness of Hoover.

Through joint appointments, through our impressive facilities, and through the high caliber of our staff, we have helped to attract a number of senior scholars to Stanford. Several senior professors would not be here, were it not for Hoover. Four Nobel prize winners, nine members of the American Academy of Arts and Sciences, and seven members of the National Academy of Sciences are connected with the domestic studies program at Hoover.

It would be a tragedy if such a resource for Stanford were destroyed.

Rhinelinder: Hoover fellows have more diverse opinion now than 25 years ago

Following is a May 12 letter to President Donald Kennedy from Emeritus Prof. Philip Rhinelander, philosophy, concerning the Hoover Institution.

As you may recall, while I was dean of humanities and sciences I also served briefly in 1959 as acting director of the Hoover Institution in the interim between the resignation of Easton Rothwell to become President of Mills College and the appointment of Glenn Campbell, the present director. In view of this circumstance, I venture to comment briefly on the current controversy over the relation between the University and the Hoover Institution.

The issues that have been recently raised are not new: they were all faced and considered in 1959. It was because of concern with these same matters that I undertook the acting directorship, and it was after considering them that the Trustees of the University made their decision at that time.

Now it is obvious that individual opinions can, and do, differ on the complex questions involved. Indeed, I then advocated a somewhat different arrangement from the one actually adopted. At the same time, it seems to me that in the interests of all concerned it is of primary importance that once a decision has been made on a matter of this sort, it should be adhered to unless strong reasons exist for a reexamination. And no such reasons have been put forward, as far as I am aware.

The current requests for an inquiry seem rather to assume that the issues raised have never been recognized and should therefore be looked into. But such an assumption is mistaken. A new inquiry would merely repeat former inquiries without adding anything of significance, as far as I can see. In this connection several facts are specially relevant:

1) There is more diversity of opinion among the fellows of the Hoover Institution today than there was 25 years ago. Hence there is less reason to be concerned over the "partisan" character of the Institution now than there was then.

2) Commitment to a partisan position or partisan ideology can seriously threaten the "free market of ideas" when such commitment is concealed or misrepresented. But we have the opposite position here. The current objection is that the Hoover Institution's links with the Reagan administration have been publicized too extravagantly, not too little. Thus nobody could claim to have been misled or deceived.

3) The notable progress made by the University over the past 25 years is ample evidence that its academic prestige has not suffered from its association with the Hoover Institution, which has been widely known for having a special orientation.

Philip H. Rhinelander
Olive Palmer Professor of Humanities, Emeritus, and Professor of Philosophy, Emeritus

Moore: Relationship between Hoover, Stanford spelled out clearly in 1959

Facts about the Hoover Institution
by John H. Moore associate director of the Hoover Institution

The current criticism of the Hoover Institution and its scholars is an unpleasant reminder of a dismal history of baseless, partisan attacks on the Institution. The so-called issues that have been raised by Professors Manley, Rebholz, et al are either totally unfounded attacks on the integrity and scholarly qualities of the administration and senior staff of the Hoover Institution or, as in the case of the Institution's relationship to Stanford or its finances, matters that are well-known and well-established.

A formal reply to the attacks on the integrity of the administration and senior staff of the Hoover Institution, the scholarly abilities of the staff, or the alleged partisanship of the Institution perhaps bestows an undue dignity on the charges and those who have brought them.

Since all but a few of the signatories of the petition have insisted upon anonymity, we are not afforded the elementary right of knowing who our accusers are. Nevertheless, individuals who know the Hoover Institution well—far better than its detractors—are presenting the facts on these unfounded attacks in numerous letters and columns in the newspapers.

In the case of the ignorance and misunderstanding of the relationship of the Hoover Institution to Stanford University, the basic facts can be spelled out simply and briefly for the record.

The relationship between the Institution and Stanford was carefully established by the Stanford Board of Trustees more than 20 years ago and it has been reaffirmed by the Board on several occasions since that time. The relationship specifies both the formal tie between the Institution and the University and the basis of the appointment procedures followed by the Institution. The financial relationship is also well known and a matter of record, since the Trustees regularly received financial reports for the University as a whole which include information about the Hoover Institution.

Relations with Stanford

The petitioners have repeatedly alleged that the Hoover Institution's relationship with Stanford is vague and unclear. On the contrary, the relationship between the Institution and the University is clearly spelled out in various actions of the Stanford Board of Trustees, principally a May 21, 1959, resolution.
